EDWARD VII OF ENGLAND.
APPLETONS' ANNUAL CYCLOPAEDIA

AND REGISTER OF IMPORTANT EVENTS OF THE YEAR 1900

EMBRACING POLITICAL, MILITARY, AND ECCLESIASTICAL AFFAIRS; PUBLIC DOCUMENTS; BIOGRAPHY, STATISTICS, COMMERCE, FINANCE, LITERATURE, SCIENCE, AGRICULTURE, AND MECHANICAL INDUSTRY

THIRD SERIES, VOL. V

WHOLE SERIES, VOL. XL

NEW YORK
D. APPLETON AND COMPANY
72 FIFTH AVENUE
1901
PREFACE.

The present volume has a peculiar interest in that it records the history of the closing year of the greatest of all the centuries—the century of steam, electricity, photography, and anaesthetics; of railways and telegraphs, sewing machines, typewriters, telephones, phonographs, armored ships, and smokeless powder. Many readers, on opening the volume, will naturally turn first to the article entitled "Nineteenth Century, Important Events of the," where they will find a rapid chronological survey, showing—not, indeed, everything that has happened since the death of George Washington, but the principal significant and suggestive events. And this is supplemented by a review of the events of Queen Victoria's long reign, which closed with the century.

Among the beneficent advances of the closing years of the century none is more worthy of note than the now widespread practice in the care of the sick of supplementing the skill of the physician with the skill of a specially educated nurse. This subject is treated fully in the present volume under the title "Nurses, Trained." And a similar interest attaches to the growing habit of giving liberally for the endowment of charitable, religious, and educational institutions. What was done in this way in 1900 may be seen by a glance at the article "Gifts and Bequests." Another advance of recent years is set forth in "Visual Instruction," a subject here presented in cyclopædic form for the first time. The greatest examples of visual instruction are afforded by the world's fairs, now so common that not many years pass without one. The beautiful exposition held in Paris in 1900 is here described, with illustrations.

At the same time, instruction by alphabetical means has progressed at its usual pace, and we present an interesting article on the public libraries of the United States, written by a veteran in the service, which is full of significant statistics, and is illustrated with portraits of some of our most eminent librarians. Our circulating libraries still show a preponderance of fiction, though the proportion of this to more solid reading is steadily decreasing; and in the book world the past year has been marked by phenomenal sales of half a dozen novels. This curious occurrence is discussed by an able critic under the title "Fiction, American." There is also a development of education which is attained by reaching backward through the centuries and reading the monuments of vanished races. Those who take an interest in this will look at our regular article on "Archaeology" and also at the special article on the "Congress of Christian Archaeology."

The regular articles on the great religious denominations, showing their growth and work in the year, are full as usual, and to them is now added the new one on "Christian Science." Whatever any one may think of this manifestation, its believers and supporters are now so numerous and so definitely organized that it can
PREFACE.

not be ignored by a faithful chronicler of the time. Those who are curious as to its history should read not only the article "Christian Science," but that entitled "Metaphysics, American," which also is in this volume.

The material and scientific advances are recorded in the regular articles on "Chemistry," "Metallurgy," "Physics," and "Physiology"; and the reader should look also at the special articles on "Explosives," "Steel Cars," and "Voting Machines," and perhaps at the curious array of information under "Gold Nuggets."

The notable event of the year in the United States was the presidential election, of which a full account is presented, with the platforms of all the parties that entered into the contest. The usual decennial Federal census was taken in June, and the population figures will be found in the articles on the several States, showing the population of each county. Very few of the other results of the census have been compiled, and therefore they can not be presented in this volume. From this subject we are naturally led to the Australian colonies, which have just federated themselves in a union closely modeled on that of the United States. The story of the federation, which went into effect Jan. 1, 1901, is told at length in "Australasia."

England has a new monarch, and we give a full-page portrait of him and a brief sketch of his life in the article on his kingdom. And last year England lost one of the most picturesque and original of all her authors and one of the most interesting of men—John Rusk in, of whom we present an extended biographical sketch, largely in his own words, and a beautiful portrait. Our own country lost one of its ablest statesmen and financiers in John Sherman, and the story of his life is here told by his friend and assistant secretary of the treasury, with a full-page portrait engraved for this work. There are also sketches and portraits of the new Vice-President and the new Speaker of the House of Representatives.

Among the eminent dead of the year, of whom sketches may be found in this volume, accompanied in some instances by portraits, are the actors Charles H. Hoyt, Edward S. Marble, and Frank Mayo; the artists William H. Beard, Francis B. Carpenter, Frederick E. Church, Jasper F. Cropsey, Thomas Faed, John S. Sargent, and William L. Sonntag; the authors Richard D. Blackmore, Clarence Cook, Stephen Crane, Archibald Forbes, Lucetia Hale, Richard Hovey, James Martineau, Moses Coit Tyler, and Charles Dudley Warner; the clergymen Cyrus A. Bartol, Thomas K. Beecher, A. J. F. Behrends, Edward McGlynn, Richard S. Storr, and Richard H. Wilmer; the educators Henry Barnard, Charles F. Dunbar, Sigmund FritcheI, Burke A. Hinsdale, Joseph Jessing, George W. Northrup, Olaf Olsson, and William L. Wilson; the jurists Cushman K. Davis, William C. Endicott, and David M. Key; the naval officers John W. Philip and Montgomery Sieard; the physicians William A. Hammond, Oliver P. Hubbard, Lewis A. Sayre, Edwin O. Shakespeare, and Alfred Stillé; the scientists Frank H. Cushing, Thomas Egleston, James E. Keeler, St. George Mivart, and Fairman Rogers; the soldiers William W. Averell, Zenas R. Bliss, Gustave P. Cluseret, Jacob D. Cox, Petrus Joubert, Emerson H. Liscum, and John G. Parke; the statesmen Count Benedetti, John A. Bingham, Paul Falk, John J. Ingalls, Edward John Phelps, and the Duke of Argyll; the capitalists Collis P. Huntington and Henry Villard; the journalist Oswald Ottendorfer, the circus performer Dan Rice, the chess player William Steinitz, and King Humbert of Italy.

The illustrations include two colored plates, four full-page pictures in black and white, and an unusual number in the text.

The volume closes with an index covering this and the four that preceded it.

New York, April 4, 1901.
CONTRIBUTORS.

Among the Contributors to this Volume of the Annual Cyclopaedia are the following:

Oscar Fay Adams,  
Author of A Dictionary of American Authors, etc.

Bartol, Cyrus Augustus,  
Blackmore, Richard Dodridge,  
Crane, Stephen,  
Martin, James,  
Mulhall, Michael George,  
Max Müller, Friedrich,  
Russell, Henry,  
Tyler, Moses Coit,  
and other articles.

Marcus Benjamin, Ph. D.,  
Editor of United States National Museum.

Explosives,  
Exposition, Paris Universal,  
Maryland,  
National Academy of Sciences,  
New York City,  
New York State,  
Rogers, Fairman,  
and other articles.

J. H. A. Bone,  
Of the Cleveland Plain-Dealer.

Ohio.

Arthur E. Bostwick, Ph. D.,  
Chief Librarian of the Free Circulating Libraries,  
New York City.

Physics.

Roscoe C. E. Brown,  
Of the New York Tribune.

</table>
ABYSSINIA, an empire in eastern Africa, known also as Ethiopia. The ruler, whose title is Negus Negusti, meaning King of Kings, is Menelek II, originally King of Shoa, who established himself on the throne with the aid of arms and munitions furnished by the Italians after Johannes II, his predecessor, had been slain in a battle with the dervishes. He signed a treaty at Ucciali on May 2, 1889, under which Italy claimed a protectorate over all Abyssinia as well as sovereignty in the territories north of Tigre and inland from Massowah, which before the Italian occupation were dependencies of Abyssinia. The protectorate was denied by Menelek, whose troops, on March 1, 1896, defeated at Adowa an Italian army that invaded Tigre and Amhara, and on Oct. 26, 1896, through the mediation of Russia, a new treaty was signed at Adis Abeba, by which Italy renounced the protectorate over Abyssinia, and Menelek recognized as Italian territory all the country north of the Mareb, Balesa, and Muna rivers.

Ethiopia proper comprises the kingdoms of Tigre, Amhara, with Gojam, and the powerful kingdom of Shoa. The dependencies extend into Somaliland as far as Harrar, and to the west and southwest the present Negus has made efforts to establish his dominion over the Gallas and the tribes beyond to the borders of the already occupied parts of British East Africa and to the White Nile.

The area of the empire is estimated at 150,000 square miles, the population at 3,500,000. The Negus has a regular army of about 150,000 men stationed in garrisons in various parts of the country, supplemented by irregular forces and territorial levies.

The Abyssinians are Christians of the Alexandrian rite, whose ecclesiastical chief, called the abuna, is always a Copt, appointed by the Alex-
andrian patriarch. The ochechek, who presides over the monastic establishments, which contain about 12,000 monks, possesses more real authority. Jewish ceremonies, survivals of an early conversion to Judaism, are mingled with the Christian rites. The ruling caste shows an admixture of Hebrew and Arab blood.

The natives raise cattle, goats, and sheep in great numbers. Tillage is not much practiced, although the soil is fertile. Sugar and cotton are easily grown, and the vine and the date palm thrive, while the coffee plant is a native of the country. The chief products for export are hides and skins, cievet, coffee, and wax. Gold and ivory are royal monopolies. Barley, millet, and wheat are raised for domestic consumption. The chief imports are coal, signed by English, American, and Indian manufacture, wool and woolen goods, cutlery, and matches. The Maria Theresa dollar has been the current coin for more than a century, and Menelek has had pieces of the same weight coined with his own effigy. The most populous town is Ankober, in Shoa, with 7,000 inhabitants. Beneched are a race driven from Jiboutil to Harrar, to which place a telegraph has been erected from Adis Abeba, the present residence of the Negus. As the result of negotiations that have been in progress since 1891 the French minister to Rome, M. Barrère, and the Italian Minister of Foreign Affairs, the Marquis Vespasiano, signed on the 10th of July a treaty limiting the French and Italian possessions on the Red Sea littoral. The frontier line, starting from the extremity of Ras Dumeira, follows the water parting for some distance inland, and then turns in a southwestern direction so as to leave within Italian territory the caravan routes leading to As-sa'a. The treaty leaves for future settlement the question of the small islands opposite Ras Dumeira, both undertaking to oppose any attempt of other powers to occupy the islands. Capt. Ciccodicola, the Italian resident at Adis Abeba, came to a settlement of the Italian-Abyssinian boundary question with the Emperor Menelek, who agreed to the rear, is Abdurrahman Khan, who was placed on the throne in 1880 by the British after they had occupied Cabul, the capital, and driven out Yakub Khan, the son of Siere Ali, the preceding Ameer. The Indian Government has since paid an annual subsidy, first £120,000, increased in 1893 to £150,000 rupees, to enable Abdurrahman to consolidate his power and preserve a strong, united, and independent Afghanistan as a buffer state between the Russian dominions and India. The military forces of the Ameer consist of the feudal militia and his regular army of about 20,000 men. The artillery has 76 modern guns, and in the arsenal at Cabul more modern arms are kept in store, including 15,000 rifles, and cannon with modern machinery. The boundary between Russian and Afghan territory starts at a point in the Kwaaj Aman range, runs first westward to the peak of Kohimalik Siuh, southeast of the Helmund, thence northward to Zulikar, on the Heri Rud, thence northeastward to Khamiah, on the Oxus; this river it follows up, and the Panjeh, its longer, southern branch, to Lake Victoria, from which it runs eastward to a point in the Surikol mountains, which form the boundary of Chinese Turkestan. The boundary between Afghanistan and India as finally demarcated leaves Chitral, Bajaur, and Swat within the British sphere, and Waziristan, in the east, the Afghan retains Kafiristan and Asmar, with the Kunar valley. The area of the Ameer's dominions is estimated at 215,400 square miles. The population is about 4,000,000. The taxes, levied in kind, are from a tenth to a third of the produce, according to the benefit derived from irrigation. The revenue is derived, in a large measure, from $3,000,000, is subject to fluctuations. The cultivators raise wheat, barley, beans, peas, etc., as a winter crop and plant rice, millet, or maize in the summer. Fruits are abundant and fine, and are the principal food of the people. Preserved fruits are exported to India. Other exports are nuts, cotton, and hides. Imports include manufactures of wool and camels' hair, felt, silk, postins, or sheepskin coats, tobacco, cattle, hides, and rosaries. The chief imports are cotton goods, indigo and other dyes, sugar, and Chinese tea. The trade is with British India and with Bokhara and Russian Turkestan, but there are no statistics of the commerce.

At the beginning of the year a detachment of Russian troops arrived at Kushk, the terminus of the Russian railroad to the Afghan frontier, having been only a week on the journey from Tiflis. The sending of re-enforcements to the new fortress at Kushk was regarded as a menace to Herat. All the materials for a siege train to be held in readiness were imported, and a rapid advance was anticipated by the Indian Government, and the Ameer proposed to create a monopoly in postins, assafetida, almonds, and pomegranates, having already prohibited the export of horses and mules and the import of Indian salt. The tax on the exportation of sheep was placed so high that the number sent to India fell from 16,000 to 6,000 in the first year. To the representations addressed to him by the Indian Government Abdurrahman paid no attention. The Englishmen who were formerly in his service he has dismissed one after another, and the factories and arsenals go on without them. His political relations with Russia were not more intimate than those with Britain; the trade with Asiatic Russia was not checked by official regulations. In the Indian trade the Afghis campaign the Ameer has devoted himself to increasing the efficiency of his regular army. More regiments
have been raised and a reserve has been started. The export of grain has been rigorously prohibited, and large military granaries have been built and filled at Cabul, Candahar, and Herat. The transport arrangements have been completed by the purchase of many thousand horses so as to place the army on a war footing. The troops are well armed with breechloaders, thousands with magazine rifles.

AFRICA, SOUTHERN, COLONIES IN.
The Cape of Good Hope, which was first settled by the Dutch and the Huguenots in the seventeenth century, was taken from the Netherlands by the British in 1806 and was formally ceded to them in 1814. The Cape of Good Hope was formerly the residence of the original settlers who were unwilling to accept British rule migrated in 1834 and 1835, and beyond the Great Fish river, which was then the eastern boundary, founded an independent commonwealth in Natal; others crossed the Orange river, which had been declared the external boundary of the war-ravaged sessions, and in 1837 established the settlements that were declared independent and organized into the Orange Free State, which was recognized by Great Britain in 1854. In the meantime Great Britain annexed the Natal settlements, whereupon a majority of the Boer colonists abandoned their farms, who had settled on the farther side of the Vaal river, established in 1849 the new commonwealth called the Transvaal Republic, whose independence was acknowledged by the British Government in 1852. Natal was separated from Cape Colony and erected into a colony in 1856. British Kaffraria was incorporated in Cape Colony in 1885, and Tembuland, East Griqualand, and the Transvaal, between the latter years; also the harbor of Walvis Bay, on the southwest coast. Griqualand West, originally a part of the Orange Free State, was annexed by Great Britain as a result of the discovery of diamond mines in the vicinity of Kimberley, and it also now forms an integral part of the colony of Orange Free State, which was annexed to Cape Colony in 1871, but after the Basuto war it was detached and made a direct dependency of the Crown in 1884. In that year Germany declared a protectorate on the southwest coast of Africa over Damaraland, extending from Cape Frio, the southernmost point of Portuguese West Africa, to the mouth of the Orange river, extending from Walvis Bay southward to the Orange river, which forms the northern boundary of Cape Colony. Great Britain occupied the South African or Transvaal Republic in 1877 in consequence of internal dissensions among the burghers. They rebelled in 1880, expelled the British officials and drove out the garrison, defeated, the first detachment of troops that were sent against them, and a new Government in England, presided over by Mr. Gladstone, made peace in 1881 on the basis of the restoration of their independence in internal affairs, reserving the suzerainty of the Queen, including the right to maintain a British resident, the representation of the Transvaal Republic in its foreign relations, the right to move troops through the country, etc. In 1884 a new convention was signed in London, from which the word suzerainty was omitted, the old name of South African Republic was recognized once more, the British resident gave place to a diplomatic agent, and the only interference in the internal government was vetoing any treaty made by the South African Republic with foreign powers or with native tribes, six months being allowed for the British Government to approve or disapprove. Zululand was made a protectorate of Great Britain and a part incorporated in the colony of Natal in 1889, and in 1897 the rest of Zululand was annexed to Natal. A part of Bechuanaeland was occupied by British troops in 1884 and after the forcible expulsion of Boers from the Transvaal, who had proclaimed the independent republic of Stellaland, with its capital at Vryburg. In 1885 a British protectorate was declared over independent Bechuanaeland, the country still ruled by Chief Khama. The east British control was established over Zululand after the Zulu war of 1879. A portion next to the Natal border was set apart as a reserve for loyal Zulus who had aided the British in the war; the rest was restored to Cetewayo in 1883, but in 1887 about two thirds of this territory, together with the Zulu reserve, was formally declared British territory and placed under the administration of the Governor of Natal, and in 1897 the whole of Zululand and British Amatongaland were incorporated in Natal. A new republic founded by Boer trekkers in Zululand was subsequently incorporated as the district of Vryheid in the South African Republic with the Transvaal, and South Africa in 1880. By the convention of 1890 a part of Swaziland also was added to the South African Republic. All the territories north of the Transvaal, including Matabeleland, ruled by King Lobengula, with the neighboring country of Mashonaland and the territory inhabited by the Makalakas and other vasals of Lobengula, was ceded to the British on the 22nd of south latitude, east of 20th of east longitude, and west of the Portuguese district of Sofala, were declared to be within the British sphere of influence. In 1889 a royal charter was granted to the British South Africa Company, which was authorized to organize an administration for these territories, the provinces of Mashonaland, Matabeleland, and Rhodesia, or, subsequently, Rhodesia, from the name of Cecil Rhodes, founder of the company. The company was empowered to take also under its administration, subject to the approval of the Imperial Government, the regions north of the Bechuanaeland protectorate and the Kalihari region west of it, as far as the German boundary. Portugal originally claimed, by virtue of early conquests and continuous occupation more or less effective, both banks of the Zambesi river, from its mouth up to its source, and the country still farther west, reaching to the Portuguese possessions on the west coast—a continuous zone extending across the whole of the central region of Africa from the Atlantic Ocean to the Indian Ocean. Yielding, under threat of war, to superior force, the Portuguese Government in 1891 agreed to recognize as a British protectorate these regions known later as British South Africa and British Central Africa, or Zambesi, including Matabeleland, Mashonaland, and the Manica plateau south of the Zambesi; Northern Rhodesia, which included Barotseland and, north of that river the Barotse Kingdom, and all other regions as far north as the boundary of the Congo Free State. The Shire highlands and the Nyassa region, where British missionaries already were active, were included, and this district, which had been declared to lie within the British sphere in 1889, were now proclaimed a British protectorate separate from British Central Africa, or Northern Zambesia, over which the British Government extended the administrative authority and commercial privileges of the British South Africa Company. Pondoland was annexed to Cape Colony in 1894, and in 1895 the Crown Colony of British Bechuanaaland was handed over to the colonial administration.

Cape Colony.—The colony of the Cape of Good Hope has possessed responsible government since 1872. The legislative power is vested in a Legislative Council of 23 members elected for seven years and a Legislative Assembly of 79 members.
elected for five years. The franchise is possessed by all adult males able to register their names, addresses, and occupations, and further qualified by the occupation of house property of the value of £75 or the receipt of a salary of £50 or more per annum.

The Governor is Sir Alfred Milner, appointed in 1898. The Cabinet at the beginning of 1900 consisted of five members: Prime Minister, and Colonial Secretary, W. P. Schreiner; Treasurer, J. X. Merriam; Attorney-General, R. Solomon; Commissioner of Public Works, J. W. Sauer; Secretary for Agriculture, A. J. Herholdt; without portfolio, Dr. Te Water.

Area and Population. The area of the colony, including the West, East Griqualand, Tensland, Transkei, and Waaltsch Bay, is 221,311 square miles, with a population at the census of 1891 of 1,527,224. The white population was 376,987; colored, 1,150,237. Pondoland, with an area of 4,040 square miles, had in 1894 a population of 189,000; British Bechuanaland, with an area of 5,421 square miles, had in 1901 the population of 72,736, of whom 5,211 were whites. Cape Town had 51,251 inhabitants; including suburbs, 83,718. The number of marriages in Cape Colony in 1898 was 8,709; of births, 15,340; of deaths, 6,936; the number of coloured, 4,367,027. The number of arrivals from over sea in 1898 was 25,513; departures, 20,635.

Finances.—The revenue of the colony for the year ending June 30, 1898, was £7,212,225 from all sources. Of the total £2,318,100 came from taxation, £3,005,100 from services, £230,653 from the colonial estate, £185,133 from fines, stores issues, and prostitution licences. The total revenue for the year was £2,532,900, of which £1,248,700 went for interest and sinking fund of the public debt, £2,058,878 for railroads, £334,338 for defense, £334,806 for police and jails, £176,210 for the civil establishment, and £1,349,143 under loan acts. The expenditure for the year ending June 30, 1900, was estimated at £6,664,044.

The budget statement of Sir Gordon Sprigg showed a deficit of only £69,000 in the accounts for the year ending June 30, 1900, the late Government having reduced expenditure on having its proposed income tax rejected. For the next year the estimates were fixed at £2,252,000, and expenditure at £2,252,000, or a surplus of £2,582,000 of permanent expenditure on harbor works, rolling stock, irrigation, and local loans to be raised by borrowing.

The public debt on Jan. 1, 1899, amounted to £28,383,922, including £3,106,477 of guaranteed loans for harbor boards and other corporate bodies.

Commerce and Production.—The crop of wheat in 1898 was 1,950,831 bushels; of oats, 1,447,353 bushels; of tobacco, 3,934,277 pounds; of mealies, 2,060,742 bushels; the production of wine, 4,801,556 gallons; of barley, 1,387,392 gallons; of raisins, 2,577,900 pounds. The number of fruit trees in the colony, including pears, apple, apricot, apple, pear, plum, fig, lemon, orange, and nectarine, was 4,155,624. The number of cattle was 1,201,522; of horses, 382,010; of mules and donkeys, 85,060; of sheep, 12,616,883; of goats, 5,316,701; of hogs, 239,451; of ostriches, 267,093. The wool was 6,293,500 pounds; the oil cake, 8,115,370 pounds; the wool of mohair, 8,115,370 pounds; of rich feathers, 294,733 pounds; of butter, 2,623,329 pounds; of cheese, 35,729 pounds. The total value of imports in 1898 was £16,682,438, of which £15,201,940 represent merchandise and £1,420,489 specie. The exports of colonial produce were £22,112,483; the total exports £35,318,701 in value. The chief exports of colonial produce were gold of the value of £15,394,442; diamonds, £4,506,597; wool, £1,706,740; ostrich feathers, £748,565; mohair, £647,548; hides and skins, £548,475; copper ore, £262,830; cereals, £18,602; wine, £15,043. The largest classes of imports were textiles and apparel for £4,367,927 and food and drinks for £3,701,849. Of the total exports £23,969,425 went to Great Britain, £1,048,120 from British possessions.

The beginning of the war in South Africa was followed by serious invasion, but to the normal movement of commerce in the British colonies as well as in the Boer republics, of which Cape Colony is the principal outlet. The Boers and their sons had to go on commando, leaving a great part of the abundant crops to perish in the ground. In Cape Colony the call for volunteers and the disorganization caused by invasion or by the fear of invasion, which had the effect of increasing the value of wool, was to some extent lessened by the presence of the Transkei, inhabited by a less degree. By the end of 1899 there was a heavy fall in the principal exports and general depression was felt in trade. Later the war began to create an immense trade of its own, and exports of most products were stimulated, including mohair, ostrich feathers, copper ore, and ship timbers, the amount of British trade being £834,527.

The export of diamonds, however, was much diminished, showing a loss of £1,579,000, and there was a reduction in the wool export, so that the total value of exports for the year showed a decrease of £1,176,000. The provisioning of the British troops more than supplied the loss on the wool export, and the demand for ship timbers and trade in timber and mining machinery from the United States and the other requirements of ordinary times, which is destined to grow in a rapid ratio after the return of normal conditions. Australia and New Zealand furnished a large proportion of the frozen meat and butter required to feed the British forces. Australia sent 3,000 tons of corn beef before January, 1900, and, the supply becoming exhausted, 1,000 tons were ordered in the United States. The supply of cattle on the hoof in South Africa proving insufficient, cargoes were brought from the Argentine Republic, which also sent cavalry horses. Horses were bought in the United States and in Hungary, and Hungarian horses having been found too heavy and not sufficiently hardy. Mules for transportation were bought in the United States. The oats of the British Islands were too tender and unfit to stand the climate, and preference was given to Russian oats, and after them to American oats and wheat. Feeding could not be got from New Zealand. Canada supplied compressed vegetables and 3,000 tons of hay, and thousands of tons of oat hay came from Australia and alfalfa from the Argentine Republic. Canned meats could not be supplied in sufficient quantities by American packers, but 2,000 tons of beef sent from England were American canned rebranded.

Navigation.—The number of vessels entered at all ports during 1898 was 1,045, of 2,812,966 tons, of which 726, of 2,445,572 tons, were British; the number cleared was 1,065, of 2,789,989 tons, of which 726, of 2,401,772 tons, were British. In the coaster trade 1,258, of 3,937,688 tons, were entered and 1,293, of 3,927,311 tons, were cleared. The shipping belonging to the colony on Jan. 1, 1899, comprised 28 steamers, of 4,023 tons, and 7 sailing vessels, of 4,513 tons.

Railroads, Posts, and Telegraphs.—The railroads belonging to the Government had on Jan. 1,
AFRICA, SOUTHERN, COLONIES IN.

1899, a total length of 1,990 miles, not including 330 miles not yet completed. Of private railroads there were 358 miles. The cost of the Government lines was £20,222,263, an average of £10,162 a mile. The receipts for 1898 were £2,933,990; expenses, £2,012,390. The number of passengers carried was 1,013,432; weight of freight, 1,507,605. The postal traffic in 1898 was 23,326,379 letters, 9,852,080 newspapers, 750,568 postal cards, 3,303,400 books and samples, and 525,660 parcels.

The length of telegraph lines on Jan. 1, 1899, was 7,224 miles. The number of dispatches in 1898 was 2,521,082; receipts, £145,438; expenses, £247,438.

The Cape Rebels.—The invasion of Cape Colony by Republican commandos was followed in the districts bordering on the Orange river and those north of that river by the adhesion of a large proportion of the inhabitants. Whenever a commando entered a town the Free State flag was hoisted, a meeting was held in the courthouse or the market place, and a proclamation was read annexing the district. The commandant then made a speech, in which he explained to the people that they must thenceforward obey the Free State laws, though for the present they would be under martial law. A local tawdros was appointed by the commandant; those who refused the rule were given a few days in which to leave the district. Their property was often commandeered, and those who stayed were commandeered themselves besides giving up whatever of their possessions were required for military purposes, and were compelled to join the Boer commandos. With the fifth report of the Cape Colonists becameburghers of the South African Republic, and joined the Transvaal army immediately before or just after the outbreak of hostilities. When the Free State commandos encamped on their own side of the Orange river preparatory to their invasion of Cape Colony other thousands from the northern and western districts joined them. And when they crossed the river and proclaimed the annexation of the northern part of the colony they were augmented by at least their own numbers of colonial Boers and sympathizers. In Vryburg, Barkly West, and other districts north of the Orange river as many colonists volunteered in the Boer ranks as sympathizers as in the older parts of Cape Colony. Sir Alfred Milner calculated that in January, 1900, more than 10,000 Cape Commandos were fighting against the British, and the rebellion had not yet reached its height. It broke out spontaneously in places where no Boer commandos had appeared, and was spreading secretly when a vigilant military policy aided by loyal colonists put a stop to the movement in the districts still in British occupation. When the invasion of the Free State by Lord Roberts drew away most of the burghers for the defense of their own soil, and when the British occupation of Bloemfontein convinced the majority of the rebellious colonists of the hopelessness of their cause, the Boers and the gradual renunciation of the annexed districts by the British forces rendered them powerless to serve the cause further in Cape Colony, the bulk of them returned quietly to their homes or made their submission, and only a comparatively few ardent ones marched northward with the retreating forces. The treatment of civilians of the treatment to be extended to those who had borne arms against the Queen or given active aid to the enemy seemed one of vital importance to the Cape ministers, and it was one that could not be solved without the concurrence of the imperial authorities. They submitted a minute, which Sir Alfred Milner forwarded on April 28, proposing the appointment of a judicial commission, comprising two judges of the Supreme Court and a barrister acceptable to the Secretary of State, for the trial of persons implicated in the rebellion, the commission to be vested with the powers of both judge and jury and to decide on a verdict by a majority of one. A few days later they sent an appeal for clemency from the leaders of the offenders, whose trials would mark the magnitude of their offense, and whose punishment would serve as a deterrent, pointing out that the insurrection was a consequence of invasion and generally subsided as soon as the invading force was withdrawn, and that it was accompanied with few, if any, cases of outrages. A few days later, a great destruction of private property. The interests of sound policy and public morality demanded, instead of a general proscription of the misguided men who joined the ranks of the rebels, that the Imperial Government should act as an issue of grace a proclamation of amnesty for all persons chargeable for high treason except the leaders selected for trial. The agitation and unrest prevailing in the colony was due to uncertainty regarding their fate, and the future well-being of the colony depended on a policy of well-considered clemency, which would have the best possible effect on the prevailing Rebellion, which had shown commendable self-restraint, and would help to unite the white races, between which harmony was a necessity in view of the large and increasing barbarian population. The rebellion was of a milder type than the one in Lower Canada, where moderation was adopted with the happiest results in 1838. Mr. Chamberlain, in his reply, argued that amnesty would place rebels in a better position than those who have risked life and property in the determination to remain loyal, and while sympathizing with a policy of clemency to rebels he held justice to loyalists to be an obligation of duty and honor, and that it was necessary in the interests of future peace to show that rebellion can not be indulged in with impunity or prove profitable to the rebel even if unsuccessful. Even those who were tools of others who had deceived them should learn individually that rebellion is a punishable offense. He distinguished between different categories of rebels; those who committed outrages or footed property; those who have committed acts contrary to the usages of civilized warfare, such as abuse of the white flag, firing on hospitals, etc.; those who have openly and willingly waged war against the imperial forces; those who have confined themselves to aiding the enemy by giving information or furnishing provisions; and those who can prove that they have acted under compulsion. Recognizing the difficulty of indicting for high treason all who had part in the rebellion, he suggested the expediency of investigating either the proposed judicial commission or a separate court, with the names of persons implicated in the rebellion under these various heads: the first three categories to be tried for high treason before the judicial commission, the fourth and fifth to be fined and disfranchised on pleading guilty, and the last to be merely disfranchised. The Secretary of State wrote to the Canadian Government that the Canadian rebellion a precedent because it was a rising in time of peace for the remedy of grievances and was not a formidable affair, whereas the Cape Colonists had gone over to the Queen's enemies and entailed damage and heavy losses on the troops. As to the duration of disfranchisement, he proposed that it should be for life. Mr. Chamberlain did not wait for the full text of the proposals of
the Cape ministers, but on receiving the telegraph summary made known at once the uncompromising policy of the Imperial Government. Not one of the ministers was willing to submit to the Cape Parliament a measure of the character demanded by the Secretary of State. Premier Schreiner and Attorney-General Solomon were willing to disfranchise the rebels for five years and to indemnify the loyalists for their losses, but they could not get any of their colleagues nor more than half a score of their followers even to agree to that measure of punishment for any except ringleaders. The Afrikander Bond was willing to accept a bill indemnifying the Government and the military authorities for the execution of military law, and compensating for property commandeered by the Boers, but only on condition of a full amnesty to the rebels who furnished a guarantee of good behavior. Ministers Merriman, Sauer, and Te Water vehemently opposed the Premier’s proposed compromise, and saw no ground for punishing men for taking up arms against what they considered a righteous cause. The deadlock in the Cabinet could not be broken. Mr. Schreiner, who before the war incurred the animosity of the English party through his efforts to bring about an understanding and preserve the peace of South Africa, had during the progress of the war given deep offense to the more earnest Afrikaners, and they were of the opinion that the qualified and partial appointment of the High Commissioner, in taking off the meat duties for the particular benefit of the refugee Uitlanders and to the detriment of the colonial producers, and for recruiting bodies of troops in the colony to fight on the British side, and especially for what they considered a native levy levied by the High Commissioner, might be considered a lease of the rights of the colony to the British and colonial interests. Mr. Solomon contended the majority of the supporters of the ministry when, instead of interfering to secure the constitutional rights of citizens who fell into the hands of the military, he gave full consent to the operations of martial law. Some of the acts of the military tribunals seemed monstrous to the Afrikanders, and the prospect of obtaining a bill of indemnity ratifying the acts done and sentences passed during the period of martial law was not promising. The courts-martial had sentenced men to do convict labor for five or ten years in districts where they had been held in honor and had sanctioned the looting of homesteads by the Boers and the imposition of tax on them as if it was the property of rebels. Boer farmers were arrested wholesale, herded together for weeks in noisome cells, and finally released for want of evidence. The evidence of Kaffirs was taken against their masters. The secretary and other members of the South African League and some of the Johannesburg reformers went into the rebel districts as they were reoccupied and took the lead in the investigations, a volunteer committee for what the Dutch called smelting out rebels. No sentence or act of military courts or military officers, if justified only by martial law, is legal according to English law, and officers who carry out the decrees of military tribunals are liable to prosecution for wrongful assault or illegal detention unless the proceedings are ratified by a special act of the Legislature. The Dutch colonists regarded many of the sentences and acts of confiscation to which their kinsfolk were subjected as barbarous, and wished to preserve for them the right of appeal. The charges of treason brought against the members of the Cape Parliament reduced the Bond majority in the Assembly to only 4 votes. Mr. Schreiner attempted to form a coalition ministry, having the assistance of Mr. Rose-Inness, who urged the Progressives to support Mr. Schreiner in a policy of moderation and conciliation, giving the special tribunal full discretion in punishing the ring-leaders, but subjecting the others to only temporary disfranchisement. The South African League, which controlled the Progressive party, would not consent to a coalition with the moderate members of the Bond, and the Progressive leaders, expecting a speedy termination of the war, went for terms by which they could retain the responsibilities of office, since the support or even the abstention of Mr. Schreiner’s handful of followers would give them a majority to start with. On June 13 Mr. Schreiner, seeing the attitude of the Progressives and the impossibility of his forming a coalition Cabinet and hoping that Mr. Rose-Inness could form one, urged the ministers of the moderate party to sanction the formation of a new Coalition Cabinet composed of the dissentient ministers and endeavoring to reconstruct his Cabinet by the inclusion of moderate Progressives, placed the collective resignation of the ministry in the Governor’s hands. Mr. Schreiner, although the parliamentary leader of the Bond party, never identified himself with the principles of the Bakeney. As the Schreinerites progressed he co-operated more heartily with Sir Alfred Milner, his chief anxiety having been throughout to save the colony from civil war. A conciliation movement that was started by the Bond after the capture of Cronje at Paardeberg left little doubt of the ultimate defeat of the republics, which had for its objects the presentation of the case of their resistance of the war, and the indemnity for all who had taken part in the rebellion, received no countenance from Mr. Schreiner nor from Mr. Solomon, who proposed to appoint a judicial commission to visit the rebel districts and put the rebels on trial. At a conciliation congress at Graaff Reinet the Bond leaders demanded the unqualified independence of the colonies, the repeal of the South Africa Act, the seven-year treaty, and the withdrawal of British troops from South Africa. This led to Mr. Schreiner’s convoking a conference of the party, at which his policy was condemned by three fourths of the delegates. The resignation of the ministry followed necessarily this action of the caucus.

Sir Alfred Milner accepted Mr. Schreiner’s resignation and called on Sir Gordon Sprigg to form a ministry. The Progressive leader first proposed to Mr. Solomon that he should continue in the office of Attorney-General, but it was finally decided that he should form a purely Progressive ministry. In this he succeeded, and on June 18 the new ministry was formed of Mr. Milner and Treasurer, Sir J. Gordon Sprigg; Colonial Secretary, T. L. Graham; Attorney-General, J. Rose-Inness; Commissioner of Public Works, Dr. Smartt; Secretary for Agriculture, Sir Pieter H. Faure; without portfolio, J. Frost. The chief task of the new ministry, that of framing the laws dealing with the rebels, was thus given to Mr. Rose-Inness, who enjoyed the confidence of the moderate Afrikanders. Even after deducting the members of the Bond party who were in prison on charges of treason or had escaped from South Africa the Progressives were in a minority of 5. Parliament was opened on July 29. The Attorney-General brought in a comprehensive bill for the indemnification of acts done in good faith under martial law, and confirming the sentences of the military tribunals for the punishment of rebels, and for the compensation of loyalists who had sustained direct losses during the war through military operations or the acts of the enemy or of rebels. The bill also provided new Courts of Confinement. Mr. Solomon’s measures just as he had drafted them. The special tribunal with the powers of a judge and the functions of a jury was to try only ring-leaders. The sentence of disfranchisement was to be pronounced by commissions with quasi-judicial
powers, and not against any who could prove that they had gone into the rebel ranks under compulsion. The procedure of the commissions was to cite all who had delivered up their arms or who were alleged to be rebels and disqualify them from voting or holding office for five years unless they appeared in court and proved their innocence. The Attorney-General was empowered to indict before the special court after preliminary investigation by the military authorities, without requiring that preparatory examinations should be taken in the usual manner; but if satisfied that the investigation was insufficient he could direct a supplementary investigation. The court could impose any penalty that a judge of the Supreme Court was entitled to impose for high treason. Its object was the trial and punishment only of those rebels who had been ringleaders in instigating rebellion or who were sufficiently influential in their districts to have seriously encouraged rebellion by their example. Martial law had already been suspended in three districts when Mr. Merriman offered a resolution for its general repeal on the ground that its continuance after the termination of armed resistance and the reopening of districts, would conflict with inherent rights of British subjects. He described the rule of martial law in Cape Colony as a reign of terror, and said that the districts which had been occupied by the enemy were now overrun by informers who from political motives were anxious to proscribe the entire Dutch population. When the bill was brought forward in the Cape Assembly, the original resolution, said that it would not consider a defeat on the amendment as in any way implying that it had not got the confidence of the house. Its adoption, therefore, did not upset the ministry, which carried through the treason bill after a long debate. Dr. Jameson said that his Government was advised by a military officer and Gen. Brabant, whose cavalry had done more than the British troops to turn back the tide of rebellion, was there to defend the actions of his partisan troops. Cape Colony raised altogether 24,000 volunteers to fight on the British side, more than all the other colonies combined. The act to punish rebels, compensate loyalists, and ratify martial law was the only legislative measure of the session. Mr. Schreiner explained that his ministry had not demanded amnesty, as that was the prerogative of the Crown, and that the Imperial Government had modified its first proposals at the suggestion of the ministers. He offered an amendment, which was carried, enabling the Crown to grant amnesty at any time within five years if it were sanctioned by the Crown and by the Cape Parliament. The rebels themselves were generally willing to accept disfranchisement when it saved them from going to prison, but the Bond politicians asserted that it would make of South Africa a second Ireland in the eyes of the world; they believed that disfranchisement of 10,000 citizens would perpetuate racial feeling and the animosities of the war.

Basutoland.—The Basutos, whose country lies between Cape Colony, the eastern part of the Orange Free State, and Natal, are governed by a resident commissioner, whom the British Government appoints on the recommendation of the High Commissioner for South Africa. The area is 10,293 square miles, with an estimated population of 250,000. The natives raise sheep, horses, and cattle and grow mealies, wheat, and Kaffir corn. The imports in 1898 were £100,280 in value, and exports £138,900. The revenue, raised by ad valorem duty of 10 per cent., and a contribution from the Cape Government of £18,000, amounted in 1899 to £46,847; expenditure, £46,417.

Bechuanaland Protectorate.—The Bamangwato under Chief Khama, the Bakhatu under Lenchwe, the Bangwakete under Balotho, the Bakwena under Sebele, and the Bamaliti, under Ikaneng have been governed since 1895 by a Resident Commissioner, Major H. J. Goold Adams. The area of the protectorate is 213,000 square miles, with a population estimated at 200,000.

Natal.—The colony of Natal has had a modified form of responsible government since 1893. The Legislative Council contains 30 members, including 1 from Zululand, elected under a property qualification for four years. The Legislative Council contains 12 members, including 1 from Zululand, appointed by the Governor for ten years. The Governor at the beginning of 1900 was Sir Walter Francis Hely-Hutchinson. The ministry, consisting of 6 members, contains besides the following members: Premier and Minister of Lands and Works, Lieut.-Col. A. H. Hine; Attorney-General and Minister of Education, H. Bale; Secretary for Native Affairs, F. R. Moore; Colonial Secretary, C. J. Smythe; Treasurer, W. Arbuckle; Minister of Agriculture, H. D. Winter. Money bills must be passed in both houses, and those which have been rejected but not amended by the Council; but, unless recommended by the Governor, no money bill can become law during the session in which it is passed. The assent of the Governor is required to all legislation, and under certain conditions this may be revoked within two years. The area of the colony, including that part of Zululand that has been annexed, is estimated to be 35,019 square miles. In a total population of 902,365 there are only 60,000 whites, in part the descendants of the early Boer settlers, but mainly of British origin or extraction. Labor is performed by natives and bumptious Chinese.

Finances.—The revenue for the year ending June 30, 1898, was £1,904,315; expenditure, £1,812,318. The chief items of revenue were £1,000,323 from railroads, £385,813 from customs, £21,893 from excise duties, £30,094 from sales of land, £25,625 from telegraphs, £23,428 from stamps and licenses, and £123,560 from the native hut tax. The chief items of expenditure were £336,350 for railroads, £92,947 for public works, and £61,054 for defense, besides £507,464 from loans. The public debt on June 30, 1898, amounted to £3,019,143.

Commerce and Production.—The chief cultivated commercial crop is sugar, of which 581,533 hundredweight were produced in 1898. Tea is also grown for export, the crop in 1898 amounting to 1,037,500 pounds. Europeans had 157,370 acres under cultivation in 1898, natives 300,232 acres, and Indians 24,725 acres. Europeans owned 155,456 cattle, 98,510 goats, 543,619 sheep, and 32,771 horses; natives possessed 122,077 cattle, 351,528 goats, 56,403 sheep, and 24,611 horses. The coal raised in 1898 amounted to 387,811 tons. The total value of imports in 1898 was £5,529,216, about 70 per cent. coming from Great Britain. The value of exports was £2,106,896, of which £87 per cent. went to India. Imports, clothing amounted to £308,072; hardware, £492,818; flour and grain, £268,101; iron manufactures, £239,046; leather manufact-
AFRICA, SOUTHERN, COLONIES IN.

tures, £246,054; cotton goods, £110,677; woolens, £38,673; machinery, £306,035; wines and liquors, £106,741. Of the exports the chief articles in value were wool for £365,479, hides and skins for £184,560, coal for £125,606, gold for £40,653, mohair for £36,541, and bark for £30,929. The number of vessels entered during 1898 was 690, of 1,264,591 tons; cleared, 687 vessels, of 1,264,591 tons.

The shipping registered in the colony consisted in 1898 of 14 steamers, of 2,495 tons, and 14 sailing vessels, of 699 tons.

Railroads. The railroads within the colony have a total length of 503 miles, all belonging to the Government. One joins at Harrismith a railroad running through the Orange Free State, and one runs from Durban through Pietermaritzburg to the Transvaal border, whence it extends through Johannesburg to Pretoria, the total distance being 511 miles. The cost of the Natal railroads was £6,500,621. The receipts for 1898 were £386,417; expenses, £589,815.

Effects of the War.—The colonists of Natal, being mainly of English extraction, were most eager for the war with the Boers, anticipating a brilliant political and commercial future for their colony in the event of victory by British arms, hoping that by the relinquishment of the Transvaal and the Orange Free State the Boers on their part made the conquest of this land, which was once theirs, and would give them access to the sea, their first object, as in all their history they have sought a seaport of their own and railroad communications under their sole control to the benefit of the political and economic independence which they wanted. Thus political rather than strategic considerations made Natal the theater of the Transvaal war in its early stages, and political hopes as well as patriotic and racial feeling moved the colonists of British descent to take an active part in the contest, while those of Boer descent, the sons and grandsons of the Dutch emigrants who first won the country from the Zulus after a heroic campaign and then had it wrested from them by a British armed expedition, gave aid and comfort to the Boer invaders. Refugees from Johannesburg flocked into Maritzburg and Durban, and had to be fed by the authorities. In Natal, 8,500 of the colonists of Natal, were accepted as volunteers in the South African corps, which the British commanders were in the beginning reluctant to employ, but came to depend upon more and more. Before the tide of war turned Boer commandos marched through Natal at will, threatening even Maritzburg; and when British re-enforcements were poured in for the relief of Ladysmith, the corner of Natal of which the besieged town was the center became the seat of military operations, and from there down to the sea were stretched the British camps. Bodies of Boers rode through the parts of the colony that were unmarshaled and through Zulu land. They commanded a sense of what they might do more harshly as the war became more bitter and their necessities and perils grew greater. Still Natal was not so great a sufferer from the vindictive reprisals and barbarities of the war as other parts of South Africa, where later phases of the struggle were enacted. When the armies faced each, they commanded a sense that they were going to gain the country for their own, and British and Boers alike because they were vying with each other in affording to the world an example of humane warfare. Nevertheless Natal, being for the longest period the field of operations and the camping ground for the main armies, suffered as great loss and disturbance as the scenes of the last great war. The great desire of the colonists was to leave their homes and abandon their property. Many of the volunteers and police lost their lives in repelling Boer raids. When the British generals began to select colonial troops for the most difficult and dangerous duties the casualties among them increased more rapidly than in the Boers because of the larger number of British colonists being selected for service. The British soldiers were more skilled in organization, strategy and intelligence. The Government suspended all public works, and yet the revenue was far from sufficient to defray the expenditure, which necessarily increased in consequence of the war.

The ministers were compelled to apply to the Imperial Government for temporary financial support, which was promptly accorded. The Zulus were kept into the financial condition of the colony is in prospect, and after the conclusion of the war Natal, which, owing to its peculiar labor conditions and the great preponderance of the native population and paucity of whites, has never received the attention that is given to larger British communities, the NATAL colony, no less than those, has made an improvement in its political and financial position to result from the determined and unswerving support the colony has afforded the Imperial Government during the war and the sacrifices suffered by the colonists. The parliamentary session was opened on May 3. A bill for more effectively dealing with personal acts of treason was directed against the Boer colonists, who are not only numerous in the higher northwestern part of the colony. Another bill was passed in order to indemnify the Governor, the ministers, and the military in respect of acts not protected by the existing laws, but which were rendered necessary through the enforcement of martial law and the suspension of the writ of habeas corpus. Natal was kept quiet during the war by the admonitions they received from both the British and the Republican authorities. The Swazis, who are by race and customs a branch of the Zulu nation, were handed over to the administration of the South African Republic in 1894, having previously been recognized as being of Natal. Natal was thus relieved of the annoyance of a joint British and Boer tutelega, a committee of Boers and British traders looking after the interests of the whites, who numbered from 900 to 1,200, while of the natives there are from 40,000 to 50,000, occupying a country about 8,500 miles in extent. Under Boer sovereignty the Swazis were governed by the native rulers according to their own customs. When the Anglo-Boer war broke out the burghees, who use their farms in Swaziland for winter pasturage and generally have their homes elsewhere, left the country to go to the war. In October, 1899, Gen. Schalk Burger went to the king's kraal and told him that the Transvaal Government handed back the country to the natives to use as they thought fit. A few days later the British consul brought a message from the High Commissioner admonishing the natives not to interfere in the war nor to kill off one another, as they sometimes do in intestine feuds when the restraint of a white authority is not enforced upon them. The outstanding feud between the king and the old queen, she having always been a partisan of British predominance and having lost power and prestige by the relinquishment of the country to the Transvaal, while the king was a friend of the Boers. The queen had her devoted followers in the nation, but they were not strong enough to dispute the
authority of the king, at any rate as long as the whites remained in the country. A month after the visit of Schalk Burger the king died from some cause and the queen suddenly acceded to power. She nominated her son Isitso to be king in succession to Ngwane, and immediately began to kill off other old adherents and all possible rivals to her son in order to secure his position against the coming of the British. Ngwane succeeded his father in 1889, and under white tutelage considerable advancement toward civilization was made during his reign. After his death the queen established herself in the royal kraal about 9 miles from the capital, assumed absolute power, and after her enemies were disposed of revived all the savage customs that existed many years before.

Rhodesia.—The order in Council published on Nov. 25, 1898, transferred the government of Southern Rhodesia, formerly intrusted to the High Commissioner for Company, to a Resident Commissioner, appointed by the British Colonial Secretary, assisted by an Executive Council, consisting of the Resident Commissioner, the Administrators of the two provinces, and not fewer than 4 members appointed by the British South Africa Company with the approval of the Secretary of State which the Senior Administrator is president, composed of the Administrator of Matabeleland, the Resident Commissioner, 5 members appointed by the British South Africa Company and confirmed by the Secretary of State, and 4 members elected by the registered voters. The legislative period is three years. Only the inhabitants of the territory will obtain the force of law when approved by the High Commissioner, but may be annulled within a year by the Secretary of State. There is a Secretary for Native Affairs appointed by the High Commissioner, and under the direction of this secretary are native commissioners. The military police are under the direct control of the High Commissioner.

The area of Southern Rhodesia is 174,728 square miles. It is divided into the province of Matabeleland, which has an extent of 60,728 square miles, with a population of about 155,000, and the province of Mashonaland, which has an estimated area of 114,000 square miles and an estimated population of 100,000. The province of Zambesi, which was purchased from the native king of the Zambesi to the southern end of Lake Tanganyika, whence it will run northward through German East Africa into Uganda, and eventually connect with the Egyptian line from Cairo to the Soudan. The Rhodesian Railroad is operated by the Cape Government. The net earnings for the year 1898 were £299,390, not including a subsidy of £20,000 from the Imperial Government and £10,000 from the British South Africa Company. Another railroad enters Mashonaland from the Portuguese port of Beira and has been completed to Salisbury, with an extension to Buluwayo in progress. The Rhodesian post office in 1898 dispatched 706,751 letters and packages to places in South Africa and 253,662 to foreign destinations, besides 247,311 newspapers and parcels and 38,857 registered articles. The postal receipts were £18,197; expenses, £20,364. The telegraph system of Rhodesia embraces 2,536 miles of line. The number of private telegraph offices in Rhodesia, both in the Central Province and in Buluwayo, is 5,652 from over seas; dispatched, 79,798, including 6,156 cable messages. The revenue from telegraphs was £23,278; expenses, £40,000.

Africans, Southern, colonies in.

The British South Africa Company, which has issued £4,375,000 of capital stock and £125,000 of debentures, derives revenue from mining, trad-
Portuguese East Africa. The Portuguese possessions on the east coast of Africa have an area of about 301,000 square miles, with an estimated population of 3,120,000. Mozambique, Zambezia, and Lourenço Marques are the chief provinces. The Manica and Sofala regions in the south are administered under a royal charter by the Mozambique Company and the district between the Rovuma, Lake Nyassa, and the Lurio in the Nyasa Company. Inhambane is now under the colonial administration, and Gazaland, where disturbances have occurred, is governed as a military district. The revenue for 1884 was estimated at $2,322,326, and expenditure at $3,954,765. The imports at the port of Mozambique for 1898 were valued at $1,174,450, and exports at 1897 at $1,160,751; imports at Quimilane in 1886 at $67,557, and exports at $71,533; imports at Beira at $911,163, exports at $310,106, and transit trade at $176,606; imports at Chinde at $379,275, and exports at $550,358; imports at Lourenço Marques at $751,931, and exports at $2,989,787. The line from Lourenço Marques 57 miles to the Transvaal border, and thence 290 miles to Pretoria. The Beira Railroad has a length of 283 miles in Portuguese territory and is continued from the frontier of British South Africa to Salisbury. There are 950 miles of telegraphs. The colonial military force consists of 1,725 European and 5,600 native troops. The Beira Railroad was the outcome of an agreement made between Great Britain and Portugal on June 11, 1891, mainly for the purpose of fixing the respective frontiers in consequence of the occupation of Mashonaland and Matabeleland by the British South Africa Company. The frontier question was not entirely settled at this conference, and the Portuguese Government undertook to construct a railroad from the frontier to the sea at Beira, and agreed not to impose any transit duties higher than 3 per cent. The concession for the railroad, originally granted to the Mozambique Company, was transferred to an English syndicate, which completed the line up to the frontier at Umtali in July, 1896. From there to Salisbury, a distance of 170 miles, the line was constructed with guarantee of interest from the British South Africa Company. The journey from Beira to Umtali takes two days, as the service is very slow. When the British military authorities were threatened with the loss of territory by Sir Evelyn Baring being reduced by Sir Herbert Vivian to Rhodesia to march to the relief of Mafeking after the failure of the force that attempted to advance from the south after the siege of Kimberley was raised, a request was presented to the Portuguese Government to allow the troops to be transported over the Beira Railroad. The Boer government's protest against the proposed violation of neutrality, intimating that they would regard permission for the passage of British troops through Portuguese territory as tantamount to a hostile action. No other Government supported their objection, and the Portuguese Government, while denying any hostile intention against the Boers, insisted that by treaty with England Portugal was bound to permit the passage of British troops. This right of way was stipulated as one of the conditions under which Great Britain recognized Portuguese rule in the Beira territory in the extension given to it in the Anglo-Portuguese agreement. A secret Anglo-Portuguese convention respecting the neutrality of Portuguese possessions in Africa was made at a time when Portugal was in financial difficulties and when the two governments were disposed to guarantee the success of a loan which might be secured on the colonial customs receipts.

Delagoa Bay Award.—After the confiscation of the unfinished Delagoa Bay Railroad by the Portuguese Government the American and British governments, on behalf of contractors and bondholders, made a protest, and as the result of negotiations it was agreed to refer the controversy to the arbitration of the Swiss Federal Council. The Swiss Governments at first refused to appoint a tribunal in June, 1891. This tribunal did not deliver its judgment till March 29, 1900. The original charter for the railroad from Lourenço Marques to the Transvaal frontier was granted in December, 1883, to Col. Edward McMurdo, an American citizen, who in May, 1884, organized a Portuguese railroad company. They signed a convention with the Portuguese Government by which it agreed, as soon as the railroad should reach the frontier, to continue it to Pretoria. By the terms of the McMurdo concession the company had the right to fix the rates to be charged on the railroad and to operate the same line from that frontier to the Limpopo, and the Government exercised its reserved right of purchasing the line after thirty-five years. The Portuguese Government bound itself not to construct or permit a competing line within 100 kilometres on either side. The absolute right to fix tariffs granted to the American concessionaire was objectionable to the Transvaal Government, which also claimed the right to run a line from the Transvaal Government's provisional concession for a tramway to be built in case the Delagoa Bay Company failed to complete the line to the frontier within a reasonable time, and to be used for the conveyance of passengers and freight if the company would not come to an agreement with the Transvaal authorities. The American company and the Swiss tribunal's subsequent action of the Portuguese Government was attributed. The frontier was assumed to be about 80 kilometres from the coast, but it had never been fixed. The Government finally settled on a line and demanded of the company that the railroad should be completed up to it within a certain time. The company protested that the period was too short. Nevertheless as soon as it expired the Portuguese Government confiscated and took possession of the railroad, which it completed and has since operated in conjunction with the Dutch company that built and operated the main part of the line in Transvaal territory. The English company applied to the British Government for its assistance and the widow of Col. McMurdo, the original concessionaire, he having died in the meantime, applied to the American Government. In accordance with the agreement concluded in 1891 the three arbitrators were to determine the amount of compensation to be paid. The claimants were representing a considerable net for the seizure of the railroad and the cancellation of the concession, which included a considerable grant of lands. The long delay was charged by the claimants to the arbitrators, while the latter said that the parties to the suit filed such a mass.
of documents and raised so many difficult and complex questions requiring expert opinion and local investigation that they could not complete their task earlier. The decision was a voluminous document. The tribunal condemned as arbitrary and illegal the action of the Portuguese Government in seizing railroad property under the terms of the charter. The amount of damages awarded to the claimants was only about a third as much as they contended for, but on the other hand it was three times as much as the Portuguese Government had offered in settlement. In addition to £28,000 sterling paid in by Portugal on account of the beginning of arbitration, the arbitrators undisputedly directed Portugal to pay over to the British and American governments the sum of 15,314,000 francs, with simple interest at 5 per cent. from June 25, 1889, the date of the seizure of the railroad by the Portuguese authorities. The costs were directed to be borne in equal shares by each of the three parties to the suit, and the award to be divided between Mrs. Murdoch and the British bondholders in accordance with a scale of distribution to be drawn up by the claimants themselves. In fixing the amount of the award the arbitrators took into account the capital actually invested in the railroad by the company and the capital invested since 1850 by the Portuguese Government. The railroad was thirty-five years old and the price that Portugal would have to pay for the railroad at the end of that term, which was taken to be twenty times the estimated average profits for the last seven years. The total capitalized value was credited to the company and to the Portuguese Government in the proportion between their respective contributions of capital. The arbitrators refused to take into consideration the market value of the bonds and shares at the time of the confiscation or to grant exemplary damages against the Government for its breach of contract, for which the unstable financial condition of the company afforded some excuse.

Angola.—The Portuguese territory on the southwest coast of Africa is divided into the districts of Congo, Loanda, Benguela, Mossamedes, and Lunda. The area is 484,800 square miles, with a population estimated at 4,119,000. The revenue for 1900 was estimated at 1,973,111,111, and the expenditure for the same year was estimated at 5,280,000. The revenue from the gold fields in 1897 were valued at 6,800,000 milreis; the exports, chiefly coffee and rubber, at 6,577,791 milreis. Wax, oils, coconuts, and ivory are minor exports. Sugar is grown for the distillation of rum, and cattle do well on the higher elevations. Gold, petroleum, iron, copper, and salt are found in considerable quantities. Fish are caught and preserved. The Mossamedes Company, formed with German capital, has a concession for cattle growing, fishing, and mining throughout a large region, including the gold field discovered in Cassinga.

German Southwest Africa.—The German possessions in Southwest Africa have a total area of 822,450 square miles, with a native population estimated at 200,000 and 1,840 Europeans, of whom 1,557 are Germans. The European military force numbers 761 men. A concession for the coloniztion of the lands in the north that are adapted for grazing has been granted to a German company, and the Government offers to advance 4,000 marks per annum to each settler. From the new harbor at Swakopmund a railroad is being constructed to Windhoek. Over 80 miles were completed before the end of 1899, and an imperial subsidy of 2,300,000 marks was granted for 1900. The expenditure for 1899 was estimated at 7,479,000 marks, of which the Imperial Government contributed 6,900,000 marks. For 1901 the German Reichstag voted 7,181,300 marks. The imports in 1899 were valued at 5,868,281 marks, of which 4,883,753 marks came from Germany; exports, 915,784 marks, of which 775,000 marks represent guano and the remainder mostly ostrich feathers.

The railroad agreement concluded on Oct. 28, 1899, between the German Government and the British South Africa Company, as the result of Cecil Rhodes’s negotiations in Berlin, provided for a connection of the projected railroad from the Cape to Cairo, with a line to the west coast of Africa passing through German territory. If the German Government judge it not ready itself to construct the railroad from the British frontier to the coast when the British South Africa Company shall communicate its intention of connecting its system with the west coast, then the British South Africa Company will be entitled to build the section across German territory. An Anglo-German company was organized in 1900 to construct a railroad 400 miles long from Great Fish Bay, in the Portuguese territory of Angola, to Otavi, in German Southwest Africa, where the company intends to carry on mining operations. An expedition was sent out to prospect the copper mines in that neighborhood. Half the capital of £2,000,000 is to be embarked in the stock, the remaining half-prize is subscribed by German and half by English capitalists. The Southwest African Company obtained the Damaraland concession, granted in 1892, which covers the Otavi district, where surveys were made in 1893 and 1894 with promising results. The German Hanseatic Land and Mining Company was granted a concession of 22,554,707 acres in the district of Rehoboth, 250 miles inland from Walvisch Bay. Copper mines have been discovered within 75 miles of Walvisch Bay, for the working of which private individuals have taken out licenses.

ALABAMA. A Southern State, admitted to the Union Dec. 14, 1819; area, 52,250 square miles. The population, according to each decennial census since admission, was 127,901 in 1820; 309,527 in 1830; 590,754 in 1840; 771,628 in 1850; 964,201 in 1860; 996,992 in 1870; 1,262,505 in 1880; 1,513,017 in 1890; and 1,828,697 in 1900. Capital, Montgomery.

Governor.—The following were the State officers in 1900: Governor, Joseph F. Johnston; Secretary of State, Robert P. McDavis; Treasurer, George W. Ellis; Auditor and Comptroller, Walter S. White; Attorney-General, Charles G. Brown; Superintendent of Education, John W. Abercombie; Commissioner of Agriculture, Isaac F. Culver, succeeded in September by Robert R. Poole; Adjutant General, W. W. Brandon; President of the Railroad Commission, James Crook; President of the Convict Board, S. B. Trapp; Tax Commissioner, W. J. Wood; Examiner of Public Accounts, John Purifoy; State Geologist, Eugene A. Smith; Chief Mine Inspector, J. de B. Hooper; Agent for Swamp Lands, W. M. Byrd; Chief Justice of the Supreme Court, Thomas N. McClellan; Associate Justices, Jonathan Haralson, John K. Tyson, Henry A. Sharpe, and James R. Dowdell; Clerk, Robert F. Ligon, Jr. All are Democrats.

The new State administration came in Dec. 1. For names of officers elected see under Political, this article. The office of Commissioner of Agriculture is created by statute, and the term begins Sept. 1, while the terms of the constitutional offices begin Dec. 1.

Population.—The census returns show no change in the order of the largest three cities
of the State. Mobile is still first with 38,469, against 31,076 in 1890. Birmingham has risen to 38,415 from 31,076 in 1890. The territorial limits of Birmingham have been enlarged since 1890. Montgomery, which had 21,883 in 1890, has now 30,346. The population of the other larger places is: Anniston, 9,695; Selma, 8,713; Huntsville, 8,068; Florence, 6,478; Bessemer, 6,338; Tuscaloosa, 3,094; Eufaula, 4,532; New Decatur, 4,477; Gadsden, 4,493; Phthiex, 4,243; Troy, 4,065; Girard, 3,840; Pratt City, 3,455; Sheffield, 3,333; Dothan, 3,273; Greenville, 3,162; Decatur, 3,114; Avondale, 3,062.

Of the 66 counties, 2, Cleburne and Lawrence, have decreased slightly in population since 1890; all others have grown. The figures for the two dates are as follows:

</table>

The sale of university lands at prices believed to be far below their value was declared by the trustees to be illegal, and suit was brought to annul it.

**Military.**—From the statement issued by the Adjutant General at Montgomery, it appears that the organized military force of the State is 2,471, while the number of men available for military duty, but unorganized, is 153,000. The Adjutant General estimated in the summer that about 80 per cent. of the State Guard would volunteer for service in China if called upon. The State appropriated $12,500 for equipment of companies, and the entire amount was used, together with funds subscribed in Mobile and Birmingham.

The number of persons allowed pensions this year was 11,214; in 1890 it was 9,628. The amounts available for distribution were $105,506 the former year and $244,503 the present.

The Governor and other citizens of the State made a trip to New Hampshire in September, on the occasion of the presentation of tablets to the battle ships Kearseuge and Alabama. The Governor of New Hampshire gave to Gov. Johnston two Confederate flags captured by two New Hampshire soldiers in front of Petersburg—the flag captured at the battle of Cold Harbor, by the State to the National Government. The regiments and States to which they belonged were unknown. The Governor and members of his staff sent afterward to the Governor of New Hampshire a loving cup bearing the motto "Non Armis sed Amore Vici."

**Talladega.**—The Andrew Jackson Chapter of Daughters of the American Revolution asked and received permission to remove from the battlefield of Talladega the remains of the 17 Tennessee soldiers who fell there Nov. 9, 1813, and to reinter them in the city cemetery. The battlefield has passed into the possession of a coal and iron company, and the Talladega furnace stands on the ground.

**Mobile.**—The increase of the commerce of Mobile during the past decade is given as being nearly threefold—from $3,470,444 to $10,485,072.

**Insurance.**—From the report of the Insurance Commissioner it is learned that 115 companies are doing business in the State. Five retired during the year and 16 came in. The net gain to the State from the office was $50,000.

**Products.**—In the production of iron ore in 1899 Alabama took the third place among the States, with 1,099,327 tons.
The coal product for the year was estimated at not less than 8,500,000 tons.

The cotton acreage in 1900 was 2,911,167, an increase of 52 per cent. The estimate of the crop made Jan. 1. Some of the larger towns in counties where it applies are excepted. According to newspaper report, candidates favoring it in some counties where primaries were held found the question rather a drawback to their popularit.

Lawlessness.—A negro guilty of criminal assault was taken from jail at Huntsville, July 23. The sheriff made a brave resistance to the mob, but the doors were battered down, dynamite was thrown into the prison, and the man was hanged just before the arrival of militia from Decatur. In October a negro boy, sixteen years old, was burned at the stake near Eclectic for the same crime. At the same time of last month, a negro was said to be written by the supreme commander of the so-called Regents of the White Shield in Alabama to a woman who was reported to be about to lead an army of negroes to avenge the lynching of a Southern negro. The extract from the letter read: "It gives me pleasure to inform you that the Regents of the White Shield are a very substantial body of organized patriots, who are ready to receive you and your Ethiopian escort and extend such other service as would be appropriate to express our contempt for a white with a black heart and at the same time to add another hue of darker shade to that of Hades. So the Negro, Jean. Arc, and don't be too modest about the number of black crusaders you bring with you. Ten thousand are not enough to tax our oil refineries in furnishing you sleeping accommodation in our potter's field. In conclusion, let me state that as we raise large crops of cotton in this section we have an abundant supply of food for our enemy, and we'll know when and how to use it."

Political.—The primaries in April resulted in a victory for John T. Morgan as candidate for re-election to the United States Senate. There were originally 4 candidates: Senator Morgan, Gov. Johnston, W. C. Oates, and J. D. Roquemore. Col. Roquemore died and Gen. Oates withdraw, leaving the contest to the two first named, who "stumped the State" before the primary elections. The proposed constitutional convention and the so-called "land scandal" (see Annual Cyclopaedia for 1899, page 4) played a prominent part in the campaign. Senator Morgan carried all the counties except on the senatorship, and he was chosen by the Legislature, Nov. 15.

The State elections were held Aug. 6. There were 4 tickets in the field, as follows: For Governor, William J. Samford, Democrat; John A. Steele, Republican; G. B. Crowe, Populist; H. L. Hargrett, Prohibitionist.

For Auditor, T. L. Sewell, Democrat; J. C. Swan, Republican; M. W. Whately, Populist; R. O. Simpson, Prohibitionist.

For Treasurer, J. Craig Smith, Democrat; Pope M. L. L., McKinstry, Populist; D. C. Batchelor, Prohibitionist.

For Attorney-General, Charles G. Brown, Demo-
modation for 6,979,150 persons; number of pupils in Sunday schools, 2,394,804, with 207,539 teachers; net clerical income, £3,357,006; amount of voluntary contributions, £5,954,738; number of incumbents, 13,873. Another table of voluntary contributions given in the work increases the total and allot them as follows: I. To central and diocesan societies and institutions: (1) home missions, £772,246 9s. 1d.; (2) foreign missions, £368,848 14s.; (3) foreign schools, £72,478. (4) the clergy (educational and charitable assistance), £197,195 19s. 8d.; (5) philanthropic work, £428,273 6s. 2d.; total, £2,065,984 9s. 4d. II. Funds locally raised and locally administered: (1) for the parochial clergy, £4,021 4s. 11d.; (2) for general education and Sunday schools, £1,177,288 15s. 7d.; (3) for general parochial purposes, £3,422,639 15s. 1d.; total, £5,398,449 15s. 7d. The total voluntary contributions thus amounted to £7,464,434 4s. 11d.

Statistics furnished by 900 out of 1,000 incumbents of Welsh parishes give the number of communicants in them as 133,223.

The accounts of the Representative Body in the Episcopal Church in Ireland showed that the amount of voluntary contributions had decreased by nearly £40,000. Yet a balance was left of £60,000 over the expenditures.

The Diocesan Church in Ireland was held in Dublin in April. The primate, in his inaugural address, referred to the considerable decline of voluntary contributions which had been taken place, and to the decrease of the receipts from assessments. The synod, however, possesses a capital fund of £25,000,000.

The annual report of the incorporated Church Building Society during 1899 to 34 new churches and 25 mission or temporary churches, besides 6 grants for rebuilding churches and 28 for enlargements. The total cost of the proposed church works was £297,217, while the society's grants were £10,035, in addition to £665 for mission buildings. The society had since its formation given £885,143 toward works involving a further expenditure of £14,840, and adding about 2,000,000 seats, three fourths of which were free. The year's income had been £6,889.

The annual report of the Bishop of London's fund, presented May 10, showed that the receipts for the year amounted to £239,171, and payments, £25,700. The temporary investments amounted to £36,913. Up to the end of the year sums aggregating £1,052,722 had been received for the fund, including £3,000 from the Queen, £1,000 from the Prince of Wales, £25,000 from the Commissioners of Woods and Forests, £25,081 from city companies, and a number of large gifts from individuals. The past year's grants had amounted to £25,967 for clergy, £23,058 for lay agents, £7,099 for mission buildings, £6,725 for clergy, £319 for vicarages, and £676 for schools.

At the annual meeting of the Additional Curates Society, April 30, the secretary reported that the general income of the society for 1899 showed a decrease of £1,500. An increase of £700 over the corresponding period of the previous year had, however, taken place during the past four months. The last year's expenditures had been £58,785. Aid had been given to 1,020 parishes with 1,217 grants, amounting to £56,986.

The annual festival of the Sons of the Clergy was held May 9. The total number of pensions and grants in 1899 was 1,689, on account of which £24,374 were paid.

The annual meeting of the Society for the Propagation of the Gospel in Foreign Parts, marking its two hundredth anniversary, was opened April 27. The report showed that the gross income of the society for the year had been £136,846, indicating an increase of £4,490. The number of ordained missionaries, including 12 bishops, was 785, distributed as follows: In Asia, 253; in Africa, 185; in Australia and the Pacific, 47; in North America, 207; in the West Indies and Central and South America, 53; and 38 chaplains in Europe. Of these, 135 were natives laboring in Asia and Africa. There were also in the various missions about 2,000 lay teachers, 3,200 students in the society's colleges, and 38,000 children in the mission schools in Asia and Africa. With the exception of Utah, where there is no society, the society was laboring in every part of the empire, and beyond its limits, the work of the Church had been hindered in the past year by disasters and visitations which no human foresight could have reckoned with. The London Junior Clergy Missionary Association had advanced in work and in numbers, having now 500 members against 450 one year previously. The federation of all the Junior Clergy Associations numbered more than 5,000 members.

The two hundredth anniversary of this society was celebrated in London, June 16, 17, and 18. The exercises began June 16, the anniversary of the foundation of the society, with a communion in St. Paul's Cathedral, following the service by the Right Rev. W. C. Doane, Bishop of Albany. The bicentenary was the subject of special sermons in a large number of churches in London, Sunday, June 17. On Monday, June 18, a public evening meeting held in Exeter Hall was addressed by the Archbishop of Armagh and the Bishop of Kentucky. An historical sketch of the work of the society for the Propagation of the Gospel was established for the purpose of instituting a central organization to superintend the ministers of the Church of England who were sent out to serve the spiritual wants of the people in the colonies in America and elsewhere. It dates its origin from March 13, 1701, when a committee was appointed to inquire into the best means of promoting the Christian religion in the plantations (as they were called) or transmarine colonies. A charter was granted the society by William III in the following July, the object of the body being defined as "the religious instruction of the king's subjects beyond the seas," and the society has been, since then, the first colonial missionary society. There are 25 members, and an amount of £5,000 was subscribed in the first year. The first committee consisted of eight members, three of whom were bishops, Bishop Inglis, whose diocese covered all British North America from Newfoundland to Lake Superior, was consecrated in Nova Scotia, Aug. 12, 1787. Since the establishment of its mission there the society has maintained in Canada 1,500 ordained missionaries, who have ministered
to races speaking 16 languages, and has expended on church work, including endowments of bishops and colleges, £1,867,582. In the West Indies and Central America the society has expended upward of £644,000. The first missionary to Africa was sent to the Gold Coast in 1752. With the first attempt at estimating the work accomplished, the first clergyman sent out by the society was stationed at Wynberg, near Cape Town, in 1820. At the present time there are 10 dioceses in South Africa between Cape Town and the Zambesi; and during the eighty years of its work the society has helped endow 8 of these dioceses, maintained 545 missionaries and chaplains, and £821,395. It still has missionaries among the 370 clergy in South Africa, 23 of whom are natives. Work was begun in Australia in 1793, and the country was made a diocese in 1836. There are now there 15 bishops and about 830 clergy. The society’s expenditure in Asia has amounted to £2,540,790. Of 781 clergy in India, 160 are clergymen maintained by the Government, 38 others are employed by the additional clergy societies and ministering to Europeans, 53 are engaged in educational work, and 321 are missionaries proper, 245 of whom are natives of the country, in the great majority of cases supported by their own people. Other fields of the world. The society has organized many grants and where active labors are carried on among both colonists and the native populations are Mauritius and Madagascar, New Zealand and the Pacific, Borneo and the Straits Settlements, China, Japan, and Korea. The expenditure of the society throughout the world during the one hundred and ninety nine years of its existence has amounted to £6,419,608; of the 94 colonial and missionary bishopries now existing it has helped to extend 45; and at the present time it is wholly supporting 5, and partially 7, bishops. It also supports 787 missionaries, working in 55 dioceses and preaching the Gospel in 54 languages or dialects.

On Tuesday, June 18, an address from the Church Missionary Society was presented by Bishop Donne, and was acknowledged by the archbishop. Greetings were received from New Jersey, Connecticut, and Rhode Island, and an address was delivered by the primate. The Marquis of Salisbury, in the name of the government, expressed sympathy with the cause of missions, but recognizing certain dangers that were likely to arise when their work is followed by commercial adventure and the intrusion of political schemes, and the missionary might be made to play a part against his will for these things. In closing, he said: “The world, however slowly, is traveling to a point where the government of all races will be not by organized force but by recognized and advancing public opinion. You have in your hands one of the most powerful and one of the most sacred forces that ever acted on opinion, and the results for which we all pray will be dependent not only on the zeal, but also on the wisdom and Christian prudence with which you work.” The Bishop of Kentucky was another speaker. A resolution of humble thankfulness was proposed by the archbishop and seconded by the Bishop of Alburay.

Church Missionary Society.—The one hundred and first annual meeting of the Church Missionary Society was held at the Mission House for the week ending June 18. Bishop John Kennaway presiding. The treasurer’s report showed that the gross income of the society for the year had been £404,905, of which £32,883 had been derived from legacies, £80,619 taken from the centenary funds, and £29,611 had come in the form of special funds not available for ordinary purposes. Omitting the two latter items, £303,675 were left to constitute the net proper income. The expenditures had been £367,268, of which £24,002 had been from the special funds. The centenary gifts had amounted to £198,948. This sum had been variously appropriated, with the exception of £10,288, which were kept in reserve for future contingencies. The computer was the 520 stations, which were manned by 418 ordained and 140 lay missionaries, 338 native clergy, and 6,459 native lay teachers; 71,051 native communicants, 268,340 native adherents; 2,144 schools with 104,388 pupils; and in the medical missions, furnished with 1,484 beds, 11,457 in-patients and 59,256 out-patients had been treated. The totals numbered 19,161. A resolution was passed earnestly welcoming every effort aiming at the full and orderly development of native churches, as the speedy evangelizing of the world before the coming of the Lord depended very largely upon the labors of the Christian people of non-Christian lands. A message of greeting was sent to the Society for the Propagation of the Gospel, which was celebrating its two hundredth year.

Universities’ Mission.—The report of the Universities’ Mission in Central Africa showed an income of £37,549, nearly £9,000 less than in the previous year. The expenditure had been £49,279. The Church related to the relief society during the year. The Army made an annual meeting, May 2, showed that 116 trained workers had been added to the staff during the year. The demand for such workers far exceeded the supply. The income of the general and evangelistic account was returned at £24,022. The previous year’s deficit of £21,181 had been reduced to £1,304. In regard to the institutions the income had been £54,557 and the expenditure £55,779, but a balance of £4,404 still remained. The assets were £49,538 in excess over liabilities. The financial requirements of the coming year would amount to £175,000. The workers of the army had obtained admission to the convict prisons.

Liberation Society.—The Council of the Society for the Liberation of Religion from the Patronage and Control of the State held its annual meeting in London, May 2, Mr. Alfred Thomas, M. P., presiding. The report referred to the prospective amendment of the burial laws and the matter of the national chaplains in the Army, and to the religious opinion. The tithe rent charge (rating) act was mentioned as having contributed much to promote the sentiment among the electorate against a church establishment. The report dwelt upon the educational condition, and regarded with regret the disposition on the part of influential men to accede to the demand for a Roman Catholic university for Ireland. The income of the society had fallen from £5,003 to £4,311. Resolutions were adopted urging upon the Liberal party, in view of a general election, to give a prominent place to disestablishment; appealing for such additional subscriptions as would enable the society to seize the unprecedented opportunities for extended work presented by the course of events in the Church of England and by the change in the opinions of a large majority of the members; calling on the friends of religious equality to press the subject on liberal organizations as one of the most urgent matters demanding legislative action; and recommending that every churchwarden of the last year in the English establishment as confirming the conviction that neither legislation nor the bishops’ action would prove effectual in suppressing sacerdotism or lawlessness.

Church Reform League.—The Central Representative Council of the Church Reform League reported to the annual meeting of the league, May
25. resolutions recommending the giving of power to the convocations to reform their own clergy, to constitute in connection with themselves representative houses of laymen, and to arrange for the joint sitting and acting of the two convocations and houses of laymen as representative bodies.

**Missions to Seamen.**—The report of the Missions to Seamen, presented at the annual meeting, May 2, represented that the expenditure in 1899, £42,514, exceeded the income by £3,898. Sailors had given £1,555 in offertories, had bought 5,741 Bibles and Prayer Books, and had furnished 98,500 attendances at 13,500 services or Bible readings almost and 348,000 attendances ashore.

At the meeting of the Convocation of Canterbury in February (Feb. 6) petitions were presented in the upper house from two rural deaneries in the diocese of Truro, praying the house not to initiate or take coercive measures to enforce compliance with the recent decision of the archbishops concerning incense and processionals, the prayers for the ships were prepared to enforce strict compliance to the Prayer Book impartially on all alike, having regard to variations of defect as well as of excess. A prayer was included in one of the petitions that their lordships would take steps in the endeavor to gain for the Church of England a larger measure of self-government than at present, but not self-government incompatible with the position of an established church. In view of the failure of the two convocations in 1899 to agree upon a joint report upon ecclesiastical courts, a committee of conference with the committee of the Convocation of York was appointed. The report of the committee called by the Archbishop of Canterbury in February, 1899, respecting missions to Israelites, was agreed to. They recognize the title of such missions to special attention; advise co-ordination of the several agencies engaged in the work so as to avoid overlapping and wasteful expenditure; emphasize the responsibility laid upon incumbents by the presence of many Israelites in their parishes; advise the provision for the salvation of Israel for the annual day of intercession for missions; and invite the attention of divinity and other professors to the existing need of clergy to undertake the Jewish side of parochial work.

In the lower house, the proctor having resigned, Archdeacon Reginald Prideaux Lightfoot, of Oakham, was chosen to that office. A resolution was passed affirming the necessity of the spiritual agencies of the Church, and a committee was appointed to consider and report as to the desirability of a revival of the subdiaconate. A second report, drawn up by a joint committee, on clergy pensions, which explained in detail the work of the clergy pensions institution, was adopted in both houses.

A resolution was adopted in the House of Laymen, asking for a joint committee of the two convocations to consider and report upon the best means of securing a fit and adequate representation of the laity in the House of Laymen of each province. At the meeting of the convocation, May 8, the upper house, upon the presentation of an article adopted by the lower house on the subject of temperance legislation, resolved unanimously, "That the House agrees that a bill be drafted and submitted to Parliament based upon such recommendations contained in the final report of the Royal Commissioners on Liquor License as are common to the majority and the minority reports of the commissioners."

The Committee on Ecclesiastical Courts reported progress, representing that they desired to confer with the committee of the Convocation of York on the subject. The Committee on the Position of the Laity in the Church submitted a statement that they had not yet been able to prepare their report. The question was a large and important one. The committee of the Convocation of York, with whom they had conferred, had appointed a committee of experts to examine fully the historical aspect of the question, and they were waiting before presenting their own conclusions until the report of that committee had been drafted.

A resolution was passed contemplating the appointment of a joint committee to confer with a committee of the House of Lords in order to consider the desirability of appointing a central Church committee to work with the chaplain general and the chaplain of the fleet for all purposes concerning the moral and religious welfare of soldiers and sailors and their families, and the status of chaplains working among them. A draft bill was framed toward this end. The action of the upper house contemplating the appointment of a joint committee on the moral and spiritual welfare of the soldiers and sailors was concurred in. The report of the Committee on the Supply and Training of Candidates for Holy Orders, embodying a number of recommendations, was adopted in the House of Commons, and the report of theconvocation on elementary education, an amendment was suggested proposing that voluntary schools should receive support from the public funds. The lower house approved the elementary education bill introduced into the House of Commons by Sir John Gorst and the Government burials bill, except as to certain sections, respecting which further investigation was desired. The action of the upper house contemplating the appointment of a joint committee on the moral and spiritual welfare of the soldiers and sailors was concurred in.

The action of the upper house contemplating the appointment of a joint committee on the moral and spiritual welfare of the soldiers and sailors was concurred in.
creasing. Yet, although the circumstance had escaped notice, the number ordained into the Anglican communion outside of England had largely increased in recent years, and it was only fair to assume that these requisites which heretofore would otherwise have been ordained for work in England. The inadequate pay of the clergy was regarded as the chief cause of the decline, and questions on matters of belief and the attractions offered by other careers in various parts of the empire were mentioned as other possible causes. The full disposition of the Anglican authorities to recognize, and extend the influence of the Church of England in the colonies, was expressed.

Committee appointments. In the Convocation of York, Feb. 22, a joint committee was appointed to confer with the joint committee appointed by the Convocation of Canterbury on the subject of the reform of ecclesiastical courts. A resolution was adopted in the House of Commons, declaring that the components of the committee to consider and report on the rights and responsibilities of the state “as intrusted in the Divine order with the guardianship of property and with coercive powers.” In the lower house a graveran protesting against the remarriage of divorced persons was made an articulas clerl.

The Convocation met again, April 25. A resolution was carried in both houses expressing the opinion that the points of agreement between the majority and minority reports of the Royal Commission on the Licensing Law constituted a practical basis for legislation. The upper house adopted the alternative evening service presented at its previous session, with the proviso that it was to be carried into both alternate service in mission churches and as “additional” elsewhere. A proposition was approved favoring the insertion of the name of St. Patrick in the calendar of the Prayer Book. The committee appointed at the last group of sessions to consider and report on the rights and responsibilities of the state as intrusted “with the guardianship of property and with coercive powers presented as their opinion that “the true basis and character of the committee of appeal, as representing the state, not the Church, will be best understood, and the limited range of its decisions most clearly recognized, if it be divested altogether of ecclesiastical appendages and appearances, expert theological opinion and information being obtained as expert opinion is obtained in other cases, and in such a way as neither to compromise the Church in its corporate capacity nor to interfere with the final responsibility of the state in temporal matters.” A suggestion was approved in the lower house, that the Archbishop of Canterbury, or the bishop of a province, should have the right to appeal to the archbishop of Canterbury, or the bishop of a province, if the bishop of the lower house of the Convocation. The meeting also expressed a desire “to see the laity of the Church taking their definite place in the management of the affairs of the Church in the parish, the diocese, and the province,” and commended the matter to the convocations and the houses of laymen.

The Ritualistic Agitation. In a pastoral issued in December, 1899, the Archbishop of York represented that the great majority of the clergy who had adopted the doubtful practices reviewed in the decision of the archbishops of July 31 (see Annual Cyclopedia for 1899) had yielded obedience to the bishops. There was still, however, a remnant of 30 or the 300 clergymen implicated who had declined to comply—a number which in the whole of the clergy of the Church of England need occasion little anxiety. That small number, however, had power to do harm. The bishop thought the bishops would not interfere with clergy who had adopted these practices although they had the power, but that it was unlikely that they would place any impediment in the way of others who desired to take that step. As to the disobedient clergy, it would be impossible to give them the same advantages as were freely granted to the other clergy, or to place the same confidence in their judgment, and particularly in their fitness for dealing with their younger brethren as they would otherwise have deserved. The archbishop further discussed the possibility of the law concerning the abandoned customs being changed through the action of Convocation, sanctioned by the Crown.

A deputation waited on the Archbishop of Canterbury, Jan. 19, to express, on behalf of themselves and other signatories to a written protest which was handed to his Grace, their objections to the opinion of the two archbishops on the ceremonial use of incense and processionals. The protest, to which 13,794 signatures were attached, was based on the grounds: “First, that your Grace has attempted not merely to define by an individual and authoritative exercise of power the ceremonial practice of the Church in this land, but also to press such definition upon dioceses of which your Grace is not the ruler, and, however valid your Grace’s sufragans may be to submit to this, we as Catholic lay people must strenuously protest, and will resist to the utmost, a prece-
dent which may lead us into a position differing but little from that against which the Church rightly protested three hundred years ago. Secondly, we protest against your Grace’s attempt to foist upon the Church, as her rule of ceremonial, a penal act of Parliament passed in days of regal autocracy, and intended to meet circumstances entirely different from those of to-day. And we are the more aggrieved because we were led to suppose that your Grace had intended to investigate the question upon the principles of Catholic law and custom and liturgical science, and not upon the construction of the alleged law of the state.”

The Duke of Newcastle and Lord Edw. Stanley, in a communication signed in support of the protest. The archbishop, replying to the addresses of these gentlemen, began with a reference to the closing sentence of the paper, saying he was quite certain that it would be impossible to quote any words of his that could fairly be said to convey the impression mentioned there as held by the protesters. “I gave no one to suppose,” he said, “that I intended to investigate the question upon any other principles but the principles, as I understood them, of obedience to the law of the Church itself, and particularly of obedience to the law of the Church of England.” He then reviewed the reasoning of the opinion, the grounds on which the act had been adopted, and the method of the court adopted, justifying the course of the archbishops in reaching it, and intimated that the opinion need not be taken as a command to obey unless the bishops enforce it upon their clergy. “It is left for the bishops to call upon the clergy to take this opinion, but if they do not choose to act in this way they will not lose the right to act in that opinion, and the Church will be perfectly free from obedience to that opinion. The clergy may very fairly say in that case, ‘My bishop does not call upon me to obey this opinion, therefore I am not bound by it,’ but there is not a word in the opinion which shows the smallest desire to set aside the separate opinion of the separate bishops in their various dioceses. It appears to me to be not quite borne out by any arguments that have been put before me, though some of the arguments that have been put before me do really express something more than is in the protest.”

The Bishop of London, in his primary charge to the clergy of his diocese, delivered in St. Paul’s Cathedral, Feb. 21, reviewed the principal questions in controversy as to their history and their significance. He took into account the motives of the reformers of the sixteenth century in introducing the changes they made in the Prayer Book, the differences in the thought and custom and conditions of that time and of the present, and the motives and purposes by which the partisans of both sides of the present controversy were animated. As to the questions concerning the holy communion, the bishop affirmed that the reformers in the latter years of Henry VIII avowedly pursued the object of turning the mass into a communion, their purpose being to get rid of the abuses which had grown up around the idea and practice of the mass. The further changes made in the second Prayer Book of Edward VI were prompted by a doubt whether the first Prayer Book had adequately succeeded in this object, and it would be a great sin to drop the word mass in the second book, and to incorporate a condemnation of the mass in the Articles of 1533. “This is the object which the Church of England has ever pursued, to make the holy communion a service for the people to which they came prepared to receive the gifts of grace in the way which Jesus had appointed. Our own time has seen a fuller accomplishment of that object than any previous period has witnessed. . . . It is greatly to be regretted that this advance toward the due appreciation of the mind of the Church should be checked by anything which even remotely suggests a desire to return to that instrument of the purely Roman was so pernicious.” The bishop traced the origin of “fasting communion” to the customs of the sixteenth century, when the hours for meals were so fixed that it was most convenient to attend the communion service before the midday meal. Customs “were not meant to be burdens to generations who were not the iniquities of the days that were afterward.”

The position of the Church of England on confession was that it was left to every man’s discretion. It was not to be enjoined, still less was it to be enforced, by the clergy. Every one was advised to try and quiet his own conscience first, and if he needed further help he might seek it. He adduced the facts in support of his opinion that confession was not to be forced on the religious conscience as a discipline; it recommends, in the first place, confession to Almighty God; it reserves private confession for cases where a man is unable to quiet his own conscience. No teaching should be given by the clergy which does not state all these facts. Further, the Bishop of London declared that Edward VI, as he now recalled, was inspired of him: “Confession is a private and personal matter. There is no service provided for it except in the case of the sick. If any one seeks a clergyman’s counsel and advice, he does so of his own free will. A clergyman is called ‘a minister of God’s Word.’ He can only minister that Word, and his advice, if he gives it, must rest on that, and that only.”

At the annual meeting of the Protestant Alliance, April 25, resolutions were adopted expressing the belief that the revival of the mass, auricular confession, and other Roman Catholic practices was disastrous to the spiritual and moral welfare of the people; pledging the meeting to continue the agitation against the legality of the Romanisation of the Church, and to secure the restoration of the English Church to its former state of independence; and approving the efforts of the Alliance to organize Protestant electors so as to return members of Parliament pledged to support legislation for the maintenance of those principles. Other resolutions expressed alarm at the continued lawlessness of a body of Anglican clergy and the culpable neglect of duty on the part of the authorities of the Established Church, as well as the delay of the Government in fulfilling their pledges to introduce a measure for the compulsory discontinuance of “Roman” practices; recording a renewed determination to continue the agitation against the illegality of the Romanisation of the Church, and to secure the full restoration of the Church. The resolutions were adopted by acclamation, and carried by an overwhelming majority. The Government was again condemned for tardily introducing a measure for the recovery of the property of the Church of England, and for its failure to carry out the enactments of Parliament relating to the restoration of the Church. The meeting was addressed by Sir Hardinge Giffard, who spoke in the name of the Alliance. The meeting was addressed by Sir Hardinge Giffard, who spoke in the name of the Alliance.
At a meeting of the Ladies' League for the Defense of the Reformed Faith of the Church of England, held March 22, Lady Winborne, presiding, explained that the work of the league was non-sectarian; and was carried on by the circulation of suitable literature and the delivery of lectures in various districts, to diffuse a wider knowledge of the history of the Church and of its teachings regarding the great doctrinal truths.

The Ladies' Protestant League was organized in 1899 for the purpose of enlisting the influence of women in opposition to ritualism. It was represented at the meeting held in London, May 10, that 2,000 members had been enrolled. The sum of £10,000 was needed for the establishment of a young ladies' high-class boarding school with teaching in accordance with the principles of the Reformed and Protestant Church of England.

On June 15 deputations representing the Church Association and other Protestant bodies waited on Sir W. Walrond, chief Conservative whip, and Mr. Herbert Gladstone, chief Liberal whip, to urge the necessity for Church reform and for the adoption of candidates prepared to put down ritualistic excesses by further legislation. Sir W. Walrond refused to discuss the question of policy or to criticize the advisability of making the Church question a test at the next general election, but assured the deputation that headquarters would give them any assistance in their power, and that he would inform Mr. Balfour, who he was sure was alive to the gravity of the situation in the Church. Mr. Herbert Gladstone said that he could not undertake the responsibility of the Liberal party, but would communicate with Sir Campbell Banman and his colleagues.

At the thirty-fifth annual meeting of the Church Association, in May, Captain Cobbham, president, on the motion of Mr. Furmstone, moved that the resolution of the society during the past year in concentrating and making effectual the Protestant vote of the country. The annual report accused the archbishops themselves of illegally encroaching upon the rights of the Church. A resolution was adopted pledging the meeting to support only Peter in the day of power, and adding the words: "The sound in this part is of what remains after the service is over. The second form of the practice is, instead of consuming all that remains of the consecrated elements as the rubric directs, to keep a portion back and to administer this portion to people known to be sick at some later period of the Lord's Supper."

At the anniversary meeting of the English Church Union, held in the Church House, June 21, the following declaration, proposed by Lord Halifax, was adopted by a standing vote: "We, members of the English Church Union, holding fast to the faith and teaching of the one Holy Catholic and Apostolic Church—that in the sacrament of the Lord's Supper the bread and wine, through the operation of the Holy Ghost, become, in and by consecration, according to our Lord's institution, verily and indeed the body and blood of Christ, and that Christ our Lord, present in the same most holy sacrament of the altar under the form of bread and wine, is truly and really, and not in any other sense, adored—desire, in view of present circumstances, to reaffirm, in accordance with the teaching of the Church, our belief in the verity of the Christian faith, and to declare that we shall abide by all such teaching and practice as follow from this doctrine of the whole Catholic Church of Christ."

Other resolutions declared that the Church Union, believing that many of the differences which divide the members of the Church of England are largely due to misunderstandings, and are often more apparent than real, expresses its thankfulness that the holding of a conference for mutual explanation has been brought before the Lower House of Parliament; and to desire the co-operation of its members by all means in their power this effort to promote the peace of the Church.

and "that the Church of England can not discharge her responsibilities unless she herself freely interprets her own formulas and is free to take all such other steps as in the light of her living experience she may deem necessary for the spiritual welfare of the people committed to her charge."

It was represented, pending the adoption of the annual report of the council of the union, that the organization had now nearly 40,000 members, the increase having been as great during the past thirty months as in the previous eight years.

Reservation of the Sacrament.—The Archbishops of Canterbury and York gave decisions, May 1, on three cases involving the question of the reservation of the sacrament, the arguments in which had been heard in July, 1899. In two of the cases the Archbishop of Canterbury was the principal and the Archbishop of York the assessor, while the Archbishop of York was the principal in the third case. The question was defined by the Archbishop of Canterbury in rendering his opinion as being whether the clergy of the Church of England are at liberty to reserve a portion of the bread and wine that have been consecrated in the course of the sacrament of Holy Communion and administer it to those who are not present in the church at the time when the prayer of consecration has been said. The practice, which is commonly spoken of as reservation, takes three distinct forms. In the first place, it is sometimes the practice to treat sick persons who are not in the church on the day of the celebration of the sacrament as part of the congregation, and at the time of administration to the communicants generally to take the elements out of the church to them as well as to those who are actually present. It is claimed that this is not reservation at all, inasmuch as the administration goes on without interruption. In the second form the practice is, instead of consuming all that remains of the consecrated elements as the rubric directs, to keep a portion back and to administer this portion to people known to be sick at some later period of the Lord's Supper. In the third form the elements after consecration are sometimes reserved, not only for those who are known to be sick at the time, but also for any case of sudden emergency which may occasion a demand for the sacrament in the course of the week. Now, the canon requires that every clergyman shall promise that in the administration of the sacraments he will use the form prescribed in the Prayer Book and none other, except so far as shall be otherwise ordered by lawful authority. On examining the Prayer Book we can find no clear allusion to the practice of reservation except in the clause of the twenty-eighth article, where it is said the Sacrament of the Lord's Supper was not by Christ's ordinance reserved, carried about, lifted up, or worshipped. It will obviously require overwhelming evidence to prove that reservation in any sense whatever is part of the form prescribed in the Book of Common Prayer. Further, the language of the Thirty-nine Articles can not be taken otherwise than as condemning the practice altogether. All the four prohibitions must be taken together, and all of them in connection with the doctrine of transubstantiation emphatically repudiated just before. The reason for the prohibition is clear. These practices led to gross abuse which the Church of England felt
bound to stop; and even the administration from the church direct during the service is shown to come under the same head, for it gives an opening to the same abuse. Reservation is, moreover, not necessary. The Prayer Book appoints a shortened service of communion for the sick; and if this was still too severe, after weighing carefully all that has been put before us," the archbishop said, "I am obliged to decide that the Church of England does not at present allow reservation in any form, and that those who think it ought to be allowed, though perfectly justified in endeavoring to get the proper authorities to alter the law, are not justified in practicing reservation until the law has been altered."

The judgment of the Archbishop of York coincided with that of the Archbishop of Canterbury, he saying that he could come to no other decision than that "the practice of reservation has no sanction in the Church of England at the present time. If it did, in the mind of the Church at the time of the Reformation, and that it is not lawful for any individual clergyman to resume such practice in ministering to the souls committed to his charge."

The opinion of the Archbishop of Canterbury embodied some observations respecting fasting commonly made; but these were cited to the effect that it was a hardship to be required to consecrate the sacrament in private houses, since this can not always be done in the early part of the day, and to continue their fast till later is sometimes a serious strain. The archbishop quoted the remarks of St. Chrysostom as fairly representing the general mind of the Church in his day, when fasting communion had become almost universal. That divine treated fasting as not having any virtue of its own, but as a means to the end of making true repentance and amendment of life easier, and admitted bodily weakness as a reasonable plea for conditting a fast. Without taking a full fast, and no sacrifice, it is said, will relieve any serious strain would be fully consistent with any obligation that the early Christians recognized. For to diminish the usual quantity of food is to fast, even though the diminution does not amount to a total abstention.

Removal of Ornaments ordered.—In the case of the application of Mr. George Davie, 10, parishioner, for a faculty for the removal of illegal ornaments from the Church of the Annunciation, Brighton, Dr. Tristram, chancellor of the diocese of Chichester, in August, ordered the stations of the cross, confessional boxes and their adjuncts, holy water cruets, and similar ornaments, to be removed before which red lights were kept constantly burning, and images of the Good Shepherd, the Virgin Mary, and various saints removed within three months; failing which the petitioner would have authority to remove them himself.

A Round-Table Conference.—In the London Round-Table Conference, held recently by Webb-Peploe moved a resolution to consider the desirability of appointing a "round table conference" in which all the parties in the ritualistic controversy might be represented and exchange and compare their views, the objects of the conference being, as defined in the resolution, to ascertain what agreement about principles exists, where difficulties begin, and what is their exact nature. The resolution was prompt, the mover afterward explained, by special request and desire from those in authority; and in moving it he emphasized the fact that it was interrogatory and not affirmative, and spoke as with the conviction that the calling of the conference would be futile and absurd unless all the parties were bound by conditions of deference to the law as authoritatively declared. The motion was approved by the bishop and was supported by Lord Halifax. Afterward, in his president's address at the annual meeting of the English Church Union, held in St. George's Hall, London, Lord Halifax said that Christian men, realizing the effects of their divisions, not resolutely to determine to take any step which might hold out even the faintest hope of promoting union and peace? They could not sacrifice truth, but they could ascertain whether their differences were really as irreconcilable as they seemed to be. The resolution had laid it down that such a conference could be held 'on the acceptance of God's Word and the formularies of the Book of Common Prayer of the Church of England in their plain meaning.' It was clear, therefore, that there was no question of a difference of first principles. On such a basis, with a careful definition of terms, a sufficient knowledge of the case, and a little wisdom, there would be no reason why any of the parties could not be admitted to meet, and a charitable desire on the part of both sides to put the best possible construction on the explanations which might be offered, a great step might be taken in the direction of peace. But insistence on the acceptance of the judicial commission's decisions as an indispensable condition for entertaining the notion of a conference would make the conference impossible.

The Council of the Church Association, May 24, declared by resolution that it had read with feelings of profound regret the proposal to hold a "round table conference" with representatives of the Romanizing party in the Church of England. They regret such a suggestion, either of slackening activity of action or of making a definite appeal to Parliament, which is now being so prosperously initiated, of anything of the nature of a fresh start for the Protestant cause. And they can not consent for a single moment to relax their own efforts in behalf of the Protestant principles of the Established Church which are being betrayed on a large scale by its own salaried servants.

The "Round-Table Conference" was held at Freemasons' Palace, Oct. 10 to 13, and was for the discussion of the subject of The Doctrine of the Holy Communion and its Expression in Ritual. It was attended by Prebendary Barlow, Prof. H. E. J. Bevan, Dr. Bigg, the Rev. N. Dimock, Canon Gore, Prof. Moule, Canon Newbold, Dr. A. Robertson, Canon J. A. Robinson, Prof. Sanday, Prebendary Vivendi, J. Birkhead, the Earl of Stamford, and Chancellor P. V. Smith. Dr. Wace was elected chairman. The meeting was private. The report of the proceedings was to be submitted to the Bishop of London, and would then, it was announced, probably be published by authority.

Prayer for the Dead.—A prayer for the dead having been included in a form of intercession which had been issued for use with reference to the South African war, a number of protests were made to the archbishops against the authorization of such a service. To some of these objections the Archbishop of Canterbury said that it had been decided at law that prayers for the dead were
Prayers before opinion in gradually have very expediency. could acknowledging of tory prayers bidden by Webb-Peploe, estant of the Church of England as one of the worst revivals of unscripturality.

To a protest by members of the National Protestant Church Union, presented by Prebendary Webb-Peploe, the archbishop replied, March 19, acknowledging that the prayer for the dead, not being found in the Prayer Book, could not be used by any clergyman without express authority, and could not be authorized by any authority. The usual restraints did not apply to the form of prayer lately issued under the authority of her Majesty's Privy Council. It could be said that prayers for the dead, in whatever circumstances and whatever language expressed, are forbidden by the law of the Church of England, the only difference appearing to be that its powers, and ought not to have been made. But it is well known that this is not the case. The law has been clearly declared by the Court of Arches, and the question whether such a prayer should be used is not a question of law, but of expediency. On such a question different men will differ. I apprehend that the opinion of the memorialists is different from mine. "We know why prayers for the dead were discontinued and discouraged at the time of the Reformation. They were bound up in the minds of the people with the Romish doctrine of purgatory and pardons, and this doctrine had led to such scandalous abuses—e.g., the sale of indulgences—that the authorities were obliged to use very strong means in dealing with it. Prayers for the dead were therefore omitted altogether lest such prayers should keep alive the doctrine that had done so much mischief. And any prayers for the dead which implied this Romish doctrine have been absolutely forbidden, as the Church of England has no personal intercession beyond the days of life, and no further ministry to the dead, and the Church of England with its severe and comprehensive views of the subject. Five different forms of Litany are included, and this prayer is only in one of them, and no clergyman is asked to use the prayer to which the memorialists object.

In conclusion, let me observe that the broad toleration which is the marked characteristic of our courts of law is true to the essential spirit of Protestantism. A church which, resting on the Bible, makes it not only the right, but the duty, of every Christian to satisfy his conscience concerning what the Bible teaches could not possibly hold together if the largest toleration consistent with what the Church has ordered be not accorded to all who endeavor to exercise this right and discharge this duty to the best of their power.

Church Defense and Church Instruction.—The fourth annual meeting of the General Committee of Church Defense and Church Instruction was held at the Church House, March 30, the Rev. C. T. Spence, deacon, presiding. It was stated that only 200 sermons had been preached and only 100 offertories taken out of a total of nearly 14,000 beneficiaries, in response to requests made to every beneficed clergyman in the country. The income showed a slight diminution. Resolutions were passed declaring the need for continued effort "to complete the organization of Church defense and Church instruction by the appointment of a committee, or at least a secretary, in every parish to co-operate with the diocesan and deanery committees for the arrangement of lectures, the distribution of literature, and the collection of funds necessary for the support of the work." Urging the vital importance of disseminating an accurate knowledge among all classes of society of the history and work of the national Church; expressing regret that no provision had been made in the census bill for a census of religious profession; and advising greater effort on the part of Church people to promote the interests of the Church of England among district councillors and guardians, with a view to the appointment of Episcopal chaplains to workhouses.

The Church Congress.—The forty-third Church Congress met at Newcastle-upon-Tyne, Sept. 25.
The Bishop of Newcastle presided, and in his inaugural address reviewed the questions to be considered by the meeting. Upon the first of the subjects on the programme of discussions—Home Work: Review of the Church's work during the Centenary—generally and in the dioceses of Durham and Newcastle, the Bishop of Ripon spoke of what had been accomplished during the second half of the century, placing emphasis upon the deepening of the unseen hold of Christianity upon mankind and the enlargement of the scope of Christian action which had taken place in the direction of Christian and social ethics. This was particularly illustrated in the work of the Salvation Army, the Church Army, and the Social Settlements. Canon Overton dwelt upon the "enormous effects" that were due directly or indirectly to the Church revival which began in 1833. Other topics of the first day's discussions were the Church's Policy in Elementary Education and the Cathedral System, with Reference to the Supply and Training of Candidates for Holy Orders. A number of carefully prepared papers were read upon the subject of The Reformation in England: (a) What was it in its Essence? (b) To what has it contributed to the Principles of Religious Instruction? (c) The Relation of the Text to the Text of the Testimony. Prof. Ryle held that there was no special operation, but a spiritual informing force, and commended the teaching of the Old Testament as an evolution of religion. The Rev. Prof. Margoliouth urged that in teaching we should not look to partial evidence; but to philosophy, and that the future was likely to be replaced and sustained. Other subjects upon which papers were read were: Art: Its Relation to Religion; War: Attitude and Duties of the Church; The Church's Policy in Elementary Education; Autonomy of the Church: Mode of Achievement; The Ascension (at the devotional meeting); The Church's Progest day in the Foreign Field in the Nineteenth Century: (a) In the Colonies, (b) In India, (c) In Other Mission Fields; The Housing of the Poor. The evening meeting for men was addressed by the Bishop of Newcastle, the Archbishop of Canterbury, the Bishop of Derry, and the Bishop of Thetford, all of whom presided. The Bishop of Thetford observed that the primitive man was a part of the progress of man and heart of man and its living power to elevate and ennoble him. At a Conference of Christians of various denominations in furtherance of Christian unity, held in connection with the congress, Earl Grey presided, and a resolution, moved by the Dean of Ripon and seconded by the Rev. F. W. MacDonald, President of the Wesleyan Conference, was adopted, declaring increased co-operation among Christians, where sacrifice of principle is not involved, to be both desirable and practicable.

Church of England in Australia and Tasmania.—The General Synod of the Church of England in Australia and Tasmania met in Sydney on Aug. 28. A committee was appointed to have charge of the raising of a twentieth century fund, and of provision for such objects as clergy pensions, religious education, clergy training, and Church extension. British New Guinea, already constituted a diocese, was included within the province of the synod. A proposal to change the name of the Church in such a way as to convey a closer identification of it with Australia was rejected. The synod decided that the primates should be selected from among the metropolitan of Australia and Tasmania, or until these provinces shall have been formed from among the occupants of the sees of Sydney, Melbourne, and Brisbane. Other action of the synod related to clergy discipline, thanks and public prayer for the inauguration of the commonwealth, the abolition of the primates' veto on the confirmation of bishops, enlargement of the powers of the synod, the College of Theology, the Clergy Superannuation fund, the Church's position in industrial problems, and the Centenary Thanksgiving fund.

Archaeology. The results of the Oriental and Grecian archaeological discoveries of the season of 1899–1900 are among the most fruitful recorded in any single year. They have established the historical character of the first dynasty of Egypt and have brought to light some of its art, and of the art even of the pre-Menite period. They have proved the existence in Crete of Greek or Mycenaean writing eight hundred years earlier than any previously known and furnished palpable data concerning times and scenes which the Greeks invoked with myths of fanciful character; and have brought to light in Babylonia a library of cuneiform cylinders, all antecedent to 2280 B.C., from the study of which an amount of information may be expected to accrue respecting the most remote past exceeding all present possibilities of estimation.

American.—The archaeological investigations conducted by Mr. Harlan I. Smith for the Jesup north Pacific exploring expedition on the north Pacific coast during 1899 were in continuation of researches made on the same field during the preceding two summers, and were designed, in the State of Washington, to extend existing knowledge of the distribution and character of cairns and burial mounds, and to bring to light the shell heaps of Puget Sound and the western coast, with special reference to the determination of their character and the distribution of the southern limits of north Pacific coast culture in North America, and of any possible influence from the region of the lower Columbia; and to learn if the shell heaps of the lower Fraser river had any analogy with those of this area. In British Columbia a further investigation was desired of the cairns and shell heaps of northeastern Vancouver island. It was further necessary to study the archaelogy of the Lifouet valley with reference to possible communication of coast culture with the interior. The eastern limit of north Pacific coast culture and the southern limit of important influence from the Columbia valley seemed to coalesce in the region from Shoolwater Bay to Seattle.

Explorations carried on under the direction of the American Museum of Natural History among the relics of the Zapotecos in the state of Oaxaca, Mexico, were to be continued during the winter of 1900–1901, under the superintendence of Prof. Marshall H. Saville. The Zapotecos are one of the hardest of the native races of Mexico, exhibiting affinities with the Mayas in language and with the Nahus in religion and some of the features of their architecture. Their ancient capital was Mitla, a town situated not far from the Atlantic, important, and have received much attention from Americanists. The present work of exploration is directed to ruins in the vicinity of Cuilapa, Tecti-pac, and Macuilxochitl, all of which are situated within a radius of 50 miles. The previous explorations made by Prof. Saville have left some various problems to be cleared up. Known as the Mogotes de Xoxo royal tombs were found, seven of the mounds being arranged in a group, while others were detached. One is marked by a pyramid of the style common in Central America, 60 feet high, with a base 100 feet square. Within the mounds were cemented floors and rows of walls of adobe. Vessels were found, some not ornamented, one bearing the figure of a large
clawed foot of a carnivorous animal. In one mound was a statuette of a man with a tiger's head. In another mound, where a cemented wall was discovered running along at a considerable depth under the ground, the workmen came upon a series of earthenware pipes, 36 feet in length, the smaller end of each section being cemented into the larger end of the preceding section, running apparently from the entrance of the tombs down toward the valley. As the situation affords little need for drainage, the possibility of finding some other motive for this construction—perhaps a mythological one—has been suggested. A more thorough examination of this work will be one of the objects of the present exploration. Pieces of similar pipes have been observed on Mount Alban and at two or three other points in Mexico, but nowhere before in place. Curiously shaped ful-78 chapels which, according to Sahagun, surrounded the main temple have been discovered.

As much of the anthropological department of the American Museum of Natural History in New York as has been put in order was opened Oct. 29. It comprises at present five collections: the north Pacific collection, containing costumes, household implements, and ceremonial masks of the tribes of that region, the fruits of the Jesup expedition of 1897-1900; the Mexican collection, consisting of casts and specimens from the ruined cities and temples of Mexico and Central America; the South American gallery; the Indian gallery, in which is a very complete collection of the clothing and utensils of the Eskimos of the Arctic coast on both sides of the Pacific; and the collections made by missionaries in Japan and other Asiatic countries, which were shown at the Ecumenical Con-

eral urns were found in different situations. Of one group of five such urns, the central figure embodied a portrait of a man, while those to the right and left of it wore grotesque masks. Other tombs contained human relics and fragments of domestic pottery. Among the objects that have been found in different tombs are censers, like some that have been discovered at Oajaca, and a terra-cotta statue measuring about 6 feet in length, which has been placed in the National Museum of Mexico. Additional value is given to the Zapotecan collection of the American Museum by the fact that the history of every article in it is known, the place where it was found, the name of the finder, and the circumstances of the discovery being all recorded.

In the course of excavations for public works in the city of Mexico numerous Aztec relics, images, censers, implements, and other objects, have been recovered from the site of the ancient temple of Huiztilopochtli, the god of war. Two of the

STATUETTES IN TERRA COTTA, BEFORE A ZAPOTEC TOMB.
precipices, the entrances to many of the dwellings being 700 feet above the river, and accessible only by climbing up from the bottom or down from the top. One building in this region had 1,500 rooms, and another, a pyramidal structure, was 3 stories high, with 500 rooms on the ground floor. Many skeletons, representing different Indian races, were recovered.

The Archeological Institute of America has for several years sustained an archeological school at Athens, which has accomplished much that is valuable in the exploration of Grecian sites. The new school at Rome had in 1899-1900 a year of successful work with American and Italian teachers. A school of Oriental studies in Palestine was to open in October, 1900.

An expedition is in course of organization under the direction of President William R. Harper, of the University of Chicago, Bishops Potter and Hurst, and others, to explore the ruins of Ur of the Chaldees, the city of Abraham. The site was visited by Mr. Taylor, an English consul, in 1854, who made sufficient observation to show that the remains of a temple which was described as being an unusually perfect specimen of Babylonian architecture. In some of the graves Mr. Taylor found inscribed tablets, pottery, and ornaments of gold, silver, and precious stones. Ancient inscriptions uncovered by Arabs quarrying bricks from the mountain side have been lying on the surface of the ground. From the importance of Ur in very ancient times, the excavations are expected to afford results of great value.

British.—Closing his presidential address before the anthropological section of the British Association on The Early Ethnology of the British Isles, Mr. Tylor, in the section on folklore, Prof. John Rhys summarized his conclusions by saying that "the first race we have found in possession of the British Isles consisted of a small, swarthy population of mound dwellers, of an unwarlike disposition, much given to magic and wizardry and, perhaps, of Lappish affinities; its attributes have been exaggerated or otherwise distorted in the evolution of the little people of our fairy tales. The next race consisted of a taller, blonder people, with blue eyes, who tattooed themselves and fought battles. These tattooed or Pictish people made the mound folk their slaves, and in the long run their language may be supposed to have been modified by hasty and speech introduced by those slaves of theirs from their idiom. The affinities of these Picts may be called Libyan, and possibly Iberian. Next came the Celts in two great waves of immigration, the first of which may have arrived as early as the seventh century before our era, and consisted of the real ancestors of some of our Goïdels of the Migration stock and the linguistic ancestors of all the peoples who have spoken Goïdic. That language may be defined as Celtic as modified by the idioms of the population which the earlier Celts found in possession that its syntax is no longer Aryan. Then, about the third century B.C., came from Iberia the linguistic ancestors of the peoples who have spoken Brythonic, but in the majority of cases connected with modern Brythonic they are to be regarded as Goïdels who adopted Brythonic speech, and in so doing brought down into that language their Goïdèle idioms, with the result that the syntax of Insular Brythonic is no less novel than that of Goïdic, as may be readily seen by comparing the thoroughly Aryan structure of the few sentences of old Gaulish extant."

The author had proceeded in his study on the principle that each successive band of conquerors had its race, language, and institutions eventually more or less modified by contact with those whom it had conquered, and he had endeavored to substitute for the supernatural beings of Celtic legend a possible series of peoples. These views await confirmation by archeology.

The excavations at Silchester, prosecuted from July 20 to the end of August, 1899, consisted very largely in the exploration of the granary, where the marks of destruction by fire and the fall of the floor and roof into the vault of the hypocaust were very evident. On a paved floor between two walls of an adjoining building, supposed to be the postern, were found three coins—including a second brass of the second century and a third brass of the third. Between two other walls was a piece of masonry forming the top of drystone wall.

Among the smaller objects turned out were a first brass coin of Antoninus Pius and a third brass of Constantine the Great, a somewhat delicate pair of tweezers with a ring clip, an ancient kind of bowl, a jar with two little handles, a piece of ornamental pottery, and a broken pillar, about 9 inches high, bearing six letters of a former inscription.

Roman.—At the time of the suspension of the excavations of the Basilica Æmilia, in the winter of 1899-1900, although the section laid bare was less than 200 feet in length, it had revealed to Prof. Rodolfo Lanciani, by reason of the symmetry of the lines, a sufficient knowledge of the general plan and elevation of the structure had been gained. The building comprised three parts: a central hall, divided into nave and aisles by a double line of columns; two rows of cells or tabernae on either side of the central hall, opening into two aisles: the former, the portion which decorated the longitudinal side of the building—the side facing the forum, the only one as yet brought to light. The decoration of the front, on the side of the arculatum, and of the back, on the side of Faustina's Temple, has not been made clear. The basilica, or central hall, resembles in design that of Trajan's columns that in Rome. The nave instead of four. The line of separation between the aisles and the nave was marked by a row of columns, of which hardly any sign is left. The wall runs plain and flat, without any pilasters corresponding to the columns. The pavement of both aisles and nave is in a general state of preservation. It is composed of large slabs of giallo, africano, cipollino, etc., all rectilinear and arranged so as to harmonize in design with the site of the columns. This pavement was found covered with loose copper coins of the end of the fifth or beginning of the sixth century, which with other rubbish bore marks of the action of fire. The central hall was adorned by an unperforated series of the kind of structure which, according to Vitruvius, was set aside for the women of the audience. The Corinthian capitals are very graceful and skillfully executed. "In fact," says Prof. Lanciani, "every particle of the architectural decoration of this building is absolutely perfect." A commemorative inscription was engraved on the frieze of the lower order, of which only two fragments have been recovered. The Basilica Æmilia, originally constructed B.C. 179, underwent five restorations, the last under Tiberius, from whose time the fragments discovered date. Among the topographical discoveries described by Prof. Rodolfo Lanciani as having been made in the excavations of the Basilica Æmilia is a fragment of the Fasti Consulares, which before its mutilation contained the list of the military tribunes from A.U.C. 374 to 379 and the list of consuls
from 422 to 433. The block of marble on which the lists were inscribed had been taken from the walls of the palace and placed in a niche of the temple of the Propylaea. It was a platform with a façade which extended beyond it as a balustrade. Digging from here, about 25 feet from the surface which they had broken the explorers came upon the floor of an irregular quadrangular room. In the west wall of this room were two lions' heads of bronze with wide-open mouths, as if for the flow of water. Beneath these heads were the round holes in the pavement in which pitchers were placed for filling. Above them the edge of the native ledge projected forward. This was an ancient Greek fountain, remaining absolutely intact, the only example of the kind known, for the other fountains that have been discovered had been changed in some way. But although it is certain that this fountain is Greek, the balustrade at the top of the steps leading to it is Roman, and made from the temples which Mummius destroyed. Pausanias mentions a single fountain situated in the Agora, on which stood a bronze statue of Poseidon with a dolphin at his feet, from which it emptied itself. A base was found on the platform, which may have been connected with this statue.

In a summary of the results of the excavation of the Argive Heraeum issued in advance of the official publication Dr. Waldstein, agreeing apparently with Dr. Dörpfeld, assigns the remains of the earliest Greek of the first millennium n.c. A continuous indigenous development of that period is shown in buildings, pottery, and other features, for the study of which the Heraeum, a religious center from the most remote period of the Argive territory, affords excellent facilities. The earliest constructions found on the site date from the late part of the nineteenth century n.c., a dating which corresponds with the old Greek tradition of the number of generations of kings who ruled in Argos, and goes about four hundred years back of the Mycenaean age.

The final report by Prof. Dörpfeld of the latest excavations at dissarlik was announced for publication during the winter of 1900-1901. Besides Prof. Dörpfeld's own contributions respecting the positions of the several buried cities, the work contains accounts of the archaeological researches of his collaborators, Winnefeld, Schmidt, Brückner, Güțe, and Wiberg, concerning the earlier and later finds.

**Cretan.**—Archaeological interest has been directed to Crete since about 1881, when Mr. W. J. Stillmann reported the discovery of the remains of a wall at Cnossus, fragments of Mycenaean pottery, and curious signs upon stone blocks on the hill of Cephalia, near Candia. He desired to excavate there, but was not permitted by the authorities to do so. Dr. Schliemann also tried to secure the right to explore the site, but could not come to terms with the Turkish officers. In 1894 Mr. Arthur J. Evans announced that he had discovered the existence in this island of a system of writing long anterior to that of historic Greece, and at the same time this case was not permitted by the authorities to do so. Dr. Schliemann also tried to secure the right to explore the site, but could not come to terms with the Turkish officers. In 1894 Mr. Arthur J. Evans announced that he had discovered the existence in this island of a system of writing long anterior to that of historic Greece, and at the same time the island of Mycenaean date consisting of the Phoenician and from the Hittite script of Anatolia. The writings were found on seal stones bearing groups of pictographs and characters in the linear style. Researches continued since then have added to the data, and have culminated in the discovery in the Dictaeum cave of Zeus of part of a steatite libation table of Mycenaean date consisting of the Phoenician and characters cut in the monumental style. Characters in the linear style were also found at Cnos- sus in 1894 and afterward. In 1896 Mr. Evans acquired an undivided interest in the hill at
archaeology.

Cephalo to which Mr. Stillmann had directed attention, but was still not able to excavate. Finally, after a succession of difficulties, including a lawsuit, a forced sale of the property, and other complications, Mr. Evans became sole owner of the site and began excavations early in 1900. A building was revealed, which there seemed every reason to believe was a palace of the Mycenaean kings. Nothing was found that could be regarded as later than the fourteenth century B.C. The structure appeared to be of unsurpassed magnificence and grandeur, with fresco paintings and stone carvings of which the author declared, in the first letter announcing his discovery, "the remains exceed anything of the time yet found in Greece," the royal bathrom displaying a luxury not found in Mycenae itself. Of even greater interest than this palace were the clay tablets bearing the characters which had already attracted attention. They were in shape generally more elongated than the cuneiform tablets of Babylon, but otherwise analogous to them, except that the records they bore were in Mycenaean script. These tablets were oblong slips of hand-molded clay, flat on the engraved side, with almost adzlike ends, but thickening toward the center of the slips. The lengths varying from about 2 inches to 7 inches, and in breadth from half an inch to 3 inches. Lines were ruled at intervals for the convenience of the scribes, one of the largest of the tablets showing 18 such lines—a certain proportion of them left blank. The most usual type consisted of two lines in sings, one inscription being written from left to right lengthwise along the tablet, but some of the broader tablets had the lines arranged across the narrower diameter. The majority of the tablets were broken in consequence of a great conflagration they had passed through, but it may be possible to reconstitute some of them. The tablets had been deposited in several chambers and corridors. Some of them were in a clay chest shaped like a bath, some in wooden coffers, the remains of some of which have come to light, with the bronze hinges, and even the clay seals with which they were secured, still bearing impressions of Mycenaean gems. Fresh material of this sort was accumulating daily. Some of the signs in the inscriptions are identical with later forms, others suggest forms of the Cypriote syllabary, as well as Lycian and Carian characters; others are ideographic, and others are "unquestionably numerals." Some of the tablets have indorsements and additional inscriptions on the back. "These palace archives of Cnossus," says Mr. Evans, "not only prove to demonstration that a system of writing existed on the soil of Greece at least centuries before the introduction of the Phoenician alphabet, but they show that already at that remote date this indigenous system had attained a most elaborate development. These inscriptions are the work of practised scribes, following conventional methods and arrangements which point to long traditional usage. Yet this development has been arrived at on independent lines; it is neither Babylonian nor Egyptian, neither Hittite nor Phoenician; it is the work on Cretan soil of an Egyptian people. It is the fitting product of a country to which all later Greek tradition looks back as having supplied the earliest model of civilized legislation. There is, indeed, an air of legal nicety about these documents themselves the effect of which is enhanced by an interesting particular as to the method by which they were originally secured. It was not thought sufficient for the official concerned with their safe-keeping simply to impress with his signet-gem the clay seals that made sure the coffers containing the tablets while the clay was still moist, but the impression of the intaglio itself and the back of the seal were in several cases signed and countersigned with incised characters in the same Mycenaean script. These inscriptions were written in a linear and highly developed script, with only occasional resort to more pictorial forms, while the previous studies of the seal stones had made it clear that there had existed in the island, from a very remote period, another form of writing, of a pictographic kind, and in its general aspect recalling Egyptian hieroglyphics, but in which "the methodical recurrence of groups of signs in the same collection sufficiently showed that one had here to do with a kind of writing and not with a mere analpsos of Egyptian or Hittite forms." On further excavation a deposit of clay tablets was found of different forms from those exhibiting the linear script, and inscribed with a hieroglyphic type of writing identical with that of the prism seals. These tablets were of a variety of shapes. Together with the pictographic, they contained a proportion of signs as purely linear as any of the other category; and it was remarked that the written forms assumed in many cases a much more alphabetic character than their glyptic equivalents as seen on the seal stones, showing "a distinct step in the evolution of writing out of mere pictorial signs." Two examples of this sort are illustrated in the accompanying figures, the first of which is taken from a four-sided bar and the second from a line of inscriptions numbered "label." For reasons which he sets forth, Mr. Evans believes that these pictographic characters and those upon the seal stones were the work of the Cretan stock, or the race which preceded the Mycenaean.
Egyptian. Mr. Evans hence infers that the particular chamber of the palace in which the tablets bearing pictographs were discovered contained re-

ords of tribute or other matters from districts which probably stood in a subject relation to the city of Minos.

The building in which the excavations were made is described by Mr. Evans as being of vast extent, before which the palaces of Mycenae, Tiryns, and other similar structures shrink into comparative insignificance. The entrance is approached from a paved court on the eastern side, and, flanked by two columns, leads into a large antechamber furnished with stone benches. Hence the visitor passes into an apartment which has been given the name of "the council chamber of Minos." Against the wall on the right stands a throne of gypseous limestone, with a low seat and a tall, curiously carved back, which still shows traces of painting. Along the walls on either side are continuous stone benches; on the opposite side, protected by a high parapet to which seats are also attached, is an oblong rectangular depression, constructed with finely compacted slabs and evidently intended to contain water, but without visible outlet. It is approached by descending steps. The walls of the council chamber are ornamented with frescoes, still sufficiently preserved to enable landscapes, flowing water, and flowering plants to be distinguished. On either side of a door leading into a smaller apartment are two griffins, seated on baskets and apparently engaged in hatching. In another part of the building is a long corridor, on each side of which are a series of frescoes representing male and female figures arrayed in rich costumes, of most of which the lower parts of the bodies have been preserved; but one piece, which had fallen, showed the figures of two men to above the waist, draped in long flowing mantles. On the left side, the central figure is a lady distinguished from the rest by her wide flounces. In another room were found parts of a fresco in a new miniature style, showing groups of elaborately dressed young women, seated and engaged in animated conversation. A figure that has attracted especial notice is that of a youth putting crocuslike flowers in an ornamental vase.

The royal magazines or storerooms are approached by a long corridor which leads to a succession of 12 apartments. Some of these contained rows of oil vases 5 feet high, some highly ornate and furnished with numerous small handles. Beneath the floor of several of the chambers and passages are receptacles of closely fitted stonework, one above the other.

Mr. W. J. Stillmann suggested in 1881 that this building, of which a wall of Cyclopean masonry was the only vestige then visible, was probably the Labyrinth. This view is confirmed not only by some of the features of arrangements, but also by the numerous figures of the double axe, ἄδειος, recurring often in different parts. The figure corresponds to one of the epithets of Zeus, and is found in both the linear and the pictographic inscriptions as a significant character. The remains of the life-size figure of a bull of painted ἄγνο δαίμον, of which the head is perfect, discovered in the later days of the work of excavation, suggest an allusion to the bull of Europa, or to the one associated with the name of Pasiphae, whose progeny, the Minotaur, dwelt in the Labyrinth.

The sculpture and painting in this palace are characterized by Mr. Evans as of a higher level than those at Mycenae or Tiryns. "For monuments of the Mycenaean painting, indeed, the palace of Cnossus stands almost alone. On many of the walls the frescoes are found still adhering, almost as brilliant as when they were executed, and we have here a new revelation of ancient painting. Quite new in ancient art are certain miniature groups of ladies fashionably dressed in somewhat décoré attire, seated in animated conversation, apparently in the courts and balconies of the palace itself." In the decorative designs and the fabulous animals—griffins and sphinxes—the influence of Egyptian models of the eleventh century B.C. is evident; and this element is adapted in an independent manner. Of more special interest are processions of youths bearing various vases, which Mr. Evans regards as having a singular general resemblance to the procession of the tribute-bearing Keft chieftains on the tomb of Rekura at Thebes, which dates from the late sixteenth century B.C. The Kefts of the Egyptian monuments are accepted as representing the Mycenaean race of the Aegean isles and coast lands. "On the Cnossian wall painting we see them in their home." The upper part of one of these Cnossian figures is of the highest anthropological interest as presenting the likeness of the first instance of the precise arrangement of the head and torso of a Mycenaean man. The profile is of a pure European character, almost classically Greek. The type of head represented is essentially that of the race which through all the changes of Cretan history still remains predominant in the island.

A new and striking piece of evidence of intercourse between Crete and the Egyptian middle kingdom was found in the palace in the form of a diorite figure with hieroglyphic inscriptions. Its good style and material have been recognized by Egyptologists as indicating a work of the twelfth, or at most of the thirteenth, dynasty. "In other words, the latest date to which it can be safely referred hardly comes down to 2000 B.C. We have here, therefore, a valuable indication for the approximate chronology of the earlier elements of the palace of Cnossus itself, which in any case go back of the period to which the remains of Mycenae have given a name."

Mr. Evans, in order to avoid confusion of periods, purposely did not go below the Mycenaean deposits; but Mr. D. C. Hogarth, digging at another spot, found a whole series of early painted pottery, many of the pieces showing artistic designs of lilies, tulips, and other flowers, with shapes in
some cases so graceful as never to have been surpassed in any age of Greece. This style of Cretan pottery, which has received the name of Kamares from the grotto where its first occurrence was described by Mr. J. L. Myers, has been found by Mr. Petrie at Kahun, in Egypt, again in a twelfth dynasty connection. The intercourse between Crete and the Nile valley in the third millennium B.C. has thus left its traces on both shores of the Libyan Sea. Such data "give additional interest to the fact that the palace of Cnosus, in its turn, overflows as a vast neolithic settlement." Trial shafts were sent down by Mr. Evans through 14 feet of continuous stone-age deposits.

The great bulk of the remains explored at Cnosus were contemporary with the eighteenth and nineteenth Egyptian dynasties.

In describing his discoveries in the British Association, Mr. Evans said that they not only carried back the existence of written documents on Greek soil about eight centuries before the first known monument of Greek writing and five before the earliest Phenician, as exhibited in the Moabite stone, but they afforded a wholly new point of view for investigating the origin of the alphabetic writing. The writings preserved by the Greeks from the Phenicians seemed to have been even influenced by these pre-existing "Egean scripts." The common elements existing in the Phenician alphabet itself were very noteworthy. De Rouge's theory of the derivation of the Phenician letters from remote hieratic Egyptian prototypes must be definitely abandoned. The Phenician, and with it the Greek alphabet must be regarded as a selection from a syllabary belonging to the same "Egean group as the Cretan. Such a phenomenon on the Syrian coast was naturally accounted for by the settlement there in Mycenean times of the "Egean island-dwelling athletes, who in that of Palestine. Though later Semitized, their biblical names of Kaphturim and Cherethim or Cretans, sufficiently recorded their "Egean origin.

An exploration of the cave of Psychro in the Lasithi district of Crete, made by Mr. D. G. Hogarth, confirmed the view that it was the Lyttan graven with the infant Zeus. The story of Zeus in the legend, the earliest version of which was preserved by Hesiod. The cave was double. A shallow grotto on the north had a rude altar in the center, surrounded by many strata of ashes, pottery, etc., among which many votive objects in bronze, terra cotta, iron, and bone were found, together with libation tables in stone, and an immense number of earthenware cups used for depositing offerings. The lowest part of the upper grotto was inclosed by a wall partly of rude Cyclopean character and partly rock cut. Within the Teneons the untouched strata of deposit ranged from the early Mycenean age to the geometric.

Babylonia.—The work of the expedition of the University of Pennsylvania at Nippur, under the direction of Prof. W. J. Hilprecht, has resulted in the discovery, in the ruins of the temple by the Elamites, 2280 B.C. It is a remarkable fact in connection with this discovery that Prof. Hilprecht had pointed out eleven years before, when Dr. Peters was at the head of the expedition, that the remains of the temple could be found at this very spot. The discovery has proved to be more important than had been anticipated. In the course of three months more than 17,000 tablets bearing cuneiform writing were recovered. They comprise historical, philological, and literary documents, mythological writings, works in grammar, lexicography, science, and mathematics. There is reason to believe, Prof. Hilprecht observed in giving an account of his discovery to the London Daily News, that these tablets "will for the first time enable the world to form an adequate idea of life in Babylon such as could only be possible by the discovery of a national library recording the national progress in nature and art. A whole month's reading of the documents is found in this collection of a later date than 2280 B.C. As this date marks the invasion of the Elamites, the fact adds confirmatory evidence that the library was destroyed during this invasion." The unexplored remains of this library are represented as being even more extensive than the published and are generally arranged with regularity on clay shelves around the rooms, and Prof. Hilprecht estimates that at the present rate of working five years more will be required for the excavation and examination of the contents, and it is calculated that the unexplored part will yield 150,000 tablets to this leader and other historians. Document, writing from Nippur, May 9, to the Lutherische Kirchenblatt, described the 16,000 tablets taken from the eastern wing of the temple as being of the very greatest importance, "because for the most part they consist of religious, astronomical, linguistic, and didactic cuneiform texts, beside letters and other historic documents. From other parts of the extensive ruins we have taken out 5,000 other inscriptions, mostly referring to business transactions, so that the entire find of valuable cuneiform tablets amounts to over 23,000. In addition to this, I have to a large extent uncovered and determined the eastern fortifications, which reach back to the fifth thousand year, together with the northwest wing of Nippur. One of the most important discoveries was the southern façade, over 600 feet in length, of a palace deeply buried in the earth belonging to the fourth thousand year B.C., and the complete uncovering of a large government building with a colonnade, belonging to the first thousand year B.C. The work, having devoted special attention to the reconstruction of the temple of Bel at Nippur,—the greatest national sanctuary in the whole of ancient Babylon,—and of a great number of articles of art obtained, "ornaments of gold and silver, and other antiquities. The works of excavation mentioned in this letter include the continued excavation of the system of the temple and the completion of the examination of the southern and eastern lines of the walls of fortification of the ancient city. "These walls show clearly the different epochs in which they were constructed. There are, first, portions of which the builders were the pre-Sargonic rulers. These followed by the works of Ur-Gur (3800 B.C.) and of Narum-Sin, his son; then about a thousand years later are the fortifications of Ur-Gur, to be followed by the later Cassite kings, belonging to the comparatively modern period of from 1700 to 1100 B.C. The numerous weapons found along the whole line of the inscription, especially in the lower strata, were welcome material for determining the methods employed by besieging armies in the earliest periods of Babylonian histoire." A palace be-
longing to the pre-Sargonic period was uncovered beneath an accumulation of 70 feet of rubbish on the northeastern side of the Shate-el-Nil. This building, which is mentioned in the letter as having formerly occupied the site of the palace of the early priest-kings of Nippur. The few rooms excavated have already given valuable results in the shape of pre-Sargonic tablets, seal cylinders of the earliest type, and clay figurines of early date. At a later period in the history it was used as a quarry for materials for other buildings. Some of the discoveries correct previous conclusions reached by the Philadelphia expedition. A large building with a remarkable colonnade, having been completely excavated, proves to be of a date a thousand years later than Dr. Peters had estimated it to be, and is a work of the Persian period. A cruciform structure which had been supposed to be connected with the temple turns out to have been a fortification constructed some time during the last two centuries B.C.

A catalogue of the collection of Assyrian and Babylonian tablets in the British Museum, prepared under the direction of Prof. Carl Bezold, of Heidelberg, includes principally the list of the 234 tablets and fragments of which have been recovered by Excavations at Shushan, Nineveh, and Assur. They have been dedicated to the memory of Mr. H. H. Rogers, Esq. These tablets have been published in the form of an illustrated catalogue, which has already been referred to, and will be found, upon the whole, to be of great importance in illustrating the lack of literary culture felt by the Assyrian conquerors of the Babylonian empire. Assyrian youth might, indeed, resort to the libraries and temple schools of Babylonia, among which those of Borsippa, Sippara, and Nippur were conspicuous; but the influence under which they were brought up, that taught to them the duties of the harem, was not able to the aspirations of the Assyrian monarchs. In order to counteract this condition, Esarhaddon determined to form a library and school at Nineveh; and this work, begun by him, was completed by Assurbanipal. The library was named after the great library of E-Zida in Borsippa, and was dedicated to the god Assurbanipal. Its contents were as follows: a foundation inscription for the temple of King Assurbanipal at Assur, a collection of the Instructions of the King to his Son, and a collection of the laws of the land together with the laws of the land at Nineveh and Babylon. There were also some very remarkable and curious works, such as the Order of the Temple of Assurbanipal, and a collection of the works of the palace of Assurbanipal. There were also some very remarkable and curious works, such as the Order of the Temple of Assurbanipal, and a collection of the works of the palace of Assurbanipal.

The University of California had two parties in the field, one of which, under Mr. Reisner, made an unsuccessful search at Kuf in the cemetery of Coptos. The other party was that of Messrs. Grenfell and Hunt, prosecuting at Ummel Barakat, on the southern edge of the Fayum, the fourth season of their work. They succeeded in their search for a large town, hitherto wholly unknown, were discovered, the name of which appears to have been Tebtunis. The remains found indicate that this place flourished from Ptolemaic times down to those of the Arabs. Many papyri were found, largely from the houses of the priests in the temple inclosure, which date from the first to the third century of the Christian era. A very large cemetery, the earliest monuments of which date from the twelfth dynasty, was discovered. About 60 of the mummies found in the Ptolemaic cemetery were in good preservation. They were furnished with papyrus cartonage like those found at Thebes. Of these, Prof. Petrie states that crocodiles, sacred crocodiles were found, some of them wrapped up in papyrus sheets and stuffed in the head and stomach with papyrus rolls, many of which are large and fine, although hardly supposed to contain important literary remains. All of them are of a late Ptolemaic date. The general result of the work of Messrs. Grenfell and Hunt is nearly to double the quantity of Ptolemaic papyri extant. The work of Prof. Petrie and Mr. Mace at Abydos in the interest of the Egypt Exploration Fund was very successful, and contributed important additions to our verified knowledge of the most ancient Egyptian history. Messrs. Petrie and Mace had already been at work at this site by Mr. A. E. Budge, who had discovered the tombs of a number of the earlier kings and recovered a number of objects.
illustrating the arts of that remote period. But his work has been criticised as lacking in system. Prof. Petrie, going over the ground again, applied the scientific processes and methods of identification and registry which were described in the Annual Cyclopaedia for 1899. While M. Amélineau's researches left the exact date of the relics he found in doubt, with room for wide differences of opinion, those of Prof. Petrie resulted in the settlement of this question and in the collection of large quantities of material identified as of the first dynasty. While this first dynasty, Prof. Petrie said in giving an account of his discoveries at University College, Gower Street, London, had generally been looked upon as more or less mythical, we were now able to handle the royal drinking bowls from the palaces, to compare the art and the Usafais, Miebis, and Semempsis, had been identified. Other royal tombs of the same group were those of other kings of the first dynasty. This discovery had also, by the style of the work and the position of the objects of King Aha, led to this king's being certainly identified with Menes, the founder of the Egyptian monarchy. Thus the tablet found by De Morgan in the tomb of Aha proved to have been correctly interpreted by Borchardt. We were now in a position to form a correct appreciation of the whole of the first dynasty between 4000 and 5000 B.C. The art, which was rude and archaic under Menes, rose to its best point under the luxurious King Deu-setui, the fifth of the dynasty. His tomb was paved with red granite and richly furnished with cups of crystal and beautiful stones, bearing his name in

The Egypt Exploration Fund

Objects recovered from Tombs of the First Dynasty at Abydos, Egypt. 1. Box of pottery, with figures of gazelles, a boat, and fishes (on the end); prehistoric. 2. Box for eye paint, in the form of two half ducks linked at the tails; carved from a single piece of ivory; first dynasty (beginning). 3, 4, 5. Stone jars; beginning of the first dynasty. 6. Piece of pottery marked with accounts of workmen; tomb of Zet Achet, third king of the first dynasty. 7. Palette of slate, King Merneit Aa; first dynasty. 8. Copper tweezers; first dynasty. 9. Copper harpoon; first dynasty. 10, 11. Pieces of painted Egyptian pottery; tomb of King Mersekha-Semenptah; first dynasty. 12. Stele erected on the grave of two dwarfs (king's servants), and bearing figures of dwarfs. 13. Canopic jar; about 5,500 B.C.

the carvings of the period, to criticise the posthumous respect paid to each king, and: "to feel much more familiar with the daily life of the age than we could with our own Saxon kings. All this had come about through the careful study of three or four insignificant-looking lumps of black mud." The royal wine jars, of which many remains were found, were sealed by the officials, and bore generally only the hawk name or Ka name which, not being recorded in the lists of kings, was not sufficient for historical identification. But one or two seals of each king bore both his name, and from these the actual tombs of the fifth, sixth, and seventh kings of the first dynasty, named by Mane-
ing bowls and platters, portions of several hundred dishes of fine stone, together with numerous alaba-
ster and slate dishes, about sixty of which bore roc-
krusser inscriptions. On the reverse of these, close to the closing of the wine jars, of which 88 different inscriptions were now drawn; (5) the labels and
tablets of ivory and ebony, of which parts of 30 had been found with inscriptions; and (6) the in-
umerable pieces of carving in slate, ebony, ivory, and stones. A collection of these objects was ex-
hibited at University College, London, early in July. Among them a group of Egyptian pottery, of forms hitherto unknown, from the tomb of King Mersekh-Semepthah, was considered very remark-
able. It appeared evidently of the same family; as the Mycenean pottery of later times. Prof. Petrie
speaks of it as dated by the tomb to about 4500 n. c., and links it to the earliest fixed point yet
known in the history of Greek civilization. Be-
sides the articles belonging to the kings of the first dynasty were some appertaining to two pre-
Menite kings, the extreme beauty of some of which
—especially a carved hand—"seems to indicate that they were the products of the zenith of a long

dea.

In a paper on the system of writing in ancient Egypt, read in the British Association, Mr. F. H.
Griffith remarked that Egyptology was now reach-
ing a position where it might contribute trust-
worthily important for the benefit of kindred re-
searches. Egyptian writing consisted of ideog-
ographs andyllabograms. The hieroglyphic system of development shown was an alphabet, which, how-
ever, was never used independently of other signs.

-Apparently not alphonic in origin, it represented consonants and semiconsonants only, vocalization not being recorded by Egyptian writing. Phonogramns were derived from word signs. The end of the hieroglyphic period was the general adoption of the Greek character, beginning perhaps in the second century A. D. Although the Egyptian system of writing might not be actually a stage in the history of our alphabet, it threw a strong light on the development of the alphabetic system; and the survival of its pictorial form for decorative purposes enabled us to recognize on the highly ramified connections between the forms and meanings of characters to an extent impossible in present in any other system, whether in Mesopo-
tamia, China, or elsewhere. The results of recent Egyptian philology proved that Egyptian was originally a Semitic tongue, though its character changed early. The main lines of the grammar being at length established, the most complete dictionary were now being collected and

Classified.

A papyrus assigned to the second dynasty, which was discovered at Kaluuen in 1898, contains data which are regarded by Prof. Borchard, of Cairo, as furnishing an important aid in fixing the date of the reign of which the extreme estimates differ to the extent of about twelve hundred years. The papyrus belongs ap-
parently to a class of records of daily events kept by the priests in the temple. Among the items is a note respecting the first rising in the year of Sirius (or Sothis), at breakday, as occurring on the 16th of Uptah, seventh month of the second year of King Useretes III, and embodying direc-
tions for the proper observance of the day. In
another part of the papyrus is a record, dated on the 17th day of the month, the day following the festival, of the festival donations that were made "on the appearance of Sirrux." Applying an ob-
tremeon located by Oppenizer, Dr. Brix has computed that the phenomenon men-
tioned took place about 1873-76 n. c. This would bring the date of the twelfth dynasty down to about eight hundred years later than the date accepted by Prof. Petrie.

ARGENTINE REPUBLIC, a federal repub-
lie in South America. The legislative power is vested in the Congress, consisting of a Senate of 30 members, 2 from each province and the federal district, and a House of Representatives, number-
ing 133, the ratio being fixed by the Constitution of 1888 at 1 to 33,000 inhabitants. Representa-
tives are elected for four years, one half being renewed every second year; Senators for nine years, the provincial Legislatures and the electo-
college of the capital electing every third year a third of the Senate. The President is
determined for a term of years by an elective body chosen by the people. The President of the republic is Gen. Julio A. Roca, who entered upon his office on Oct. 12, 1898; the Vice-Presi-
dent is Dr. Norberto Quirino Costa. The Cab-
inet appointed by President Roca was composed as follows: Minister of the Interior, Dr. Felipe
Yofre; Minister of Foreign Affairs and Worship, Dr. Amancio Alcorta; Minister of Finance, Dr. José M. Rivadavia; Minister of War, Dr. Ar-
Mogno; Minister of War, Gen. Luis Maria
n Campos; Minister of Marine, Commodore Martin
n Rivadavia; Minister of Agriculture, Dr. Martin
n Garcia Mercou; Minister of Public Works, Dr.
Emilio Civit.

Area and Population.—The area of the re-
public is 1,778,195 square miles. The population
in 1899 was estimated at 4,569,000. Buenos Ayres, the chief city, had 779,872 inhabitants. The num-
ber of immigrants in 1898 was 95,100, of whom 39,135 were Italians, 18,716 Spaniards, 2,449
French, 1,503 Turks, 779 Germans, 632 British, and
31,976 from other countries.

Finance.—The revenue in 1898 was $33,878,-
263 in gold and $49,744,214 in paper; expendi-
ture, $20,931,551 in gold and $893,072,745 in
paper. The revenue for 1899 was estimated at $41,870,867
in gold and $69,822,000 in paper, and the expendi-
ture at $26,453,272 in gold and $101,170,399 in
paper. The budget estimate of revenue for 1900
was $43,981,738, of which $37,500,000 was
from import and $2,500,000 from export duties,
and $67,122,000 in paper, of which the spirit tax
produces $16,000,000; the tobacco tax, $9,000,000;
wine, sugar, and matches, $7,500,000; beer and other
taxes, $2,081,000; sanitary works, $5,-
100,000; land tax, $2,500,000; stamp and licenses,
$9,310,000; local and national debts, $4,550,000; and
sales and leases, $4,000,000; railroads, $3,209,000;
national bank, $2,000,000; various sources, $572,-
000. The gold expenditure for 1900 was esti-
mated at $32,946,813, of which $23,147,962 repre-
seated the service of the debt and $9,515,000 extraordinary expenditure. The estimated expenditure in paper was $25,445,518, of which the Ministry of the Inter-
ior and Congress required $16,666,636; the
Ministry of Foreign Affairs, $1,097,520; the
Ministry of Finance, $7,115,420; the public debt, $11,-
695,218; the Ministry of Justice, Education, and
Worship, $16,005,678; the Ministry of War, $16,-
011,057; the Ministry of Marine, $11,955,680; the
Ministry of agriculture, $1,911,620; the Ministry of
Public Works, $6,302,664; extraordinary expendi-
tures, $6,086,000. At the opening of Con-
gress on May 1, 1900, the expenditure for 1899
was stated to have been $7,000,000 below the esti-
mate, excluding special expenditure amounting to
$13,500,000. The receipts were $45,676,000 in gold
and $61,423,000 in currency.

The national foreign loans in July, 1899,
amounted to $45,123,408, in addition to which there were provincial, municipal, and railroad
debts to the amount of £20,021,138 guaranteed by the Federal Government and prospective new issues of £5,938,760, besides £9,565,015 of celulas of the national mortgage bank, making the total foreign debt £80,361,321. The amount of the internal debts was $104,555,933 payable in paper and $46,575,877 in gold. The foreign and domestic debts on April 30, 1900, amounted to £88,000,000, besides £3,500,000 of floating debt.

The Army and Navy.—The standing army numbers 1,463 officers and 12,867 men. The National Guard, the members of which receive two months of camp drill, had 467,572 men on the rolls in 1898.

The navy consists of 2 old ironclads for coast defense, 2 newer construction, 5 armored Bruisers built in Italy, 2 ram cruisers built in England, 5 other modern cruisers and gunboats, 4 destroyers, and 12 first-class and 10 second-class torpedo boats.

Commerce and Production.—The production of wheat in 1899 was about 2,500,000 tons; of flaxseed, 3,000,000 tons; of sugar, 90,000 tons. Indian corn is, next to wheat, the most important crop. The number of cattle slaughtered in 1899 was 310,700. The wool clip was 253,000 tons. The total value in gold of the principal imports in 1899 was $107,429,000; of exports, $133,829,000. The imports of animal products were valued at $2,175,000; alimentary substances, $13,557,096; beverages, $8,298,612; textile fabrics and clothing, $33,946,484; mineral oils, $3,206,021; chemicals, $3,101,784; lumber and wood manufactures, $816,094; paper, $3,016,860; leather and hides, $800,631; iron and iron manufactures, $17,755,792; other metals, $3,504,811; pottery and glass, $8,599,408; miscellaneous, $2,113,090. The exports of animal and animal products were valued at $87,381,625; agricultural produce, $42,692,922; forest products, $2,283,061; mineral products, $2,055,559; products of the chase, $44,949; miscellaneous, $81,637,000. The export of wool was 221,286 tons; of sheep skins, 42,425 tons; of wool, 648,101 tons; of maize, 717,105 tons; of beef and mutton, 89,144 tons. The imports of gold and silver coin and bullion were $7,303,250; exports, $1,374,946.

The import and export trade was divided among various countries in 1898 as follows:

<table>
<thead>
<tr>
<th>COUNTRIES</th>

</table>

The gold value of imports in 1899 was $117,000,000; exports, $185,000,000.

Navigation.—The number of vessels engaged in foreign commerce entered in 1898 was 10,198, of 6,553,128 tons, of which 6,806, of 5,928,765 tons, were steamers and 3,322, of 624,363 tons, sailing vessels. The mercantile navy in 1898 numbered 86 steamers, of 31,976 tons, and 157 sailing vessels, of 39,005 tons.

Communications.—There were 9,855 miles of railroad in operation in 1898. The capital invested was $510,613,290; receipts, $339,963,633; expenses, $291,643,485; net profits, $48,321,303; passengers carried, 16,044,389; tons of freight, 9,001,559.

The telegraphs have a total length of 23,345 miles, with 59,000 miles of wire.

The number of letters received in the internal postal service in 1897 was 46,653,262; of other packets, 37,581,566; of letters dispatched, 47,892,263; of other packets, 35,737,266; of letters received in the foreign service, 9,257,654; of other packets, 5,081,737; of letters dispatched, 6,444,378; of other packets, 2,088,718.

Arizona.—A Territory of the United States, organized Feb. 14, 1863; area, 113,020 square miles. The population, at the last census, was 9,658 in 1870; 40,440 in 1880; 59,620 in 1900; and 122,212 in 1900. Capital, Phoenix.

Government.—The following were the Territorial officers in 1900: Governor, N. O. Murphy; Secretary, Charles H. Akers; Treasurer, T. W. Green; and Assessor and Register, G. A. Scott; U.S. General, C. F. Ainsworth; Adjutant General, H. F. Robinson; Superintendent of Education, R. L. Long; Geologist, W. P. Blake; Chairman of the Live Stock Sanitary Board, A. C. McQueen; Chief Justice of the Supreme Court, Webster Street; Associate Justices, Richard E. Sloan, Fletcher P. Davis, George R. Davis; Clerk, Lloyd Johnston—all Republicans.

Finances and Valuations.—The bonded Ter- ritorial debt, as by the last biennial report, was $1,045,972,43; the city and county funded indebtedness was $1,634,027. The valuation of taxable property was $31,473,540. In August of this year, the valuation after equalization amounted to $33,782,400.

A decision lately rendered in the United States Supreme Court affirms the validity of railroad subsidy bonds given by Yavapai County years ago, but lately sought to be repudiated as illegal. The road brought a suit, not yet decided, but the validity of the bonds was in question in the suit between two counties, decided as above.

Education.—The new normal school at Flagstaff was dedicated May 11. Forty-one students were in attendance during the year.

The Territorial University has about 130 in the regular classes.

The Indian school at Phoenix has about 600 resident pupils and about 100 day scholars who are employed in families in the town. The Fort Yuma Indian school has about 150. A new building, to cost $10,000, is in progress.

Railroads.—The total valuation of the railroads in the Territory that are subject to taxation, as reported by the Board of Equalization, is $428,415,000. The Attorney General, in his brief before the board that the Santa Fe, Prescott and Phoenix could not be placed upon the assessment roll, excepting having been made by the Legislature in consideration of the fulfillment of certain conditions. Most of the lines had extensions in progress this year, opening new mining territory.

Banks.—The aggregate of the condition of the national banks of the Territory at the close of 1899 gave: Loans and discounts, $1,364,118; stocks and securities, $174,879; due from national banks not reserve agents, $240,002; due from State banks and bankers, $131,761; due from reserve agents, $490,221; gold coin, $134,720; total specie, $158,151; lawful money, $226,815; due to other national banks, $11,133; due to State banks and bankers, $47,829; individual deposits, $2,138,619.

The New Capitol.—This building was finished in August. It has cost $130,000. Its length is 184 feet and its depth is 54 feet. The height of the top of the dome from the ground is 76 feet. The dome is 154 feet in diameter and 82 feet 4 inches high, is con structed as nearly as possible of Arizona material. The foundation is made of malpais, the walls of the first story of granite, and the rest of the walls of tufa. The structure is as nearly fireproof as it was possible to make it.

Cities.—The census returns credit the capital city with 5,544 inhabitants. The assessed valu-
tion is $4,275,000. A very successful Indian and Cowboy Carnival was held last winter, with the design of attracting travelers to the Salt River valley and prolonging the winter tourist season.

The population of Tucson is somewhat more than 7,000 and the valuation between $2,900,000 and $3,500,000.

Globe was incorporated this year, and has in progress a gravity system of waterworks with a catchment reservoir 3 miles to the south.

Prescott suffered great loss by fire, July 13. A large part of its business portion was burned away, with the loss of one life and destruction of property amounting to more than $1,000,000. This was a fire protection against fire, the waterworks not having been finished; consequently, rates of insurance were high and not a large amount was carried. Offers of aid were sent from other places but were declined, and rebuilding was at once begun. An election was held Aug. 28 on a proposition to bond the town for $100,000 for water and sewerage. Of 340 votes cast, 19 were opposed.

**Products.**—Newspaper reports indicate constantly increasing activity in mining, fresh discoveries, new strikes in old fields, more capital, improved machinery. The gold product for 1899 was estimated in Wells, Fargo & Co.'s report at $9,000,000, and the silver at $720,000. Ores and old stock, with and without by-products, was sold for $3,000,000. These figures are regarded by mining men as too low.

From a description that accompanied the exhibits of three Arizona companies at the Paris Exposition are taken the following general statistics: The present annual production of the Copper Queen mines is approximately 40,000,000 pounds of copper, 1,500,000 pounds of the United Globe mines, 6,000,000 pounds. The number of employees of the three groups of mines is 2,500. The coal consumed in generating power is 25,000 tons, and the coke used in the furnaces 60,000 tons. Both coal and coke come from the Colorado Fuel and Iron Company. The Copper Queen and Detroit companies have mercantile departments and stores at their mines. All these companies support free libraries and reading rooms for their employees. A medical staff and well-equipped hospitals exist at all the establishments, the men contributing monthly from their wages for medical and hospital services.

The Live Stock Inspection Law.—This law was in March practically declared invalid in the district court, as one of its main provisions was declared contrary to the organic act as restricting the business of the plaintiff in the suit.

**Forest Protection.**—An organization has been formed with a view to saving the forest reserves. After a careful investigation of the effect of stock, and particularly of sheep, upon the forest reserves, the commissioner of the General Land Office issued an order for the protection of the forests, excluding all stock from the reserves. Ever since then the large sheep owners in the northern part of the Territory have been endeavoring to have the order rescinded. Mr. Wilson has already decided in favor of it, "for the protection of the stock interests in the country," and this was the occasion of the action noted above.

**Political.**—The Republican Territorial Convention, Sept. 24, nominated Gov. N. O. Murphy as Delegate to Congress. There were two Democratic candidates—J. F. Wilson and Marcus A. Smith—but Mr. Wilson withdrew about a month after the convention.

In the contest for Delegate to Congress the total vote of the Territory was 16,620, compared with a total vote of 14,650 in 1896. Of this, Smith, the Democratic candidate, received 8,664; Murphy, Republican, 7,666; and Danielian, Prohibitionist, 292.

**ARKANSAS.**

**Government.**—The following were the State officers in 1900: Governor, Daniel W. Jones; Secretary of State, Alexander C. Hull; Treasurer, Thomas E. Little; Auditor, Clayton Sloan; Attorney-General, Jefferson Davis; Superintendent of Education, J. J. Doyle; Commissioner of Mines, Manufactures, and Agriculture, Frank Hill; and Road Commissioners, J. G. Wallace, Felix M. Hanley, and Henry W. Wells; Mine Inspector, Robert Boyd, succeeded in September by W. H. Hill; Land Commissioner, J. W. Colquitt; Inspector of Wines, Cari A. Starck; Board of Charities, S. H. Davidson, W. H. Matthews, J. J. Thomas, J. W. Meeks, G. A. Melcher; Clerk of the Supreme Court, Henry G. Bunn; Associate Justices, Simon P. Hughes, C. D. Wood, Burrill B. Battle, James E. Riddick; Clerk, P. D. England—all Democrats.

**Population.**—The census returns by counties for 1900 and for 1890 are as follows:

</tbody>
</table>

There are 184 incorporated towns, cities, and villages in the State. Little Rock has population 40,000. The other larger places are the following: Fort Smith, 11,587; Pine Bluff, 11,496; Hot Springs, 9,073; Helena, 5,550; Texarkana, 4,914; Jonesboro, 4,508; Fayetteville, 4,061; Eureka Springs, 3,572; Mena, 3,432; Paragould, 3,322; Newport, 2,806; Camden, 2,830; Arkadelphia, 2,759; Van Buren, 2,573; Batesville, 3B
2,327; Rogers, 2,158; Prescott, 2,005; Conway, 2,003.

Most of the larger cities are disappointed over the returns and sure something is wrong, as estimates based on the school census give larger figures. The Governor is reported as saying: "These figures can not be otherwise than erroneous. Through these imperfect census returns Arkansas will get only one extra congressman, when we should have had two."

**Finances.**—The receipts and expenditures of the State for the two years ending Sept. 30, 1900, and the balances due each fund on Oct. 1, 1900, are shown in the following statement from the biennial report of the Auditor:

- General revenue—amount received, $1,191,724; warrants redeemed, $1,453,068.43; balance on hand, $625,087.67. Sinking fund—amount received, $24,443.25; warrants redeemed, $23,575.53; balance on hand, $7,305.00. Common school fund—amount received, $27,841.25; warrants redeemed, $29,360.32; balance on hand, $57,213.77. Permanent school fund—amount received, $2,677,423.13; warrants redeemed, $1,157,189.22; balance on hand, $2,519,233.88. Sixteenth section fund (transferred to permanent school fund)—amount received, $221,791.80; warrants redeemed, $375,315.68. Confederate pension fund—amount received, $1,000,627.07; warrants redeemed, $101,648.52; balance on hand, $17,646.45. Direct tax—balance on hand, $15,015.75. Swamp land fund—amount received, $7,530.51; warrants redeemed, $1,974.58; balance on hand, $49,767.23. Internal improvement fund—amount received, $59,390.10; balance on hand, $61,316.80. State Capitol fund—amount received, $48,029.64; warrants redeemed, $36,063.44; balance on hand, $11,360.20. Penitentiary deposit fund—amount received, $180,730.65; warrants redeemed, $280,430.61. Tax due counties—amount received, $53,207.57; warrants redeemed, $49,360.99; balance on hand, $13,378.08. Tax due cities—amount received, $323,65; warrants redeemed, $114.04; balance on hand, $642.13.

**Valuations.**—The value of real estate, as shown by the tax books, is $127,002,900. The value of personal property assessed was $26,936,142.

In a suit to determine the liability of Garland County for a part of the indebtedness of Hot Spring County, from which it was set off in 1873, the court adjudged that Garland should pay Hot Spring $19,850 as its share of the debt at the time of separation.

**Education.**—The school population is 472,508. The enrollment in 1899 was 296,785, of whom 76,049 were colored. In private and denominational schools there were 5,835.

Twenty-one young men and women were graduated at the State University in June.

**Charities.**—The report of the State Board of Charitable Institutions, published in May, gives the following data:

- The current expenses of the lunatic asylum from April 1, 1897, to March 31, 1898, were $56,956.73; from April 1, 1899, to March 31, 1900, $59,449.88, an increase of $2,493.15 for the year just closed. The record shows that on April 1, 1897, there were 507 patients on hand in the asylum, and on April 1, 1899, there were 605, an increase of 98 patients.
- The current expenses of the deaf-mute institute from April 1, 1897, to March 31, 1898, were $10,676.62; from April 1, 1899, to March 31, 1900, $17,439.86, an increase of $2,242 for the year just closed. The record shows that on April 1, 1897, there were 206 pupils in attendance, and on April 1, 1900, there were 250, an increase of 42.
- The current expenses of the school for the blind from April 1, 1897, to March 31, 1898, were $13,723.85, and from April 1, 1898, to March 31, 1900, $17,313.90, an increase of $3,990.05 for the year. The report shows that on April 1, 1897, there were 167 pupils in attendance at the school for the blind, and on April 1, 1899, 192, an increase of 25 pupils.
- The last Legislature increased the current expense appropriation of the lunatic asylum $10,000, the deaf-mute institute $4,000, and the school for the blind, $11,000.

**Railroads.**—Among the States having new railroad mileage built in 1899, Arkansas stood third, with 282 miles. During the first half of 1900 62 miles were constructed in the State. The net incomes of the several roads for the year ending June 30, 1900, as reported to the State, were: St. Louis, Iron Mountain and Southern, $1,063,026.71; St. Louis and Southwestern, $497,380.09; Choctaw and Memphis, $832,834.08; Paragould and Southeastern, $122,214.59; Arkansas Midland, $8,765.02; Eureka Springs, $369,750.07; Hoxie, Pocahontas and North-Western, $87,143.05; Dardanelle, $67,007.17; Stuttgart and Arkansas River, deficit, $3,366.99; Des Arc and Northern, $2,916.43; Louisiana and Arkansas, $29,164.04.

The report of the Kansas City, Fort Scott and Memphis for the year ending June 30, 1900, shows the income $363,495, or 213 21/24 per cent, in earnings; of $636,495, or 213 per cent, in expenses; and of $343,337, or 253 per cent, in net earnings. In addition $100,000 was appropriated for improvements and transferred to the general improvement fund, $100,000 having also been ated for the year's miscellaneous earnings for the same purpose, with a surplus balance for the year, after all deductions, $28,400.

The Kansas City, Memphis and Birmingham road, operated in the same interest, shows for the fiscal year an increase of $90,139, or 19 per cent, in gross earnings and of $157,057, or 42 per cent, in net receipts.

Charter privileges have been granted to the Arkansas and Missoula and the Arkansas Western. The former is to run from Little Rock to a point on the State line in Boone County, and the latter from Howe, Indian Territory, to Waldron, Ark., about 36 miles.

The Stuttgart and Arkansas River was sold in April to the Des Arc and Northern. The White and Black River Valley was leased in June to the Choctaw, Oklahoma and Gulf.

The commission gave an opinion in a case involving their right to regulate rates, holding that the transportation of freight between two points in the State, though the line of railroad may pass outside the borders of the State, for a few miles, is intra-state and subject to regulation by the commission.

**Business and Products.**—Figures published in August show the capitalization of corporations registered with the Secretary of State from Jan. 1, 1900, as follows: Manufacturing associations, $23,000,575; railroad companies, $82,130,000; bank companies, $855,000; building associations, $75,000; loan and investment companies, $135,000; telegraph and telephone companies, $109,200; total, $113,827,775.

The cotton acreage this year was 1,718,901; the estimated crop, 899,000 bales; the consumption in mills of the State, 2,580 bales.

From a review of the lumber trade for July it appears that of 135 mills reporting, which are in 6 States and 1 Territory, 41 were in Arkansas and Indian Territory; that they cut 40,962,812 feet.
and shipped 51,156,821, and had on hand 71,502,475.

A first prize was awarded at the Paris Exposition to an exhibit of apples from the State experiment station, prepared by the pomologist at the university.

AUSTRALASIA.

General's office is learned that under the anti-trust law passed by the last Legislature 225 suits were brought against the fire insurance companies doing business in this State, to subject them to the penalty of the act. Proceedings were instituted also against the express companies, W. A. Pierce Oil Company, American Tobacco Company, Continental Tobacco Company, and the various cotton-seed oil companies operating in this State.

The construction of the act was tested in the Supreme Court under the style of State ex rel. Etna Fire Insurance Company and The State vs. Lan-cashire Fire Insurance Company, one series of which was affirmed, the other, carrying the constitutionality of the act, was reversed. The court having decided adversely to the opinion of the Attorney-General, the other cases were dismissed.

LAWLESSNESS.—A negro prisoner who had confessed to the murder of an Italian fruit vendor was hanged at Helena by a mob near Helena, April 16. A negro school-teacher, suspected of having broken into a store, was shot and killed by a party of men, who took him and another suspected negro to a lonely place to frighten them into confession. It was declared that the killing was not intentional, and that only a "mob" was intended.

LABOR.—A decision was handed down in the United States District Court at Fort Smith, in January, making permanent the temporary injunction issued previously, restraining the striking coal-miners of western Arkansas from interfering with nonunion men who took places in the mines.

Before the State election the labor unions were asking of candidates for the Legislature pledges as to proposed legislation in which they were interested. A set of questions used in Sebastian County is as follows:

1. Will you favor a bill making eight hours a legal working day, with a penalty for the violation of the same?
2. Are you in favor of a law establishing semi-monthly or weekly pay day?
3. Are you in favor of the abolition of the scrip system now in use by corporations?
4. Will you favor a law compelling all corporations doing business in the State of Arkansas to be incorporated under the State laws and chartered by the State?
5. Are you in favor of a law establishing a uniform system of textbooks to be published by the State and furnished at cost to all patrons of the public schools of the State?

POLITICS.—Secretary and Gov. Jones were candidates before the primaries for the office of United States Senator, but the Governor withdrew from the contest, March 23.

The election for State officers was held Sept. 3. There were three candidates for Governor, but only the Democrats put out a full State ticket. The Democratic and Populist nominees were A. W. Files. Following is the Democratic ticket: For Governor, Jeff Davis; Secretary of State, John W. Crockett; Attorney-General, George W. Murphy; State Auditor, T. C. Monroe; State Treasurer, Thomas E. Little; Commissioner of Lands, J. W. Colquitt; State Superintendent of Public Instruction, J. J. Doyne; Commissioner of Mines, Manufactures, and Agriculture, Frank Hill; Associate Justice of Supreme Court, Carroll D. Wood; Railroad Commissioners, F. M. Hanley, Abner Gaines, J. G. Wallace.

The platform of the Democratic convention, June 26, 27, approved the national platform of the party as adopted at Chicago in 1896; recognized the Monroe doctrine as a cardinal tenet of the party, and favored its strict observance; favored the building of the Nicaraguan Canal by the Government; opposed the donation of the public lands of the United States to private corporations. Trusts and all illegal combinations were denounced. The platform approved the action of the last Legislature in passing laws against them, and pledged the party to the passing of laws to prohibit their operation in Arkansas.

The set of resolutions at the Republican convention for nominating delegates to the national convention, March 29, favored expansion, opposed trusts, favored the Nicaraguan Canal to be owned and controlled by the Government, and approved the protective tariff policy. It denounced the Coeobol act and the Nesbitt act and "all similar laws in Arkansas and elsewhere concocted to cheat honest voters, and to enable a corrupt minority to govern."

The State Republican convention, July 7, declared in favor of a reform school, completion of the Statehouse, compulsory arbitration in labor troubles, and nonpartisan educational and charitable boards, and opposed competition of convict vs. free labor, and unfettered activity of labor. The Prohibitionists nominated a presidential elector at large, and declared: "The Democratic and Republican parties are equally corrupt and in sympathy with the liquor power of this nation, and therefore unworthy the support of any Christian or philanthropist."

The vote for Governor stood: Davis, Democrat, 88,637; Remmel, Republican, 40,701; Files, Populist, 3,041. The State Senate will be entirely Democratic; the House will have 1 Independent, 2 Republicans, and 97 Democrats.

The total vote for presidential electors was 127,839, compared with 149,547 in 1896. The Democratic vote represents 41 of the 42 counties; the Republican, 44,800; and the Prohibitionist, 584— a Democratic majority of 35,758.

AUSTRALASIA, one of the grand divisions of the globe, consisting of the continent of Australia and island colonies of Great Britain, with interjacent islands. With the exception of the Dutch and German portions of New Guinea, the German protectorate of Bismarck Archipelago and that of the northern Solomon Islands, now diminished by the cession of the Howe group, the French colony of New Caledonia, and the New Hebrides and smaller islands under native rule, all the islands of Australasia are British colonies and dependencies in the southern seas and dependent on the Imperial Government. The colonies of Australia and the colonies of Tasmania and New Zealand are self-governing, having each its representative Legislature, with a responsible ministry, disposing of its own revenues, and making its own laws under a charter granted by the British Parliament, subject to a certain reserved veto power of the Imperial Government. The British Crown is represented in each colony by a governor, who as the executive head of the colonial Government acts on the advice of the responsible ministers selected from the party or coalition that forms the majority in the Legislative Assembly. The Crown colony of Fiji is administered in accordance with native laws and customs, and its Gov-
AUSTRALASIA.

An estimate made for the purpose of apportioning representation under the federation scheme gives Victoria 1,162,900; Queensland, 482,400; South Australia, 370,700, and Tasmania, 182,300 inhabitants.

The population of "New South Wales on June 30, 1899, was composed of 725,900 males and 631,150 females. At the end of 1889 it was estimated at 729,063 males and 627,645 females; total, 1,356,708, including 8,235 natives. The population of Sydney, the capital, was estimated in 1898 at 426,530, including suburbs.

In Victoria it was estimated in 1899 that 606,110 of the total population lived in towns. Melbourne, the capital, in 1897 contained 469,880 inhabitants, nearly two-fifths of the population of the state, and Ballarat the next in order, with 44,480, Bendigo, or Sandhurst, 42,992, and Geelong 23,334. The emigration from the colony has for five years past exceeded the immigration, chiefly owing to the exodus to the gold fields of Western Australia.

Brisbane, the capital of Queensland, contained at the end of 1898 a population of 167,840 souls, its environs included. The Chinese immigrants into Queensland in 1898 numbered 742, and the emigrants 475; the Polynesian immigrants numbered 1,182, and the emigrants 731.

The population estimated for South Australia on Dec. 31, 1898, consisted of 187,251 males and 185,701 females. In the northern territory there were 4,903 inhabitants, of whom only 405 were females, the bulk being Chinese coolies. Adelaide, the colonial capital, had a population of 147,616.

The population of Western Australia comprised 111,354 males and 57,126 females. In 1891 there were 49,782 persons in the colony, and then the increase had been 68 per cent. in ten years. Perth, the capital, had an estimated population of 39,600 in the beginning of 1899.

The white population of New Zealand at the census of April 12, 1896, was 703,300, consisting of 371,415 males and 331,845 females. Of this total 690,003 were British-born, and of these 441,661 were born in New Zealand and 215,161 were born in the United Kingdom. 30,541 of the latter in England, 2,148 in Wales, 50,435 in Scotland, and 46,037 in Ireland. Of the total population, 15.13 per cent. were agricultural, pastoral, mineral, or other primary producers, 7.18 per cent. were employed in commerce, 4.11 per cent. were engaged in the professions, 8.93 per cent. were engaged in professional occupations, and 58.25 per cent. were dependents. The population as estimated at the end of 1899 includes 39,584 Maoris and 3,711 Chinese. Of the Maoris, the number including 3,903 half-castes and 229 Maori wives of white men, 21,679 were males and 18,181 females. The capital of New Zealand is Wellington, which had at the last census 41,758 inhabitants, with its suburbs, while Auckland had 57,016, Christchurch 31,330, and Dunedin 47,250. Of the total population of the colony, 307,294 lived in boroughs, 391,735 in the rural districts, 950 on adjacent islands, and 3,381 on ships.

The population of Fiji, as estimated for Dec. 31, 1898, comprised 67,245 males and 54,403 females. The European population was 3,927, of whom 2,444 were males and 1,483 females; Indians numbered 12,320, of whom 8,293 were males and 4,027 females; Fijians, 39,054, comprising 52,650 males and 46,298 females; Polynesians, Rotumans, half-castes, and others, 6,537, comprising 3,852 males and 2,685 females. Among the natives in 1898 there were 4,300 deaths to 3,481 births.

The movement of population in the several colonies for 1898 was as follows:

* Net emigration.  + Excess of deaths.
and tramways having been £41,226,475, on telegraphs and telephones £1,013,484, on water supply and severance £9,099,531, and on other works and services £10,915,047. The estimated wealth of the colony at the end of 1898 was £547,521,500, of which £109,705,500 was public and £375,116,000 private wealth.

On the revenue side, Victoria, taxation produced £2,910,237, of which £1,840,404 came from customs and other duties, £301,318 from excise, £115,451 from the land tax, £238,750 from duties on estates of deceased persons, £18,844 from the duty on bank notes, £172,400 from the stamp duty, £26,815 from tonnage dues, etc., and £180,225 from other indirect taxes. The income from railways and land, and 1,020,547; from telegraphs, £526,399; from public lands, £385,518; from other sources, £402,752. The expenditure for debt charges was £1,852,056; for railways, £1,559,379; for public instruction, £571,590; for posts and telegraphs, £508,851; for pensions, £339,836; for police and jails, £300,723; for electric lamps and fountains, £279,013; for various public works, £242,924; for general expenses, £290,362; for defenses, £184,677; for law courts, £157,457; for mining and agricultural, £142,780; for public lands, £74,508; for other purposes, £156,495. The revenue for the financial year 1900 was estimated at £1,750,221; expenditure, at £1,906,000.

In Queensland, customs produced £1,367,426 of the total revenue; excise and export duties, £143,905; stamps, £120,814; licenses, £57,279; dividend duty, £60,497; rent from pastoral leases, £334,900; other rents and sales of land, £240,143; railroads, £1,222,606; posts and telegraphs, £11,901. The principal expenditure is for interest on the public debt, £79,785 for municipal and divisional endowments, £275,715 for public instruction, £181,470 for the Colonial Treasurer's department, £76,980 for the Department of Public Lands, £50,401 for the Department of Agriculture, £783,311 for the expenses of the railroads, £328,403 for the Department of Health, and £356,400 for interest from loans amounted for the year to £1,054,787, mostly for public works, including £208,812 on railroads. The revenue for 1900 was estimated at £4,388,445 and expenditure at £4,364,420.

In South Australia the revenue is derived from customs duties, excise, posts and telegraphs, railways, and other works and services and interest on the debt. Three quarters of the debt was contracted to build railroads, waterworks, and telegraphs. The railroads earn 3½ per cent. a year. The customs revenue for the year were estimated at £303,231, the total receipts at £2,711,333; estimated expenditure at £2,478,217.

The revenue of Western Australia is obtained from customs, railroads, and public lands. The public debt on June 30, 1898, was £8,947,554.

The expenditure of Tasmania for 1898 includes a sum derived from territorial revenues that was applied to the redemption of loans. For 1899 the revenue of the colony was estimated at £240,750 and expenditure at £256,600.

Of New Zealand's revenue for 1899, customs supplied £1,965,018; stamps, posts, and telegraphs, £779,309; railroads, £1,465,507; land tax, £298,033; income tax, £113,480; sales of land, £22,075. The chief expenditures were: £1,767,605 for the public debt; £698,917 for railroads, £475,218 for education, £388,546 for posts and telegraphs, and £234,344 for constabulary and defense. The total expenditure on public works, including the expenses of raising loans, from 1870 to March 31, 1899, was £31,955,750. The debt amounted to £61,146, per capita.

 Fiji derives its revenue mainly from customs, which produced £45,300 in 1898, and a tax on the natives, which produced £18,923. This tax is paid in produce, which they deliver to the Government, to be sold on their account. The expenditure on salaries in 1898 was £37,946; for other purposes, £10,585.

Commerce and Production.—The value of the foreign trade of the several colonies for 1898 is given in the following table:

Of the total imports into New South Wales in 1898, the Australasian colonies furnished the value of £12,467,059, while of the exports £8,675,199 went to other colonies. The overland trade was £5,678,201 for imports and £4,121,784 for exports. The imports from the United Kingdom were £7,744,418; from British possessions besides Australasia, £864,429; from the United States, £1,002,554; from other colonies, £1,037,749; and imports to the United Kingdom, £7,734,880; to other British possessions, £725,383; and to the United States, £5,051,287; to other countries, £4,561,368. The total exports of home produce in 1898 were £17,272,007 in value; exports of foreign produce, £9,021,063. The quantity of wool exported was 294,948,406 pounds, valued at £2,744,673; the export of tallow was £493,918 in value; coal, £902,668; hides and skins, £840,533; leather, £340,400; preserved and frozen meat, £721,457. The export of gold coin was £6,520,060. The value of the gold obtained from the mines of New South Wales in 1898 was £1,244,330, and in 1899 was £1,820,953. Among the other metals, in 1898 was £59,278; of silver lead ore and metal, £1,044,777; of copper, £272,688; of coal, £1,271,832. The tin mines from their opening in 1872 to the end of 1898 produced the total value of £6,292,066. The production of sugar in 1899 was 282,206 tons; of wheat, 9,956,310 bushels; of tobacco, 7,723,000 pounds. The colony possessed 41,241,004 sheep, 2,029,516 cattle, 401,553 horses, and 247,061 hogs. The duty on imports in New South Wales averages 5½ per cent., taking free and dutiable goods together. In Victoria there is a protective tariff, and the duties collected amount to 12 per cent. of the total value of the imports. The wool sold abroad and in other countries exceeded the quantities of which are imported from other countries to be re-exported or manufactured, are free of duty. The value of wool imported into Victoria in 1898 was £1,608,492; of hides and skins, £202,035; of cotton goods, £1,140,393; of woolen goods, £602,533; of sugar and molasses, £895,014; of live stock, £732,001; of iron and steel, £440,890; of timber, £344,024; of coal, £277,688; of silks, £345,633; of tea, £300,940; of oils, £239,593; of all other goods, £9,425,343. The exports of gold coin and bullion from Victoria in 1898 were £5,947,195; of wool, 131,850,560 pounds, valued at £4,038,908; of live stock, £255,064; of raw hares, £318,868; of cereals and flour, £638,047; re-export of tea, £100,873; exports of sugar and molasses, £150,431; of clothing, £136,776; of tallow, £94,508; of hides and skins, £373,034; of butter, £730,323;
of frozen meat, £177,348; of all other articles, £2,746,189. Of the total imports in 1898 the United Kingdom furnished £6,155,134; Australasian colonies, £7,670,126; India, £287,529; Ceylon, £140,537; New Zealand, £740,430; Canadian colonies, £6,342,230; India, £500,332; Ceylon, £15,484; Canada, £651; other British possessions, £220,731; the United States, £67,561; France, £806,470; Germany, £344,041; Belgium, £225,402; Java and the Philippine Islands, £14,523; other foreign countries, £35,401. The value of the gold in Victoria in 1899 was £3,446,444, against £3,349,632 in 1898. The factories of the colony, having a total valuation of £12,000,000, produce many of the articles used by the colonists. Agriculture is developed further than in other parts of Australia. The yield of wheat in 1899 was 19,581,000 bushels.

The importation into Queensland in 1898, the value of £2,757,981 came from Australasian colonies, £2,559,244 from the United Kingdom, £155,299 from other British possessions, £278,837 from the United States, and £255,905 from other foreign countries. Of the exports, £6,269,090 went to Australasian colonies, £4,332,067 to the United Kingdom, £190,974 to British possessions, and £133,996 to foreign countries. The chief exports were gold of the value of £2,855,781; wool, £3,018,089; sugar, £1,329,876; hides and skins, £460,656; tin, £31,571; silver, £39,625; copper, £6,430; peats, shelled, £109,588; frozen meat, £676,598; preserved and salted meat, 445,173;精神, £5,904; live stock, £50,937. The gold output of 1898 was 920,048 ounces, and in 1899 it was increased to 947,626 ounces. The value of the coal raised in 1899 was £150,493; of tin, £36,502; of silver, £10,583. There were 17,552,608 sheep, 5,571,292 cattle, 480,469 horses, and 127,981 hogs in the colony in 1898.

The report of South Australia for 1898 shows the share of the other Australasian colonies was £3,348,822 of the imports and £3,332,226 of the exports; the share of the United Kingdom, £1,974,818 of the imports and £2,306,202 of the exports; that of British possessions not in Australasia, £193,829 of the imports and £265,467 of the exports; that of the United States, £310,866 of the imports and £915 of the exports; that of all other foreign countries, £336,659 of the imports and £590,904 of the exports. The export of wool was £945,859 in value; wheat, £15,101; flour, £235,752; copper, £244,845. The wheat crop was 8,778,900 bushels, and the value of the mineral exports was £239,372. There were 260,343 cattle, and 5,012,629 sheep in 1898. In 1899 there were made 1,980,772 gallons of wine, of which 504,065 gallons were exported.

Of the imports of Western Australia, £2,651,872 in value came from, and of the exports £2,293,652 went to, the United Kingdom. The export of gold was £3,900,698; of silver, £1,759,086; of pearl shell, £49,480; of sandalwood, £31,812; of timber, £326,195; of wool, £287,731; of skins, £44,545. The trade with other Australasian colonies was £2,743,761 of imports and £2,462,901 of exports; with other British possessions, £165,103; with the United States, £1,929,992 of exports; with the United Kingdom, £181,940 of imports and £64,701 of exports. The value of gold exported has increased from £570,748 in 1895. There were 3,009 leases of gold mines in 1898, and 16,438 men were employed in the mines, the output of gold being 3,075,000 ounces. The output of gold was £6,431,063 in value, bringing the total production up to £20,000,000. For mining copper 27 leases have been issued; for tin mines, 2; for lead mines, 41; for coal mines, 63. The live stock at the close of 1898 consisted of 62,442 horses, 245,907 cattle, and 2,244,888 sheep.

The wheat crop in 1899 was 2,303,512 bushels. Oats, potatoes, and hay are important crops, and fruit-growing is a great industry, large quantities of apples and other fruits being exported to the other colonies and to England.

The live stock in 1899 consisted of 29,751 horses, 148,538 cattle, 1,493,638 sheep, and 45,294 hogs. Iron, tin, galena, copper, gold, and silver mines are worked. The value of gold exported in 1898 was £185,478; of silver, £167,618; of copper ore, £378,565; of tin, £141,162. The export of wool was £254,940 in value; of timber and bark, £60,012; of hops, £22,012; of fruit and jam, £285,345. Of the total imports, £465,544 came from the United Kingdom, £752,084 from Belgium, and £375,227 from other foreign countries. Of the total exports, £431,518 went to the United Kingdom, £614,640 to Victoria, £635,110 to New South Wales, £99,948 to other British possessions, and £22,153 to foreign countries.

The imports of colonial produce from New Zealand in 1898 amounted to £10,324,988. The export of wool was 149,385,815 pounds, valued at £4,645,804; of gold, 280,175 ounces, valued at £1,080,691; of Kauri gum, 9,905 tons, valued at £556,767; of frozen meat, 1,551,773 hundredweight, valued at £1,968,750; of butter, 90,501,000 pounds, valued at £225,402; 96,501,646 pounds, valued at £225,402; £46,501,482 of British and foreign produce, £124,850; of specie, £6,117, against £19,191 of imports. The gold mines of New Zealand are mostly situated on Government lands. The production of gold since they were first opened in 1857 has been £54,453,325. The production of silver in 1898 was 290,851 ounces, valued at £33,107; of gold, 907 ounces, value £453,517; of Kauri gum, 9,905 tons, value £586,767. The production of gold for 1898 was 470,585 ounces, value £513,242. The wheat crop for 1898 was 13,073,000 bushels, nearly 33 bushels to the acre; the oat crop, 16,311,000 bushels; the barley crop, 1,675,000 bushels. The wool crop, 988,899, valued at £258,115; the cattle, 1,293,024 cattle, 19,075,725 sheep, and 193,512 hogs. The total value of imports in 1898 was £8,793,693; of exports, £11,938,335. The exports of dairy products were valued at £701,742; gold export, £1,513,173.

In Fiji the European settlers had 22,078 acres in 1898 planted to sugar cane, 21,544 acres planted to coconuts, 6,452 acres planted to bananas. The export of sugar was 34,156 tons, valued at £409,884; of run, 111,088 gallons, valued at £13,886; of copra, 6,474 tons, valued at £63,140; of value of bananas, £25,475.

**Navigation.**—The number of vessels entered at the ports of New South Wales during 1898 was 3,316, of 3,464,867 tons, which, 2,983, of 3,005,748 tons, were British or colonial, and 331, of
railroad were £1,169,665 and the expenses £920-737. There were 4,955,553 passengers and 2,744-441 tons of freight carried. The total capital expenditure up to that date had been £17,190,967.

The number of letters carried in the mails of New South Wales during the year ending June 30, 1898, was 75,650,965; postal cards, 1,331,250; newspapers, 42,370,850; packets, 10,497,334; money orders, 410,772, for £1,432,373; postal notes, £420,113.

The post office in Victoria showed for 1898 receipts amounting to £331,367, including telegraph and telephone receipts, and £408,192 of expenditure.

The Queensland post office in 1898 carried 19,729,955 letters, 11,047,822 newspapers, 5,130,733 packets, and 235,240 parcels; receipts, £182,207.

In South Australia the postal traffic for 1898 was 19,391,816 letters, 1,501,802 packets, and 8,803,104 newspapers.

The post office of Western Australia carried 13,132,988 letters, 296,712 postal cards, 7,390,294 newspapers, and 3,261,436 packets in 1898.

The New Zealand post office in 1898 forwarded 34,737,316 letters, 917,631 telegraph letters, 1,479,964 postal cards, 16,822,704 books and parcels, and 15,985,467 newspapers, and issued 318,370 and paid 229,751 telegrams. The number of telegraph offices, wharves and post and telegraph department for the year ending March 31, 1899, were £445,770, and expenses £390,197.

New South Wales had 13,242 miles of telegraph lines, with 35,630 miles of wire, at the beginning of 1899. The capital cost was £980,425. The number of telegrams dispatched in 1898 was 2,806,570; receipts, £428,995; net revenue, £158,062.

The telegraph lines of Victoria had a length of 6,509 miles, with 14,729 miles of wire, in 1898. The number of messages sent in that year was 1,806,184. The receipts were £97,565.

Queensland had 10,088 miles of telegraph lines, with 18,565 miles of wire. The number of private messages was 1,061,068, besides 151,967 foreign messages received. The receipts were £88,727.

The telegraphs of South Australia had a length of 5,874 miles, including telephone lines; the length of wire was 14,585 miles.

The length of telegraph lines in Western Australia at the end of 1898 was 5,880 miles, with 8,050 miles of wire. The number of dispatches sent during the year was 1,175,928; revenue, £79,754. A cable is to be laid from Freemantle to Cape Colony.

The telegraph lines of New Zealand on March 31, 1898, had a total length of 6,736 miles, with 18,746 miles of wire. The number of messages for the year was 2,960,738. The telephones as well as the telegraphs belong to the Government, and the receipts from both were £145,293.

**Australian Federation.** — When Australia was first settled the seat of government was in the original colony of New South Wales, established in 1788, until Van Dieman’s Land, now Tasmania, set up an independent administration in 1825. This example was followed successively by Western Australia, South Australia, Victoria, and lastly Queensland. Before the Victorian Government was founded in the Port Phillip Settlement, which was placed in 1850, Parliament was established that a central authority to decide questions of interest to Australia collectively was necessary, and in 1856 he introduced proposals for constituting such a central authority; but at that time they met with no general support. From the time of the establishment of the Dominion of Canada, in 1867, Sir Henry Parkes labored to bring about a
union of the Australasian colonies, but the activity of Germany and France in the Pacific in 1883 first impressed the impetus to the movement for federation. A conference was held in Melbourne, followed by a convention in Sydney in 1881, at which the first commonwealth bill was drafted. This was submitted to the colonial Parliaments, but the popular demand for federation was not strong enough to secure its adoption. The Federal League was then founded to enlighten the Australian people regarding the benefits of federation, and so successful was this educational movement that in 1895 the Premiers in a conference agreed to bring forward enabling bills in their several Parliaments for providing a convention of delegates which should be instructed and empowered to frame a constitution to be submitted to the separate Parliaments sitting in grand committee; the amendments made by the several Parliaments were then to be referred back to the convention, and after they had been considered a final draft was to be made and submitted to the people of the several colonies to be voted on at a referendum. This convention was held at Adelaide in March, 1897. Queensland was not represented, its Government having refused to pass an enabling bill. The constitution drafted at that meeting was based on the one drawn up in 1891, of which Sir Samuel Grif- fith and Edmund Barton were the principal autho- rities. The convention met in Sydney, and before the close of 1897 to consider and digest the amendments made by the several Parliaments, adjourned to Melbourne in 1898, and the final draft was submitted to popular vote in the several colonies. Queensland, as well as Western Australia, abstained from voting on the bill. The people of five colonies had given the seal of their approval, for the bill, but in New South Wales it failed to secure the 80,000 votes that had been fixed as the minimum majority required to secure its adoption. The Government of New South Wales then proposed amendments, which were substantially adopted. Another referendum was proposed and the people of New South Wales voted on it this time, and the results were 377,760 votes for the bill and 141,500 against. Western Australia did not take part in this decision, but pressed for further amendments, which the other colonies declined to consider, the Premiers deciding that it was too late to change the constitution to which the people of five colonies had given the seal of their approval. In this form it was then forwarded for the sanction of the Imperial Parliament, accompanied by a bill authorizing the federation of the colonies under this palladium.

The draft bill for the federation of the Austra- lian colonies embodying the Federal Constitution was presented to the British Government for the sanction of the Imperial Parliament before the beginning of the session of 1900. It was the result of many years' discussion, and had been ratified by a referendum in the colonies that were ready to enter the federation as original states, viz., New South Wales, Victoria, Tasmania, Queens- land, and South Australia. All these colonies desired a postponement until its people could also decide by a referendum whether they would accept the Federal Constitution, but the other colonies were not willing to grant further delay. New Zealand still held aloof. The conference of Premiers, held at Sydney in January, 1900, voted the commonwealth bill should be passed without alteration. The principal clauses of the Constitution which the statesmen and jurists of Aus- tralia had drawn up and the people had ratified by a large majority are given below.

The commonwealth bill as finally adopted pro- vided that the legislative power shall be vested, consisting of the Queen, a Senate, and a House of Representatives, the Queen's representative being a Governor General, appointed by the Crown and receiving a salary from the commonwealth of £10,000 until the Parliament should otherwise decide its amount. Parliament shall sit once at least in the course of a year. The Senate is to be composed of Senators for each state, directly chosen by the people of that state, and sitting for a term of six years. The method of election was left to be defined later. The House of Representatives is to contain twice the number of the Senate, and its members are to be elected by the people of the whole commonwealth, and the representation of each state to be in proportion to the number of the people in that state; but in each original state there shall be at least five members apart from this consideration. The bill provided that the Queen should proclaim the union of the colonies adopting the Constitution, within a year of the passing of the enabling bill. The Queen was to be the queen of a federation. It was in a federal commonwealth under the name of the Commonwealth of Australia. The commonwealth act and all laws made by the Parliament of the commonwealth under the Constitution shall be binding on the courts, judges, and people of every state and of every part of the commonwealth, not-withstanding any legislation of any state. The courts and the laws of the commonwealth shall be in force on all British ships, except ships of war, whose first port of clearance and port of destina- tion are in the commonwealth. States of the commonwealth are such of the colonies of New South Wales, New Zealand, Queensland, Tas- mania, Victoria, and South Australia, Australia, including the northern territory of South Australia, as for the time being are parts of the commonwealth, and such colonies and terri- tories as may be admitted into the commonwealth or established by the commonwealth as states. The Parliament shall, subject to the Constitution, make all laws necessary in the execution of its declared policy of good government of the commonwealth with respect to trade and commerce with other countries and among the states; taxation, so as not to discriminate between states or parts of states; bounties on the production or export of goods, so that such bounties shall be uniform throughout the commonwealth; borrowing money on the public credit, the management of any telegraph, telephone, and other like services; the naval and military defense of the commonwealth and of the several states, and the control of the forces to execute and maintain the laws of the commonwealth; lighthouses, light-ships, beacons, and buoys; astronomical and meteorological ob- servations, quarantine; fisheries in Australian waters beyond territorial limits; census and sta- tistics; currency, coinage, and legal tender; banking other than state banking, also state banking beyond the limits of the state concerned, the incorporation of banks, and the issue of paper money; insurance and encouragement of ob- state insurance extending beyond the limits of the state concerned; weights and measures; bills of exchange and promissory notes; bankruptcy and insolvency; copyrights, patents of inventions and
designs, and trade-marks; naturalization and aliens; foreign corporations, and trading or financial corporations formed within the limits of the commonwealth; marriage; divorce and matrimonial causes, and in relation thereto parental rights; the people of any race, other than the original race in any state, for whom it is deemed necessary to make special laws; immigration and emigration; the influx of criminals; external affairs; the relations of the commonwealth with the islands of the Pacific; the acquisition of property on just terms from any state or person for any purpose solely by the Parliament of the commonwealth to make laws; the control of railways with respect to transport for the naval and military purposes of the commonwealth; the acquisition, with the consent of a state, of any railways of the state on terms arranged between the commonwealth and the state; railway construction and extension in any state and the making of compensation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one state; matters in respect of which this Constitution makes provision until the Parliament otherwise provides; matters referred to the Parliament of the commonwealth by the Parliament of the United Kingdom or by the Federal Council of Australasia; matters incidental to the execution of any power vested by this constitution in the Parliament or either house thereof, or in the Government of the commonwealth, or in the Federal judicature, or in any department or officer of the commonwealth.

The executive powers transferred to the commonwealth comprise the departments of posts, telegraphs, and telephones; naval and military defense; lighthouses, light-ships, beacons, and buoys; and quarantine. These can be taken over at any date after the establishment of the commonwealth. The chief command of the naval and military forces is vested, however, in the Governor General.

The bill provided that the judicial power of the commonwealth should be vested in a Federal supreme court, to be called the High Court of Australia, and in such other Federal courts as the Parliament might establish. Any question as to what branch or departments of the Federal Government constituted the High Court of the commonwealth, or which court should exercise jurisdiction, subject to such exceptions and regulations as the Parliament prescribed, to hear and determine appeals from judgments, decrees, orders, and sentences of any justice or justices exercising the original jurisdiction of the High Court, of any other Federal interest of the High Court exercising Federal jurisdiction, or of the Supreme Court of any state or any other state court from which an appeal lies to the Queen in Council, or as to questions of law of the Interstate Commission. No exception or regulation of the Parliament should prevent the High Court from hearing and determining appeals from the Supreme Court of a state in any matter in which at the establishment of the commonwealth an appeal lies to the Queen in Council, and the same conditions and restrictions on appeals to the Queen in Council should be applicable to appeals to the High Court unless the Parliament otherwise provides. No appeal should be permitted to the Queen in Council in any matter involving the interpretation of the commonwealth Constitution or the constitution of a state unless the public interests of some other part of the imperial dominions are involved. The royal prerogative to grant appeal from the High Court to the Privy Council would not be extended beyond the provisions of the Constitution limit it, but the Parliament would have power to impose further limitations. In matters arising under any treaty, affecting consuls or other representatives of other countries, in which the commonwealth is a party, between states or residents of different states, or in mandamus as against officers of the commonwealth, the High Court should have original jurisdiction, and the Parliament might confer original jurisdiction in any matter arising under the Constitution or involving its interpretation, arising under any laws made by the Parliament, of admiralty and maritime jurisdiction, relating to the same subject matter claimed under the laws of different states. In admiralty and maritime jurisdiction or to conflicts in the laws of different states as to the same subject matter the Parliament could make laws defining the jurisdiction of any other Federal court than the High Court and defining the extent to which such questions of jurisdiction should be decided that which belongs to or is vested in the state courts, also investing any state court with Federal jurisdiction. Parliament may make laws conferring rights to proceed against the commonwealth or a state. The Federal jurisdiction of any court may be exercised by such number of judges as the Parliament prescribes. Trial of any offense against any law of the commonwealth shall be by jury, and every trial shall be held in the state where the offense was committed, but when it is not committed within a state the Parliament may prescribe the place of trial.

The Federal Constitution provides for a uniform postal and telegraphic service, and at some time in the future a single control over railroad communications. Everything connected with the external relations of the six federating colonies will be a matter for the commonwealth and not for the state governments. A common tariff will be established for all the colonies, and at the same time there will be an interior free trade. The national defenses will be under one control. The Constitution is modeled more closely after that of the United States than that of any other country. State rights have throughout been jealously preserved. Whereas in Canada everything not expressly given to the service went to the central Government, in Australia the central Government has power only in matters that are distinctly de-
fined in the Constitution. The Australian Senate consists of six members from each of the states, elected at the same time as members of the lower house, but by all the electors of each state voting as one constituency except in Queensland, which is divided into two constituencies. The Representatives, elected in separate districts, will be kept down to double the numbers of the Senate. Members of both houses will be paid and will receive the same salary. Ministers in taking office do not vacate their seats, as in England. A measure that the House of Representatives has passed may be rejected by the Senate, and if brought before it in the succeeding session may be rejected again, after which the Government may dissolve both houses and order new elections. If the newly elected House again rejects the same measure and the Senate again rejects it, then there is to be a joint session of both houses, in which the decision is made by a simple majority vote.

A constitutional amendment must first be passed by an absolute majority of both houses of Parliament, and then in majority of two thirds of the members present, at the call of the Governor-General, to be submitted in each state to the electors qualified to vote for members of the House of Representatives. If one of the houses of Parliament fails to pass the proposed amendment or makes an amendment to it to which the other will not agree, and if it is again passed by the former after three months the same measure and it is again rejected by the other, the Governor General may submit it to the popular vote either with or without any amendments subsequently agreed to by both houses. The people shall vote in such manner as the Parliament prescribes; but until the qualification for voting be otherwise uniform throughout the commonwealth only half the states shall be counted in states in which adult suffrage prevails. If in a majority of the states a majority of the electors approve of the proposed law, and if a majority of all the electors voting also approve, the proposed law shall be presented to the Governor General for the Queen's assent. No alteration of the proposed proposition of any state in either house of the Parliament, or the minimum number of representatives of a state in the House of Representatives, or increasing, diminishing, or otherwise altering the limits of the state, or in any manner affecting the provision of the constitution in relation thereto, shall become law unless the majority of the electors voting in that state approve the proposed law.

Western Australia held out when the other colonies voted to join the federation, in the hope of securing special amendments in view of its undeveloped condition, such as differential railroad rates in favor of Western Australian coal and a protective duty against English coal. After agreeing to railroad connection with South Australia without differential freight rates, the Western Australian Government still asked for the right to impose tariff duties, not to exceed the existing duties. The bill provided that the colony might tax imports from other colonies temporarily, the duties to be reduced by 20 per cent. a year until in five years they would disappear. Sir John Forrest, the Premier of Western Australia, asked for fiscal freedom for the five years, the other colonies to be equally free to tax Western Australian goods. To this the other Premiers would not agree, urging that it might open the door for other amendments. The British Government, through which the request was presented to the Premiers, urged Western Australia to reconsider its attitude and take steps to enter the federation as an original state. This Western Australia decided to do, and made arrangements to have the bill read again for the second reading, which took place on May 17, and the third reading on May 24. The amendment would not hold against the new court of appeal. The British Government insisted was an express statement that the colonial laws validity act of 1865 will apply to laws of the commonwealth.
The question of the right of appeal from the Australian High Court to the Privy Council has been under discussion since the scheme of federation was discussed at the first meeting of the convention at Adelaide. When the Premiers visited England, on the occasion of the Queen's Jubilee in 1897, Mr. Chamberlain urged reconsideration. It was accordingly reconsidered at Melbourne, and finally the British Government signified its willingness in the bill was adopted. The Australians were unwilling to sign the right of having their Constitution interpreted by their own tribunal, and believed that by excepting cases in which the public interests of the United Kingdom or of other colonies were involved they conceded all that was necessary and right. But the concession of the interest of the Colonial Secretary vaguer and indefinite. In the course of further discussion between the delegates and the Colonial Secretary, James R. Dickson, the Queensland delegate, separated himself from his colleagues and expressed himself in favor of accepting the proposed amendments in order to get the commonwealth bill passed. Mr. Chamberlain, who was serving provisionally as delegate from New South Wales, approved the amendments for similar reasons. The Australian governments, however, contended that the right of deciding Australian constitutional questions should reside in the tribunals of Australia. After further conference Mr. Chamberlain announced that he desired the delegates, allowing the Executive Government to determine whether an appeal from the High Court to the Privy Council should be allowed. This proposal to confound executive and judicial powers was universally condemned in Australia. The Victorian delegate was superseded. The Governor of Queensland has the right to appeal to Parliament and people the decision whether they would accept a constitution into which such a principle was introduced. Further conferences between the delegates and the Secretary of State resulted in a new compromise, according to which state and constitutional questions shall be finally settled by the Federal High Court unless that court has before it a question which the delegates desired to be settled by the Privy Council. Private litigants may carry their cases from the state Supreme Court either to the Federal High Court or to the Privy Council. If they desire to appeal from the decision of the High Court to the Privy Council they must obtain permission from the Privy Council. This amendment proved useful and in Australia and was adopted by the British Parliament, though New South Wales, Victoria, Tasmania, and South Australia would have preferred the clause in the original draft, while Queensland and Western Australia objected to any restriction of the right to appeal to the imperial courts with the hope of a question being decided by the Privy Council. The new clause as follows: No appeal shall be permitted to the Privy Council from a decision of the High Court upon any question howsoever arising as to the limits inter se of the constitutional powers of the commonwealth and those of any state or states or as to the limits inter se of the constitutional powers of any two or more states, unless the High Court shall certify that the question is one which ought to be determined by her Majesty in Council. The position taken by Mr. Dickson was approved by his Government, which had opposed from the beginning any restriction of appeal to the Privy Council. Newspapers and commercial bodies in the other colonies sustained the view of the Imperial Government, and so did the chief justices of all seven Australasian colonies. The Government of New Zealand protested against the transfer of cases from the metropolitan to the Australian authorities. The Premiers of New South Wales, Victoria, South Australia, and Tasmania, while pleading for the passage of the bill as it stood, did not question the constitutional right of the British Parliament and its procedure. The bill was introduced in the British House of Commons by Mr. Chamberlain on May 15, with the amendments on which the Imperial Government insisted. The only alteration in the Constitution as drafted in Australia was the deletion of the entire clause restricting the right of appeal from the High Court to the Privy Council, and by empowering Parliament to make further restrictions. The bill was altered so as to allow Western Australia to come into the federation as an original state, and an amendment was added which provides that, notwithstanding anything in the Constitution, the Queen's prerogative to grant special leave to appeal to the Privy Council may be conferred by Parliament on any judgment or order of the High Court of the commonwealth or the Supreme Court of any state. The Earl of Hopetoun, born Sept. 20, 1860, who was Governor of Australia from 1889 to 1895 and since Lord Chamberlain, was appointed to be the first Governor General of the Commonwealth of Australia, 1901, was fixed for its proclamation, its inauguration to take place at Sydney, but the future capital to be determined by the Federal Parliament. The Federal Parliament, as is provided in the Constitution, will sit at Melbourne until the new seat of Government is fixed. It is to be placed within territory granted to the Commonwealth by the commonwealth and vested in it, of not less than seven hundred square miles in area, situated in the state of New South Wales, but distant not less than 100 miles from Sydney. The representation in the Federal House of Representatives, as calculated for the five colonies that applied for federation, is as follows: New South Wales, 23 members; Victoria, 20; Queensland, 6; South Australia, 6; Tasmania, 5; total, 62 members. New South Wales.—The Legislative Council contains 69 members, who are nominated for life by the Governor. The Legislative Assembly has 125 members, elected in separate districts by all males of full age who are qualified by a residence of twelve months in the colony. At the election of July 27, 1898, the number of electors registered was 32,438, which was 24.28 per cent. of the population; the number who voted was 175,717, which was 56.41 per cent. of the number registered in contested districts. The Governor, appointed in January, 1899, is Earl Beauchamp. The ministry at the time of the legislature was as follows: Premier and Colonial Treasurer, Sir William John Lyne; Chief Secretary, John See; Attorney-General, Bernhard Ringrose Wise; Secretary for Lands, Thomas Henry Hassall; Secretary for Public Works, Edward William O'Sullivan; Minister of Public Instruction and of Industry and Labor, John Perry; Minister of Justice, William Herbert Wood; Postmaster-General, William Patrick Cribie; Secretary for Mines and Agriculture, John Lionel Pegan; Vice-President of the Executive Council, James Alexander Kenneth Mackay. The new Cabinet has endeavored to show that the surplus in the Treasury of G. H. Reid's budgets were fictitious, and that he left behind him an accumulated deficit of a million sterling. The expenditures are still increasing faster than the revenue,
and no surplus is anticipated until the new Federal tariff comes into force. In order that this shall be ample not only for revenue but for provision the New South Wales Protectionists are agitating for the adoption of the Victorian tariff, which is vaunted as a scientific one. The Parliament met on June 12. When the bubonic plague appeared at Sydney the city corporation showed itself incompetent to deal with the difficulty. Inspectors appointed by aldermen would not apply the sanitary laws when dealing with the purposes of these aldermen or their supporters. Very soon the Government saw the necessity of taking the matter into its own hands, and its thorough work in sanitation led to the opinion that the public health should be taken from the corporation and placed in charge of a responsible Government department. A bill was introduced for this purpose. The Government pulled down buildings and did other things that were illegal but effective as preventive measures. For these it obtained a bill of indemnity. The wharves and foreshore of the harbor, where the disease first appeared, were resumed by the State. A more thorough public health act was carried through the Senate, and a Government is now protecting the people of New South Wales. A bill dividing the country into the proper number of electorates was based on the report of a commission. A harbor trust was established. To replace guns sent to South Africa the Government purchased in England 4.7-inch naval guns fitted with carriages for the Royal Artillery. The total expenditure was £132,000. For the war in Africa £63,000 had been spent, and £20,000 of the surplus was required to send a naval contingent to China. Revenue for 1901 was estimated at £7,482,000 and expenditure just under that amount. For increased educational expenditure £19,000 would be required; for additional military purposes £18,900; for old-age pensions, £25,000. The women in Victoria, New South Wales, and South Australia opposed to female suffrage started a movement on the lines of the American women's anti-suffrage movement, and when the woman's suffrage bill was under discussion in Parliament they obtained many thousand signatures to a petition against the measure. The Government borrowed £500,000 for road purposes, obtaining the money in Melbourne at the price of 96½ for 3 per cent. debentures.

Queensland.—The Legislative Council contains 38 members, nominated by the Crown; the Legislative Assembly of 72 members is elected for three years by the ballots of male residents of six months' standing. The Governor is Lord Lamington. The ministry was composed of the following members at the beginning of 1900: Treasurer and Secretary for Mines, Robert Philp; Chief Secretary, James Robert Dickson; Secretary for Agriculture, J. V. Chetaway; Home Secretary, J. F. C. Foxton; Postmaster-General and Secretary for Public Works, W. O'Connell; Secretary for Parliamentary and Public Works, John Murray; Attorney-General, A. Rutledge; without portfolio, George Wilkie Gray and D. Dalymply.

South Australia.—There is an elective Legislative Council of 24 members, the third of whom are replaced every third year. The House of Assembly has 54 members, elected for three years by the vote of adult citizens of both sexes whose names have been registered six months previous to the election. There were 151,143 qualified electors in 1898. The Governor is Lord Tennyson. The Cabinet at the beginning of 1900 was composed as follows: Treasurer and Premier, R. E. Holder; Chief Secretary, J. G. Jenkins; Attorney-General, J. H. Gordon; Commissioner of Crown Lands, L. O'Loughlin; Commissioner of Public Works, R. W. Foster; Minister of Education and Agriculture, E. L. Batchelor.

The Parliament was opened on June 14. Households from the counties, the assessment of land values, local government, land consolidation and repurchase, factories, a grazing dock for Port Adelaide, railroads, a company law, aborigines, and other subjects were brought forward by the Government for legislation. The proposal to give all householders votes for members of the Legislative Council did not obtain the consent of the Council, although an extension of suffrage was agreed to. Both houses passed an act disqualifying members of the Federal Parliament from sitting in the South Australian Parliament, and compelling members of the local Parliament to resign on taking seats in the Federal Parliament. A royal commission examined into the condition and prospects of village settlements started some time ago in South Australia, and reported that...
the attempt to apply communistic principles in the management of these settlements has resulted in total failure. The settlers received Government advances amounting to £55,000, of which they have paid back only £9,463.

In 1895, the Legislative Council contains 24 members, who are elected for six years by householders and occupants of property; the Legislative Assembly of 44 members, who are elected by adult males who have resided six months in the district or who own or rent property. The Governor is Col. Sir Gerard Smith, who was appointed in 1895. The Cabinet at the beginning of 1900 was composed as follows: Premier and Colonial Treasurer, Sir John Forrest; Commissioner for Railways and Director of Public Works, F. H. Piesse; Commissioner of Lands, George Throssett; Minister of Mines, H. B. Le- troy; Attorney-General, Richard William Penne- fay; they had only 3 members in the Legislative Council and 6 in the Assembly. This proportion would be changed, but in a very inadequate degree, by the redistribution act recently passed, increasing the Legislative Council to 30 and the Assembly to 50 members. Under the new law the gold fields have only 6 members in the Council and 19 in the Assembly. The Cabinet in the last four years had spent, it was asserted, over six times as much on the coast districts as on the eastern part of the colony, had spent, in fact, all the money raised by loans, all the revenue of the coast district, and in addition half a million of the revenue collected from the gold fields. This statement was controverted by the delegates of Western Australia, who said that nearly all the revenue drawn from the gold fields had been expended there and some of the loan money as well. The residents of the eastern districts found fault also with the tariff by which food, clothing, and other necessaries must pay duties for the benefit of the farmers and miners of the colony. Differential railroad rates are paid on all that is brought to the gold mines and a progressive tax is levied on the value of ore sent away. Recently a dividend tax had been imposed. The people of the mining districts were denied their natural harbor of Esperance and a railroad line to the south coast. An Act petition for a railroad on the question of federation, in favor of which the gold fields were unanimous, had been rejected by the Legislative Council by a majority of 13 to 4, although the signatures of 18,000 voters of the eastern district had been re-enforced by 5,000 names from the coast. The petition to the Queen was signed by 26,000 persons. Mr. Chamberlain suggested that under federation their complaints could be dealt with in Australia. The representatives of the Western Australian Gold Fields Reform League in London pointed out that the division of Western Australia into two colonies, which was the conclusion of the British Parliament had granted self-government in 1890, could no longer be dealt with by the Imperial Government if federation became a fact. Mr. Chamberlain nevertheless declined to receive the deputation. A congress of workingmen sitting at Perth called for the total exclusion of colored and other undesirable aliens from the future commonwealth. The Western Australian ministry induced the governments of the eastern colonies to consent to having the mail steamers call at Fremantle, although this lengthens the voyage a full day. Although the revenue of the colony for 1900 was only £1,875,393, a decline of nearly a third, the previous deficit was wiped out and a surplus was expected. The regular session of Parliament began on Aug. 15, a special session having been held to enable Parliament to authorize a referendum on the commonwealth bill. Federation having been approved, the Government petitioned to have Western Australia admitted to the commonwealth, and the Commonwealth Government took the necessary steps to have this colony included. The session was a short one because it was necessary to dissolve the Legislative Assembly in order that members might be elected under the extended franchise. Bills were discussed concerning municipalities, the public service, and arbitration in industrial disputes. The Government desired to encourage immigration and the settlement of land. The farming population is so small that the colony is a large importer instead of an exporter of agricultural produce. The railroad company to which large strips of land had been granted retarded the settlement by leaving the land unimproved. Nevertheless, under the liberal laws of the colony, land settlement is making progress. The tin and coal mines are being rapidly developed. The export of timber shows signs of improvement. Western Australian timber suitable for street pavements is in growing request in Europe. Railroad business is booming. New towns are being founded, and the roads in the gold fields are being duplicated. The Government did not ask Parliament to sanction public works of magnitude on account of the impending dissolution. The Coolgardie water scheme is nearing completion.

**Tasmania.**—The Legislative Council consists of 10 members, elected under a property qualification for six years; the House of Assembly of 38 members, elected for three years, also by a qualified franchise. The electors for the Council in 1899 numbered 9,406; for the House of Assembly, 34,928. The Governor since 1893 has been Viscount Gormanstown. The Cabinet was composed as follows at the beginning of 1900: Attorney-General, N. E. Lewis; Chief Secretary, G. T. Collins; Treasurer, B. S. Bird; Minister of Lands and Works, E. Muleahy; without portfolio, F. W. Piesse. In Tasmania the imports in 1899 were £119,000 in excess of those of 1898, and the exports showed an increase of £774,000, the exports of minerals in one year making increase £500,000 in value. Deposits in savings and other banks and investments in Government bonds attest the growing wealth of the people. The Government closed its accounts for 1899 with a surplus of £72,500, the revenue having been £36,000 in excess of that of 1898. In 1900 a revenue of £1,040,000 was anticipated, and the expenditure was expected to amount to
£296,000. The deficiency in the public revenue, which six years ago amounted to £455,000, will probably be extinguished by 1901.

New Zealand.—The Legislative Council has 48 members, appointed formerly for life but since 1891 for seven years. The House of Representatives consists of 74 members, of whom 4 are Maoris, elected for three years by the suffrage of adult persons of both sexes who have resided a year in the colony. There were 339,230 registered electors in 1896, of whom 106,925 were men and 142,305 women. The Governor is the Earl of Ranfurly. The ministry was composed at the beginning of 1900 of the following members: Premier, Colonial Treasurer, Vice-Premier, Colonial Secretary, Minister of Public Works, Minister of Finance, Minister of Native Affairs, Minister of Public Instruction, Minister of Agriculture, Minister of Education, and Minister in Charge of Hospitals and Charitable Aid. W. C. Walker: Minister of Public Works, Minister of Marine, and Minister in Charge of Printing Office, W. Hall-Jones; Minister of Justice, J. Thompson; Minister of Mines, A. J. Cadman; Colonial Secretary, Postmaster-General, Telegraph Commissioner, J. W. Carroll; Minister of Railways, J. B. McCrimmon; Minister of Agriculture, and Commissioner, J. G. Ward. On Jan. 25 Mr. Thompson and Mr. Cadman retired and James McGovern took both their portfolios.

The session of Parliament began on June 22. The general prosperity of the colony and the increasing volume of its exports are attributed to the policy of encouraging the acquisition of an established interest in New Zealand. The colonies of Australia are adopting the same policy. The granting of pensions to deserving aged persons is pronounced by the Government so great a boon to old colonists requiring assistance that there is no intention of repealing the law. The buoyancy of trade has added largely to the revenue raised by indirect taxation, but the ministers deem it advisable to reduce the customs duties levied on necessaries of life. With increased revenues New Zealand is able to undertake military expenditure on an unprecedented scale. By such activity it is sought to impress upon the native races it is able to aid in extending the British flag over the seas and settle it in the Pacific, and perhaps to take some of them into its own jurisdiction. The New Zealand contingent was the first of the colonial forces to arrive in South Africa. Four other bodies of troops were sent, making in all the largest contribution in proportion to population of any of the British colonies. To meet the cost of these contingents and of others measures designed to place the defenses on a safer and more satisfactory footing a large increase in the vote for defense was necessary. The establishment of a fully equipped reserve force for imperial and colonial purposes was proposed to the Imperial Government. Mining in New Zealand is far more active than it has been for a long time. The largest yield of gold in a quarter of a century was obtained in 1899. The output of the coal mines is also increasing. The improvement in machinery for alluvial mining has been the means of giving employment to a large number of people. On July 3 J. Mackenzie resigned the Ministry of Lands and Agriculture. He was succeeded by Thomas Duncan. The Premier and Colonial Treasurer announced a surplus for 1900 of £605,000, exceeding all previous records. The revenue amounted to £5,700,000, not including a balance of £45,000 from the previous year, and expenditure was £5,140,000. Customs exceeded the estimate by £127,000, railroads by £146,000, stamps by £61,200, and territorial revenue by £24,200. Large areas of land were acquired for settlement during the year at a cost of £370,000, and £100,000 had been loaned to public bodies. The land tax produced £234,000 and the income tax £128,000. The public debt increased £900,000 during the year, but two thirds of this yields interest, making it no burden on the taxpayers. The expenditures for 1901 were estimated at £5,441,000. Of the excess of £301,000 over expenditures for the preceding year £285,000 were required to extinguish a deficiency in revenue. The cost of equipping the defense forces and volunteers also largely increased the expenditure. To extend the public schools into outlying districts and to establish a system of technical education it was necessary to augment the vote for educational purposes, which would be £402,000. The sum of £140,000 was required for surveys in connection with the close settlement of lands. Notwithstanding the large expenditures it was decided to reduce the customs duties by making mining, agricultural, dairy, and dredging machinery, engines, and boilers free, involving the sacrifice of £157,000. Penny postage was continued on all government and important personal correspondence, the revenue in 1901, entailing a loss of £80,000 in revenue. Concessions in freight and passenger rates on the railroads cost £70,000 more.

Fiji.—The Fiji Islands, which have been a British possession since 1874, are administered by a Governor, who is also High Commissioner and Minister and Consul-General of the Pacific. Sir T. M. O'Brien holds the office of Governor. The Legislative Council is composed of 6 principal officials and 6 other members appointed by the Crown. Five of the provinces into which the colony is divided have European commissioners and 12 others are left in charge of the native chiefs.

British New Guinea.—The southeastern part of the island of New Guinea, with the D'Entrecasteaux and Louisiade groups, was proclaimed a British possession after the Germans had occupied the northeastern part. Queensland guaranteed £15,000 a year to pay the cost of administration, and subsequently New South Wales and Victoria contributed to extend the islands under the Governor, who administers the Government, is George Ruthven Le Hunte. The revenue, derived mostly from customs, was £10,300 in 1898. For 1900 the revenue was estimated at £12,500 and expenditure at £27,000. The area under British rule is about 90,540 square miles, with 350,000 inhabitants. There are 250 European traders and missionaries, besides 300 or more gold miners, on the Louisiade Islands, Woodlark island, and the mainland. The value of the imports in 1898 was £46,971. They consist of food and tobacco, cloth, and hardware. Copra gathered by the natives from natural coconut groves, trepan, pearls, pear shells, sandalwood, and gold are exported. The total value of the exports in 1898 was £49,859. Gums, rattan, ebiony, and other cabinet woods and the coconut and sugar palms are abundant. The acquisition of land by whites was not permitted until in September, 1899, the British Government made arrangements to grant large areas of land at low rates of rent to prospective settlers at 2s. 6d. an acre for agricultural, and 1s. for pastoral, land. The colonial governments objected strongly to this grant, and the arrangement was consequently made conditional on their approval.
AUSTRIA-HUNGARY, a dual monarchy in central Europe, composed, under the fundamental law of Dec. 21, 1867, of the Empire of Austria and the Kingdom of Hungary, in the year of the extinction of the male line, in the female line. The legislative power for affairs common to both monarchies—viz., foreign relations, military and naval affairs, with the exception of the national territorial armies, common finance, commercial and railroad affairs concerning both monarchies, the customs tariff, the coinage, and the administration of the occupied provinces of Bosnia and Herzegovina—is exercised by committees of the governmental bodies of both monarchies. These committees, which are called the Delegations, meet alternately in Vienna and Budapest, the two capitals. They are composed of 20 members elected annually by each of the two upper houses and 40 from each of the lower houses. The Austrian and Hungarian Delegations meet and vote separately, and in case of disagreement they decide the question by a joint vote. The common ministers are responsible to the Delegations, and may be impeached for any dereliction of duty.

The Emperor of Austria is Franz Joseph I, born Aug. 18, 1830, proclaimed Emperor of Austria on Dec. 2, 1848, when his uncle Ferdinand I abdicated in consequence of a revolutionary uprising, and he was crowned King of Hungary on June 8, 1867, when the ancient constitutional rights of that monarchy were restored.

The Emperor of Hungary is Franz Joseph I, born April 21, 1835, son of the late Archduke Karl Ludwig and the Princess Anna Claudia, daughter of the former King of Naples.

The ministers for the whole monarchy at the beginning of 1900 were as follows: Minister of Foreign Affairs and of the Imperial Household, Graf Agenor Maria Adam Goluchowski; Common Minister of War, Gen. Edmund, Freiherr von Krieghammer; Common Minister of Finance, Benjamin de Kallay.

The Common Budget.—The cost of the administration of common affairs is borne by the two halves of the empire in the proportion of one-fifth in Hungary and four-fifths in Austria, as provided in an agreement between the Austrian Reichsrath and the Hungarian Parliament. The ten years' Ausgleich, as the agreement was called, was not renewed when the last period expired in 1897, and pending negotiations for a new one the provisions of the last Ausgleich were continued as a modus vivendi. A compromise was reached in November, 1899, in accordance with which Hungary will pay 34.4 per cent. of the common expenditure, and Austria 65.6 per cent. The Hungarian quota is 3 per cent. more than under the old Ausgleich, and the duties paid by Hungary are reduced in the new commercial treaty so that the burden is about the same as in 1897. The compromise will run till Jan. 1, 1910, or three years longer than the treaty. Hungary pays her share of the interest and sinking fund of the debt of the empire contracted prior to 1868. Since then no common debt has been contracted except the paper currency, which is guaranteed jointly. The common expenditure in 1897 was 71,255,000 florins, of which 62,267,000 florins were receipts from customs and the contributions of Austria and Hungary were 74,756,000 and 34,232,000 florins respectively. The preliminary accounts for 1898 make the total revenue and expenditure 180,541,000 florins, of which 71,147,000 florins came from customs and the two monarchies contributed respectively 75,044,000 and 34,350,000 florins. According to the sanctioned estimates for 1899, the total was 156,587,000 florins, 57,139,000 florins being derived from customs, 75,522,000 florins from the Austrian and 34,766,000 florins from the Hungarian contribution.

The budget estimate for 1900 was 172,387,500 florins, 112,747,045 florins being the revenue of the Ministry of Foreign Affairs, 181,047 florins; Ministry of War and Marine, 4,450,389 florins; Ministry of Finance, 40,556 florins; Board of Control, 6,367 florins; contributions of the two halves of the monarchy, 106,171,332 florins. The expenditure of the Ministry of Foreign Affairs is 5,060,618 florins, 4,938,471 florins for ordinary and 101,147 florins for extraordinary purposes; for the army, 145,280,352 florins, 134,593,088 florins for ordinary and 10,687,264 florins for extraordinary purposes; for the navy, 19,733,250 florins, 12,778,025 florins for ordinary and 6,955,225 florins for extraordinary purposes; Ministry of Finance, 2,102,300 florins; Board of Control, 140,230 florins.

Of the general debt, contracted before Dec. 24, 1867, the amount outstanding in July, 1899, was 2,722,540,875 florins. The annual payments for interest and amortization amounted to 126,274,590 florins, of which 95,963,877 florins fell to the share of Austria and 30,310,713 florins to the share of Hungary. The debt thus amounted at the end of 1899 to 163,201 florins, of which 112,080,650 florins represent paper money guaranteed by both monarchies, 14,480,951 florins Austrian paper money, and 35,001,600 florins Austrian salt mine obligations.

The revenue of Bosnia and Herzegovina for 1900 was estimated at 29,827,440 florins, and expenditure at 29,832,184 florins.

The Army.—The common army is organized in 15 army corps of 2 divisions, or 4 brigades, of infantry, 1 brigade of cavalry, 1 brigade of artillery, and 1 section of train. The common army has a supplementary reserve, to which young men not drawn for three years' active service are transferred. The Austrian Landwehr and the Hungarian Honved, constituting the special national armies of the two monarchies, have also their supplementary or Ersatz troops, which are drafted into the respective armies in case of war. Young men who have received a gymnasia education are required to serve only one year in any of the armies. The maximum strength of the common army is 103,100 men, of which number Austria supplies 59,211 and Hungary 43,899. For the Austrian Landwehr the yearly contingent is 10,000; for the Honved, 12,500. The total peace strength of the military forces in 1899 was 26,454 officers and 335,239 men, of whom 3,597 officers and 2,736 men were attached to the general staff, 1,097 officers and 7,153 men were serving in military establishments, 10,447 officers and 178,138 men belonged to the infantry of the common army, 1,890 officers and 45,900 men to the cavalry, 1,047 officers and 25,586 men to the field artillery, 422 officers and 7,786 men to the fortress artillery, 354 officers and 9,953 men to the artillery reserve, 1,503 officers and 29,646 men to the sanitary troops, 417 officers and 3,309 men to the train, 2,415 officers and 22,949 men to the Landwehr infantry, 246 officers and 2,119 men to the cavalry of the Landwehr, 2,387 officers and 22,312 men to the Honved infantry, 426 officers and 4,314 men to the Honved cavalry; total, 691,693 officers and men, with 63,382 horses and 1,048 guns.

The war strength of the Austro-Hungarian army is 45,238 officers and 1,826,340 men, with 281,856 horses and 1,864 field guns. The general levy or Landsturm is estimated at 4,000,000 men. Military service in the national army as well as in the common army, begins at the age of twenty-one, and in the common army lasts ten years, viz,
three years in the line and seven years in the reserve; in the Landwehr or Homeved the period is twelve years. All who are not in the common army or the special armies or their reserves are liable to be called out for service in the Landsturm from the age of nineteen to that of forty-one, but only by command of the Emperor, and not to serve outside the national border except by parliamentary sanction.

The Navy.—The Austro-Hungarian navy, which is kept in a high state of efficiency for defensive purposes, will consist when completed of 15 armor clads of 6,000 to 9,000 tons, 7 cruisers of 4,000 to 7,000 tons, 7 third-class cruisers of 1,500 to 2,500 tons, 15 torpedo gunboats, and 90 torpedo craft of various sizes, exclusive of the monitors and torpedo boats kept in the Danube. The ships already built include 8 armor clads, 2 armored cruisers, 3 second-class and 8 third-class cruisers, 19 coast-defense vessels, and 52 first-class, 31 second-class, and 8 third-class torpedo boats. There were building on Jan. 1, 1900, 2 first-class battle ships of 9,390 tons, 2 second-class, and 25 monitors. The newest vessels previously constructed are the Monarch, Wien, and Budapest, of 5,600 tons, with Harvey-vized steel side armor 10.6 inches thick and gun protection, the armament consisting of 4 9.4-inch guns, 6 quick-firing 5.9-inch guns, and 14 small quick firers. The armored cruiser Karl VI., of 4,000 tons, has 4 quick-firing 12-inch guns and carries 2,9.4-inch guns, 8 quick-firing 5.9-inch guns, and 18 small quick firers, and is capable of steering 20 knots, while the new battle ships can make 17 knots.

Navigation.—The number of vessels entered at the ports of Austria during 1897 was 105,146, of 126,766,724 tons; and of the total entered 12,134,468 tons; of the vessels, 88 per cent. were Austrian; of the tonnage, 90 per cent. was Austrian. At Hungarian ports, 19,190 vessels, of 2,016,484 tons, were entered and 19,174, of 2,012,945 tons, cleared during 1898. Of the vessels 83 per cent. and of the tonnage 83 per cent. were Hungarian.

The Austrian shipping on Jan. 1, 1898, comprised 1,893 merchant vessels engaged in ocean commerce, of 168,038 tons; 1,452 coasting vessels, of 21,085 tons; and 10,033 fishing and other vessels, of 21,423 tons; total, 11,674 vessels, of 210,546 tons, of which 175, of 142,310 tons, were steamers. The Hungarian merchant navy on Jan. 1, 1899, numbered 12,216 vessels, of 114,206 tons, of which 171, of 117,990 tons, were steamers. The coasting vessels, of 5,456 tons; and 277 fishing craft, of 432 tons; total, 501 vessels, of 62,777 tons, of which 69 were steamers, of 43,809 tons.

Commerce and Production.—The total value of the special imports into the Austro-Hungarian customs territory, in which Bosnia and Herzegovina are included, amounted in 1898 to 769,300,000 florins, and the total value of exports was 928,400,000 florins. In 1898 the total for imports was 819,800,000 florins; exports, 928,400,000 florins. The chief imports in 1898 were cotton, of the value of 52,814,000 florins; coal, 40,552,000 florins; wool, 39,400,000 florins; maize, 30,178,600 florins; tobacco, 25,556,000 florins; coffee, 22,448,000 florins; silk, raw and manufactured, 21,052,000 florins; wheat, 19,840,000 florins; wine in casks, 17,406,000 florins; flax and jute, 16,991,000 florins; rye, 15,501,000 florins; eggs, 14,153,000 florins; books and prints, 13,212,000 florins; copper, 11,760,000 florins; machinery, 9,152,000 florins; talc, 8,283,000 florins; flax, 8,152,000 florins; hogs, 6,464,000 florins. The chief exports were humber and wood manufactures, of the value of 76,754,000 florins; sugar, 67,056,000 florins; eggs, 39,998,000 florins; barley, 30,204,000 florins; lignite, 29,373,000 florins; malt, 24,288,000 florins; leather gloves and shoes, 24,178,000 florins; cattle, 18,506,000 florins; horses, 17,467,000 florins; colored glassware, 11,000,000 florins; bed feather, 9,295,000 florins; woolsens, 8,501,000 florins; cask staves, 8,671,000 florins; hops, 7,870,000 florins; beans, 7,301,000 florins; beer in casks, 6,997,000 florins; flours, 6,990,000 florins; coal, 6,719,000 florins.

The distribution of the special commerce in 1898 is shown in the following table, giving the imports from and the exports of domestic merchandise to the principal countries, in Austrian florins:

The imports of precious metals in 1898 were 23,469,000 florins; exports, 60,056,000 florins.

In Austria about half the people are engaged in agriculture. Rye, barley, oats, potatoes, beets, pulse, maize, and buckwheat are the principal crops. The vineyards produced 4,224,000 hectolitres of wine in 1898. The production of maize in 1898 was 41,142,000 florins in value; of lignite, 43,493,000 florins; of pig iron, 34,303,000 florins; of lead, 1,790,000 florins; of quicksilver, 1,119,000 florins; of zinc, 1,759,000 florins; of silver, 1,885,000 florins; of copper, 628,000 florins. The total value of minerals raised was 94,870,874 florins; of metals extracted, 42,433,505 florins. There were 9,837,563 hectares under forest, of which 6,825,415 are pine. The breweries produced 9,060,498 hectolitres of beer in 1897, the distilleries 1,737,531 hectolitres of alcohol.

Of the Hungarian people, 62 per cent. are employed in the cultivation of the soil. Wheat, rye, barley, pulse, and potatoes are the principal crops. The forest area is 7,515,490 hectares, of which 3,714,590 hectares are beech woods, 2,082,834 hectares oak, and 1,718,066 hectares pine. The value of the mineral products in 1898 was 26,027,981 florins, of which 14,922,400 florins represent lignite, 6,350,194 florins coal, and 4,527,387 florins iron ore. The smelted metals were valued at 26,027,981 florins, 18,676,010 florins representing pig iron, 4,538,524 florins gold, which is found associated with silver, lead, and copper, and 1,104,513 florins silver. The special commerce of Hungary for 1898 amounted to 397,169,000 florins for imports and 531,893,000 florins for exports. The chief imports are cottons, woollens, clothes, silks, wool, linen, flax, flaxen, hides, leather, and of the exports, 58 per cent. From Austria came 75 per cent. of the imports, and 74 per cent. of the exports were shipped to Austria.

Railroads, Posts, and Telegraphs.—The state railways of Austria had in 1898 a total
length of 4,700 miles; lines belonging to companies and operated by the Government, 1,260 miles; lines owned and operated by companies, 4,862 miles; total length, 10,822 miles. The total capital expenditure was £231,522,000 sterling. The number of passengers carried in 1897 was 118,638,000; tons of freight, 103,771,000; receipts, 278,003,000 florins; expenses, 122,434,000 florins.

The state railroad lines in Hungary had on Jan. 1, 1899, a length of 4,876 miles; companies' lines operated by the Government, 3,439 miles; lines owned and worked by companies, 1,822 miles; total length, 10,137 miles. The total capital expenditure was £107,300,000 sterling; number of passengers carried, 1,520,721,000; tons of freight, 38,624,000; receipts, £10,576,000 sterling; expenses, £5,730,000 sterling.

The Austrian post office carried in 1898 576,556,080 letters and postal cards, 12,886,840 samples and books, and 97,400,800 newspapers. The Hungarian postal traffic in 1898 was 250,800,000 letters and postal cards, 41,068,000 samples and book packets, 18,964,000 money and postal orders of the aggregate amount of £43,382,000 sterling, 18,155,000 parcels and money letters, and 108,752,000 newspapers.

The telegraph lines of the Austrian Government had in 1898 a total length of 32,303 miles, with 90,597 telegraph offices and stations. The number of messages during 1898 was 14,155,226. The length of telephone wires was 64,380 miles. The postal and telegraph receipts amounted to £44,650,851 sterling; expenses, 40,705,717 florins.

The Hungarian Government lines had a total length of 13,075 miles, with 60,659 miles of wire; number of telephone offices was 60,312,000; tons of freight, 38,624,000; receipts, £10,576,000 sterling; expenses, £5,730,000 sterling.

**Austria.**—The legislative authority for the empire is vested in the Reichsrath, but each province possesses a large measure of autonomy and has a Landtag, or Diet, to legislate on all matters not reserved to the Confederation for the Reichsrath. The upper house of the Reichsrath is the Herrenhaus, composed of 19 archdukes, 67 hereditary territorial nobles, 10 archbishops, 8 prince bishops, and 136 life members nominated by the Emperor for distinguished services or eminence in the arts or sciences. The lower house of the Reichsrath contains the landed proprietors, 118 representatives of boroughs and cities, 21 representatives of commercial enterprises and industry, 129 representatives of rural districts elected indirectly by the peasants and small proprietors, and 72 members elected directly by the people; total, 425 members. All males over twenty-four years of age who pay taxes in direct taxes or possess educational or other qualifications are entitled to vote directly for Deputies in the towns and in the rural constituencies for electors who choose the Deputies, each elector representing 500 individual voters. The Austrian Ministry in the beginning of 1900, consisted Oct. 2, 1899, of twenty-three members: President of the Council and Minister of Agriculture, Graf Clary and Aldringen; Minister of National Defense, Graf Zeno Welser von Welsersheim; Minister of Railroads, Ritter von Wittek; Minister of the Interior, Dr. E. von Körber; Minister of Justice, Eduard Ritter von Kindinger; Minister of Worship and Education, Dr. W. Ritter von Hartel; Minister of Finance, Dr. S. Kniazevulchi; Minister of Commerce, Dr. Friedrich Stirbal; without portfolio, Dr. C. Ritter von Chiedowski.

**Area and Population.**—The area of Austria is 113,093 square miles. The population at the cen

**Vol. XL.—4 A**
with the mission of seeking a working compromise between the conflicting nationalities. It was composed as follows: President of the Council and Minister of the Interior, Dr. Körber; Minister of Railroads, Dr. von Wittek; Minister of Finance, Dr. Heitger; Minister of National Defense, Field-Marshal Graf Zeno von Welsersheim; Minister of Agriculture, Councilor Giovannelli; Minister of Justice, Baron Sprents von Booden; Minister of Commerce, Baron Call von Kulmbach-Rosenburg; Minister of Public Instruction and Worship, Dr. von Hart; and, without Portfolio, Dr. Rzek and Dr. Pietak. The parliamentary leaders of the Czech and German parties professed to be alike eager for an understanding, and as soon as the new Cabinet took office a conference of representatives of the two nationalities was summoned to discuss a project submitted by the Government as the basis of an agreement. The Reichsrath assembled on Feb. 22 before the nationality conference had led to any definite result. The Young Czechs determined to continue their obstructionist tactics, reserving for themselves the proper moment for putting them into practice. The object in convoking the Reichsrath before the conference completed its work was to keep alive the sense of a divided and unequal contingent of recruits. The German Clericals and the Poles declared against obstruction. The Prime Minister threatened to dissolve the Reichsrath if it proved still unmanageable. The programme of the new Cabinet contained urgent and popular reform measures on which all nationalities were in agreement. Whether the conference reached a settlement of the language question or failed to reach one, the Government was determined to bring in a bill on the subject. In the economic field the Government proposed the construction of 6 railroads, costing 480,000,000 crowns, in the space of seven or eight years, also to extend the harbor at Triszsee and to regulate the navigable rivers. Measures were promised for the promotion of industry and the export trade, and a series of reforms affecting the working classes as well as the industrial and commercial community. The question of the legislative regulation of the hours of labor and conditions of work in the mines would receive immediate consideration; a commission having been appointed to examine the situation before a railroad and coal strike going on in Bohemia and Moravia impelled the Social Democrats and some of the German factions to bring the subject forward, and the Government agreed to introduce the eight-hour day in some of the state mines. The Reichsrath voted for the annual contingent of recruits and elected the Austrian Delegation without a hitch. The language conference, which closed its labors on March 22, achieved a temporary truce between the nationalities sufficient to insure the resumption of its normal activity by the Reichsrath. The military authorities decided to lighten the burden of military service for citizens living abroad and engaged in advancing the export trade of the monarchy. The promotion of manufactures and exports is a subject that has engaged the attention of Austrian statesmen in recent years, and proposals for sending colonists as well as commercial agents to Turkish dominions and to Africa, and of military and educational missions to China and elsewhere, have been put forward. While the situation in Germany and England and rivaling France in some classes of fine handiwork of artistic quality, Austria has been far outstripped by Germany in wholesale production by machinery, although possessing all the natural resources and mechanical aptitude. No actual settlement of the language question was brought about through the conference, and after it separated the extreme partisans on both sides assumed a more irreconcilable attitude than ever. The Czechs, who numbered 60 in the Reichsrath and had as allies the Slovenses, the feudal nobility of Bohemia, and other factions counting 30 to 40 deputies, by a vote of 68 against 46, surrounded Dr. Körber and Dr. Pietak. The Young Czechs were a small minority when the Old Czechs came to an understanding with the Taaffe ministry and accepted the proffered compromise on the language question, but this minority repudiated the agreement, and in the next elections they routed the moderate party and reduced the comprimass to two seats. With the assured franchise in force, the ministry of Dr. Körber had to face the contingency, in the event of a dissolution, of seeing not only the Radical Czechs, but the Radical Germans coming into the new Reichstag in greater strength and more violent and uncompromising than before, which would compel a new dissolution up to the absolute restriction of the franchise by executive decree. Some of the differences of minor importance were disposed of in the conference of the nationalities, but in essential matters the two parties were as far apart as ever. When the Reichsrath met on May 8, after the recess, Dr. Körber introduced two language measures and a vote of censure on the Taaffe ministry, which met with an indifferently approval from the Germans, but were rejected without hesitation by the Czechs. The Prime Minister called attention to the financial difficulties of the country. The surpluses which former ministers obtained by means of fresh taxes had fallen off, while the cost of administration had risen. A reduction in expenditure for common affairs, particularly for the army, had largely increased. The stagnation of the empire at a period when other states were progressing in prosperity and power was attributable to the struggle of the nationalities during the past three years, which had produced a situation that was deplored by all Austrians and friends of Austria. Dr. Pacak, one of the Czech leaders, announced the intention of his party to resort to obstruction to prevent the passage of the bills, the Czechs believing it to be outside of the constitutional powers of the Reichsrath to impose such measures on the provinces. He then put forward an extraordinary resolution for the calling of a meeting by others till the house adjourned for lack of a quorum. The Czech representatives were driven to take the course they did by their party, and they received no encouragement from Russian Panslavists nor support from the Poles or the German Clericals who have at other times been in alliance with the government. When the Reichsrath reassembled, after a recess on June 6, the obstruction was resumed. The ministers, not being party men or members of Parliament, had no strong support in their effort to break the deadlock. The Germans, who themselves resorted to obstruction in dealing with the Badeni Cabinet and wish to preserve the position of the AustrianMONARCHY, Interrupted, by parliamentary tactics opportune, were reluctant to take a decided stand against its use by their adversaries. The Emperor demanded in authoritative tones that Parliament should work, but the Czechs disregarded his intimation. The whole time of the sittings was taken up with dilatory motions and the petitions of the various circles to the Reichsrath. On exceptional occasions the ministers were driven to more violent obstruction to prevent an amendment of the rules of procedure. Such a din was raised with trumpets, cymbals, whistles, and even saucepans and trays brought from the restaurant that discussion was impossible. Detachments of 15 members relieved each other in keeping the doors of the Reichsrath open. The ministers held a council and consulted the sovereign, with
the result that the Prime Minister announced the close of the session. With its ending the parlia-
mentary immunity of members for any excess of language allowed them, and it became apparent that the Czech nationalities should be preserved not alone in the interests of justice, but in that also of the preservation of Austria; for if the empire were to become a German state its absorption by Germany would eventually become inevitable; on the other hand, the opposition of German Austrians would lead to a conflict with the powerful German Em-
pire. A restricted autonomy was therefore desira-
ble, by which each nationality would be able to promote the material strength of the empire by its own free national and economic development, and such a solution should be the result of a com-
promise between the two nationalities. In the Austrian Delegation the Czech representatives vehemently assailed the foreign policy of Graf Goluchowski in an unprecedented manner, and called in question the strength and durability of the Austrian Empire, which Austria alone had done before. The ministers assured them that the alliance, which was purely for peace and de-
fense, is as substantial as it was twenty years ago; that Italy was not tired of it or ruined by it; and that a story of Austria having proposed to annex Bosnia and Herzegovina definitely and of Italy longing the statement to that event to occupy Albanian was void of foundation.

Hungary.—The Hungarian Parliament legis-
lates for Hungary, and in matters of common con-
cern for Croatia and Slavonia also, but for provincial affairs they have their separate Diet of 90 members elected for five years. The Hun-
garian Parliament consists of two chambers—
the House of Magnates and the House of Repre-
sentatives. The upper house is made up of 18
archdukes, 44 archbishops, bishops, and other
Roman Catholic and Greek Catholic dignitaries, 12
ceselesiastical and lay representatives of the Cal-
vinistic and Lutheran confessions, 226 Hungarian
princes, counts, barons who pay a minimum
land tax of 3,000 florins, 17 judges and other offi-
cial members, 77 life peers nominated by the King
or elected by the House of Magnates, and 3 dele-
gates of Croatia-Slavonia. To entitle a citizen to vote for members of the lower house a low tax qualification is necessary, excepting for the profes-
sional and learned classes. One out of every 18
persons has a vote. The House of Representatives
contains 453 members, including 40 delegates of
Croatia and Slavonia.

The Cabinet of Ministers in the beginning of
1906, constituted Feb. 26, 1899, was composed of
the following members: President of the Council,
Coloman de Szell; Minister of Finance, Dr. Lida-
lund; Minister of Justice, Dr. Lajos Szekely; Min-
ister of National Defence, Baron Geza Fejervary;
Minister near the King, Count Emanuel Szcheny;
Minister of the Interior ad interim, Coloman de Szell;
Minister of Education and Worship, Dr. Julius de Wlassies;
Minister of Justice, Dr. Alexander Plosz; Minister of
Industry and Commerce, Alexander de Hegedus;
Minister of Agriculture, Dr. Ignatius Barauty; Min-
ister for Croatia and Slavonia, Ervin de Cseh.

Area and Population.—The area of Hungary,
including Croatia and Slavonia, is 125,039 square
miles, with a population at the census of Dec. 31,
1890, of 17,463,791. The estimated population on
Dec. 31, 1898, was 18,953,000. The number of mar-
riages in 1898 was 136,298; of births, 738,467; of
deaths, 540,207; excess of births, 198,260. Bud-
apesth, the capital, had 505,763 inhabitants in 1890.
The immigration of Hungarians into the United
States in 1898 was 16,662, and in 1899 it was
20,920.

Finances.—The revenue of the Kingdom of
Hungary in 1898 was 526,498,000 florins, of which
sum 500,185,000 florins represent the ordinary re-
vence and 17,313,000 florins transitory and extrao-
dinary receipts. The total expenditure was 524,
442,000 florins, of which 452,370,000 florins were
the ordinary expenditures of the Government,
15,825,000 florins an extraordinary contribution to
common expenditure, 11,825,000 florins transitory
expenditures, and 44,410,000 florins permanent in-
vestments. The budget estimate of revenue for
1900 was 527,256,732 florins, including 31,394,381
florins of extraordinary receipts. The ordinary
revenue was estimated at 495,582,321 florins, de-
rivled from the following sources: State debts,
25,918,000 florins; Ministry of Finance, 1,990,000
florins; Ministry of the Interior, 3,809,690 florins;
Ministry of Finance, 338,277,923 florins; Ministry of
Commerce, 120,787,018 florins; Ministry of Agricul-
ture, 18,912,346 florins; Ministry of Education and
Worship, 2,305,498 florins; Ministry of Justice,
922,531 florins; Ministry of Defense, 1,713,488
florins. The deficit in revenue for 1899 was esti-
_24,381,304 florins; investments,
27,490,078 florins; total expenditure, 526,340,910 fl-
oring. Of the ordinary expenditure, 4,650,000
florins were the civil list; the Chamber annu-
y required 80,091 florins; Parliament, 1,765,876
florins; Hungarian quota of common expenditure,
28,318,076 florins; common pensions, 22,135 florins;
Hungarian pensions, 9,520,475 florins; national
debt, 129,226,866 florins; debts of guaranteed rail-
roads expropriated by the Government, 13,682,935
florins; guaranteed railroad interest, 201,502 flor-
ins; loans of separate ministries, 4,083,900 florins;
income-tax on income ad latus, 1,000 florins;
Accountant General's office, 164,183 florins;
administration of courts, 277,218 florins; Minister-
Presidency, 492,390 florins; Ministry ad latus,
68,951 florins; Ministry for Croatia, 45,430 florins;
Ministry of Commerce, 90,292,659 florins; Ministry of Agricul-
ture, 21,235,030 florins; Ministry of Instruction and
Worship, 14,705,926 florins; Ministry of Justice,
17,901,727 florins; Ministry of National Defense,
17,290,653 florins.

The public debt of Hungary in 1898 amounted
to 2,444,338,000 florins, of which 1,050,033,000
florins were consolidated debt, 1,054,928,000 florins
the capitalized value of annuities, 12,734,000 florins
treasury bonds, 69,880,000 florins debts of sepa-
rate ministries, and 219,093,000 florins arrears
unpaid.

Political Affairs.—The Liberal party in the
Hungarian Parliament was reinforced in 1900 by
a coalition with the National party, reducing the
Opposition almost to insignificance. Baron Banffy,
the former Prime Minister, tried to create a sepa-
rate group of his own within the Liberal party,
but without success.
BAPTISTS.

The American Baptist Yearbook for 1900 gives returns of 1,655 associations in the United States, including 43,427 churches, 29,473 ordained ministers, 4,181,686 members, with 184,845 baptisms, so far as reported, during the year. The aggregate year's contributions of the churches for all purposes were $12,348,527. The value of the churches property was estimated as $80,648,982. The educational institutions included 7 theological seminaries, with 68 teachers, 1,012 students, property having an estimated value of $2,444,051, and endowment funds aggregating $2,556,065; 104 universities and colleges, with 1,574 teachers, 26,126 students, $15,249,038 of property, and $14,442,807 of endowments; and 14,673 numbers and institutions, with 634 teachers, 10,882 pupils, $3,497,938 of property, and $1,414,473 of endowments.

The list of Baptist periodicals includes 124 publications. A list of 36 Baptist charitable institutions is given.

The Yearbook gives the number of Baptists in the following localities: In North America, 44,603 churches, 30,344 ministers, and 4,223,317 members; in South America (Argentina Republic, Brazil, and Patagonia), 28 churches, 15 ministers, 1,639 members; in Europe (Austria-Hungary, Denmark, Finland, France, Germany, Great Britain, Holland, Italy, Norway, Roumania and Bulgaria, Russia and Poland, Spain, Sweden, Switzerland), 3,867 churches, 3,038 ministers, 487,363 members; in Asia (Ceylon, China, India, Assam, Burmah, Japan, Palestine), 1,482 churches, 796 ministers, 116,508 members; in Africa (Central and Congo, South Africa, West Africa, St. Helena, and Cape Verde), 110 churches, 90 ministers, 7,271 members; in Australasia, 228 churches, 166 ministers, 18,082 members; making the aggregate number of ministers, 50,263 churches, 34,375 ministers, and 4,954,780 members; while the whole number of baptisms during the year was 223,389.

The American Baptist Education Society meets alternately with the conventions of Northern Baptist societies and the Southern Baptist Convention for its annual meeting, held this year at Springs, Ark., May 10. President A. D. Montague, of Furman University, South Carolina, presided. The annual report represented that since its beginning this society had made 66 grants to 41 institutions in 29 States and the maritime provinces of Canada, to the total amount of $1,273,100. During the past year, 13 grants, amounting to $2,000,000, had been made to 12 institutions, conditioned on their also raising certain amounts, the aggregate of which would be $520,000. Two of these grants, amounting to $165,000, were made after the report was prepared. Twenty-three institutions reported the addition of $425,000 to their endowment funds. The total receipts for all purposes during the year had been $1,071,000, besides the large contributions, amounting to $2,000,000, for the University of Chicago, made by Mr. J. D. Rockefeller to meet the offer of like sums, making the total of gifts to that institution for the year $4,000,000. The addresses were made at the meeting on Denominational Schools and Agencies, in Denominational Development during the Century, by Dr. J. W. Armstrong, editor of the Central Baptist, and on The Functions of the Intellect in Religion, by President D. B. Purinton, of Denison University, Ohio.

Publication Society.—The seventy-sixth annual meeting of the American Baptist Publication Society was held in Detroit, Mich., May 25 and 26. The report showed that in the publication department the aggregate of sales for the year had been $672,017, an increase of $29,211 over the sales of the preceding year. In the missionary department, the receipts from invested funds, Children's Day, contributions from churches and individuals, bequests, etc., had been $103,418, or $8,343 more than in the previous year. The receipts in the Bible department had been $17,918. The total amount of receipts in all departments on special accounts, from rents, etc., had been $867,066. A deficit in the missionary department had increased from $3,114 at the beginning of the year to $11,910 at the close of the year. The societies, together, make an aggregate contribution of $546,350, copied has been printed, while the whole number of copies of new and old publications was 44,870,054. The missionary work had been vigorously pushed. In view of the complexity of the work of evangelization among the various populations of the United States, making it difficult to render an accurate account of the work of the missionaries, the following general statement is made:

The American Baptist Home Mission Society engaged in home mission work the appointment of a joint committee (not to be composed wholly of members of their own denominations) was made, having as its object the giving of a complete and detailed account of the work of the various mission societies in the United States engaged in home mission work the appointment of like committees. The purpose of this step was to secure the calling of a national interdenominational conference of the representatives of all such bodies at the earliest practicable day for deliberation, discussion, and action with the view of a more intelligent, systematic, and effective execution of their one great work—the speedy and complete evangelization of the United States.

Home Mission Society.—The sixty-eighth annual meeting of the American Baptist Home Mission Society was held in Detroit, Mich., May 25 and 26. The report of the treasurer, for the year 1899, showed a deficit of $650,891, and the expenditures $458,710, besides which $184,663 had been added to the permanent funds. Eleven hundred and eighty missionaries had been employed in the United States, Mexico, Alaska, Cuba, and Porto Rico; French missionaries in 6 States; Scandinavian missionaries in 23 States; German missionaries in 21 States and Canada; and colored missionaries in 22 States and Territories; among foreign populations, 275 missionaries and 10 teachers; among the colored people, 63 missionaries and 201 teachers; among the Indians, 23 missionaries and 27 teachers; among Mexicans, 13 missionaries and 9 teachers; and 4 teachers among the Micronesian. The society had aided in the maintenance of 31 schools established for colored people, Indians, and Mexicans, 3 day schools for the Chinese, 1 day school in Utah, and 1 in New Mexico. In the church edifice department, the principal of the Loan fund amounted to $156,373. From this fund advances are made in small amounts at an interest rate of 6 per cent, with the stipulation that the sum loaned shall constitute the last payment required to complete the house, and shall be secured by a first mortgage on the property. The Benevolent fund, the income of which is available for gifts to churches, amounted to $163,453. Seventy-two churches had been aided.
Supporting, 1,090 churches and chapels, 1,510 out stations where regular meetings were held, 105,216 church members, 843 Sunday schools with 34,867 members, 1,445 schools (including 8 theological and 71 boarding and high schools), 433 of which were self-supporting, 37,297 pupils of all grades, 722 accessions during the year, and $87,977 of native contributions. The European missions (in Sweden, Germany, Russia, Finland, Denmark, Norway, France, and Spain) returned 1,213 preachers, 985 churches, 101,554 church members, 77,801 pupils in Sunday schools, and $402,500 of contributions.

Meetings of the American Baptist Historical Society and of the Commission on Systematic Benevolence were held in connection with the anniversary meetings of the missionary societies. At the former meeting progress was reported in the effort to replace the collection of books which had been destroyed by the burning of the building of the American Baptist Publication Society a few years before. The Commission on Systematic Benevolence presented an account of what it had done to promote the organization of members and churches for regularity and method in contribution.

Women's Societies.—The Woman's American Baptist Home Mission Society (Boston) returned receipts for the year as follows: missions, $33,308, and its expenditures $32,274. At its annual meeting in Boston, May 2, the "Paper Mission" requested a supply of "Anti-Mormon" and "Anti-Christian Scientist" literature, and a number of "State workers" described features of their labors in various fields in the United States, etc.

The twenty-third meeting of the Women's Baptist Home Mission Society was held at Detroit, Mich., May 21. The total cash receipts of the society for the year had been $74,040, and the disbursements $73,036, besides which goods having an estimated value of $9,583 had been sent to missionaries. A debt of $5,000 had been extinguished. One hundred and forty-nine missionaries, 24 of whom were female, had been employed at 101 stations in 57 States and Territories, who recorded among their labors the organization of 21 Sunday schools, besides visitations, conducting and attending meetings, and holding conversations. Missionary training schools were sustained at Chicago, Ill., Raleigh, N. C., and Dallas, Texas, for the former two of which 19 students had been graduated.

Southern Baptist Convention.—The forty-fifth meeting of the Southern Baptist Convention was held at Hot Springs, Ark., beginning May 11. The Hon. W. J. Northen, ex-Governor of Georgia, was chosen president. The Home Mission Board reported that its total receipts for the year, including a special annuity gift of $4,000, had been $79,366. All the States except one had shown an increase in cash contributions. Six hundred and seventy-one missionaries had been employed, serving 2,108 churches and stations, who returned 5,116 baptisms, 11,953 additions in all, 123 churches constituted, 71 schools of worship built and 63 improved, with an expenditure of $82,223, and 639 Sunday schools organized, with 24,675 teachers and pupils. The State boards of Alabama, Arkansas, Florida, Georgia, Indian Territory, Kentucky, Louisiana, Maryland, Missouri, Mississippi, North Carolina, Oklahoma Territory, Tennessee, Texas, and Virginia were in co-operation with the board in part or the whole of their work. The report designated as frontier work to which it was giving much attention the effort to provide churches and preaching for the population which was pouring rapidly into a strip of terri-
tory about 1,000 miles in length and 500 miles broad stretching through Indian and Oklahoma Territories. The increase of the foreign population in the larger cities made co-operation with the State boards a matter of growing importance. Special attention was invited to the problem of work among the negroes. It was believed that the feeling of these people toward the whites was changing, so that the negroes becoming more inclined to rely upon those of the South, and that the conditions which had rendered it impossible for Southern Baptists to help the negro in the past were passing away. The need for schools in the mountain region was another matter demanding serious consideration. It had been the policy of the board in the past to refer all such requests to the building of churches at important points so far as the funds contributed would allow, and it was of the opinion that the time had now come for the establishment of a permanent fund for that purpose. Offers of considerable gifts had already been made toward the constitution of such a fund. A gift of $4,000, on which an annuity of $200 annually was to be paid, had been received through the agency of the Woman's Missionary Union, and was available for church extension purposes. The Sunday School Board had received $76,002, the same being its largest receipt in a single year. The reserve fund had been advanced from $19,000 to $30,000, and was kept loaned out without the building up of the loan fund. There were kept in hand, and had a cash balance of $1,630. It had received through the Woman's Missionary Union an annuity gift of $1,000. The appropriations aggregated $19,479, including gifts of $200 in cash to the Chinese Baptist Publication Society, Canton, and of $100 in books to the library of the seminary. The report of the board of Foreign Missions for 1898 had been $140,102, a considerable increase over those of the previous year. A balance of $8,459 remained over the expenditures. Sixteen new missionaries had been sent out. From the mission stations were returned 113 churches, 155 outstations, 41 men and 53 women American missionaries, 6,623 members, 2,408 pupils in Sunday schools, 57 houses of worship, 45 day schools with 1,278 pupils, and 134 baptisms during the year, while the contributions of the mission churches amounted to $7,093. The missions were in China, Japan, West Africa, Italy, Brazil, and Mexico. But the special appeal to world missions was with a deputation of 100 members appointed by the Arkansas convention of colored Baptists, with reference to the framing of a plan of co-operation. The committee on the celebration of the new century presented a report, which was adopted, recommending that the convention devote itself for the next few years to the special object of enlarging the mission field among the colored people, and combining all the energies of the whole denomination to the sacred effort for the propagation of the Gospel. As the best method of accomplishing the end sought, a joint committee of co-operation was, by the advice of the committee, constituted to consist of three members appointed by each of the three boards of the convention, the special work of which should be "to labor systematically and persistently to secure the active co-operation of every church within our bounds in the work of each of our boards, and, as far as possible, personal contributions from every member of every church; that in thus laboring this committee of co-operation shall function addi- tionally all the boards of the convention." The recommendations of the committee further contemplated the appointment of a committee of three by each State convention to co-operate with the general committee within the State. Resolutions were adopted on temperance declaring unfruitless hostility to the liquor traffic in all its forms, favoring prohibition for the nation and the State and total abstinence for the individual, and condemning the permission by the Government of the canteen in the army and the establishment of the liquor traffic in certain places under military occupation.

**Colored Baptists.—**The colored Baptists in the United States are represented in the National Baptist Convention, which has affiliated with it a Foreign Mission Board, a Home Mission Board, an Educational Board, and a Young People's Union. The twentieth annual meeting of this board was held in Richmond, Va., beginning November 12. Another colored Baptist organization of more recent origin is the Lott Carey Baptist Foreign Mission Convention, which was formed in 1897 in response to a call from the colored Baptists of North Carolina. At the general convention of organization, held in Washington in December, 1898, its membership was reported as follows: Virginia, the District of Columbia, Maryland, Pennsylvania, New Jersey, New York, and New England. The constitution adopted then sets forth as the object of the society "the fostering of the kingdom of God, especially in foreign lands," in order to accomplish which object co-operation will be sought with all religious and philanthropic organizations, as occasions might require, from time to time. At the second anniversary of this society, held in Baltimore, Md., in August, 1899, receipts of $401 and the appointment of missionaries at Brewerville, Liberia, and Cape Town, South Africa, were reported. The next meeting was appointed to be held at Alexandria, Va., in August, 1900. The total number of colored Baptists is estimated at 1,576,792.

**Constitution and Rights of Baptist Conventions.—**At the meeting of the Baptist State Convention of Texas, in 1899, the Rev. Dr. S. A. Hayden was excluded on grounds satisfactory to the convention. For this he brought suit against the Rev. E. S. Carrol, the Rev. J. B. Cranfill, and other Baptists of Texas, charging a malicious conspiracy, with attempts to ruin his character and business, and laying claim for damages of $50,000. A verdict for the plaintiff, awarding him $30,000, was found in the lower court, and the case was carried on appeal to the Supreme Court of Texas, which decided in March reversing the rulings of the lower court and in all points in favor of the defendants in the original suit. It upheld the authority of the State convention to decide upon the qualifications of its members, declaring that by accepting credentials and applying for admission to the convention, as a member of a local church, he thereby "must be held to have assented and submitted himself to the exercise of all the lawful authority which pertaineth to that body in relation to the qualifications of its own membership." From an examination of the portions of the constitution of the State convention which provide for members from the churches and dissolution of power or authority over any church, the court argued that it did not appear that the convention was a body exercising delegated powers. "While its membership is made up of persons selected by churches, associations of churches, and missionary societies, co-operating with the convention as an instrumentality for the execution of the powers of the convention, as a body to perform delegated duties, are in any way bound to conform to instructions of the bodies naming them as messengers, or have any right to bind such bodies..." We must, then,
understand the annual convention to be a deliberative body, composed of individuals voluntarily named by the several churches, associations of churches, and missionary societies, which co-operate in work, without authority extending beyond its own membership, nor intended to control its deliberations and proceedings, or subordinate to it to be bound thereby. If, then, it has no supervisory power over it, exercises no delegated powers, and is not representative, it must be an independent sovereign body, under the limits of its own organic law." Concerning the question of jurisdiction over members, the court recognized the right of selection by the bodies named, but held that the presumption is that the members shall be good men, and in harmony with the purposes of the organization. The method of selection had as its purpose to fix membership in proper limits, secure general co-operation, and obtain the best representatives of the denomination. With nothing in the constitution renouncing the right of the convention to control its membership, the court decided that it clearly had that right. "The collective wisdom, judgment, and integrity of such assemblies generally is the only safeguard against the abusive exercise of such power. Such bodies as Missionary Societies are not given the right and authority to protect themselves in the matter of their membership, and in the exercise of that right and authority they are answerable alone to their own consciences and to general public opinion. They are not limited to the power to investigate and determine the validity of the credentials presented by one claiming membership, as is contended by the appellee, but they have the power to refuse him membership upon any grounds which may seem good and sufficient to the body itself." The transaction was regarded by the court as coming under the head of "privileged communications." The right of the convention to control its own membership, and the submission to its authority in that respect by a member when he accepts credentials and applies for admission, were regarded as first principles of such privileged communications. Another condition of them is that the action taken shall be under a sense of duty to the body itself, not under a sense of duty to the membership of any other body, or upon any other grounds as its basis. More disagree for the person expelled, because of his actions and their effect upon the common work, were regarded as not constituting the malice necessary to make a case of libel. The decision was regarded by the parties supporting the action of the convention as constituting a legal vindication of the Baptist principles of the freedom and independence of the churches.

The Baptist Congress.—The eighteenth annual Baptist Congress was held in Richmond, Va., Nov. 20 to 22. The Rev. A. P. Montague, D.D., president of Furman University, presided. The subjects of The Ritschlian theology; its meaning and effects; the diseased state of the church, and the Missionary Society? Where lies the efficiency of Jesus' work in the Reconciliation? Romanist survivals in Protestantism, Weak Points in the Baptist Position, and Child Nurture in Baptist Polity were discussed, each by two designated writers, two designated speakers, and volunteer speakers, representatives of the different sides of the several questions being sought in the selection of the writers and speakers. The congress is a voluntary body, "not representative, deliberative, legislative, or missionary," but a free arena for the expression of opinion, and no one but the individual speakers is committed by the declarations and expressions made in it.

Baptists in Canada.—The 18 Baptist associations in Ontario and Quebec return 464 churches, with 43,345 members, and 2,160 baptisms during the year, 5,000 teachers and 37,000 pupils in Sunday schools, and an average attendance there of 2,444.

The twelfth annual convention of these churches met at Woodstock, Ontario, Oct. 15 to 19. The address of the president, Mr. John Stark, on Conditions of Baptist Success, Past and Present, bore upon the denominational history, and papers were read in the convention dealing with the history of the Baptist churches of the two provinces with their mission and educational work, and their growth during the nineteenth century. The Rev. S. S. Bates was chosen president of the convention for the ensuing year. The Church Edifice Society, founded in 1868, had received $1,729 and expended $1,164 during the year, and was now aiding 28 churches. Eighty-four churches in all had been aided; and though the permanent fund had never exceeded $8,500, the loans granted had aggregated more than $40,000. The home mission work of the denomination began in 1836 with the organization of the Canada Baptist Missionary Society at Montreal; but the present Home Missionary Society of Canada, which was formed at Brantford in 1851. Its present work was carried on in a region extending 1,600 miles from east to west, and 400 miles from Lake Erie northward. During the year 9 churches had been organized, 5 chapels built, 3 buildings enlarged, 6 of the existing churches were provided with their own buildings. During the past twenty years $543,111 had been contributed to the home mission work, 172 chapels built, 153 churches organized, 64 churches become self-sustaining, and 12,653 persons baptized. Fifty-five thousand dollars had been contributed during the year for foreign missions, and all the expenses of the work had been met. The mission fields among the Telugu in India and in Bolivia returned 33 churches, 491 baptisms during the year, 4,000 members, 10 ordained and 63 unordained native helpers, 81 teachers, 7 colporteurs, 15 Bible women, 136 Sunday schools, with 3,387 pupils; 70 day schools, with 961 scholars; 7 boarding schools, with 516 pupils. The amount contributed by the native churches. Seven missionaries had been appointed to Bolivia, 3 of whom were already on the field, and 4 missionaries had been secured for India. The present capital of the Superannuation fund was $20,737, and the income for the past year had been sufficient for the payment of all claims in full. The accounts of the book room, presented by the Board of Publication, showed a loss of $604 on six months' business. Reports were made of English, German, and Galician work in Manitoba and the Northwest. The convention of Manitoba included 69 churches, with 3,692 members in 58 of them, while services were maintained in 19 places, in 40 of which there were but Baptist meetings. In British Columbia regular meetings were held in 9 districts. Two churches in Victoria were maintaining Japanese work. The educational report showed a surplus of funds, for the first time since 1892. The French Baptist churches had raised more than $82,000 for their own support. Report was made of work in connection with the Grande Ligne Mission at Feller Institute, where 3,500 young people had been taught since the beginning; of the mission in Montreal; the St. Roch Mission, Quebec; the Ottawa Valley, Nova Scotia, Manitoba, and five single stations.

The reports made to the Baptist Convention of the Maritime Provinces indicated considerable
gain in the contributions to denominational objects, including a few large individual contributions. The income for home missions in the Northwest had been $5,556, and for Nova Scotia and Prince Edward Island $8,117. Work had been done in 75 churches in the latter section. The Foreign Mission Board had received $20,844 and had expended $19,875. Of the receipts, $1,000 more had come from the women's societies than from the ordinary gifts of churches and individuals. The 7 churches in the foreign field had 346 members, and returned 41 baptisms during the year. Acadia University had $200,000 of trust funds, encumbered with $60,000 of debts. Including the proportion contributed by the churches, the educational endowment, estimated by Mr. J. H. Cottrell, $41,785 has been obtained on endowment pledges. A plan was considered for raising $50,000 as a Century fund.

Baptists in Great Britain.—The Baptist Union of Great Britain and Ireland met in its spring session in London, April 23. The report of the council showed an increase of about 25,900 clergymen during the year. The membership had apparently fallen from 355,218 to 333,258, but 46 churches, whose membership was included in the figures of the previous year had made no return. Estimating the number thus omitted, the membership would really be 300,475. The number of baptisms had increased from 27,470 during the year to 39,083, an increase of 11,613. During the year £50,743 had been spent on new chapels, £36,755 on improvements, new schools, etc., and £77,024 in payment of debts. The receipts of the union had been £39,083, including £22,226 for the Twentieth Century fund. The capital of the Annuity fund amounted to £167,736. The Annuity committee, who were enrolled themselves under the Act, so largely increased that the free contributions of the churches had been insufficient to maintain the annuities at their full amount, and it had been necessary to make small reductions in them. The Committee of the Home Mission reported that there were now 107 churches in 20 associations on the list, 53 of which churches were formed into 25 groups of 2 or 3 each. There were in addition 27 mission stations, and over the total number of preaching places—134—72 mission pastors. These churches returned 5,054 communicants and average attendances of 6,411 in the morning and 10,733 in the evening. The increased funds were £10,007. The campaign for the Twentieth Century fund was being pursued with great vigor and success. Eight hundred and ten out of the 1,180 churches connected with the union had adopted the scheme. The Irish Baptists were trying to raise £7,000 for it, the Welsh Baptist Union £50,000, and the Scotch Baptist Union £20,000. The whole amount received to date was £133,861. The Board of Introduction, which had been recently constituted for such purposes, had made recommendations of pastors to churches or of churches to pastors in more than 60 cases, and some settlements had resulted. The ministerial recognition committee reported upon the examination of ministers who sought ordination by the Baptist Union. Considerable progress had been made in the negotiations for the erection of a Baptist church house, with a chapel or hall, to serve as a headquarters for the denomination. A resolution of sympathy with the scheme of the Exeter Council for a Welsh Church had been adopted, with a pledging of the co-operation of the Baptist churches for its success. The Rev. Alexander McLaren, D. D., was elected vice president of the union and president for 1901. The resolution adopted on temperance approved the proposal for the association of the Free churches in a temperance crusade at the close of the nineteenth and the opening of the twentieth century, and advised the co-operation of the Baptist churches with it. Other resolutions protested against the scheme for a state-endowed Roman Catholic University in Ireland, and against certain provisions in the new educational code. The union also denounced certain incidents in the ritualistic controversy in the Established Church as constituting a grave public scandal, and expressed the belief that the true and only remedy for such conditions lay in disestablishment and disendowment. The Baptist Building fund had granted the applications of 42 churches for sums varying from £1,250 to £2,000, making a total of from five to ten years, amounting in all to £12,880. Practically the whole of the capital of about £53,000 was in use. The receipts from subscriptions and collections had decreased.

The autumnal session of the union was held at Leicester, beginning Oct. 2. The president, the Rev. William Cuff, in his opening address presented the Federal Union of Free Churches, the Twentieth Century Fund, and the Simultaneous Mission as the "three great movements" occupying the attention of evangelical Christians. A proposal for a union of the ministers and missionaries of all evangelical churches in a concert of prayer and special offerings, was presented. The sum of £18,000 in the new century was commended to the earnest consideration of ministers. Pastors, superintendents, and teachers in Sunday schools were advised to warn the youth under their charge against the dangers of cigarette smoking. Resolutions were passed urging the importance of securing as representative a profession of unselfish patriotism, and earnest and noble character; condemning resort to war; welcoming the definite constitution of the tribunal of arbitration at the Hague; warning the people against the growth of militarism, the revival of racial animosity, "the moral, not less than the physical, evils of war," and advising the cultivation in every possible way of the spirit of international brotherhood; mentioning the questions of licensing reform, the housing of the poor, the proper care for the aged poor, the increase of efficiency in state education for the children of the nation, the reform of the land laws, and the establishment of state-aided religious education as among the "true and lasting national interests" of the nation; and renewing protests against support of sectarian schools from public funds, and demands for government by the people of all elementary schools supported by the people. The Annuity fund having reported an excess in expenditures of £2,921 over income, the subject of remedial measures was referred to the council of the union for consideration. The report of the Twentieth Century fund showed that £15,000, of the £25,000 which it was proposed to raise had been subscribed.

Baptist Missionary Society.—The financial statement of the Baptist Missionary Society, made at the annual meeting, April 19, showed that the year's receipts for the general work of the missions, exclusive of special funds, had been £66,553 and the expenditures £73,716. An increased expenditure of £2,210 was wholly accounted for by the large addition (40) to the staff of missionaries which had taken place since the centenary celebration of the opening of India. An omission of gifts to the Indian Famine fund, the total receipts had been £77,049, an increase of £2,310 over the previous year. The reports from the mission fields indicated prosperous work. New stations had been opened in India, with a large in-
gathering of converts and a great improvement and advance in Christian elementary schools. Similar conditions prevailed in China. The new memorial station at Kiboko had been opened on the Congo, and large additions had been made to the station at Francqui, from which 3,100 pupils regularly taught in zenzanas; and Bible lessons given in 3,283 houses. On account of its distance from other stations, the mission in Madras had been transferred to the Wesleyans. The financial reports showed an increased deficit on the year's working, the amount having reached $5,394.

The American Baptist Yearbook gives the numbers of the Baptists in the British Isles as 2,750 churches, 1,959 ministers, and 378,475 members, with 16,996 baptisms during the year.

**Baptists in Germany.**—The Baptist Union of Germany, which was formed in 1849, held its eleventh annual meeting from April 20-23. The report upon the newly erected publishing house mentioned a gift of $10,000 from Mr. J. D. Rockefeller to pay off a current debt on the property, which after some parleying with the authorities had been admitted free of income tax. The report upon the Orphan fund, the object of which is to provide homes for orphaned Baptist families, represented that no trouble was had in finding places for orphans, that the supply of good homes was larger than the demand, and that such an institution as an orphan asylum was not needed among the Baptists of Germany. The Chapel Building fund had a capital of about 77,000 marks. Mr. W. S. Oncken, son of the Rev. J. J. Oncken, founder of the Baptist Church in Germany, had begun a collection in England for a Jubilee Chapel Building fund in commemoration of the one hundredth anniversary of his father's birth. An effort was instituted to raise a jubilee endowment of 100,000 marks for the Widows' and Orphans' Invalid fund, toward which subscriptions of 1,434 marks were made during the meetings of the union.

The Baptists in Germany have 155 churches, with more than 700 additional preaching stations, and 28,898 members. Twenty-four years had been built and 5,065 persons baptized since 1897. During the same period, 355,000 copies of 80 books had been issued from the publishing house at Cassel; and this establishment had realized profits amounting to $20,000. Eleven colporteurs were employed.

**Baptist Union of Jamaica.**—The Baptist Union in Jamaica reached its fiftieth year in 1900. During the half century of its existence the membership had increased from 44 to 182, the number of ministers was twice what it was when the union was formed, and the membership had nearly doubled. The jubilee report referred to many public questions on which the voice of the union had been heard. Among them was that of the disestablishment of the Church of England in the island, for which it had sent strong seated petitions to the local Legislature and the British House of Commons, eventually with success. The Baptists in this island number 182 churches, 61 ministers, and 33,638 members, and return 1,069 baptisms during the year.

**Belgium.**—a constitutional, representative, and hereditary monarchy in western Europe. The legislative power is vested in the Senate and the Chamber of Representatives. The Senate consists of members who are elected by the direct suffrage of male citizens over thirty years of age for the term of eight years, and in addition 2, 3, or 4 members are elected indirectly for the same term. The members of the House of Commons are elected directly for four years by all male citizens over twenty-five years of age. An additional vote or two votes additional are allowed to those having certain legal qualifications, which are the possession of real property worth 48 francs a year, money in Belgian funds or savings banks yielding 100 francs interest, a profession of public past or present, a diploma from one of the higher educational institutions, or the status of a married man or widower thirty-five years old who has legitimate issue and pays a house tax of 5 francs or more. Any one who possesses three or more of these qualifications is entitled to cast three votes. The number of electors in 1898 was 1,418,480, possessing 2,175,957 votes.

The reigning sovereign is Leopold II, the second King of the Belgians, born April 9, 1835, who succeeded his father Dec. 10, 1865. His heir is his brother, Philippe, Count of Flanders, born March 13, 1837, who became regent April 8, 1875. The Cabinet of Ministers in the beginning of 1900, constituted on Aug. 5, 1899, was composed of the following members: President of the Council, Minister of Finance, and Minister of Public Works, M. de Smet de Naeyer; Minister of the Interior and of Public Instruction, M. de Sterck; Minister of Education, M. de Even- reau; Minister of Justice, M. van den Heuvel; Minister of Agriculture, Baron van den Bruggen; Minister of War, Major-Gen. A. Cousebant d'Alkemade; Minister of Railroads, Posts, and Telegraphs and Minister of Industry and Labor, M. Liebaert.

**Area and Population.—**The area of Belgium is 11,373 square miles. The population at the census of 1890 was 6,069,321. On Dec. 31, 1898, it was computed to be 6,669,732, comprising 3,326,190 males and 3,343,542 females. The number of births in 1898 was 190,108; of deaths, 114,736; excess of births, 75,372. The number of emigrants in 1898 was 22,890, and of immigrants and asylum seekers, 4,533 immigrants. Brussels, the capital, had on Dec. 31, 1898, an estimated population of 561,130; Antwerp, 277,576; Liège, 109,202; Ghent, 102,652.

**Finance.**—The revenue of the Government in 1897 amounted to 499,613,000 francs, and expenditure to 511,398,000 francs. The budget voted for 1900 makes the total ordinary revenue 452,346,618 francs, of which 50,135,000 francs are the yield of direct taxes, 100,764,764 francs are derived from customs and excise duties, 14,633,000 francs from registration and other fees, 221,620,000 francs from railroads, tolls, etc., 14,776,800 francs from capital invested, and 19,747,474 francs from interest and income of the crown. The total ordinary expenditure was estimated at 450,929,726 francs, of which 127,910,416 francs were for interest and sinking fund of the public debt, 5,044,157 francs for the civil list and duties, 24,959,885 francs for the Ministry of Justice, 3,069,228 francs for the Ministry of Foreign Affairs, 29,245,290 francs for the Ministry of Public Instruction, 11,801,470 francs for the Ministry of Agriculture, 4,582,520 francs for the Ministry of Industry and Labor, 147,122,930 francs for the Ministry of Railroads, Posts, Telegraphs, and Railways, 53,520,911 francs for the Ministry of War, 34,747,385 francs for the Ministry of Finance and Public Works, 7,019,544 francs for the gendarmerie, and 1,876,000 francs for repatriation.
The national debt in 1899 amounted to 2,065,757,175 francs, including Belgium's share in the old Netherland debts. This share amounts to 219,059,622 francs, on which 2½ per cent interest is paid. The Belgian consolidated debt, amounting to 2,383,827,543 francs, all raised for railroads and other useful works, bears 3 per cent. interest, and is being paid off by means of a sinking fund.

The Army.—Belgium has only recently begun to build a national army and build a system of fortifications, having formerly relied on the treaty of London, by which Austria, Great Britain, Prussia, and Russia undertook to protect the neutrality and inviolability of Belgian territory. A system of conscription has been introduced, although the army is still partly recruited by enlistment. Every able-bodied man at the age of nineteen is liable to be drawn, but those who have the means can provide substitutes. The annual contingent is 13,300 men. The term of service is nominally eight years, the actual requirement not over a third of this period. The peace strength of the army in 1899 was 3,472 officers and 48,030 men in all ranks. The army numbered 17,450 officers and 27,900 men; cavalry, 304 officers and 5,762 men; artillery, 544 officers and 8,225 men; engineers, 146 officers and 1,880 men; gendarmerie, 65 officers and 2,839 men; general staff, military schools, train, administration, etc., 668 officers and 1,424 men. The regular army had 9,045 horses. The gendarmerie also had 204 pieces of field artillery. The war strength of the army is 163,000 men of all ranks, with 25,823 horses, not including the civil guards, who in 1899 numbered 40,443 men.

Commerce and Production.—The value of the general imports in 1898 was 3,279,047,704 francs, and of the exports 1,657,609,111 francs. Of the imports, the value of 1,714,379,111 francs entered by sea and 1,564,686,503 francs by river and rail, and of the exports, 1,256,226,730 francs in value were shipped by sea and 1,763,655,759 francs by river and rail. The imports for consumption were valued in 1898 at 2,044,700,000 francs, the exports of dollars at 1,757,000,000 francs. Belgium's transit trade was 1,232,800,000 francs. The special imports of cereals in 1898 were 383,408,000 francs in value; textile materials, 191,743,000 francs; mineral substances, 127,657,000 francs; chemicals and drugs, 103,205,000 francs; gums and resins, 94,011,000 francs; lumber and wood manufactures, 91,084,000 francs; spirits, 90,000 francs; sugar beets, 53,450,000 francs; beer, 52,670,000 francs; wine, 50,000 francs; coffee, 46,342,000 francs; live animals, 44,282,000 francs; coal, 40,347,000 francs; animal products, 37,682,000 francs; dyes and colors, 34,812,000 francs; machinery, 28,604,000 francs; linen, wool, and cotton yarns, 26,475,000 francs; cotton, 25,723,000 francs; tobacco, 14,965,000 francs; fertilizers, 14,631,000 francs; butter and margarine, 11,897,000 francs. The special exports of textile materials in 1898 were valued at 112,655,000 francs; cereals, 109,005,000 francs; coal, 107,366,000 francs; linen, wool, and cotton yarns, 97,873,000 francs; machinery and vehicles, 82,755,000 francs; glass, 80,600,000 francs; iron, 75,350,000 francs; chemicals and drugs, 70,616,000 francs; hides and leather, 67,889,000 francs; mineral substances, 67,053,000 francs; steel, 57,701,000 francs; zinc, 54,037,000 francs; textile fabrics, 52,651,000 francs; sugar, 45,220,000 francs; oil seeds, 37,571,000 francs; margarine, 34,105,000 francs; animal products, 32,844,000 francs; resin and bitumen, 30,313,000 francs; dyes and colors, 28,504,000 francs; meat, 20,058,000 francs. The special trade with the principal foreign countries in 1898 is shown in the following table, giving the values of the special imports and exports in francs:

When Belgium first became a kingdom in 1831 the total value of imports was only 98,000,000 francs, and of exports 15,500,000 francs. In 1899 the value of Belgian imports was the seventh country in the world according to the value of its special commerce, the imports having increased in the year 10 per cent. and the exports 9 per cent. According to the value per capita Belgium leads all countries, this being 574 francs, while in Great Britain it is 430. Belgium and Russia are closer than 311, in France and Sweden, 657, in the United States 129, in Austria-Hungary 92, in Italy 83, and in Russia 40 francs per capita. Belgians have invested a great amount of capital in Russian industries, estimated at 1,100,000,000 francs, and the present value of the investments is 50 per cent. more. Half the foreign companies started in Russia in 1896-1899 are Belgian, and also the railroads. They turned their attention to the industrial development of China, sending a commercial mission to that country and forming companies and syndicates to build railroads and to work mines. The agricultural lands of Belgium were divided up in 1868 among 282,623 holders, of whom 544,041 had less than 5 hectares, and 1,205,040 holders had 50 hectares. The area farmed by the proprietors was 593,333 hectares, while 1,520,358 hectares were cultivated by tenants. The wheat crop in 1897 was 6,681,568 hectolitres; barley, 1,264,141 hectolitres; rye, 6,250,350 hectolitres; oats, 10,569,398 hectolitres; potatoes, 29,637,026 quintals; sugar beets, 8,722,105 quintals; other vegetables, 2,381,070 quintals. The tobacco crop in 1895 was 5,166,000 kilogrammes. There were 271,572 horses, 1,420,976 cattle, 235,722 sheep, and 1,163,133 hogs in 1895. The forests, which cover 17.70 per cent. of the total area of the kingdom, belong in part to the state, some of them to communes and public institutions, and the rest to private individuals. The net forest product is 22,000,000 francs. About 19 per cent. of the working population is engaged in agriculture and about the same percentage in mining and metal industries, while other industries employ a larger proportion. The number of persons employed in coal mines in 1897 was 122,846. The production of coal in 1898 was 22,068,000 tons, valued at 242,504,000 francs. The pig-iron product was 970,101 tons; manufactured iron, 509,100 tons; ingot steel, 653,150 tons; steel rails, 558,956,385; the import of iron ore, chiefly from Luxembourg, was 2,544,403 tons, while the product of Belgian mines in 1907 was 2,748,774 tons. The number of all registered commercial vessels entered at Belgian ports during 1898 was 8,335, of 8,233,700 tons; cleared, 8,370, of 8,283,910 tons. Of the total number entered 4,010, of 3,903,180 tons, and of those cleared 4,035, of 4,054,203 tons, were British;
BRAZIL.

Ministry of Government.

Liberals and Socialists, 42,333,896 demonstrations.
Democrats, 1,461,434,198 francs.

The Government elected Jose Severo Vieiro; Minister of Finance, Dr. Genaro Sanjines; Finance Minister of the Chamber of Deputies, Gen. José Manuel Pando; Secretary of the Cabinet of Ministers.

1,401,434,198 francs.

The post office in 1898 forwarded 123,040,221 private and 23,435,925 official letters, 53,174,433 postal cards, 107,900,411 printed packets, and 122,451,701 newspapers. The receipts were 22,634,951 francs; expenses, 12,425,263 francs.

The Government telegraph lines in 1898 had a total length of 3,960 miles, with 45,944 miles of wire. The number of messages transmitted during the year was 10,505,200; receipts were 7,880,485 francs, and expenses 6,222,503 francs.

Political Affairs.—A new Chamber of Representatives was elected at the end of May. The result was as follows: Catholics, 85; Christian Democrats, 1; Liberals and Radicals, 35; Socialists, 5; the remainder, 2 Progressives, 8 Catholics, and 3 Liberals to the Chamber. The provincial elections did not disturb the predominance of the Catholics, who obtained majorities in 6 provinces out of 9, although partial successes were won by Socialists and Liberals. The Socialist party immediately after the elections set on foot a new movement in favor of unrestricted suffrage, and during an extraordinary session of the Chamber held in July the Socialist Left had recourse to obstruction in order to force the Government to introduce a bill to establish universal and unrestricted suffrage, while political demonstrations in support of that object took place in the large towns.

The correspondence with the British Government took place in consequence of an attempt on the life of the Prince of Wales in a railroad car at Brussels committed on April 4 by a young tin-smith, who said that he wanted to kill the British heir apparent because he had caused thousands of men to be slaughtered in South Africa. The victim was only fifteen years old, was tried in July, and the court decided that he was demented, after the jury had found him guilty.

BOLIVIA. a republic in South America. The Congress consists of a Senate of 16 members, elected for six years, and a House of Representatives, elected for four years by all adult male Bolivians who are able to read and write. The President is elected for four years by the vote of the nation, and is not eligible for the next succeeding term. The President, who assumed office on Aug. 18, 1896, was Severo Fernandez Alonso; in 1898, Dr. Genaro Sanjines was elected Vice-President and Dr. Genaro Sanjines second Vice-President. On Oct. 20, 1899, the Government was overthrown, and on Oct. 26 Gen. José Manuel Pando was declared President.

Area and Population.—The area of Bolivia is 567,430 square miles. The population is estimated at 2,019,549, not including tribal Indians. About a fourth of the people are white, a fourth of mixed blood, and half are Indian.

Finances.—The revenue in 1899 was estimated in the budget at 7,973,190 bolivianos, and expenditure at 8,104,200 bolivianos. The foreign debt, secured on the customs collected at Arica, amounted in 1898 to 1,084,535 bolivianos, the internal debt to 3,707,541 bolivianos.

The Army.—The active army, consisting of 2 infantry battalions, 2 regiments of cavalry, 2 regiments of artillery, and 1 battalion of garrison in each department, numbers 2,975 men. In the National Guard about 64,000 men are enrolled.

Commerce and Production.—The production of silver in 1897 was 11,765,470 ounces, against 9,113,564 ounces in 1896. Other mineral products are tin, copper, lead, zinc, bismuth, antimony, and salt. Rubber, cinchona, cocoa, and coffee are exported, as well as wool and hides and skins. Provisions, hardware, cotton and woolen cloths, clothing, and wines and spirits are imported. The import trade is carried on mainly by German merchants.

BRAZIL, a federal republic in South America. The National Congress consists of a Senate of 63 members, 3 from each state and from the federal city of Rio de Janeiro, elected by indirect vote, one third retiring every three years, and a House of Deputies, consisting of as many members from each state as there are multiples of 70,000 in its population, elected by universal suffrage, every adult male Brazilian having the right to vote unless he is a soldier in active service, a member of the diplomatic service, a pauper or criminal. The President of the republic is elected by the direct suffrage of the nation.

The President elected for the term beginning Nov. 15, 1898, is Dr. Manoel Ferraz de Campos Sales. The Vice-President is Dr. Francisco Rosa e Silva. The Cabinet in the beginning of 1900, constituted in November, 1898, consisted of the following members: Minister of Foreign Affairs, Dr. Olyntho de Magalhaes; Minister of Finance, Dr. Joao Mustinho; Minister of War, Gen. Joao Nepomuc de Medeiros Mallet; Minister of Industry, Severino Vieiro; Minister of the Interior and Justice, E. Pessoa; Minister of Marine, Rear-Admiral Pinto da Costa.

Area and Population.—The area of Brazil is 3,209,878 square miles. The population at the census of 1890 was 14,333,915. The immigration in 1897 was 112,495. In 1898 the total number of immigrants was 53,822, of whom 33,272 were Italians, 11,662 Portuguese, 5,943 Spaniards, 609 Austro-Hungarians, 47 Germans, 247 French, 157 Russians, and 129 Swiss.

Finances.—The estimated revenue for 1898 was 328,504,914 milreis, and expenditure 329,308,845 milreis. For 1899 the estimated revenue was 346,164,000 milreis, and of expenditure 346,000,423 milreis. The budget estimate of revenue for 1899 was in paper 289,040,000 milreis, of which 162,033,000 milreis were expected from import duties, 35,000,000 milreis from railroads, 15,500,000 milreis from posts and telegraphs, 18,000,000 milreis from stamps, 27,770,000 milreis from excise duties, 13,122,000 milreis from various ordinary sources, and 17,583,000 milreis from extraordinary sources. The estimated revenue to be collected for the fiscal year 1900 was 44,948,000 milreis, of which 18,506,000 milreis were expected from import duties, 310,000 milreis from extraordinary sources, 505,000 milreis from various ordinary sources, and 25,627,000 milreis from the emission of paper currency. The estimated expenditure of gold was 30,974,000 milreis, of which
1,053,000 milreis were for foreign affairs, 13,435,000 milreis for agriculture, and 22,460,000 milreis for finance. The estimate of currency expenditure was 263,162,000 milreis, of which the Imperial and Justice Department incurred 15,897,000 milreis. Foreign Affairs 527,000 milreis, the navy 23,077,000 milreis, the army 45,506,000 milreis, the Department of Agriculture 62,233,000 milreis, and the Department of Finance 115,530,000 milreis.

The national obligations on April 30, 1898, consisted of a formerly used debt of £28,000,000 sterling, an internal debt of £373,425,000 milreis, 306,306 milreis of floating liabilities, 21,027,500 milreis of treasury bills, and 785,941,758 milreis of notes in circulation; total amount, 1,444,701,794 milreis. The deficit existing at the end of 1897 was extinguished by means of an internal 6-per-cent. currency loan of 60,000,000 milreis and a 5-per-cent. gold loan of £22,000,000 sterling. The interest on the foreign debt, by arrangement with the creditors, has been funded since July, 1898, and new 5-per-cent. bonds not exceeding £10,000,000 in amount have been issued to cover the defaulted interest and that of guaranteed railroads, which are £1,130,000 in arrears. The internal gold loans have been converted into currency loans.

The actual receipts for 1899 were approximately 266,000,000 milreis from customs, including 10 per cent. in gold reduced to currency and 111,000,000 milreis of internal revenue; total, 377,000,000 milreis. The ordinary expenditure was 259,000,000 milreis incurred in the Department of Finance; balance of loan of 1897, paid, 33,000,000 milreis; total, 325,000,000 milreis. The bad financial situation that necessitated the funding loan has been remedied by curtailing expenditure and promoting an increase of revenue. A surplus has been accumulated to enable Government to resume the payment of the external bonds in 1901 without resorting to fresh taxation. In 1900 the Government redeemed 71,000,000 milreis of paper currency, and in 1901 planned to redeem a larger amount. The surplus in the treasury at the end of the financial year was over 16,000,000 milreis in paper and 3,257,000 milreis in gold. The proportion incurred in gold, which had been increased from 10 to 15 per cent., was further raised to 25 per cent. in the budget for 1901. The external funded debt, when payment of interest is resumed on July 1, 1901, will consist of £3,292,000 of the loan of 1883, £5,295,000 of the loan of 1888, £25,388,290 of the loan of 1889, £7,331,600 of the loan of 1895, and £9,694,790 of the funding loan authorized in 1898; total, £42,915,100, resulting in an annual payment of £1,921,324, in addition to which there is £160,405 of interest on the guaranteed loan of the Minas Gerais Railroad, £1,138,347 guaranteed to various railroad and other companies, £111,554 for the service of the gold bonds of 1896 and 1898 of £28,000 commissions, making the total annual gold payment approximately £150,000,000 milreis, not including 60,000,000 milreis authorized in 1897, but not issued. The floating debt is about 300,000,000 milreis. The inconvertible paper currency in circulation on June 30, 1900, was 705,000,000 milreis. The total indebtedness, not including floating liabilities, is 1,340,000,000 milreis, equivalent to £76,000,000 sterling at the exchange value of 13. For the milreis, but if the milreis reached par the equivalent would be £150,750,000. Including the foreign debt and Military and Internal loan debt of 1897, the total indebtedness of the Government is 1,969,077,000 milreis, the sterling equivalent of which at par is £236,231,100.

The fund accumulated in London for the reconvension of interest payments was £675,700 on March 1, 1900, and by July 1, 1901, it will be increased to £1,000,000. The Department of Finance has been efficiency increased since 1898, and is now one of the most efficient and well governed in the world.

The estimates of ordinary revenue for 1901, as presented by the Ministry of Finance, were 32,105,000 milreis in gold and 343,782,000 milreis in currency, to which are added 9,765,000 milreis in paper of extraordinary receipts, the fund of 25,820,000 milreis for withdrawal of currency, a current guarantee fund of 8,082,000 milreis in gold, 12,678,074 milreis in gold from the emission of funding bonds, and 5,000,000 milreis in paper of balance of deposits, making a total of 58,869,741 milreis in gold and 284,367,000 milreis in paper. The estimates of expenditure were 15,784,415 milreis in paper for justice and interior, 965,500 milreis in gold, and 340,000, and in foreign affairs, 23,976,977 milreis in paper for marine, 45,518,523 milreis in paper for war, 12,857,814 milreis in gold and 60,560,986 milreis in paper for industry, and 21,976,470 milreis in gold and 95,648,340 milreis in paper for finance, making a total of 37,799,754 milreis in gold and 241,125,361 milreis in paper.

The Army and Navy. The strength of the active army in 1898 was 2,300 officers and 25,800 men. Military service is obligatory for three years with the colors and three years in the reserve. There is a National Guard, which has been reorganized and is now more efficient. The number of gendarmes is 20,000. The army was reduced in 1898, and attention was given to training the nucleus of a new force.

The effective navy comprises 44 armored vessels, 1 coast-defense gunboat, 5 monitors, 2 second-class cruisers, 2 third-class cruisers, 12 small cruisers and gunboats, and 8 first-class and 11 third-class ironclads. The total number of steamers is 343,782, of which 13 are for coast-defense, 1 at Santos, 1 at Timbira, and 1 at Kia, the latest addition. The navy has been greatly improved, and by the end of 1901 the Government expects to have 23 ships ready for sea and 12 for river service.

Commerce and Production. The Rio district produces 10,774,000 bags of coffee in 1898, 6,750,000 bags in 1899, and 7,250,000 bags in the season of 1900, each bag holding 60 kilogrammes. The sugar crop of Pernambuco in 1898 was 1,757,421 bags of 75 kilogrammes. The same state produced 107,198 bales of cotton, the bale weighing 75 kilogrammes. In Rio Grande do Sul the number of cattle slaughtered for export was 159,000 only 270,000. The tanneries, breweries, and canneries of this state are important, and it has coal mines producing 18,300 tons in 1896. In Minas Gerais are coal mines, of which the output is 104,000 tons. Here and in Bahia are the diamond mines of Brazil, the normal product of which has been 40,000 carats, and in 1899, 13,000 carats. The Cape Colony have been cut down. Gold, silver, lead, zinc, iron, manganese, copper, and quicksilver are found in Bahia, and iron ore in enormous quantities exists in Minas Gerais. The export of coffee from Rio de Janeiro in 1898 was 3,793,320 bags; from Santos, 5,745,210 bags; from Victoria, 379,911 bags. The tobacco export was 339,725 bags; of sugar from Pernambuco, 1,757,421 bags; from Macae, 639,584 bags; of cotton from Pernambuco, 167,198 bales; from Ceará, 8,000 bales; from Macae, 7,375 bales; from Penedo, 40,000 bales; from rubber from Ceará, 1,005,317 kilogrammes; of hides from Bahia, 268,010; from Macae, 5,807; from Pernambuco, 158,151; of tobacco from Bahia, 431,110 bags; cotton from cacao from Bahia, 155,312 bags; of piassava from Bahia, 2,006,592 kilogrammes.
Navigation. — There were 1,218 vessels, of 2,063,161 tons, entered and 1,130, of 1,057,712 tons, cleared at the port of Rio de Janeiro in 1898; at Pernambuco, 867, of 1,106,556 tons, entered and 870, of 1,096,077 tons, cleared; at Ceará, 266, of 521,453 tons, entered and cleared; at Penedo, 182, of 34,008 tons, entered and 182, of 35,024 tons, cleared; at Pará, 192, of 1,857,557 tons, entered and 193, of 183,752 tons, cleared.

The mercantile navy of Brazil engaged in foreign commerce consisted in 1898 of 344 sailing vessels, of 88,000 tons, and 229 steamers, of 94,262 tons. There were 388 sailing vessels, of 26,637 tons, and 212 steamers, of 70,650 tons, engaged in 1897 in the sugar trade, which from the beginning of that year could only be carried on under the Brazilian flag.

Railroads, Posts, and Telegraphs. — The length of railroads open to traffic on Jan. 1, 1898, was 8,718 miles, besides which 4,589 miles were building, 4,670 miles more surveyed, and 8,440 miles projected. The Government guarantees 6 or 7 per cent. interest on most of the railroads.

The telegraph lines, which belong to the Federal Government, have a total length of 10,145 miles, with 21,936 miles of wire.

Political and Economic Conditions.—The abolition of slavery in 1887, the overthrow of the municipal government of Rio de Janeiro in 1893, and the outbreak of a serious agrarian movement that has prevailed most of the time since, the depression in the coffee trade, and recurring crises in the finances of the Government have tended to check the development of the resources of Brazil and weakened Brazilian credit at home and abroad. Only recently has a return to more settled conditions been experienced and a prospect of industrial expansion. During the last few years attention has been attracted to the mining industry. Brazilian diamonds, notwithstanding the purity of the stones, have not been systematically searched for during a quarter of a century until the increased demand for the gems while the output at Kimberley was interrupted reawakened interest in this branch of mining and enlisted foreign capital, which enables the work to be carried on with modern appliances. A French syndicate has begun operations on a large scale in the Diamantina district of the state of Minas Geraes, and intends utilizing the water power that is there available for hydraulic mining over a large area. Improved methods of transportation, a better supply of labor, and an abatement of local taxes on enterprise are conditions favorable to a commercial system of mining in this district where only superficial and desultory working has been the rule. Valuable finds of diamonds are also made from time to time in the state of Bahia, where the work is conducted as yet by washing the river beds and no attempt has been made to work the diamantiferous ore systematically. Gold mining has been greatly neglected of recent years except by one or two well-established companies in Minas Geraes, although gold in paying quantities is found in many districts of Brazil. Plans for mining always hinge up by hydraulic methods have been formed.

The shipments of manganese ore have increased steadily for five years past. The supply is practically inexhaustible and the cost of mining it is less than in any other country. Iron ores, some of them exceptionally rich, are found in many sections, and coal is known to exist in considerable quantities; yet no attempt has been made to found an iron industry. The check on imports resulting from the scarcity of money and the heavy duties imposed in 1898 turned the balance of trade, which was $22,000,000 against Brazil in 1897. This deficit has since been wiped out. This in combination with the redemption and incineration of large amounts of paper money by the Government has produced a marked rise in the exchange value of the paper milreis. The suspension of the payment of cash interest on the external national debt has helped to keep down foreign remittances and to keep the balance in favor of Brazil. This suspension of payments continues at least to July, 1901. From that date the payment of interest will be resumed if the agreement made with the bondholders in London in 1898 is kept. The rubber exports for the year ending June 30, 1900, were larger than in any former season, exceeding 25,000 tons. Although fears have often been expressed that the systematic method of collecting the gum is rapidly depleting the forests, the Amazon, yet the supply has hitherto steadily increased, so vast are these forests and so rich in rubber-yielding trees. The amount of rubber collected for export is controlled only by the difficulty of obtaining laborers willing to brave the unhealthy climate and endure the hardships incidental to this work, to which immigrants from Europe rapidly succumb. The larger export has been culled out by increased prices, but even still higher prices would fail to augment the yield except to a slight extent.

Brazil asked France and Italy to reduce their high duties on coffee by 30 per cent. France agreed to make a reduction of 10 per cent. in 1897 and 20 per cent. in 1899. Congress was opened on May 3. The redemption of paper currency beyond the 78,000,000 milreis required by the funding loan contract was suspended in consequence of the rapid rise of exchange. In the summer the rate went up to 67.9. the price of coffee was almost double that of the preceding year. Congress voted a budget that authorized the Government to carry out any financial transactions except the emission of paper money. After the funding loan is terminated a gold credit is to be established to insure the punctual payment of the external debt charge.

The Anglo-Venezuelan boundary award made at Paris drew from the Brazilian Minister of Foreign Affairs a strong protest. When the arbitrators met the Brazilian Government made reservations as to the rights of Brazil which might be affected by the arguments of the contending parties; also that the silence of Brazil could not be invoked as an argument in the arguments held by the Brazilian and Venezuelan Governments with regard to its rights and its resolution to maintain them. Brazil was surprised when the tribunal issued its award fixing the boundary between Venezuela and British Guiana through territory in the upper reaches of the rivers Takuta and Cotinga, which the Government of Brazil claims is Brazilian territory. Brazil has a treaty of delimitation with Venezuela dated May 5, 1839, by which it is stipulated that their common frontier shall follow the Paezarena in such manner that the waters flowing toward the Rio Blanco shall belong to Brazil. The award of the international tribunal presumes that Venezuelan territory extends to the other side of the Cotinga and the Takuta, territory that is incontestably Brazilian, and also to the southern slopes of the Aca-ray chain, a district that is solely dispute against Brazil by France and is the subject of a controversy between these two countries that has been referred to the Swiss Federal Council for arbitration. Brazil, by a note of March 19, 1899, to an arbitration of the boundary between its territory and British Guiana, and takes the position that the award of territory claimed by Brazil to British Guiana by the Venezuelan Boundary Commission can have no prejudicial effect in international law upon its claims.
BRITISH COLUMBIA, PROVINCE OF.

Politics and Legislation.—The politics of the period in this province was exceedingly stormy. The Turner ministry, formed in 1855, had struggled along until 1858, when it was dismissed by Lieut.-Gov. McInnes and replaced by one under the leadership of Mr. C. A. Senlin. The chief figure in the political conflicts of this time was the Hon. Joseph Martin. In Manitoba, from which he had migrated, he was the father of the famous measure abolishing separate schools, and he was the indirect cause of the defeat of the Dominion Conservative Government in 1896. As the government which founded the active leadership of the British Columbia Legislature and a bitter opponent of the Semlin Government, which then included Messrs. Alexander Henderson, R. E. McKeechin, F. Carter-Cotton, and J. Fred Humne.

On Jan. 5 the second session of the Eighth Legislature was opened by Lieut.-Gov. T. R. McInnes in a speech which dealt with the South African war, and promised in behalf of the Government various educational reforms; the substitution of a cash subsidy to the Central Pacific Railroad for the 2,500,000 acres of land previously granted in connection with the Columbia and Western extension; the grant of representation to the boundary districts of the various sections by rail ways. The session that followed was full of personalities and lacking in practical legislation on account of the Government's small majority and the fierce attacks of Mr. Martin. Finally the ministry was defeated, on Feb. 24, by 19 to 18 votes, and three days later were dismissed by the Lieutenant Governor. They had persisted on the ground that a majority of the House was really with them, and they proved this during the ensuing period of turmoil by passing a resolution declaring: "That this House, being fully alive to the great loss, inconvenience, and expense to the country of any interruption to the business of the House at the present time, begs to express its regret that his Hon. has seen fit to dismiss his advisers, as in the present crisis they have the efficient control of the House." The Lieutenant Governor persisted in his policy, however, by calling in his friend, Mr. Joseph Martin, to form a ministry. For a month matters were in the most uncertain state. Martin could not bring himself to join a ministry, and yet he held on to office and, at a later date, maintained a dissolution of the Legislature from the Governor. The House expressed its contempt of the latter by publicly insulting him when he attended its last meeting, on March 2, and by passing a unanimous resolution of want of confidence in Mr. Martin. Yet the new Premier went on with his work, and eventually made up a ministry composed of Messrs. Smith Curtis, J. Stewart Yates, and G. W. Beeche—all of whom were unknown to politics. In the elections that ensued his policy was announced in a manifesto, issued early in March, with the following platform:

"The abolition of the $200 deposit for candidates for the Legislature.

"The bringing into force, as soon as arrangements can be completed, of the Torreens registry system.

"The redistribution of the constituencies on the local and provincial general population; all populating sparsely populated districts a proportionately larger representation than to populous districts and cities.

"The enactment of an accurate system of Government scaling of logs, and its rigid enforcement.

"The re-enactment of the disallowed labor regulation act of 1898, and also the all the statutes of 1899 containing anti-Mongolian clauses, if disallowed as promised by the Dominion Government.

"To take a firm stand in every other possible way with a view of discouraging the spread of Oriental cheap labor in this province.

"To provide for official inspection of all buildings, machinery, and works, with a view to compelling the adoption of proper safeguards to life and health.

"The Government will continue to enforce the eight-hour law as it stands. An immediate inquiry will be made by the Minister of Mines into all grievances put forward in connection with its operation, with a view of bringing about an amicable settlement. If no settlement is reached, the principle of the eight-hour law and the necessity for it were possible, a vote will be taken at the general election as to whether the law shall be repealed. If the law is sustained by the vote, it will be retained upon the statute book with its penalty clause. If modifications can be made, removing any of the friction brought about without impairing the principle of the law, they will be adopted. If the vote is against it, the law will be repealed.

"To re-establish the London agency of British Columbia, and to take every effective means of bringing before the British public the advantages of this province as a place for profitable investment of capital.

"The making of the resources of the province as an asset for the benefit of the people, and taking effective measures to prevent alienation of the public domain except to actual settlers or for bona fide business or industrial purposes, putting an end to the practice of speculating in connection with them.

"The passage of active measures for a systematic exploration of the province.

"To adopt a system of Government construction and operation of railways, and immediately to proceed with the construction of a railway on the south side of Fraser river, connecting the coast with the Kootenay District, with the understanding that unless the other railways now constructed in the province give fair connections and make equitable joint freight and passenger arrangements the province will continue this line to the eastern boundary of the province, proper connection with such Kootenay railway to be given to the Island of Vancouver. With respect to other parts of the province it proposes to give to every portion of it railway connection at as early a date as is possible, the railway, when constructed, to be operated by the Government through a commission.

"A railway bridge to be constructed in connection with the Kootenay railway across Fraser river, at or near New Westminster, and running powers given over it to any railway company applying for them under proper conditions.

"In case it is thought at any time advisable to give a bonus to any railway company, the same to be in cash, and not by way of a land grant; and no such bonus to be granted except upon the condition that a fair amount of the bonds or shares of the company be transferred to the province, and effective clauses taken to maintain control of the freight and passenger rates, and provision made against such railway having any liabilities against it except actual cost.

"The unconstitutional nature of these proceedings was so glaring that it attracted the attention of the press all over Canada. An appeal was made to the Dominion Government, and Wilfrid Laurier announced in Parliament that, though the matter was serious, the issue now lay in the hands of the people of the province, and he intimated that the Lieutenant Governor, as well as the Premier, would have to abide by the result. A little later he wrote to Mr. Martin that
he must expect no help from him in the contest at the polls, and thus practically withdrew the Liberal party from a fight in which Martin, as a life-long Liberal, might have expected a measure of party support. Meanwhile, although the Conservatives of British Columbia were in a greatly mixed-up condition and divided into supporters of Mr. J. H. Turner, Mr. C. A. Senlin, and Mr. F. Carter-Cotton, respectively and separately, they had proclaimed a platform for the province as follows:

"To revise the voters' lists.
"To aid actively in the construction of trails throughout the undeveloped portion of the province and the building of provincial trunk roads of public necessity.
"To provide for official inspection of elevators and hoisting gear.
"To improve the administration of justice and secure speedy disposition of legal disputes.
"To provide an effective system for settlement of disputes between capital and labor.
"To adopt the principle of government ownership of railways in so far as the circumstances of the province will warrant it, but with the addition of the principle that no bonus should be granted to any railway company which does not give the Government of the province control of rates over lines bonused, together with the option of purchase.
"To assume control and administration of the fisheries within the boundaries of the province.
"To assist actively by state aid in the development of the agricultural resources of the province.
"To make the London agency of British Columbia effective in proclaiming the natural wealth of the province and as a place for profitable investment of capital.
"To recognize and reform the system of provincial aid to medical men and hospitals in outlying parts of the province.
"To promote the advancement of the mining interests of British Columbia.
"To aid in the immigration of female domestic servants."

For some months Mr. Martin fought hard to establish an organized party in support of his defined policy. But his personality was so peculiar, his abuse of opponents so violent, his energy so neutralized by mistakes, that in the elections, June 10, he was politically buried. Out of 38 members, only 7 Government supporters were returned, the rest being divided among the straight Conservative wing, the independent element, the Labor party, and those classed merely as oppositions.

On the other hand, the division of the Government re-signed, and Lieut.-Gov. McInnes, in practical pursuance of the announced Dominion policy in the matter, received his dismissal from Ottawa. In the meantime he had called on Mr. James Duns-muir, a millionaire mine owner, to form a ministry, and this was completed on June 21 as follows: Hon. James Dunsmuir, Premier and President of the Council; Hon. D. M. Eberts, Attorney-General; Hon. J. H. Turner, Minister of Finance; Hon. J. D. Prentice, Provincial Secretary; Hon. R. McBride, Commissioner of Lands and Public Works; Hon. A. C. Wells, Minister of Mines.

Three members of the Government were Liberals, with the formation and the retirement of Mr. McInnes came a period of comparative political peace. Sir Henri Joly de Lotbiniere, Minister of Inland Revenue at Ottawa, was appointed Lieutenant Governor, and became immediately popular with all classes of the community. The dismissal of the Lieutenant Governor by the Dominion Government had been a serious action, and of course was much discussed. Important correspondence between Mr. McInnes and the Dominion authorities was made public, and on July 12 the Hon. David Mills, Minister of Justice, made a speech in the Senate, describing the constitutional mistakes and missteps for which the Lieutenant Governor had suffered.

On July 19 the first session of the Ninth Legislature was opened in state by Sir Henri Joly de Lotbiniere. Mr. J. P. Booth was elected Speaker, and the Lieutenant Governor then read his speech from the throne, which, after certain personal references and loyal expressions in connection with the South African war, continued as follows:

"The industries of the province are in a fairly prosperous condition, notwithstanding a temporary wave of depression. The metalliferous mining, which was more particularly affected, is resuming a more normal condition of activity, and I anticipate a greatly increased output during the present year.

"Coal mining in East Kootenay and on Vancouver island is on a prosperous basis, the output for the past year exceeding that of any other year. The lumbering district is likewise in a prosperous condition, and the foreign demand continues to be above.

"Agriculture, including fruit growing, dairying, stock raising and kindred branches, is making steady progress, with prospects of ultimate great development.

"The fisheries last year were successfully prosecuted. It is too early in the season to indicate the results of the present year's operations.

"I observe with satisfaction a concordance between the Government of British Columbia and the Federal and Imperial Governments, relative to Asiatic immigration, has been published a large influx of Japanese has taken place. The intention of my Government is to make strong representations to the authorities at Ottawa and Great Britain, with a view to checking the influx of the laboring classes against consequences which threaten to come with an alarming increase in our Japanese population.

"The extensive requirements of the province with respect to public work for its development will involve the carrying out of a vigorous policy in road building, and my Government intends to provide for surveys and a report concerning the various sections requiring attention."

I am impressed with the opportunities for the profitable carrying on of the manufacture of pulp in British Columbia, and note with pleasure that preparations are being made and sites arranged for extensive pulp mills in this province.

"My Government will ask for an appropriation for defraying the expenses of a commission to inquire into the working of the mining acts, with a view of introducing legislation for the purpose of amending them next session, and into the various conditions affecting the question of water rights. The intention of my Government is to impose a tonnage tax on the output of coal and coke in this province, and introduce other measures to be considered for the purpose of increasing the revenue.

The intention of my Government is to provide in the estimates a sum to place the office of Agent General on a more satisfactory basis.

"Owing to the fact that the present extra session is for the purpose mainly of voting supplies, and that the regular session is to be held at an
early date, the measures to be submitted for your consideration, though important, will be few."

In the session that followed various important resolutions were passed. One of them urged the Dominion Government to settle the disputes regarding actual and ultimate ownership of Indian reserves in the province; another protested against the influx of Mongolian immigrants; another pressed for better payment of Dominion judges in the province; still another urged the establishment of a mint in British Columbia.

A measure was also passed for helping the Kettle Valley Railway, which had been so badly handled by the Canadian Pacific Railroad and refused incorporation by the Dominion Parliament. On Aug. 31 the House was prorogued with a speech from the Lieutenant Governor and his assent to the following, among other acts:

Respecting the closing of shops and the employment of children and young persons therein.

To incorporate the Vancouver and Westminster Railway Company.

To incorporate the Crow’s Nest Pass Electric Light and Power Company, limited.

To incorporate the Western Telephone and Telegraph Company.

To incorporate the Pacific Northern and Omineca Railway Company.

To amend the investment and loan societies act.

To amend the Columbia and Western Railway subsidy act of 1896.

To amend the land registry act.

To amend the judgments act of 1899.

To amend the mechanics’ lien act.

To extend extra-provincial investment and loan societies.

To incorporate the Kamloops and Atlin Railway Company.

To amend the official administrators’ act.

Respecting succession duties.

Relating to employment on works carried on under franchises granted by private acts.

To regulate immigration into British Columbia.

To permit the use of voting machines in British Columbia.

To amend the law relating to costs allowed to mortgagees.

To incorporate the Grand Forks and Kettle River Railway Company.

To amend the licenses act of 1899.

To levy a tax on coal and coke.

To amend the land act.

To amend the assessment act.

Financial.—On Aug. 16 Mr. J. H. Turner presented to the House his budget as Finance Minister. He pointed out that from 1893 to 1900 the provincial debt had increased about $3,000,000, making it $5,000,000 altogether. During this period $4,500,000 had been expended on public works, the revenue had increased 90 per cent., and the expenditure only 40 per cent. The estimated revenue for 1900 was over $1,549,000; that for 1901 was $1,757,229. The estimated expenditure for 1900 had been $1,764,573, involving a deficit of over $200,000; that for 1901 was $2,220,388, involving a possible deficit of over $400,000. Doubling the grant for public works was the chief cause of this increased expenditure.

The budget included $372,000 on the public debt, $341,000 on civil government and Department of Justice (salaries), $67,000 on legislation, $118,000 on maintenance of public institutions, $70,000 on hospitals and charities, $110,000 on the general administration of justice, $326,000 on education, $664,000 on public works, and the remainder on miscellaneous subjects.

The budget was received with general approval.

Labor Questions.—Matters connected with labor in a province where fishermen and miners are so large a part of the population naturally have a prominent place. Mr. Ralph Smith became this year the leader of the more staid labor element, and his speeches were rather more trenchant than those of the late Mr. McClain. Mr. Smith was elected President of the Canadian Trades and Labor Council at Ottawa, and in October resigned from the Legislature to contest a seat in the Dominion Liberal interest. There were several mining strikes, but the Fraser river strike was the most important. The miners, however, were soundly defeated. There arose in May out of Japanese competition with white workmen. The white fishermen, numbering about 4,000, demanded 25 cents a fish, and the canners offered 20 cents, at which rate the Japanese, numbering 3,000 men, were willing to work. Much loss was incurred and bad feeling and violent causes a state of excitement and unrest. An organized effort was made to prevent any person from fishing until such time as the union fishermen should succeed in arriving at a price for fish satisfactory to them; that the justices of the peace were of opinion that the fishery might have been initiated by Japanese competition, yet it was greatly helped by the fact that 7,000 men were fishing where there was only room for half that number. Other factors were the competition of the Alaska and Oregon fisheries, the lowering in the price of salmon, and two bad years in succession for the canners. After the strike was over a committee of the Assembly reported as follows concerning the situation and the necessity of sending militia into the disturbed district:

“In addition to the bona fide fishermen in Steveston there was a tough element from across the border which, aided by certain agitators, caused a state of excitement and unrest. But an organized effort was made to prevent any person from fishing until such time as the union fishermen should succeed in arriving at a price for fish satisfactory to them; that the justices of the peace were of opinion that the fishery might have been initiated by Japanese competition, yet it was greatly helped by the fact that 7,000 men were fishing where there was only room for half that number. Other factors were the competition of the Alaska and Oregon fisheries, the lowering in the price of salmon, and two bad years in succession for the canners. After the strike was over a committee of the Assembly reported as follows concerning the situation and the necessity of sending militia into the disturbed district:

Mongolian Labor.—Intimately associated with the general labor situation, with political conditions, and even with imperial relations, was the question of Chinese and Japanese immigration. In the previous year measures prohibiting the entry of Chinese laborers, and a limit of 200 to the number of Japanese, were passed, but were vetoed by the Dominion authorities at the request of Mr. Chamberlain, with the intention that it was done on account of the exclusion applying to Japanese as well as Chinese. The provincial authorities refused to discriminate between the two races, and there was a practical deadlock at this point. On April 20 the situation was rendered a British Columbian standpoint by the Legislature, in a resolution from which the following extract may be taken:

“That the wave of Mongolian immigration is increasing in volume at such an alarming rate that it threatens to overwhelm all the industries connected with the development of the natural re-
sources of the province, whether the fisheries, lumber, mineral, or agricultural; that during the first six months of the present year over 7,000 Japanese alone have landed on our shores, a number of whom, however, are said to have crossed to the United States; that out of a total population of say 200,000, or about 40,000 working white men, we have a probable Mongolian working population of 20,000. That the above proportion is continually being changed by a constant influx of these undesirable people and white immigration is deterred by dread of competitive labor and that the well-known conditions of life under which the Mongolians live render it impossible for white men, with their higher standard of living, to compete successfully.

It was therefore proposed that the Dominion Government should legislate along lines similar to the Natal immigration act, which it was understood the imperial authorities did not consider hostile to Japan. Nothing, however, was done except in the appointment of a royal commission to investigate alleged grievances, composed of R. C. Clute, Q.C., of Toronto; Ralph Smith, M.P.P.; and Daniel J. Munn, of British Columbia. It was natural that in the ensuing Federal elections strong opposition to the Dominion Government upon this point and upon the charge in a telegram from Sir Wilfrid Laurier in 1896, declaring that if he succeeded then, "the views of the Liberals in the west will prevail with me" regarding Chinese immigration.

The South African War.—Like all the provinces of British Columbia, the Okanagan was interested in this conflict. On Jan. 4 the speech from the throne, for which the Semlin Government was responsible, had declared with pride that the number of volunteers from the province in the various contingents had greatly exceeded those which imperial official arrangements made it possible to accept. The Home generality expressed a unanimous resolution offering a further contingent of mounted men, with expenses paid to Halifax. A large gathering in Victoria a few days later declared in favor of the Dominion Government's raising and equipping an armed force of 10,000 men for service whenever desired or needed by the Imperial Government. This was approved by Vancouver and Canadian cities. The legislative suggestion fell through, owing to the local political turmoil that almost immediately developed.

Mining.—On Aug. 28 the Hon. C. H. Mackintosh, chairman of the company, declared that there were 2,500,000 tons of gold ore in sight in the Le Roi mine alone. Despite labor troubles in the mining districts, the estimated production for British Columbia in 1900 was $12,000,000, against $4,000,000 in 1899. In the latter year the general mineral development had included a production of gold—placer and lode—to the value of $4,202,478; silver, $1,603,708; copper, $1,351,459; lead, $873,810; coal, $3,982,296; coke, etc., $874,635. Many drawbacks existed during 1899 and were continued into 1900. The labor deadlock in what was the most productive of the camps kept the rich deposits and immense fixed capital there unfruitful for the whole year. Another drawback felt by many of the camps was the handicap on homemade goods. The high duty put on manufactured goods and the low duties or high protective tariffs worked together in favor of the American smelting industry, and American railway companies whose lines penetrate into southern British Columbia co-operated to give works across the line the preference. The development of the Atlin and Boundary districts was very marked in 1900, and one of the most important legislative enactments of the year was the removal, in February, of the disabilities under which American miners had labored in those districts.

BULGARIA, a principality in eastern Europe under the suzerainty of Turkey, created an autonomous province in 1878 by the Treaty of Berlin, signed July 13, 1878. Eastern Roumelia, which was created an autonomous province at the same time, in 1885 proclaimed its union with Bulgaria after expelling the Christian governor appointed by the Sultan, and has since been administered as a part of the principality, the Prince holding the title of Governor General, and the Sultan of Turkey. The legislative body in Bulgaria is a single chamber called the Sobranje, containing 157 members, 1 to 20,000 of population, elected for five years by universal manhood suffrage.

The reigning Prince of Bulgaria is Ferdinand, Duke of Saxe-Coburg-Gotha and of Princess Clementine, a daughter of Louis Philippe, King of the French. The heir to the throne is Prince Boris, born Jan. 30, 1894. The Cabinet at the beginning of 1900 was composed of the following members: President of the Council and Minister of Foreign Affairs and Worship, T. Ivanov, M.P.; Minister of War, Prince Radoslavoff; Minister of Interior, D. Radoslavoff; Minister of Public Instruction, Dr. Vachoff; Minister of War, Col. S. Pafrikoff; Minister of Communications, T. Tomcheff; Minister of Commerce and Agriculture, G. D. Nachovich.

Area and Population.—The area of Bulgaria is 24,380 square miles, and that of Eastern Roumelia, or South Bulgaria, is 13,700 square miles. The population of the entire principality in 1893 was 3,310,713, divided into 1,690,636 males and 1,620,087 females. Of the total number, 2,006,786 were Greek Orthodox, 645,258 Mohammedans, 28,207 Israelites, 22,617 Roman Catholics, 6,643 Armenians, 2,384 Protestants, and 718 undefined. The number of marriages in 1897 was 29,227, against 29,199 in 1896; of births, 149,631, against 143,553; of deaths, 90,134, against 84,076; excess of births, 59,497, against 59,179. Sofia, the capital, had 46,583 inhabitants at the census of 1890. Philipopolis, capital of Eastern Roumelia, 41,068.

Finances.—The revenue for 1899 was estimated in the budget at $84,097,195 francs, and expenditure at $84,035,514 francs. Of the revenue, 33,941,000 francs were derived from direct taxes and 31,051,000 francs from indirect taxes. Of the expenditure, 20,931,146 francs were required for interest and sinking fund of the debt, 22,623,224 francs for the army, 7,560,501 francs for the interior, 7,545,555 francs for public instruction, and 6,731,693 francs for public works.

The public debt in 1899 consisted of 40,071,000 francs outstanding of the railroad loan of 1888, 40,070,000 francs of the 6-per-cent. loan of 1889, 125,857,000 francs of the loan of 1892, and 9,700,000 francs unpaid of the Russian occupation debt; total, 201,955,000 francs, not including the Eastern Roumelian tribute, which is 2,051,000 francs a year, nor the Bulgarian tribute and share of the Turkish debt, which have never been demanded or paid under the provisions of the Berlin Treaty. In June, 1899, the Sobranje authorized the Government to convert and consolidate the entire national debt and to issue a new loan of 280,000,000 francs bearing 5 per cent. interest for this purpose.

The Army and Navy.—The Bulgarian army consists of 24 regiments of infantry of 2 battalions each and 12 reserve battalions; 3 regiments of

</table>
that the Bulgarian Government seemed disposed to screen. Political assassination has been practiced in every stage of Bulgarian history, but never with such frequency and impunity as under the rule of Duke Ferdinand. Prof. Mihalevano was a Macedonian by birth, the son of Roumanian parents. He had taken a prominent part in the press discussion of the future of Macedonia, boldly contending the Bulgarian claim to ascendancy and counseling the Wallachs to make the best of Ottoman rule. After hismurder the Roumanian Government sent a second note, accompanied by a threat to appeal to Turkey as the suzerain power over the principality to put an end to the interlacing intrigues of the various revolutionary parties. This extorted a more conciliatory reply from Sofia. The Bulgarian Government, however, demanded proofs before proceeding against any of the persons suspected of the crime. The judicial investigation at Bucharest brought out facts tending to show that Dimitroff, the assassin, had 7 accomplices, one of whom was Saratoff, the president of the secret committee in Sofia. Most of the accused were in Bulgaria or elsewhere, safe over the border. Nevertheless, their trial was ordered to take place in Bucharest. One was a Roumanian by birth, although of Bulgarian race, and his extradition was requested. The Roumanian Government also accused the Bulgarians of acts of extortion and incitements to murder which it connected with the Macedonian Revolutionary Committee, and this evidence, together with the correspondence that had passed between the two Cabinets, was submitted to all the great powers. It was ascertained that in the previous elections, many Macedonian and Roumanian committees, as well as the Bulgarian Government, were subscribers, and that not only Saratoff but other officers of the committee were concerned in this, but probably Gen. Nikolaieff, Prince Ferdinand's aide-de-camp. Threatening letters were received from Bulgaria predicting the assassination of the judge conducting the inquiry in Bucharest, the Roumanian Minister of Foreign Affairs, and of King Carol. The Austrian, German, and Italian Cabinets, in response to the Roumanian request, addressed representations to the Bulgarian Government, and the Russian Government probably gave similar advice, in accordance with which the Bulgarian Cabinet, while continuing in the same way proceedings, promised to investigate the charges of blackmail and intimidation. The murder of a Roumanian named Karadjoff in Sofia the Bulgarian Government ascribed to private revenge, and not to political motives. This explanation the Roumanian Government refused to accept. Before the incident was closed by the concurrence of just issues, proceedings military preparations were begun in Bulgar and mobilization of the Roumanian forces was threatened. On the border of Macedonia revolutionary bands were drilled by Bulgarian officers. Still no fear was felt in Europe of a Macedonian rising so long as the Ottoman Government maintained a strong and alert by the services of the Macedonian. Following the example of Roumania, Servia placed before the powers a list of crimes attributed to the Macedonian Revolutionary Committee of which Servians were the victims.

In the beginning of May the authorities had difficulty in quelling a riot which broke out among the peasants in the vicinity of Rustchuk, the cause of which was the oppressive action of the police. The first soldiers who were sent to the scene were disarmed by the rioters, as the police had been before them, and a concourse of two or three thousand peasants had gathered to march upon Rustchuk, when they were dispersed by several battalions of soldiers.

CALIFORNIA, a Pacific coast State, admitted to the Union Sept. 9, 1850; area, 158,360 square miles. The population, according to each decennial census since admission, was 92,597 in 1850; 379,954 in 1860; 590,247 in 1870; 864,904 in 1880; 1,463,130 in 1890; and 1,485,033 in 1900. Capital, Sacramento.

Government.—The following were the State officers during the year: Governor, Henry T. Gage; Lieutenant Governor, Jacob H. Neff; Secretary of State, Charles F. Curry; Comptroller, Edward P. Colgan; Treasurer, Truman Reeves; Attorney-General, T. L. Ford; Surveyor General, J. Wright; Superintendent of Public Instruction, Thomas J. Kirk; Superintendent of Printing, Alfred J. Johnston; Adjutant General, W. H. Seaman; Commissioner of Labor, F. V. Meyers; Railroad Commissioners, E. B. Edison, C. S. Laumeister, N. Blackstock; Board of Equalization, Alexander Brown, R. H. Beamer, Thomas O. Toland, Lewis H. Brown; Commissioners of the Supreme Court, Wheaton A. Gray, James A. Cooper, E. W. Britt, who resigned in April; Building and Loan Commissioner, Frank H. Gould; Bank Commissioners, John Markley, A. W. Barrett, B. D. Murphy; Chief Justice of the Supreme Court, W. H. Beatty; Justices of the Supreme Court, W. B. R. Mace, R. H. Van Dyke, R. C. Harrison, Walter Van Dyke, F. W. Henshaw, Jackson Temple; Clerk, George W. Root. The officers elected in 1898 were candidates on the Republican ticket except T. O. Toland and W. Van Dyke, who were candidates of the Fusionists. Justice Temple is a Democrat.

Population.—The population of the State has increased since 1890 by 276,923, or 22.9 per cent. A small portion of this increase is due to the fact that there were 5,107 Indians and 101 persons on Indian reservations, etc., in California, who were specially enumerated in 1890 under the provisions of the census act, but were not included in the general population of the State. Of the 57 counties, all but 11 have increased during the decade. The population by counties is as follows:

</table>

There are 116 incorporated towns and cities in California, for which the population in 1900 is separately returned. Of these 46 have a populac-
in 1900 of more than 2,000, 19 over 5,000, 10 over 10,000, and 4 over 25,000, namely, San Francisco with 343,752, Los Angeles with 102,479, Oakland with 66,900, and Sacramento with 29,282 in 1860, or 101.2 per cent.; and at present is more than four times as great as it was in 1850. The population of Sacramento has increased from 6,820 in 1850 to 13,282 in 1860, or 101.2 per cent., and at present is more than four times as great as it was in 1850. The population of Oakland, starting with only 1,543 in 1850, increased to 10,500 in 1870, or 550.4 per cent., and to 34,555 in 1890, or 229 per cent. It now has a population of 66,900, or more than 43 times as many inhabitants as it had in 1860. The population of Los Angeles was 1,610 in 1850; in 1880 it was 11,133, but during the decade from 1880 to 1890 it increased to 50,305, or 350.6 per cent.; and during the decade from 1890 to 1900 to 102,479, or 103.3 per cent.

In the two years ending Nov. 1, 1899, new four-year colleges added to the number of 166 established in the State.

The other cities having more than 5,000 are: San José, 21,500; San Diego, 17,700; Stockton, 17,506; Alameda, 16,404; Berkeley, 13,214; Fresno, 12,470; Pasadena, 9,117; Riverside, 7,973; Vallejo, 7,965; Eureka, 7,327; Santa Rosa, 6,673; Santa Barbara, 6,587; San Bernardino, 6,159; Santa Cruz, 5,659; Pomona, 5,526.

**Valuations.**—The valuations of property in the State, as given in the Comptroller's official report for this year, amounts to $1,218,292,437, made up as follows: Value of real estate, $660,905,083; improvements on real estate, $272,447,521; personal property, $127,163,043; money and solvent credits, $438,847,378; railroads, $47,711,755. The rate of State taxation is 49.8 cents.

The total assessed value of mortgages is $156,444,753; the assessed value of university and other State mortgages, $1,180,985. The total county indebtedness is $3,820,379,40, of which $3,820,379,40 is the debt of the State.

The total valuation this year is $24,527,684 greater than in 1899. There is a falling off in the amount of solvent credits and money, and, on the other hand, a decrease in the value of mortgages amounting to $4,416,237. Mortgages have increased during the year in those sections of the State only where the rains last winter were scant, and the people have not fully recovered from the effects of a series of dry seasons.

The funded and floating debts of counties have been reduced. Many counties have made expensive improvements, but without incurring new debts.

**Education.**—The State University graduated a class of 353 in May. "It was the first time in the history of Berkeley that the gowns appropriate to the various collegiate degrees had been worn by the entire faculty, and the draped satin, velvet, and silk indicative of so much erudition and academic distinction made the parade down the campus a long-to-be-remembered feature of this gala day of the college year. The graduating class wore the plain black silk undergraduate gowns, but there were tasseled mortar boards, flowing sleeves, and low-hanging silk hoods that represented every degree given in Americ and nearly every institution learning in this country, besides many of England's and Germany's universities. The gowns of university graduates were trimmed in velvet, the bachelors being distinguished by long, pointed sleeves and three-foot hoods; the masters by full square sleeves and three-and-one-half foot hoods; the doctors by sleeves of three velvet bars, gold tasseled mortar boards, and four-foot hoods. The color of the outside of the hood in each instance shows the department in which the degree is granted, white designating letters or arts; blue, philosophy; yellow, science; green, law; and purple, medicine. The inside of the hood displays the colors of the university at which the degree was granted." Of 40 appointments made in the year 1899-1900, 31 are of graduates of the university.

A tract of 20 acres adjoining the campus is to be added to the grounds, and a part has already been bought. Hearst Hall will be moved to the new ground, and fitted up as a gymnasium for the woman students. Mrs. Jane K. Sather has given about $100,000 to the university for a chair of Classical Literature and a law library, to become available at her death; in the meantime she is to receive the income of the property, which the regents are to invest. Mrs. Hearst has made provision for a series of archaeological explorations in Egypt, Greece, Etruria, South and Central America, Italy, and California, under charge of the university.

At the Wilmerding school 140 boys are learning trades. A building has been erected and equipped with machinery, at a cost of $60,000.

The graduating class of the normal school at San José in June numbered 86.

The cornerstone of the chapel was laid at Stanford University, Jan. 29. A course of lectures on horticulture was given to the fruit growers of the State during the week of Feb. 19-24, at Stanford.

The experience of California in publishing its own schoolbooks is thus set forth: "Our appropriations made to the State printing office, have been, for plants $406,000 and for ' compilation ' $40,000, total $506,000, for which we have to show a worn-out plant and a lot of book plates which could not be sold to anybody except as old metal. In the meantime for all these years we have been paying for books which, for the most part, we could not even use, because, in our schools, they were compelled by State law to use them, at prices decidedly higher than the best books in the world can be obtained for in the open market."

**Banks.**—From a table made up from the returns of the Bank Commissioners in the past ten years it is learned that the amounts on deposit in all the banks of the State has risen from a total of $171,229,531.61 in 1890 to $279,838,089.35 in 1900. There has been an increase every year except in 1893-'94, when there was a falling off of $2,365,841.49. The increase from July 1, 1896, to Aug. 11, 1900, was $222,973,689.88. The amount on deposit in the banks of the State in 1890 of $171,229,531.61 had risen to $1,454,043,102.59 in 1899, and to $1,585,167,402.61 in 1900, with 214,250 individual depositors.

**Militia.**—The organized military force of the State, as given in the figures of the Adjutant General's office, is 4,929 men; the number of men liable for service, but unorganized, 211,901.

**Railroads.**—The first through passenger train over the recently completed Santa Fé system from Chicago to San Francisco arrived at the latter place June 30.

The suit of the Railroad Commissioners to compel the Southern Pacific to observe the order of the Commission was dismissed (see American Cyclopaedia for 1899, page 97), was decided against the company in June, in the Superior Court. The case will be ended, however, only by the decision
of the Supreme Court, and possibly only by that of the United States Supreme Court.

In 1899 175 miles were added to the railroads in the State, and in the first six months of 1900 the added mileage was 122.

Products.—The gold product of the State in 1899 was given at the mint as approximately $13,335,031, and silver $504,012. The silver is given at its commercial value; its coining value was $31,973.

The returns to the mint show the employment of 18,701 miners in the gold, silver, lead, and copper mines of the State, a decrease of 1,122 compared with the previous year.

The copper product was estimated unofficially at about $4,000,000, and the oil at $3,900,000. The entire value of the base metals and other minerals was estimated at $13,976,090. The oil industry is rapidly becoming one of the most important in the State.

The savings of sugar beets were reported at 42,300 acres. The wheat crop was an average one, estimated at 30,833,333 bushels; barley, 20,782,608 bushels; hops, 5,235,000 pounds; wool, 20,506,000 pounds; and flax, 2,000,000 pounds; and 300,000 pounds; canned fruit, 2,900,000 cases. The nut crop of southern California, mostly walnuts, was estimated at 450 car loads.

Public Lands.—The slow rate at which surveys of lands in the State are made, while those in other States are carried on with vigor, is a public grievance, especially with settlers on the unsurveyed lands. A bill passed Congress in March providing for the preservation of the big trees. The State has received, by bequest of Col. J. B. Armstrong, between 400 and 500 acres of redwood forest, adjacent to Guerneville, for a public park.

Public Works.—The report that has occupied the attention of California is the election of 1899. The election sent to Congress in February. Two projects are spoken of in the report. That of 1899 is the one approved by the commission, the chief of engineers, and the Secretary of War. It consists of a series of dams constituting restraining barriers and forming impounding reservoirs in and about and above and lateral outlets for the Yuba river that contains a small amount of salt water, and a single channel. The report estimates the cost of constructing the works at present advised at

A new contract has been made for the construction of the San Pedro breakwater.

San Jacinto Mountain.—A dispatch of March 19 from San Jacinto said: "Tremendous excitement prevails in San Jacinto, it having been discovered that part of San Jacinto mountain hasIdeal grandeur. There is a mountain cave 2,000 feet deep, covering 60 acres, at an elevation of 4,000 feet, was dislodged by the Christmas earthquake, and slipped 150 feet lower than it had stood for many centuries. The face of this new valley is thickly traversed by fissures and cracks varying in width from 1 inch to 6 feet across, and it is not possible to see the bottom nor to sound the depths by throwing stones into them."

Legislative Session.—As no Senator was chosen at the regular session in 1899, a special session was called this year and continued from Jan. 28 to Feb. 10. Thomas B. Bard was made the nominee of the Republicans and was elected Feb. 6, receiving the full Republican vote, 85.

James D. Phelan was the Democratic nominee.

Other purposes for which the session was called, as named in the Governor's proclamation, and the disposition made of bills embodying them, are summarized as follows:

- To re-enact the law creating a Commissioner of Public Works. Law re-enacted on lines proposed in the proclamation.
- To enact a law relative to an auditing board for the Commissioner of Public Works. Law enacted as proposed in the proclamation.
- To repeal the wide-tire law of 1897. Law repealed.
- To repeal the act of March 27, 1897, relative to the location of mining claims. Law repealed.
- To amend section 3494 of the political code, relative to the sale of public school lands. Bill defeated.
- To empower the Governor to remove summarily all public officers appointed by or under his authority. Bill defeated.
- To empower the Governor to suspend for cause during recess of the Legislature appointees subject to confirmation by the Senate. Bill defeated.
- Constitutional amendments relating to the judicial department, providing for three district courts of appeal, and to municipal charters were adopted. Constitutional amendments relating to the judiciary were defeated.
- Asking Congress to make appropriation for roads in Yosemite National Park; favoring election of United States Senators by the people; favoring American manufacture of the proposed Pacific cable; favoring the completion of public surveys; opposing the Jamaica reciprocity treaty; asking Congress to prevent fraud in the location of oil lands; asking action of the Government on the report of the Debris Commission.

Political.—No State officers were elected this year, their term of office being four years. Conventions were held to choose delegates to the national conventions and to nominate presidential electors.

The Republicans approved the national and State administrations, favored the construction of the Nicaragua Canal under Government ownership, appropriations by Government for reclamation and irrigation of arid lands with co-operation of the States, establishment of national forest reserves. The Republicans approved the acquisition of mineral lands, continuance of the Chinese exclusion laws, road improvement, increased appropriations to the State University, and adoption of the proposed amendment for regulation of primary elections.

The Democrats adopted a platform approving the Chicago platform, favoring the candidacy of William J. Bryan, favoring an amendment to the Federal Constitution to require the election of United States Senators by direct popular vote; demanding a similar amendment providing for the income tax; favoring the immediate construction, control, and protection of the Nicaragua Canal by the United States; extending sympathy to the South African republics; condemning imperialism; condemning the Porto Rican tariff law; affirming that the Constitution follows the flag; favoring the abolition of all unnecessary war taxes; condemning the trusts; favoring the passing of laws for the exclusion of all Asiatic laborers and congratulating the Democracy on the selection of W. R. Hearst to be president of the National Association of Democratic Clubs. On State matters, the resolutions called for preservation of the redwoods, rehabilitation of hydraulic mining, storage reservoirs, increase of university revenues, reduction of hours of labor for minors, and election at large of railroad commissioners.

In the Legislature the Republicans have 34 members of the Senate and 59 of the House; the Democrats, 6 of the Senate and 21 of the House.
Eight constitutional amendments were proposed by the General Assembly, and submitted to vote at this election. They were:

To exempt from taxation buildings used solely and exclusively for religious worship and the land on which they are built.

To assure the perpetuity of Stanford University, which is believed to be in danger either from defects in the original law or the deeds of gift, and to enable it to receive property by legacy and to hold property outside the State of California, and to authorize the Legislature by special act to exempt the property of the university from State taxation and the Palo Alto farm and the personal property of any property and municipal taxation upon condition that tuition be made absolutely free to residents of California. The amendment itself makes no exemption of taxation, and the Legislature could pass no such law which could not be repealed. The funds of the university are now invested in United States bonds and so pay no taxes.

To exempt from taxation the property of the Lick School of Mechanical Arts on condition that the trustees make annual reports to the Governor.

To exempt from taxation all bonds hereafter issued by the State or any political subdivision or court thereof.

To make possible the enactment of a primary election law.

To make the salaries of superior judges payable entirely by the State, instead of half by the counties, as now; to provide for the appointment of as many salaried stenographers as there are superior judges; and to make salaries of supreme judges payable monthly.

To permit Vallejo and San Francisco to pay certain indebtedness.

To make changes in the judicial system, the principal one of which is the creation of three new appellate courts, in order to relieve the Supreme Court, the decisions of the courts of appeal being made final in the majority of cases.

The total vote for presidential electors was 303,793, compared with 290,503 in 1896. Of this, the Republican candidates received 164,755; the Democratic, 124,985; the Protectionist, 5,024—a Republican majority of 34,740.

Saturday and Sunday yacht races and regattas were held on the bay. Saturday night there was a magnificent naval parade on the water front, in which the battle ship Iowa and the Naval Reserve steamship Marion and a large fleet of tugs, launches, and other craft participated, and in which the big four-masted sailing vessel May Flint took an involuntary part by colliding with the Iowa and other vessels at anchor and then plunging to the bottom of the harbor, where she now lies. On Sunday afternoon Claus Spreckels's gift of a great band stand at Golden Gate Park, one of the features of the day. Monday the greatest parade ever witnessed in San Francisco passed over the principal streets, and on Tuesday the festivities closed with a variety of special features. The celebration attracted visitors by the tens of thousands. The city was smothered in bunting, and the street decorations are now in progress.

CANADA, DOMINION OF. Legislation and Politics.—The history of Canada in 1900 includes two all-absorbing issues—the South African war and the general elections. Public sentiment was deeply and continuously stirred by the former; legislation and politics were greatly affected by the latter. The Parliament met in its last session at Ottawa, Feb. 1, and was opened by the Earl of Minto as Governor General. The Government of Sir Wilfrid Laurier was practically unchanged from its composition of the preceding year, and was composed of himself as President of the Couch, Sir Richard Cartwright, Minister of Finance; Sir W. Borden, Minister of Militia and Defense; Hon. William Mulock, Postmaster-General; Hon. F. W. Borden, Minister of Marine and Fisheries; Hon. A. Fisher, Minister of Agriculture; Hon. J. M. McDougall, Minister of the Interior; Hon. C. A. Dobbie, minister without portfolio; Hon. W. S. Fielding, Minister of Finance; Hon. A. G. Blair, Minister of Railways and Canals; Hon. Clifford Sifton, Minister of the Interior; Hon. W. Paterson, Minister of Customs; Sir H. Joly de Lotbiniere, Minister of Inland Revenue; Hon. James Sutherland, minister without portfolio. Later in the year Sir Henry Joly retired to take the lieutenant governorship of British Columbia, and was succeeded by Hon. M. E. Bernier.

Lord Minto's speech from the throne, describing the general situation and outlining the ministerial programme for the session, contained these passages:

"Hostilities having unfortunately broken out, during the recess, between Great Britain and the South African Republic, it appeared to my ministers expedient to anticipate the action of Parliament by equipping and forwarding two contingents of volunteers to the seat of war as a practical evidence of the support of the war by the Dominion and loyalty to the interests of the entire people of Canada to the sovereign and institutions of the British Empire. In addition to the contingents sent by the Government, another Canadian force is being organized and dispatched at the personal expense of the High Commissioner of Canada. I have been instructed to convey to your Majesty's high appreciation of the loyalty and patriotism thus displayed, which, following the preference under the present tariff to articles of British manufacture, has had the happiest effect in cementing and intensifying the cordial relations subsisting between Canada and the mother country. A bill will be submitted for your approval, providing for an appropriation for equipping and paying the Canadian contingents."

"The measures which have been taken from time to time to facilitate the safe transportation of foodstuffs to European markets have resulted in a large increase in the exportation of several important articles of produce, and it may become necessary in the interest of this very important branch of industry to require a more careful inspection than has been customary, for the purpose of maintaining that high standard of excellence heretofore secured, and which is absolutely indispensable if the people of Canada are to increase their large and profitable trade with other countries in these commodities."

I am glad to observe that the returns from the Post Office Department afford good ground for believing that the temporary loss of revenue caused by the great reduction recently made in the letter postage will specifically be made good by the increased correspondence consequent thereon. We are now in progress with several of our sister colonies in the West Indies which it is hoped may resultant in increasing and developing our trade with those islands, and possibly with certain portions of the adjacent continent of South America.

"It gives me great pleasure to observe that, in pursuance of a policy which was defined at the
last session of Parliament, a carefully devised body of regulations has been adopted, applicable to all public works with Federal jurisdiction, making adequate provision for the sanitary protection and medical care of workmen.

The attention of the Government has been called to the conflicts which occasionally arise between workmen and their employers. While it may not be possible wholly to prevent such difficulties by legislation, my Government think that many of the disputes might be avoided if better provisions could be made for the friendly intervention of a board of conciliation—the conclusions of which, while not legally binding, would have much weight with both sides, and be useful in bringing an intelligent public opinion to bear on complicated subjects. You will be invited to consider whether the provincial legislation in this matter may not be usefully supplemented by an enactment providing for the establishment of a Dominion tribunal for assisting in the settlement of such questions.

In the former session I observed that the number of settlers who have taken up lands in Manitoba and in the Northwest Territories is larger than in any previous year, and affords conclusive evidence of the success which has attended the efforts of my Government to promote immigration, and I have no doubt that the greatly increased production of the West will accelerate the advance of the growth of the trade of the whole Dominion. While the efforts made to secure increased population for the West have thus been successful, much attention has also been devoted to the repatriation of Canadians who in less prosperous times have left Canada. You will be pleased to learn that this work of repatriation is being prosecuted not only on the surface, and in a proposed amendment declared that the provisions of the act were not sufficiently comprehensive. The proposal to widen the scope of the commission was voted down on a party division.

On July 18 the session was formally closed by the Governor General in a speech from the throne, which briefly and succinctly outlined the legislation passed, from the Government's point of view. He said:

"I desire to congratulate you on the buoyant state of the revenue. The large receipts have enabled my Government to provide liberally for the public service, and to place the country in a prosperous position. The improvements of the act relating to banks will tend to perfect a system of banking of which Canada has reason to feel proud. The extension of the British preference in our tariff will tend to reduce the burden of taxation and stimulate the growth of every trade with the mother country. The measure you have passed respecting the admission of Canadian inscribed stock to the list of securities in which trusteees in Great Britain may invest is being followed by similar legislation in the Imperial Parliament, which will in due course consummate this very important improvement in the financial affairs of the Dominion. I particularly congratulate you upon the passing of the conciliation act, which, it is confidently hoped, will not only improve the condition of the industrial classes, but will also better promote the relations which ought to exist between capital and labor."

By-elections in the early part of the year had resulted in a Conservative victory in Sherbrooke, Quebec; the choice of an Independent-Liberal, supported by the Conservatives, in Winnipeg; and the success of an Independent-Liberal in Lotbiniere, Quebec, over the Government candidate.
In February Mr. W. F. Maclean, M. P., editor and proprietor of the Toronto World, published the following platform, which he has since continued to press, and many planks of which are approved by the Conservative party. Some, however, such as nationalization of telegraphs and public ownership of franchises, are new to party platforms:

1. Rounding off confederation by taking in Newfoundland.
2. Imperial federation and preferential trade between the sections of the empire.
3. Protection to Canadian industries and a reciprocity of tariffs as between us and those who tax Canadian products. Export duties sufficient to compel the manufacture in Canada of Canadian logs, woods, pulp, ores, metals. Customs duties or bounties sufficient to build up a great iron industry in Canada.
4. State-owned cables between Britain and Canada, and between Canada and Australia.
5. Nationalization of the Canadian telegraph and telephones as a part of the post office.
6. A national fast Atlantic service between the nearest available Canadian and British ports.
7. Canadian railways to have their Atlantic terminals in some Canadian port.
8. Maintenance of the independence of the Canadian national railway (the Intercolonial), and its gradual extension westward. This national railway to be the complement of the fast Atlantic service.
9. A strong and impartial railway commission to regulate rates and the relations of railways one with the other and with municipalities and individuals.
10. No railway subsidies without corresponding control and ownership of the roads subsidized.
11. A federal insolvency law.
12. Laws to regulate trusts, corporations, trade combinations, and holders of patents in their treatment of the public.
13. Extension of the principle of public ownership of control to all public franchises within provincial and municipal jurisdiction.

As the electoral conflict approached the press teemed with references to the policies and performances and promises of the two parties. The Government, or the Liberal party, held that during its four years of power an immense amount of untrustworthy and wasteful work had been done, and the party greatly helped in its path toward prosperity and nationality within the broad bounds of the British Empire. Their claims may be summarized as follows: The settlement of the Manitoba school question; the reduction of the tariff; the granting of a preference to Great Britain; sending of Canadian volunteers to South Africa; the vigorous development of transportation facilities; the establishment of imperial penny postage; the establishment of the postal-note system; the placing of the Intercolonial railway on a paying basis; the abolition of land grants to railways; the gaining of valuable concessions from existing railways and running powers over all new roads; the opening up and establishment of liberty, law, and order in the Yukon, without cost to the Dominion; the abolition of the franchise act; the repeal of the superannuation act; the attempted repeal of the "gerrymander act" of 1882; the abolition of the sweating system in Government contracts; the securing of the concession by the British Parliament allowing British trust funds to be invested in Canadian securities; the securing of the abolition of the United States quarantine regulations, which increased the export of cattle to the United States from $8,870 in 1896 to $1,173,000 in 1899; the establishment of a system of cold storage for the transportation of our products to Great Britain; the reservation of Dominion lands for the settler and not for the speculator.

The Conservative view of the issues involved can not be better outlined than in the following deputation of the Government contained in the Montreal Gazette of June 16 and repeated in various forms from a thousand platforms:

It broke a contract for fast Atlantic mail service to put the St. Lawrence on a level with New York, and it proved itself unable to make another.

It broke an arrangement by which the Crow's Nest contract was to have been constructed for $1,600,000, and made another that cost the country $3,600,000.

It bought from a political supporter, at a price far above its cash cost, the Drummond County Railway, and then bonused another railway to take trade away from it.

It made a contract without tenders being asked, for the construction of a railway into the Yukon country, pledging as a bonus millions upon millions of square miles of land in the great gold-bearing region, a contract so bad that the whole people revolted against it.

It filled the Yukon country with officials whose conduct was so scandalous that the greatest opposition in England said the relations between people and rulers in that section of the British Empire were everything that they should not be.

It refused a public independent inquiry into the conduct of these officials, though charges were made against them by name on the floor of Parliament by the leader of the opposition.

It bungled its tariff legislation so that Canadian grain was shut out of the German market.

It instituted a splurge preferential tariff system from which Canada has not received, and can not receive, any commercial advantage, and which can not be made effective of its intended purpose except at the cost of Canadian industries.

It put an insulting "no precedent" proviso in the order in Council authorizing the dispatch of Canadian soldiers to the war in South Africa.

It compounded cases of customs fraud which had been brought into the courts, and this against the protests of straightforward importers and merchants.

It appointed unqualified men, and men who had been condemned by the courts as political corrupters, to important places of trust and emolument.

It spent tens of thousands of dollars in paying partisan commissions for going about the country looking through the public service for employees' who had voted against its party candidates.

It raised millions more by taxation than its members had declared the people could bear, and spent ten millions more a year than they had pledged themselves to show was sufficient for the needs of the country.

It established a system of giving contracts without tender to political friends, who sublet the work, at a profit to themselves and a loss to the country, to men not capable of doing it.

It forced two qualified commanders of the militia to throw up their positions in disgust at the ideals and methods of its administration of the country's armed forces.

On Oct. 9 Parliament was dissolved, the nominations to be on Oct. 31 and the elections on Nov. 7. The country was at once in a political turmoil, although the issues were really not very serious. Sir Charles Tupper, the veteran Conservative lead-
er, now in his eightieth year; Mr. Hugh John Macdonald, Premier of Manitoba; and Mr. George E. Foster, long Finance Minister in the preceding Conservative Government, made a tour of the country and well received. Sir Wilfrid Laurier, Mr. Fielding, and other members of the ministry did the same, with a similar result. In the Parliament thus dissolved the Government had a majority of 59, which had grown up, through successful by-elections, from about 30 majority obtained at the polls in 1896.

Mr. Foster left his previous constituency and joined issue, in St. John, N. B., with Mr. Blair, whose position as a Cabinet minister with a previous Liberal majority of more than 600 made the result appear almost hopeless for the Conservative leader. Mr. H. H. Cook, ex-M.P., long a well-known Liberal in Ontario, issued a manifesto denouncing his party upon an indictment containing 17 counts, and declaring them guilty of corruption and absolutely indifferent to their pledges of previous years. He also charged the Government with offering him a senatorship in return for a $10,000 contribution to party funds. This Sir W. Laurier and his colleagues declared the charges were not answered by the Liberal leader. Mr. John Charlton, also a prominent figure in the same party, issued an address to his constituents supporting parts of the Conservative platform and condemning portions of the Liberal record. Sir MacKenzie Bowell, a former Conservative premier, received from his party a message going to the constituency of Hon. J. G. Haggarty, a former colleague of his own and of Sir C. Tupper, and denouncing him with vigor. And so the contest proceeded, both parties in favor of closer British unity, but differing strongly in detail. The preferential tariff was a prominent feature, Sir Charlton charging that it should have invited reciprocity from England, and expressing the belief that such a result was possible. This the Government denied strenuously, and in doing so certainly had the record of English free-trade policy for fifty years. Mr. Tarte's alleged anti-British utterances made another strong card of the Conservative leaders, but the other trying to raise racial issues in Quebec.

The general result of the struggle, Nov. 7, was somewhat extraordinary. The Laurier Government was sustained by a majority of about 50. The great bulk of this was from Quebec, which gave a total of 57 Liberals to 8 Conservatives. Ontario turned a Liberal majority of 14 into a Conservative majority of more than 20. The maritime provinces increased their previous Liberal majorities somewhat, and Manitoba, the Territories, and British Columbia divided about equally. All the ministers were re-elected from comparatively safe seats; nearly all the Conservative leaders, including Sir John, Hon. David. Macdonald, Hon. Hugh John Macdonald, Sir Adolphe Caron, and J. G. H. Bergeron were beaten in trying to carry Liberal constituencies, or from spending all their time speaking throughout the country. The French of Quebec voted almost solidly for a French-Canadian Premier, while the French in some of the Ontario and Manitoba constituencies, and the Acadian-French in all the maritime provinces, apparently did the same. The day after the election Sir Charles Tupper announced his retirement from public life.

Canada in the South African War.—Including the 1st and 2nd ballot regiments of 1,000 men under Col. W. D. Otter, the Canadian Mounted Rifles under Lieut.-Col. F. L. Lessard, the Royal Canadian Dragoons under Lieut.-Col. T. D. B. Evans, and the Strathcona Horse under Lieut.-Col. S. B. Steele, there were about 3,000 Canadian troops in South Africa by January, 1900. There had been some hesitation in sending the first contingent, and for this the Government had to meet severe party denunciation during the ensuing year. Popular opinion forced its dispatch by having an order in Council prepared which formally announced that the action taken should not be considered a precedent, which was promptly broken through in the sending of a second and a third contingent. Lord Minto hinted at this situation when he said, in a speech of farewell at Quebec to departing troops, that "the Canadian contingent goes out because you" (the people of Canada) "insisted upon its going." This matter, and the fact that in Quebec the Liberal leaders said they had "allowed" the volunteers to go, while elsewhere they declared with pride that they "sent" them, held a large place in the subsequent elections.

The Government paid for the equipment of the contingents and their transportation to the Cape, and after that they became British soldiers and subject to similar rates and rules. In February Mr. Fielding introduced into the House a vote of $2,000,000, carrying the expenses of the mission, for the payment of these expenses and for an increase in the regular army remuneration of the men, to be given to them on their return. The Strathcona Horse was equipped and all expenses borne by the personal generosity of Lord Strathcona, Canadian High Commissioner in London, who also obtained through Sir Charles Tupper for an insurance of $1,000 each on the lives of the men in the first contingent. Tributes to the conduct of the Canadian troops were numerous, and included the direct congratulations of the Queen, Lord Roberts, Sir Alfred Milner, and Mr. Chamberlain, and praise from almost the entire British press to the effect that they had done all of what colonial volunteers could do. At Paardeberg 13 men were killed and more than 30 officers and men were wounded. Parliament promptly expressed its gratulations to the living and its sympathy for the dead and wounded in a dispatch sent by the Premier. After this time the Royal Canadians were engaged in action with another crack British regiment, and on July 16 Gen. Smith-Dorrien issued the following congratulatory order:

"The Tenth Brigade has achieved a record of which any infantry might be proud. Since the date it formed, namely the 12th of February, it has marched 620 miles, often on half rations and sleep-"...
Canada is entitled to share in a new and special manner in the joy of the present triumph. We rejoice that the conflict now happily drawing to a close will result in the removal of those disabilities under which many of our fellow-subjects have labored for so long, and we can not doubt that the extension of our Union with the Mother of South Africa will be attended by those blessings which flow from a wise and beneficial administration of just and equal laws.

The attitude of the French-Canadians during the conflict and its imperialistic developments was a most important matter. There was undoubtedly much of sympathy with the first expression of a sort of passive deprecation of the British position. As time passed on, and Sir W. Laurier continuously proclaimed his belief in the justice of the war and was joined by French Conservative leaders such as Casgrain, Chapais, and Bergeron, this feeling was modified. Mr. Tarte's peculiar attitude, however, produced a new complication, while two Liberal members of Parliament—Bourrassa and Monet—inaugurated a distinct campaign against any kind of participation in the affairs of the empire and in favor of Canadian independence. On March 12 Mr. Henri Bourrassa introduced the following resolution in the Commons:

"This House insists on the principle of the sovereignty and the independence of Parliament as the basis of British institutions and the safeguard of the civil and political liberties of British citizens, and refuses, consequently, to consider the action of the Government in relation to the South African war as a precedent which should commit this country to any action in the future. That this House further declares that it opposes any change in the political and military relations which exist at present between Canada and Great Britain, unless such change is initiated by the sovereign will of Parliament, and sanctioned by the people of Canada."

This was voted down by 119 to 10 and was chiefly important as producing an eloquent speech from Sir W. Laurier in condemnation of its general tone, in the course of which he declared that should Canada be compelled to participate in all the wars of Great Britain it would have the right to say, "If you want us to help you, you must call to our aid." Outbreaks of this sentiment occurred from time to time during the year in an extreme form. One was the appearance of an article in La Semaine Religieuse, the organ of the Quebec archbishop, denouncing the British. Other papers took, upon occasion, a similar line. In each case, however, the result was assurances of loyalty from the highest quarters, and in the first-mentioned instances most ultra-British speeches from Archbishop Bognin and Lieut.-Gov. Jettén of Quebec. Mr. Tarte's utterances in France during the Paris Exposition took the form of asserting continually that he was French by origin and birth and sentiment but British in loyalty. His position in this respect became the subject of wide discussion and keen hostility in Ontario.

Canada and the Empire. — Apart from the war, many imperial issues demanded attention in 1900. In June the Fourth Congress of the Chambers of Commerce of the Empire drew forth a large representation from Canada. In discussions which the Dominion held a foremost place. Resolutions were passed in favor of closer commercial and defensive relations and the appointment of a permanent Imperial Council. In March the Montreal Board of Trade passed a series of resolutions favoring a similar policy, which was approved by bodies of the same importance all over the country.

Complications arose in connection with the proposed Pacific cable, created by the rivalry of the eastern extension system in Australian waters. Resolutions of protest were passed by the Senate, and explanations were offered in the Commons by Mr. Mulock. Eventually the contract was let by Mr. Chamberlain, and toward the end of the year the various colonial interests in the matter appear to have been harmonized. In the British war loan of £30,000,000 sterling, Canadians subscribed many millions of dollars, notably $5,000,000 by the Bank of Montreal, and were allotted a fair proportion.

Sir Charles Tupper delivered a speech in Quebec early in May in which he spoke highly of the colonial representation in the Imperial Parliament, and this was directly replied to by Mr. Chamberlain, on April 3, in a speech in which he said: "So far the colonies have not made any definite suggestion with respect to representation; and I am convinced that nothing would be more fatal than a premature discussion of details. I do not think the time has arrived to suggest to the colonies the form which imperial unity should take."

An outcome of the war was the Canadian offer to relieve the regular forces at Halifax, and the creation of a special provisional regiment of volunteers for the purpose. A practical result of the sentiment of Great Britain towards Canada was the formation in July of a Lord Mayor's fund to help the sufferers from the Ottawa fire, and the contribution of about $200,000 for the purpose.

The preferential tariff of the Government came in for keen discussion, and on the whole may be said to have been a decided benefit to Canada. The Canadian manufacturers, however, found fault with the increase from 25 to 33½ per cent., and their associations passed resolutions in favor of a reciprocal preference, of protection high enough to guard their interests, and of protest against certain reductions, notably that upon woven goods. They also urged a more careful adjustment of duties to suit special cases. This idea of reciprocity was not only the principal platform in Sir Charles Tupper's political policy, but was strongly urged by the Boards of Trade in Montreal, Toronto, and Halifax. The Canadian Manufacturers' Association passed the following resolution on July 11:

"That this House is of opinion that the bonds of the British Empire would be materially strengthened and the union of various parts of her Majesty's domains greatly consolidated by the adoption of a commercial and fiscal policy for the colonies of Great Britain, based upon the principle of mutual preference whereby each component part of the empire would receive a substantial advantage in trade as a result of this national relationship; that this is a singularly opportune time to look to the adoption of this policy in two of the largest of her Majesty's colonies; and, therefore, that the Dominion Government be urged to take such steps as may be possible to bring about the adoption of this policy by the sister colonies."
and the colonies would greatly stimulate increased production in and commerce between these countries, and would thus maintain the unity of the empire; and that nothing which falls short of the complete realization of such a policy should be considered as final or satisfactory.”

**Militia and Defense.**—The record of this department’s work was necessarily largely connected with the war. The minister came in for some very severe criticism, but his dispatch of nearly 3,000 officers and men to South Africa, and of another thousand to Halifax, with the details of their equipment and transport, entailed much work and responsibility, and was upon the whole well done. Dr. Borden, speaking in the Commons on June 26, pointed out what he had done and what he intended to do in the following words: “Since he had been in office annual drill had been adopted; a limit was placed upon the period of command for corps; an age limit had been established for officers; cadet corps in connection with high schools and the regiments of militia had been formed; steps taken to form an engineers corps in British Columbia and the provinces of Manitoba, Ontario, and Toronto; a completed scheme of defense for the Dominion; and an army medical service upon the British model, modified to meet the requirements of the Canadian service, has been formed, and will be increased until a complete medical service for an army corps of 36,000 has been provided. An experiment will be made in the Northwest and Manitoba, and the cavalry and infantry converted into mounted infantry.”

One scandal did undoubtedly disgrace his administration of affairs, and the purchase of some “emergency food” for the troops, at a high rate, with little or no competition, caused much discussion in Parliament and the press, and was investigated by a parliamentary commission which on June 28 issued major and minority reports, in which the Liberals practically cleared the minister of responsibility, while the Conservatives proclaimed him inefficient and corrupt.

The expenditure of the Militia Department for 1899 was $2,489,551. That for 1900 would include the whole of the South African war expenses, and be at least double this sum.

**Finances.**—Mr. W. S. Fielding, as Finance Minister, presented his budget to Parliament on March 28. It was stamped with the evidences of good times. The government’s revenue for 1899-1900 included free trade between Canada and the island of Trinidad—an arrangement which subsequently fell through; the free admission of machinery used in the manufacture of beet-root sugar; an increase from 25 to 33½ per cent. in the tariff; preference given to British goods; the statement that the Imperial Government had at last consented to the libel of dismissal of the railway employees for an investment for trust funds; and the announcement of a surplus of more than $4,500,000. In his speech Mr. Fielding declared that the past fiscal year had been the most prosperous in Canadian history; that the revenue had been $46,741,249, the expenditure $41,900,578, and the surplus $4,837,741. The minister then continued as follows: “The capital expenditure for the year amounted to $9,187,562, and, deducting surplus, sinking fund, and like charges, the net increase of the debt last year was $2,317,047. The average increase in the public debt from 1878 to 1890 was $8,503,073, and in the last two years with him in office under the present Government. Of the expenditure of the last three years, $2,500,000 was for obligations entered into by the last Government, and if this amount were deducted the average annual increase under this administration was about $1,700,000. What had the country got for all this? Taking the four classes of expenditure—for canals, public works, the Intercolonial railway, and the railway subsidies—the expenditure for the three years ending with July 1, 1899, was $16,667,500, compared with $14,351,433 for the three years before that. As to the present fiscal year, of which eight months had elapsed, he estimated that the total revenue would pass $50,000,000.”

On June 26 the supplementary estimates were brought down to the House, consisting of grants to harbors and rivers, public buildings, railways, and canals, and sundry Yukon expenditures. The total was $7,544,135. The figures of revenue, as finally announced, for the fiscal year ending June 30, 1900, included $28,102,751 from customs, $8,817,121 from excise, $5,098,410 from the post office, $5,173,544 from public works, and $2,842,770 from miscellaneous sources—a total of $49,034,507. In the matter of the expenditures on capital account, there was an increased outlay of $920,210 on canals, $690,416 on railways, $8,099,692 in 1898–99 to $5,328,908 in 1899–1900. There was an increase in the outlay upon Dominion lands from $140,126 in 1898–99 to $101,409 in 1899–1900. These, together with an item of $1,372,707 for the South African contingent, were the only items of increase in capital expenditures for the year compared with the previous year. Over and above these increases there was in the outlay for railway subsidies from $3,194,302 in 1898–99 to $724,388,73 in 1899–1900—a decrease of $2,469,914. This decrease, together with several minor items, made a total reduction in the expenditure on capital account of $185,714—from $8,318,181.56 in 1898–99 to $7,317,997.45 in 1899–1900.

**Agriculture.**—The crops of 1900 were generally good and prices fair. The production and export of butter largely increased in 1899, and the total was 20,000,000 pounds, an increase of 100 per cent. over the preceding year. The exports of cheese fell off a little, and amounted to 189,827,000 pounds. In the annual report of the department of Agriculture stated that Canadian eggs were gaining favor rapidly in England, and referred to experiments which were going on for the growth of apples in the Northwest. Considerable advance was made in the fattening and export of poultry. The value of the total export of butter in 1899 was $1,298,170, and the value of the export of eggs was $1,298,170.

In the same report the minister stated that 25,000 acres were set aside for the work of reseeding and reseeding, and the new Dominion Soil Commission was making rapid progress. The number of acres under reseeding was increased by 5,000 in 1899–1900. The report of the Fish Commission showed that the fishermen in 1899 were employed for 147,990 days, and the catch amounted to 1,347,992 fish, valued at $1,540,857, the bulk of which went to the United States. The total export of provisions was $892,400,84, nearly all of which went to Great Britain.
to considerable extent among the range cattle of Alberta and Assiniboine.

Banks.—This year was marked by the decen- 
nial consideration of the bank act. The changes were not many and the revision of the charter was 
merely formal. On May 22 Mr. Fielding in- 
troduced the subject in the House, and declared that the present act had been found reasonably 
satisfactory. "The present bank charters expired in 1901, and they proposed by this bill to extend them for ten years, or until 1911. There were 
new provisions in regard to bank notes, to prevent the issue of notes by a bank after its 
suspension. It was desirable, in the light of the 
experience of recent years, that a better supervision of the affairs of the banks, when the bank 
suspended, than now existed should be provided. They believed that the best medium for doing this 
was by using the services of the Canadian Bankers' 
Association, and for that purpose they had asked the 
association to become incorporated."

The bank circulation on Dec. 31, 1899, was 
$40,588,236, and the circulation of Dominion notes 
$27,067,369—a joint increase of $10,000,000 over the 
same date in 1898. The bank clearings in Toronto, 
Montreal, and Hamilton, for the year John 
1899 were $5,154,906,696, showing an increase of 
$250,000,000 in the year. The discounts in char- 
tered banks on Jan. 31, 1900, were $301,000,000, or 
$18,000,000 more than in June, 1899. The deposits 
in chartered and savings banks had increased in the 
same period from $308,000,000 to $321,000,000.

Trade and Commerce.—The returns for the 
year ending June 30, 1900, showed a phenomenal 
increase in trade. The total exports amounted to 
$175,650,947, an increase over 1896 of $46,440,165. 
The items included products of the mine, $14- 
106,764; products of the fisheries, $11,303,028; 
products of the forest, $30,030,018; animals and 
their products, $35,307,800; agricultural products, 
$27,429,121; manufactures, $13,092,773; miscella-
neous, $330,413.

The goods entered for consumption were valued at 
$183,209,273, compared with $154,051,593 for the 
previous year. In the fiscal year 1899 the total 
trade was $308,388,966; in 1900 it was $338,866,220.

Fisheries.—The apprehension of the elections naturally brought labor interests into 
prominence, and especially as the Government 
made strenuous efforts to conciliate this particular 
class in the community. A commission was ap- 
pointed in September, composed of Messrs. R. C. 
Clute, Q. C., Daniel J. Munn, and Ralph Smith, to 
investigate and report upon the Chinese immigra-
tion trouble in British Columbia. Legislation was 
passed forming a Department of Labor at Ottawa, 
under the administration of Mr. Mulock, Post-
master-General, and a paper was established under 
its auspices entitled the Labor Gazette. A con- 
ciliation act was passed, dealing with the settle-
ment of disputes of trade disputes by concilia-
tion and arbitration. On March 22 Mr. Mulock 
introduced, and the House passed, the following 
resolution, which the Opposition designated as a 
piece of buncombe, but did not otherwise oppose: 
"That it be resolved that all Government con- 
tracts should contain such conditions as will pre- 
vent labor disputes, but that where such disputes may arise from the subletting 
of such contracts, and that every effort should be 
made to secure the payment of such wages as are 
generally accepted as current in each trade for 
competent workmen in the district where the work is 
carried out, and that this House cordially con-
curs in such, and deems it the duty of the Government to take immediate steps to give effect 
thereto. It is hereby declared that the work of the 
which the foregoing policy shall apply includes not

only work undertaken by the Government itself, 
but also all works aided by the grant of Dominion 
public funds."

The Conservatives declared, on the other hand, 
that the bill was farce, were not enforced; and 
that while Americans were working at will in this 
country, Canadians were still excluded from em- 
ployment on the other side of the border.

Several strikes occurred during the year, the 
chief ones being that of the Fraser salmon fisheries 
in July, the machinists on the western division of 
the Canadian Pacific Railroad in August, and the 
troubles at the Valleyfield cotton mills in Quebec 
August.

Mining.—The steady increase of mineral pro-
duction in Canada has been one of the chief inci-
dents in its recent development. The output of 
1890 was $16,000,000; that of 1896, $22,000,000; 
1897, $32,000,000; 1898, $35,000,000; and for the 
year ending Dec. 31, 1899, it was as follows: 
Copper, $2,055,319; gold (Yukon District, $16,000,000; 
all other, $5,040,730), $21,049,730; iron ore, $28,372; 
lead, $977,250; nickel, $2,067,540; platinum, 
$835; silver, $1,834,371—total metallic, $28,835, 
717; total nonmetallic, $18,141,755; total mineral 
output, $47,087,132. With exception of a slight falling off in the 
value of asbestos, the chief minerals showed con- 
siderable advances, both in amount and value.

Fisheries.—In 1900 changes in fishing regula-
tions were made necessary by the decision of the 
Judicial Committee of the Imperial Privy Council, 
which in the previous year had declared that 
licenses were under the jurisdiction of the provin-

cial authorities. The system of administration was not greatly altered, and the 
chief change was in the appointment of officials by 
the provincial authorities. The fishery statistics of the Dominion are always behind in publication; 
the latest figures, those for 1898, show a catch 
valued at $4,908,734, but above the record of $3,960,000 from the unprecedent 
figures of 1897 and an approxima-
tion to the usual average.

The chief commercial fishes were lobster, with a 
valued production of $3,877,939; salmon, $3,159- 
306; cod, $2,906,583; herring, $1,987,454; and 
maekerel, trout, haddock, whitefish, sardines, 
and cod hake, but above the record of $3,900,000 
Canadian sealing catch in Bering Sea for 1899 
showed an increase on the two preceding years, and amounted to 34,454 seals. The 
Dominion Gov-
ernment expenditures for 1899 upon the fisheries 
were $417,610, which included $34,522 spent upon 
fish culture, $163,135 upon the protective service, 
and $139,450 as fishing bounties. In 1898, 80,000 
fishes were registered in the fisheries, with beots, nets, 
etc., valued at $8,600. There were 1,150 schoon-
ers, manned by 8,657 sailors, and 72,877 fisherman 
using 38,675 boats.

Prohibition.—The year opened with a general 
feeling of disappointment among prohibitionists 
throughout the Dominion regarding the Laurier 
grant of the Government's refusal to accord pub-
licity given to the proposal in the plebiscite of 1898. 
In March the Dominion Council of the Royal Tem- 
plars of Temperance accepted a report which spoke of 
this fact in no uncertain terms. "The Govern-
ment, declared this document, "with shameful 
indifference to their pledges, have refused to give to the 
law for which the majority voted, and have 
utterly ignored the expressed will of the people, 
clearly showing, as most of us believed at the time 
the scheme was first proposed, that the whole 
things was a subterfuge and a farce, and once 
again we find ourselves mere trickster's tools and 
fools." On April 23 the House of Commons de- 
ated the question, and Mr. T. B. Flinton 
resolved in favor of a prohibitory law to take

effect "in at least those provinces and territories which have voted in favor of such prohibition." Mr. C. H. Parmalee (Liberal) moved an amendment to the effect that, in view of the state of public opinion revealed by the plebiscite, it would be unwise to enact a prohibitory law at present, and this was carried by 41 votes.

The Post Office.—This department made marked strides in efficiency during the year under the administration of the Hon. William Mulock. Imperial penny postage proved a great success. In South Africa the Canadian postal corps came in for warm praise from the army officials, and Captain Eceleston's service in his supervision were so much appreciated that he was transferred to the imperial postal department in that country. The Canadian statistics for 1899 show 9,420 post offices, 836 savings-bank offices, 2,640 postal-note offices, 14,141 new savings-bank accounts opened, 471,407 letters, 1,726,363 telegrams and $440,467,997 as the value of the money orders issued, 31,198,778 as the number of miles the mails were carried, 228,024,900 articles carried, a net revenue of $8,132,930, and expenditure of $3,581,848.

Railways.—In 1899 Canada had 165 railways, 17,395 miles of track, $806,690,784 capital involved in railways, and a total of 19,215,207 passengers moved. Its railways carried 19,133,265 passengers and 31,211,753 tons of freight; earned $620,243,784, and had working expenses of $40,706,217. There were 2,217 locomotives in use and 280 sleeping and parlor cars. The Canadian Pacific is the great railway of Canada. At the close of 1899 it had 6,691 miles in operation, $4,547,714,110, a passenger record of 3,436,843, a freight of 5,971,205 tons, a train mileage of 16,873,771, receipts amounting to $26,745,071, and expenses totaling $80,454,173. All these items showed a marked increase over the preceding year.

The Grand Trunk Railway, during the same period, had 3,147 miles in Canadian operation, $343,723,731, a passenger record of 6,178,315, a freight of 8,880,000 tons, a train mileage of 17,007,740, receipts amounting to $18,471,150, and expenses to $11,603,335. The Government railways, comprising principally the Intercolonial, showed 1,511 miles in operation, $614,936,900 of paid-up capital, 1,752,762 passengers carried, 1,511,100 a passenger record of 3,436,843, and expenses totaling $3,903,433, and expenses to $3,903,739.

An important controversy occurred between the Minister of Railways and the Canadian Pacific, arising out of the latter's demand for a special subsidy to carry on its winter port business at St. John, N. B., under threat of going to a Maine port if its desire was not acceded to. Mr. Blair refused to grant the subsidy, and matters were complicated by a further discussion as to the Canadian Pacific Railroad receiving and handling a portion of the Intercolonial's business below Montreal. Upon this issue generally Mr. Blair and the Hon. G. E. Foster fought the battle at St. John during the general elections, and upon it Mr. Blair won.

Canals.—Upon the canals of Canada, up to June 30, 1899, $920,362,524 had been expended. The expenditure in 1899 for construction, repairs, and staff maintenance was $4,533,193—an increase of $700,000 over the preceding year. The receipts and government were from these canals $330,044, against $407,663 in 1898. The number of Canadian vessels passing through the canals in 1898 was 23,320, with a tonnage of 4,201,916, and the number of American vessels was 6,128, with a tonnage of 3,024,403.

Miscellaneous.—The governments of the Dominion, Ontario, and Quebec were advised of three awards issued by the arbitrators—Sir John Boyd, Chancellor of Ontario; Sir L. E. N. Casault, Chief Justice of Quebec; and Mr. Justice Burbridge, of the Dominion Exchequer Court—appointed to settle the long-standing disputed accounts between the federal authority and the old province of Upper Canada. Lower Canada, on the awards Ontario lost about $2,000,000. One award dealt with the claim of the Dominion in behalf of the Ojibway Indians of Lakes Huron and Superior. The claim had been stubbornly contested, not only before the arbitrators, but in the Supreme Court and the Privy Council in England. The arbitrators found that the Dominion was entitled to receive, in behalf of these Indians, from the provinces of Ontario and Quebec jointly, the sum of $313,000. The second award dealt with what is known as the province of Canada account, and decreed that two provinces owed to the Dominion, Dec. 31, 1892, on this account, the sum of $212,904, of which $112,350 is chargeable to Ontario and $100,533 to Quebec. The third award had reference to the province of Canada account as between the Dominion and the province of Ontario only. The submission to arbitration required that the accounts be closed Dec. 31, 1899, and when the commissioners found the province of Ontario was indebted to the Dominion in the sum of $1,815,484.

On April 25 the Dominion Government advised that of British Columbia that it had disallowed four statutes passed by the province in 1899. The reason in each case was that restrictive legislation against foreign vessels had been included, despite warnings previously given that the royal assent would be refused.

In September the first of a line of 7 vessels which are to ply between British Columbia and South Africa arrived at Victoria, B. C. The attempt of dynamiters to blow up the Welland Canal in April occasioned some excitement. The Fenians who made the crazy attempt were captured and tried, and on May 25 three men were found guilty and sentenced to imprisonment for life. The Ottawa fire was a disaster that will be long remembered. Thousands of people were rendered homeless in Hull and Ottawa on the night of April 27, 1899, and the extent of the damage to lives, property and property in buildings, etc., to the value of many millions was destroyed. The relief fund at Ottawa soon grew to more than $300,000. The Dominion Government gave $25,000, as did the cities of Ottawa and Toronto. Cape Town, in the midst of war, raised $10,000, and the New Zealand Government called $23,000, while the Lord Mayor's fund in London soon amounted to $60,000.

CHEMISTRY. Chemical Theory.—Discussing in the British Association The Influence of Pressure on the Formation of Ocean Salt Deposits Dr. H. M. Davson said that in the uppermost layers of the large salt lakes he found a double salt containing magnesium and calcium chlorides, to which the name of tachychlydrite had been given. Experiments showed that this double salt could separate only from solutions the temperature of which was higher than 22.5° C. If the temperature was lower than this line a mixture of the simple chlorides separated from the solution. Experiments on the influence of high pressure on the value of this limiting temperature showed that by the application of 100 atmospheres the temperature was raised by only 1.5° C. In comparison with the influence of temperature, that of pressure was small. The observations indicated that the temperature displacement by the application of high pressures in...
the case of other salts must be of the same order of magnitude as that which had been found in the case of tachyhydrine. From the insolubility of other sea salts in the mother liquor from which tachyhydrine separated, and the direction in which pressure exerted an influence, it might be definitely concluded that the temperature of the mother liquor when tachyhydrine was deposited was higher than 22.4° C.

The chairman's address of James Lewis Howe before the chemical section of the American Association, on The Eighth Group of the Periodic System and Some of its Problems, concluded with a brief consideration of the group from the theoretical point of view. Following Dr. Venable, the author said that we may assume that each of the first seven groups consists of a group of elements, as, in group one, lithium; a type element, as sodium; and two series, one of more positive elements, as potassium, rubidium, and cesium, and the other more negative, as copper, silver, and gold. Further, the more positive the type metal, the more closely will the metals of the positive series resemble it. Thus, in the first group, the positive rubidium, cesium, and potassium, resemble the type element, sodium. In the seventh group, the negative series, bromine and iodine, resemble the type element, chlorine. Now, the eighth group differs materially from the other seven groups in that it contains three series, with no group or type element. These three series are remarkable among the seven positive series, manganese, to the least negative among the negative series, copper, arsenic, and gold. The properties of the metals of group eight show the transition as from a chemical point of view. Iron, cobalt, and nickel form a direct gradation between manganese and copper, and the positive and negative transition elements of the most negative series, thallium, lead, bismuth, and thallium, resemble the type element, tin.

The existence of a relation between the different factors of equilibrium (temperature, electromotive force, pressure, physical, and chemical nature, condensation, and concentration) is affirmed by M. O. Boudouard. This relation is such that each of the factors is a function, and a continuous positive relationship, of the others. This establishes the law which concerns the correlation changes of pressure and temperature (Clapeyron's formula). There exists further at constant pressure and temperature a relation between the proportions of different bodies present in a gaseous mixture in equilibrium (Isenbart's experiments in ammonia).

Mr. W. J. Pope, in a paper on recent developments in stereo-chemistry, read at the last meeting of the British Association, reviewed the results of investigation in that branch since the hypothesis of the asymmetric carbon atom was first put forward by Van't Hoff and Le Bel in 1874. Pope and Peauchey prepared in 1898 series of compounds with different activities, especially in the finding asymmetric nitrogen atoms, and during the present year they had prepared optically active compounds containing asymmetric tin and sulphur atoms. In the discussion of the paper, Dr. Divers commented upon the light thrown upon the atomic theory by this work. Dr. H. E. Armstrong observed that the identity of the difficult question of valency might be expected from it.

The report of a committee on alloys of the British Association mentions the fact of the belief of most students that certain definite chemical compounds exist in alloys. To prove this, however, special means had to be devised to detect these substances. Ordinary chemical methods of isolation were of little use under the circumstances. Fractional solution has been effective in some cases, and by means of it several distinct metal compounds have been separated from alloys, such as platinum-tin, copper-tin, zinc-copper, and other compounds. Another method is the observation of the melting point of krypton when the molten mixture is cooled down slowly, and the temperature is noted at which solid matter begins to appear from the liquid. This varies with the proportions of the constituents, and by making many observations with varying proportions a curve may be obtained of their solidifying temperature, any irregularity pointing to the formation of something more than a mere mixture. By this means many interesting facts have been indicated which have subsequently been rendered evident by examination under the microscope. Valuable and interesting results have thus been obtained, and Prof. Regnault and Chatelier have particularly distinguished themselves in this direction. A remarkable instance of peculiarity is exhibited by mixtures of aluminium and antimony, when all the mixtures freeze out at a
higher point than either of the components, and show two irregularities indicative of two distinct compounds. In these mixtures it appears that the component that predominates to a considerable extent is always a solvent to the compound formed with the other component as the proportion of the other component is increased, the condition becomes reversed. Interesting results have been obtained by observing, not only the freezing point, but the point where the whole mass solidifies, so that for every mixture the exact composition of the form in which the compound has separated and of the separate compound is indicated. Röntgen-ray photography has also been utilized to demonstrate the formation of these intermetallic compounds. A long list of known and supposed alloy compounds is given in the report; and it appears that the atomic ratio is generally assumed by chemists do not hold in the case of the alloys.

In presenting the foregoing report Mr. F. H. Neville held that intermetallic compounds may be compared with the unstable compounds of the halogens to each other and with sulphur. They often bear a great superficial resemblance to their constituent elements, and appear to show marked differences of behavior. But in the cases of their equilibrium with the liquid mixture of their components.

An experiment described by Schönbein nearly forty years ago in which on shaking lead amalgam with air and water equivalent quantities of lead oxide and peroxide of hydrogen were formed has been followed in recent years by many isolated cases indicating a phenomenon of autooxidation or simultaneous oxidation by air of two substances, one of which is incapable of being oxidized by air alone. The formation of peroxide of hydrogen in such cases is proved by the researches of Bamberger, and of Manehot in particular. The probability has been suggested by Engler that in all these instances the reaction is simultaneous, half of the oxygen molecule going to oxidize the substance present, and the other half to form hydrogen peroxide. In many cases the formation of the latter substance is difficult to prove, on account of the secondary oxidizing action in the substance used. Dr. H. Blitz has described the tendency to its formation in a zone of debrмагoxylbenzaldehyde in alkaline solution by air at the ordinary temperature, and in this case he has been able to prove that the amount of oxygen in the hydrogen peroxide formed is exactly equal to the oxygen used up by the hydrazone.

Prof. Brauner said at the German scientific meeting in September, 1899, concerning the position in the periodic system of the elements of the rarer earths, that he considered that the position indicated by the fourth group and the eighth series must be assigned to a group of three elements—cerium, 140; praseodymium, 140.8; neodymium, 143.6. This conclusion was based in a great measure on the study of the higher oxides. The author considered that the oxides Pr₂O₃, and Nd₂O₅ belong to the oxides of the PbO, or ozonic type—that is to say, that the metals in these oxides are tetravalent, and the oxides correspond to CeO₂. At first sight the oxides observed with cesogenic peroxide should belong to the second, H₂O₃, or autozonic type of oxide. Prof. Brauner found that on repeating this experiment at low temperatures the hydrates of true superoxides were formed, possessing the formula Pr₂O₅ and Nd₂O₅, and losing oxygen with great ease.

Chemical Physics.—The record of the study of radio-active substances, as it is summarized in a paper read by H. Carrington Bolton before the Chemical Society of Washington, and published in the Journal of the American Chemical Society, begins with the announcement by Becquerel that the salts of uranium emit invisible radiations incapable of discharging electric current and that inducing skiagraphic images on sensitive plates. Other experimenters found that a number of other substances had the power of emitting "Becquerel rays"; Mr. Henry, phosphorescent zinc sulphide; Niewlogelski, isolated calcium sulphide; Troost, artificial hexagonal blende; Schmidt, thorium compounds. Mme. Curie, studying the subject with her husband and using a special apparatus, found the property in a number of minerals, and observed especially that pitchblende contained a substance analogous to bismuth, which emitted rays 4,000 times stronger than those of uranium. She called this substance polonium. Afterward Mme. and M. Curie discovered a second radio-active body in pitchblende which they called radium. This hitherto unknown element was found to accompany baryum in analytical separations. Its chloride is wholly soluble in water, and it responds to the usual tests for baryum. Its spectrum shows the lines peculiar to baryum, and the same is true of itself. Radium-188, a radioactive isotope, is identical with radium from radium have been unsuccessful, but a salt has been obtained having 900 times the activity of uranium. The rays emitted by the two new substances possess luminosity and actinie and skiagraphic power, and render the air through which they pass a conductor of electricity. Radium-224, one of these substances, is not radio-active body in pitchblende which they called radium. This hitherto unknown element was found to accompany baryum in analytical separations. Its chloride is wholly soluble in water, and it responds to the usual tests for baryum. Its spectrum shows the lines peculiar to baryum, and the same is true of itself. Radium-188, a radioactive isotope, is identical with radium from radium have been unsuccessful, but a salt has been obtained having 900 times the activity of uranium. The rays emitted by the two new substances possess luminosity and actinie and skiagraphic power, and render the air through which they pass a conductor of electricity. Radium-224, one of these substances, is not

New Substances.—A new sugar has been described by Mr. Gabriel Bertrand as produced by the action of the sorbose bacterium upon erythric. By its reduction it appears to be a ketone of the composition \( \text{CH}_2(\text{OH})\text{CO.CO.CO}(\text{OH})\text{OH} \), thus being a lower homologue of levulose. Erythrose, as it is called, is not fermentable by yeast, but forms a well-crystallized osazone. It resists oxidation by bromine water, and hence is probably a ketone.

Samarium prepared by the crystallization of a double magnesium nitrite, as already described by M. Eugène Demarçay, can, according to that author, be obtained in a state of comparative purity, showing, after continuous fractionation, the properties of the first and last portions to be absolutely identical, both with regard to the absorption and the spark spectrum. The absorption spectrum obtained by the author corresponds in all respects with that previously published by Lecoq de Boisbaudran. The line 614.4 is, however, absent in this specimen of pure samarium. The author obtained the absolute weight of his samarium by the method of parallax and determined the sulphuric acid, varying between 147.2 and 148. Nitrate of samarium and magnesium, \( \text{Sm(NO}_3)_2 \), \( 3\text{Mg(NO}_3)_2 2\text{H}_2\text{O} \), is a pure yellow salt, crystallizing in large rhombohedrons and melting between 93.5° C. and 94.5° C. The simple nitrate, \( \text{Sm(NO}_3)_2 6\text{H}_2\text{O} \), is formed in large orange-yellow crystals, melting at 78°–70° C., and is very hygroscopic.

By passing dry cyanogen into a glass tube heated to redness and full of iron nails T. L. Phipson obtained a gas which could be collected over water. As described by the author, this gas is colorless and almost odorless, extinguishes a lighted splint, and is not absorbed by potash. It does not detonate when mixed with oxygen and submitted to the electric spark. Its weight is materially different from that of nitrogen, and more so from that of cyanogen, so as to make it sure that it is neither. From two determinations that were made, its atomic weight was deduced as that in a substance having one half the carbon contained in cyanogen. The author intimates that it is perhaps identical with argon, of which about 1 per cent. has been found in atmospheric air. If this be so, then argon is a carbide of nitrogen containing half the carbon found in cyanogen.

The above experiments and observations on some new chemical compounds discovered by the use of the electrical furnace Mr. C. S. Bradley announced the production of silicides of barium, calcium, and strontium by heating the carbonates or oxides with silica in the electric furnace in the presence of carbon. These silicides have a metallic appearance with a crystalline structure, oxide in the case of barium, and hydrochloric acid. Silico-acetylene, unlike ordinary acetylene gas, is a yellow crystalline compound.

Experiments are described by M. Eugène Demarçay with gadolinium, which, besides small quantities of terbia, contained a certain quantity of \( \text{Z} \), which had not been eliminated. In the course of the fractionations, a decided quantity of the double nitrate of magnesium and gadolinium was isolated. The spectrum of the gadolinium extracted from this salt, examined under the spark of the induction coil, showed only slight traces of the spectrum of gadolinium, a distinct group of lines of this spectrum were only feeble, and the traces of yttrium were estimated at less than \( \text{100} \) part of the absorption spectrum. This gadolinium, at first sight, appears to be as white as magnesia, but with a little attention slight yellow tinges may be seen, which are ascribed to the presence of a trace of terbia. The double magnesium nitrate melts at 75.5°–78° C. The simple nitrate, crystallizing with \( \text{CH}_2\text{O} \), melts at about 91.5°–92° C. At this temperature the nitrate with \( \text{CH}_2\text{O} \) seems to lose water and be transformed into a less hydrated nitrate, which remains in solution, and may lower the freezing point. This gadolinium gives the band spectrum of M. Lecoq de Boisbaudran. The atomic weight of gadolinium has been found by the various chemists who have investigated the properties of this element to be about 165. From several attempts the author has deduced a number approximately the same, but he believes it to be slightly too high, on account of the need of a method more rigorous than that of Lecoq de Boisbaudran.

Gadolinium has been found by C. Benedicks to be closely allied to the yttrium metals, and to resemble the cerium metals in a much slighter degree. Therefore a small intermediate group is formed of samarium and gadolinium. For trivalent elements, most characteristic are the platino-carbon and gold ethylide double salts, the potassium double nitrate, and the halide of gadolinium. Nothing can yet be definitely stated with regard to the position of gadolinium in the periodic system, but it will certainly, the author affirms, find a place in the eighth horizontal row.

The manufacture of artificial dyestuffs in Germany is reported in the recent edition of the Chemical Week from Frankfort-on-the-Main. The endeavors of manufacturers and industrial chemists are directed, generally speaking, to producing the organic natural products by artificial means, and in a more serviceable form for dyeing; also to producing new colors approaching and even surpassing the qualities of the dyes used in nature in brilliancy. Since the discovery that the important dyestuff of madder—alizarin—could be produced in an easy and cheap manner from the carburetted hydrogen of coal tar, the use of dyestuffs obtained by coal-tar distillation has gradually grown to such an extent that in Germany about five times as much artificial indigo as natural is used in the dyeing of wool and cotton. The importance of indigo is evidenced by the fact that the production of vegetable indigo equals in value the entire world’s production of artificial dyestuffs. The present artificial indigo represents almost pure indigotin. It is sold in the form of a 97-per-cent. powder, whereas the natural indigo used in some other countries, especially India, fluctuates between 70 and 80 per cent. It contains no indigo red, no indigo brown, and no indigo blue. The lack of indigo red and indigo blue, which both seem to be of some importance in the relation of the dyestuff to the fiber, are its special disadvantages. The indigo red seems to be of importance in the production of darker shades of blue. There is no doubt that at some time not too far off it will be possible to produce this ingredient also. Artificial indigo is used by dyers in the same way as vegetable indigo.

A peculiar, light-brown, highly voluminous substance is described by Erdmann and Kothner as being formed by the action of acetylene below 250° C. upon cuprous oxide, or even, though more slowly, upon copper. At higher temperatures a black carbonaceous mass is the result, and at a red heat (from 400° to 500° C.) carbon is deposited in a graphite condition. The light-brown fluffy material yielded cuprous chloride to hydrochloric acid, and its mixture with zinc dust possessing the characteristic of naphthalene, or, at high temperature and under rapid heating, aromatic compounds, among which naphthalene and a cresole were indicated. Erdmann and Kothner
CHEMISTRY. (New Substances.)

classify this body as a very complex but nonexplo- 
usive copper acetylene, and give it a formula which 
implies a loss of carbon. This formula is criticised 
by F. A. Gooch and DeForest Baldwin, who, upon 
revising it, mod.聘 propose that the formula 
to which mineralogists assign for manganese is deficient in hydrogen, not in carbon, as 
compared with acetylene. The results of the ex-
periments of these authors go to show that, while 
metallic copper may at comparatively high tem-
peratures induce the polymerization of acetylene, 
the action is an oxidizing one which starts at 
moderately low temperatures; and they find no 
evidence that the product of the action of acety-
lene on the oxides of copper under the conditions 
of their experimentation is other than a mixture 
of a hydrocarbon or hydrocarbons with metallic 
copper, and, probably, in the darker preparation, 
some free carbon.

The hydrate of sulphuric acid, H₂SO₄·2H₂O, 
whose existence was predicted by Mendeleeff, has 
been obtained in crystalline form by Von Biron 
by cooling with liquid air a mixture of strong 
sulphuric acid and water in the required propor-
tions. The whole solidifies into an amorphous 
mass, which, when rubbed with a glass rod, be-
comes charged with electricity, the temperature rising to 75°C. If a solution of sulphuric 
acid of the right strength is now cooled with 
solid carbonic acid and ether, and a fragment of 
the crystalline hydrate is added, the liquid crys-
tallizes well. The crystals melt at —38.9°C.

Numerous attempts have been made to obtain 
the substitution product Νₓ from the curious 
compound of nitrogen and hydrogen known as 
hydrazoic acid. Among the experiments were 
those made in the laboratory of Prof. William 
Ramsay, using the method of the interaction of 
silver azoimide and iodine. Although the sub-
stance sought could not be isolated, Prof. Hautzsch 
has succeeded in isolating a definite iodide of nitro-
gen from the products of the reaction. By work-
ing at a low temperature and as rapidly as possible 
in the presence of ether, the new iodide is taken 
to solution by the ether, and can be obtained as 
a yellowish solid in minute quantities, not ex-
ceeding 0.2 gramme, by the rapid evaporation of 
the ether. The compound is also unstable to heat 
and analysis, but an examination of the solution showed 
that its composition was ΝₓI. This iodide is vio-
letly explosive. Attempts to prepare Νₓ by 
the action of the iodide on silver azoimide, or by the 
spontaneous decomposition of the iodide, were un-
successful.

M. Moissan has been able, by the aid of a method 
in which a U-tube of copper takes the place of his 
original platinum-iridium apparatus, to study 
without difficulty reactions demanding considera-
tble quantities of fluorine. A new fluoride of man-
ganese obtained by him casts some light on the 
valency of the metal. Fluorine gas reacts readily 
with aerial ammonia, but does not.attract the con-
sequence of the experiments a higher fluoride than MnF₂ 
was formed, which, however, on account of the vio-
lence of the reaction, was not of constant com-
position. The interaction of fluorine and man-
ganese iodide gave a definite fluoride, MnF₅, 
which in many of its reactions behaved like free 
fluorine, giving with pentachloride of phosphorus 
PF₅, and with amorphous carbon a fluoride of car-
bon. On heating this manganese fluoride splits 
up into MnF₂ and fluorine gas.

Metallie cesium may be prepared, according to 
Herren Graefe and Eckhardt, by the reduction of 
cesium fluoride with means of magnesium powder. 
The mixture is heated in an iron tube, through 
which a slow current of hydrogen passes. The 
metal distills over, and is collected under melted 
paraffin. It has a silvery luster with a slight yel-
low tint, and remains bright under paraffin. On 
exposure to air it oxidizes quickly, melts, and 
finally inflammes. In its action on water it resem-
bles potassium strongly.

Experiments have been described by Hall in the 
American Chemical Society which he has made to 
ascertain the cause of the loss in weight which 
platinum vessels are known to suffer when heated 
in the flame of a Bunsen burner or over a blow-
pipe. Platinum wires immersed in glass tubes were 
heated strongly by an electric lamp in the vapor 
of various gases. There appeared practically no 
loss in hydrogen, carbonic oxide, and carbonic acid, 
but there was a rapid loss when the gas was oxygen 
or air. Similarly it was found that platinum wires 
suffered a greater loss of weight when heated in 
an oxidizing flame than when heated in a reducing 
flame. The author suggests that these phenomena 
are best explained by the hypothesis that platinum 
forms a volatile oxide, stable at high and low 
temperatures, but unstable at intermediate tem-
peratures—a similar behavior having been ob-
served by Troost and Hautefeuille in the case of 
platinous chloride.

A new reaction product, acetate of cellulose— 
is described by Dr. C. O. Weber as a substance 
which constitutes a point of departure for a whole 
series of homologous bodies, some of which are 
designed to play an important part in the indus-
trial point of view. The new substance is 
prepared by a method discovered by Cross and 
Devonshire, which consists in heating the mixture 
used on a large scale, as is also the manu-
facture of tetrabutyrate of cellulose, which is 
prepared in an analogous manner. Besides these 
ethers of cellulose, nothing is at present known 
beyond the nitrates of cellulose, which are dis-
tinguished from the ethers by their explosive prop-
erties. The acetate of cellulose is, however, only imperfectly 
prepared. With solvents they behave in the 
same manner as the nitrates, in so far that 
all their solutions are of a colloidial nature, but 
they differ from the nitrates in regard to the ex-
tent of their solubility. The solution of the ace-
tate in nitrobenzene becomes on cooling a solid 
acetic acid, and on warming up reverts to the solu-
tion. It is also observed that with the acetate 
resists the action of reagents in a remarkable 
manner; dilute acids, with the exception of nitric 
acid, do not attack it at all; neither do the alka-
line lyes, even at a high temperature; while these 
reagents completely destroy the nitrates, even in 
the cold. When boiled for several hours with 
an alcoholic solution of soda very fine particles 
are completely saponified; but the saponification 
does not disintegrate the materials, so that the 
particles retain their form and transparence. 
The insulating properties of the acetate surpass 
those of India rubber and gutta-percha. The 
substance is very durable and does not begin to 
soften till it reaches a temperature of 150°C. Mois-
san therefore promises to give commercial impor-
tance to the acetate and butyrate of cellulose, which will prob-
bly be found preferable to celluloid in cases 
where a noninflammable material is desired rather 
than a very inflammable one. By reason of their 
noninflammability, their resistance to the action 
of moisture and to high temperature, and their 
high insulating properties, they can easily replace
mica and be employed for insulators. It is also certain that they can be advantageously used as refractory linings and as absorbent materials.

Essence of chrysanthemum is described by O. Perrier as a greenish liquid of an oily consistence, with a special odor recalling those of peppermint and camomile. It begins to boil at 160° C.; its density is 0.932 at 15° C., and its index of refraction at 15° C. is 1.4981. It is soluble in 10 parts of alcohol at 0° C., but is almost insoluble in alcohol at 70° C. When cooled down to —15° C. it deposits a small quantity of an amorphous solid substance, which is probably paraffin. At 240° C. it becomes black; and it solidifies in a mixture of ether and solid carboxonic acid.

A new gutta-percha lately discovered in the punk of a tree which grows principally at Dunge, near Zanzibar. When the tree is tapped a white fluid exudes, which, placed in boiling water, coagulates into a substance strikingly resembling gutta-percha. As the material cools it becomes very hard, but while soft it can be moulded into any required shape. The experiments made upon it prove it to be suitable for most of the purposes for which gutta-percha is used. Among the products of the action of fluorine upon sulphur recently investigated by M. Moisan, thionyl fluoride, SO₂F₃, was noticed. MM. Moisan and Bassenge have endeavored to give the subject of a more careful study, and have succeeded in obtaining it pure by the action of iron upon thionyl chloride and by the interaction of fluoric acid splenic with thionyl chloride. It is a colorless gas, foaming slightly in moist air, and possessing an unpleasant odor resembling that of carbonyl fluoride. It undergoes quick, but the action of carbonyl dioxide and acetone, giving a liquid that boils at —32° C. In the absence of moisture glass is not attacked by the gas at temperatures lower than 400° C. Above this temperature silicon tetra-flouride and sulphur dioxide are produced. Water decomposes thionyl fluo-
ride at ordinary temperatures, giving hydrofluoric acid and sulphuric acids. Indications were observed of another oxyfluoride of sulphur, not absorbed by water and possessing a lower boiling point.

**New Processes.** — Of recent developments in the textile industries, Dr. A. Liebmann mentioned in the British Association the process for producing the peculiar effect called watermarking or moiré can be produced by a process which resolves itself mechanically into the application of electrolysis. A platinum plate of suitable size is connected with the positive pole of the source of current. On this conducting surface is placed some absorbent material saturated with a solution of common salt. On this pad is placed the fabric to be watermarked, and the plate engraved with the watermark, connected with the negative terminal, is pressed down upon it. To produce opaque designs the absorbent material is saturated with a solution of barium chloride which is decomposed on passing the current.

Chlorine has been used by Traube and Bassenge for the purification of water. Bassenge recommending a dose of 0.0078 grammes of chlorine per litre of water for ten minutes. Bromine, recommended by Schimburg, gave the same result with 0.04 gramme per litre after five minutes' contact. According to Allain, a dose of 1.000 part of iodine in 100.00 parts of water all the non-periodic pathogenie germs in half an hour, as well as most of the substances. Mainejac has carried out a systematic series of experiments with a badly contaminated water, using varying equal quantities of chlorine, bromine, and iodine per litre. Taking the lowest quantity given by the above-mentioned authors as the basis, the centigramme per litre of water for half an hour—he found that the number of microbes per cubic centimetre was reduced from 17,500 in the original water to 300 by the action of chlorine, to 190 by that of bromine, and to 90 by that of iodine.

From a number of papers, published in abstracts in the 'Monthly Journal of Chemistry,' it appears that in the production of acetylene it appears that solutions of metallic salts do not wholly remove the impurities, while chromic acid and chloride of lime seem to be the only substances that effect a complete purification. Of these chromic acid is preferable, since explosions have occurred with chloride of lime. The solution of acetylene, which boils at 8.7° C., is made to pass through the state railways with gas use, according to M. Pfiffe, a solution of chloride of lime and phosphate of soda, chloride of lime having been found likely to cause an explosion. Experiments with the new mixture indicate that it is not dangerous.

Up to the present time lithium has been obtained by electrolysis as a gas at very high temperature and in the molten state. The reason why this metal can not be obtained from aqueous solutions by electrolysis is that it reacts with water, forming hydrogen and lithium hydroxide. If a solvent for a lithium salt could be found upon which lithium does not act, the metal could be deposited from the solution by electrolysis, provided the solution proved to be an electrolyte. Pyridine has been found by Louis Kahlenberg to be a solution of this kind. It will dissolve lithium chloride and thus form a solution that conducts electricity. The author has obtained lithium in white metallic form from solutions of lithium chloride in pyridine by electrolysis at room temperatures. It can be obtained thus from a comparatively cheap ore in quantities sufficient for most scientific purposes. Lithium, being an alkali metal that is not very plentiful in Nature, has thus far not found use in practical life in the metallic form; and the indications at present are not that it will be used in practice.

In all the usual methods the ignition of a jet of recently generated hydrogen gas is attended by danger of explosion. The following method is recommended by C. G. Hopkins, who has used it
CHEMISTRY. (New Processes.)

with his classes for several years, as absolutely safe and involving no loss of time. As soon as the action begins collect the escaping gas in a test tube, and when the tube is thought to be full of pure gas remove 2 or 3 centimetres of tube, and immediately light the hydrogen in the test tube; then immediately attempt to light the jet of hydrogen with the hydrogen flame contained in the test tube. If the gas is explosive it will explode in the test tube and leave no flame. If, on the other hand, a flame remains in the test tube with which the jet can be ignited it is certain that the gas in the generator is no longer explosive. Hence the caution: Never light the hydrogen jet except with the hydrogen flame obtained as just described.

In the preparation of oxidomorphine, A. Loubion has obtained a very white and well-crystallized product by the aid of peroxide of hydrogen. The action of this new process is less thymic than that of Dr. Djierdjian.

Two striking reactions of silver salts and solution of ammonium persulphate have been observed and investigated by Bamberger and Marshell. When a small quantity of silver salt is added to a strong ammoniacal solution of ammonium persulphate, nitrogen is evolved almost immediately. The temperature rises rapidly, and the action may soon become violent. Apparently the silver is rapidly peroxylated by the persulphate and the nitric oxide. In the second reaction an aqueous solution of ammonium persulphate was steadily decomposed at the ordinary temperature in presence of small quantities of silver salts. No evolution of gas takes place, but part of the nitrogen of the ammonium salt is converted into nitric acid. It was found that in the space of two or three hours a gramme-equivalent of silver salt per litre of solution decomposed one half of the persulphate originally present, the temperature being 20°C.

The fact that the alkaloids cocaine, atropine, and nicotine are derivatives of pyrol has suggested experiments in synthesis of pyrol products. Among these the synthesis of pyroldehyde, the analogue of benzaldehyde and furfuraldehyde, which has been accomplished by Bamberger and Djierdian. The process was by Reimer's reaction with chloroform and potash. The new aldehyde forms a well-crystallized hydradene, oxime, and also an insoluble sodium sulphite compound, but differs from its analogues in crystallizing readily and in having no smell. Portions of this substance several centimetres long have been obtained.

Among the different substances which have been proposed for the biological purification of waters oxidizing agents occupy a preponderating place, especially the perangnates. The attempts at purification by these means have, however, met with considerable success, as it shall be explained in the next chapter. Reason of the impurities introduced by the reagent. For example, the use of perangnate of potash and lime gives rise to the presence of free alkali in the water, and small quantities of free lime (the alkali present in most cases make the water absolutely unfit for drinking purposes. This difficulty may be overcome by using the perangnate of alumina and permanganate of baryta in variable proportions. The reactions take place easily in the cold, and the quality of the water can be determined five minutes after the addition of the first drop of the reagent. In some cases the reaction is instantaneous.

Having found that recently reduced nickel acts directly on acetylene, either slowly or with incandescence, Paul Sabatier and J. B. Senderens experimented with other substances. With platinum black, iron, or cobalt the slow reaction was accelerated, and the use of these substances led to the decomposition with incandescence, followed by the more or less complete hydrogenation of a portion of the acetylene. Ethylene, on the other hand, was rapidly decomposed above 300°C by recently reduced nickel. The metal swelled up considerably, and evolved a variable mixture of methane, ethane, and hydrogen, accompanied by a very small proportion of higher formene carbide.

On reviewing the science of electro-chemistry and its application to modern manufacturing processes, "one is struck with amazement," says Mr. F. Mollno Perkin in Nature, "at the enormous strides which have been made in the last few years from the turn of the century.

The process for depositing metals from their solutions has not undergone any radical change, and the means to our disposal for carrying out the operation have not undergone any considerable change, the means at our disposal for carrying out the operation.

Among the important applications for various purposes mentioned by the author is the preparation of copper and the electro-plating processes, of which the absolute purity required is hardly obtainable by any other methods. Such copper is, however, obtained by the electric process, while the gold and silver present in the metal are also separated and saved. While zinc can not as yet be obtained from its ores by electrolytic methods, zinc galvanizing by electrical processes is an important achievement. These processes have been successful applied in the production of a large number of valuable products, of which the absolute purity required is hardly obtained by any other methods. Such copper is, however, obtained by the electric process, while the gold and silver present in the metal are also separated and saved.

Among the special processes to which electrolytic methods have been successfully applied, the author mentions the preparation of a very pure white lead from a dilute solution of sodium chlorid and nitric acid, the production of a dilute solution of potassium chloride at low temperatures; the production of potassium iodide by the electrolysis of a solution of potassium iodide and sodium carbonate with alcohol.

In the simple method of Dr. R. Uhlers of preparing free hydroxylamine, when the phosphat of the base is heated gently under reduced pressure the base distills over in a state of such purity that the distillate solidifies on placing the receiver in melting ice.
Atomic Weights.—Discrepancies still appear in the values of the atomic weight of nitrogen as deduced by chemical and physical methods. The mean value as found by the best chemical determinations is 14.034, while the value calculated from the practically identical densities found by Lord Rayleigh and Leduc is 14.006. A more recent chemical determination, made by Mr. G. deBoer, in silver cyanide in a state of great purity, gives 14.051—nearly identical with the average chemical value given above. Further work, Nature says, is clearly necessary to explain the considerable discrepancy of nearly 0.2 per cent. between the results obtained by physical and by chemical methods.

This paper, published several years ago indicated that the formula of hyposulphurous (or hydrosulphurous) acid was H₂S₂O₇ instead of the accepted form H₂SO₄. This view was not generally adopted, and the author has made new experiments in conjunction with M. Baslen, to test them. The results sustain them, and accordingly hyposulphurous acid must be regarded as corresponding in its state of oxidation to the oxide S₂O₇.

Four series of determinations of the atomic weight of boron by Henri Gautier, using boron sulphide, carbon boride, boron bromide, and boron chloride, gave results the average of which is 11.016. This value is adopted by the author. It is slightly larger than the values previously found by Abraham, and again by Ramsay and Aston.

The International Commission on Atomic Weights has published a paper recognizing the desirability of a universal standard of atomic weights as asked by the German Chemical Society, but expressing the conviction that unanimity cannot be reached by starting from O = 16. Grave reasons are urged by the commission against the abandonment of the standard I = 1. If alteration of the standard is thought necessary, it would be better to start from an element whose atomic weight may be conveniently ascertained—such as silver or iodine—which also serves as a practical starting point in consideration of the sharpness of its reactions in numerous oxidizing and reducing agents. In the opinion of the commission, urgent reasons for an alteration do not yet present themselves. The time has not yet come for an unchangeable table of atomic weights. Teachers want simplicity and clearness, and instructors must suffer no difficulty in presenting intelligible and confidence-inspiring statements. The author quotes answers from teachers to the following questions:

Shall the unity of hydrogen be retained as the standard for reckoning atomic weights?

Shall the atomic weights be given approximately with two decimal places in which the uncertain figures can be recognized by the eye?

Shall the International Atomic Weight Commission have the current table of atomic weights edited on this basis?

By experiments on the density of sulphur vapor at very low pressures, O. Bleier and L. Kohn have obtained results indicating that the true molecular formula of gaseous sulphur, undisassociated, is S₈. This value agrees with the conclusions previously arrived at by the application of the freezing-point and boiling-point methods to sulphur solutions.

From two determinations with ferrie oxide prepared from precipitated ferrie hydroxide, T. W. Richards and G. Paul Baxter found 55.900 as the mean value of the atomic weight of iron, and five different values agreed with the conclusions previously gave the average 55.883. The latter value is regarded as nearest the truth. Experiments are described which prove that ferrie oxide occludes no appreciable quantity of gas, and the same had been previously shown to be true of iron ignited in hydrogen. Previous determinations are criticized in the author's paper, and the errors which led to the higher value commonly adopted are suggested.

Chemical Analysis.—In a paper on the Chemistry of Perfumes, Dr. W. H. Warren, of St. Louis, says that for the most part substances designated as perfumes are high boiling oils. Formerly the oils, which are complex mixtures of several compounds, were obtained exclusively from flowers, but recently some of the essential principles have been produced by chemical means, whereas the artificial perfumes are mere imitations. With a few exceptions, the essential principles that give the perfumes their value belong to the class of the terpenes. Nearly every substance having the properties of a perfume has in its molecule certain atomic groups, the presence of which exerts a marked influence on the odor. Among the more important of these may be mentioned the aldehyde, ketone, ester, ether, and alcohol groups.

Mr. Carl A. Bleier, in a paper on The Nature of India Rubber, with a reference to the great experimental difficulties encountered in the investigation of colloid bodies whose physical constants are highly indeterminate, and which, instead of melting points, boiling points, and solubility, simply exhibit a gradual merging of the state in which they are found. These difficulties are met with in a pronounced degree in the examination and investigation of India rubber. If unworked India rubber (Para) be treated with chloroform or carbon bisulphide partial solution gradually takes place; and it was very early observed that by this treatment the rubber was separated into two parts, one being soluble, the other insoluble and presenting a peculiar characteristic under the microscope. Very divergent statements are to be found respecting the relative proportions in which these two constituents occur. The author, on treating a specimen of Para rubber with chloroform, obtained a solution consisting of two layers, the lower of which was a bright clear solution, while the upper part consisted of small clotted shreds of the insoluble part, comprising nearly 6.5 per cent. of the dry weight of the rubber used. This swelled to an enormous volume in various solvents, but no appreciable part of it ever passed into solution. The insoluble body was free from stickiness, smooth, but felt tough when dry, and only moderately indigestible.

The body representing the soluble part contained nearly 2 per cent. of oxygen, which on further purification tended to approach a vanishing point. Analysis showed that the soluble and insoluble parts were not identical in composition, as had been supposed... A high percentage of hydrogen and a large amount of oxygen are remarkable facts concerning the insoluble part. The experiments left no doubt that to within a very few per cent., India rubber consists of a soluble hydrocarbon of exactly the same empirical composition as the terpenes, C₅H₈. While the percentage of oxygen may vary very considerably, the carbon-hydrogen ratio is left practically unaffected, and a number of varieties contain substantially the same C₅H₈. We may therefore state that India rubber consists chiefly of a hydrocarbon, C₅H₈, readily soluble in benzene, chloroform, and carbon bisulphide; that at least one variety (Para) contains a small proportion made from the body dissolved in solvents, and possessing a composition widely different from that of India rubber as above stated; and that, in addition, oxygen products of the hydrocarbon C₅H₈ occur in quantities varying considerably in different kinds of India rubber, but
the solubility of which appears to be much the same as that of the India-rubber hydrocarbon itself. The oxygen addition products contained in it do not appear sensibly to affect the chemical behaviour of the whole. A high molecular weight is thus indicated. The composition of a chlorine compound obtained by Gladstone and Hibbert is in agreement with their conclusion that the hydrocarbon has for C₅H₄ three pairs of double linked atoms. Accordingly, India rubber (polyprene) must be an olefinic, and can not be a cyclonic compound like the ordinary terpenes. In other words, the constitution of polyprene would be that of an olefinic polyprene, standing at the end of the terpene series, just as the ordinary polyethylenes stand at the end of the cycloterpene—the hemiterpene C₂H₅—iso-polyene—representing the connecting link between the two series.

A method proposed by Carl Otto Weber for separating India rubber from the mineral matter it contains by boiling finely divided rubber in a flask fitted with a vertical condenser with nitrobenzene, has given very satisfactory results in the author's practice. The only drawback to it is represented by the difficulty of eliminating the mineral matter from the solution of the products of decomposition of the India rubber. The author's experiments are continued on this and other points in the analysis.

A number of analytical methods applicable to the treatment of manufactured India rubber, published by Dr. R. H. Stengel, give processes for the estimation of the total sulphur and mineral constituents; of factitious matter in vulcanized India rubber; of nonsaponifiable oils in vulcanized mixtures; of factitious matter and of nonsaponifiable oils in nonvulcanized India rubbers; and of carbonic acid. The author says he has not, on many occasions, been able to obtain reliable results when following the method proposed by Weber, either in its original or in its improved form. Nonvulcanized or slightly vulcanized rubber, it is true, dissolves in boiling nitrobenzene, but if we have to deal with hard or highly charged rubbers it is very difficult to dissolve the whole of the gum, and the filaments that the residue presents insurmountable difficulties.

Armand Gauthier concludes from the researches he has made that pure air contains normally about 1/1,000 of its volume of free hydrogen, to which must be added, owing to the exhalations and fermentations of the soil, vegetables, animals, and products of human industry, a certain proportion of hydrocarbons, which is relatively great in populous towns, small in country districts, very slight on rocky plateaus and peaks of high mountains, and particularly absent in the higher regions of the atmosphere. There will remain to be determined the nature of the hydrocarbons of the air of towns and woods and the origin of atmospheric dryness.

A method of estimating halogen elements in organic compounds by combustion in a calorific bomb is described by M. A. Valleur, who finds it eminently practicable by reason of the complete and instantaneous combustion of the substance and the rapidity of the operations.

The report of the British Government Laboratory records the examination of a number of tinned meats which had been furnished by the Admiralty for the detection of food preservatives. No antiseptic other than common salt was found. No meat broths contained boric preservatives, and were artificial. The use of boric acid is most prevalent in butters from France, Belgium, and Austria, and is very common also in Holland. The most frequent coloring matter is anatto, but the use of coal-tar yellows is on the increase, and is especially prevalent in the United States, Holland, and Australia. A filter for passing ship's effluvia capable of removing water from the use of lead compounds in pottery manufacture. A considerable number of "fruits" and "glazes" had been examined, and the conditions determining the ease with which lead compounds may be extracted from them by dilute acids comparable as regards their action with that of the gastric juice and other animal solvents had been ascertained. As a result of the inquiry, the Home Secretary has requested the manufacturers of pottery to abandon the use of raw lead; and in view of the facts brought to light by the examination of the frists and glazes, he has expressed the intention of prescribing that in future the manufacture should conform to a standard of insolvability as regards lead.

Besides a paper on The presence of Fluorine in the Mineral Waters of Spain and Portugal, a preliminary account of researches on the subject has been published by A. J. Ferreira da Silva and Alberto d'Aguiar. M. Parmentier mentioned the presence of fluorine in the water of the springs at Casablanca, and Dr. Hibbert found that of the waters of the springs of Gerez. M. Ricardo Jorge regards these waters as the most fluorized waters in Europe, and estimates that they contain four times as much fluorine as those of Casablanca. This author has tabulated, from this point of view, the values of other similar springs in Europe, and found that the fluorine present in them is due to the therapeutical action of the alkaline fluorides, thus clearing up the mystery which enveloped the salutary action of these waters. One of the authors of the paper now under consideration found in the spring at Campilho, at Vidago, fluorine in much greater quantity than it had been found in other springs. Dr. Casas do Canto, at Almeida, also found fluorine in quantities corresponding, but a little exceeding, that found at Gerez. He believes that fluorine is to be found in many mineral waters in much higher proportions than has been observed up to the present, and that for this reason many analyses should be revised. He suggests that the reasons fluorine has not been more generally detected in springs is because it has not been carefully looked for, and because the action of hydrofluoric acid on the glass has been chiefly relied upon as the test, while in the usual method of analysis by treatment with concentrated sulphuric acid, not hydrofluoric acid is given off, but fluoride of silicon, the action of which on glass is barely of any importance.

A specimen of soot from an ordinary household chimney in Birmingham, England, analyzed by H. Worth, yielded totals of 7.4 per cent. of ammonium salts and 1.3 per cent. of fixed soluble salts. The fixed salts consisted of sulphates and chlorides of sodium, magnesium, calcium, and iron—more particularly the chlorides. The chloride stands explains the almost total absence of sulphates among the volatile portion. The sulphur trioxide was chiefly retained by the nonvolatile metals, and thus it is that the volatile portion consists of nearly pure ammonium chloride. The proportion of the ammonium salt in the soot is large enough to justify the esteem in which soot is held as a plant manure.

A reaction of cotton-seed oil, described by S. A.
van Kettel in 1897, is based on the presence in a number of fatty oils of minimal quantities of pentoses, which are liable to来源 unknown origin. These pentoses may easily be detected by means of a hydrochloric solution of phloroglucine. Shortly after this the author's attention was directed to a reaction discovered by Halphen, in which equal volumes of the oil under examination, amylle alcohol, and sulphide of carbon containing 1 per cent, of sulphur in solution, are heated in a boiling salt-water bath for ten minutes or a quarter of an hour, when, if a red or orange color is produced, the presence of cotton-seed oil is indicated. For detecting cotton-seed oil in butter, the author dissolved a quantity of butter in benzene, and after having filtered the liquid obtained and driven off the benzene by vaporization, added Halphen’s reagent to the melted fat and heated half an hour in a boiling-water bath. In 20 experiments made he discovered cotton-seed oil in only one sample. The commercial oils are submitted to a series of manipulations for the purpose of improving the smell, taste, and color, and oils thus treated give negative results with colored reagents.

Miscellaneous.—Attention has been called by Thomas B. Stillman to important variations in the composition of Paris green under the increasing consumption which has been stimulated by its extensive use in horticulture as an insecticide. The average composition of the pigment, as determined by Van't Hoff, was of uniform composition, or nearly so; but of late years, since it has been hurriedly manufactured in enormous quantities, variation in composition has become very marked. The commercial product now fails in many instances as an insecticide; for, when arsenious oxide is present in it combined as arsenious sulphide, the arsenic is more readily volatilized. When pure, the composition of Paris green may be stated as an aceto-arsenite of copper—a combination of arsenious acid 56.85 per cent, oxide of copper 31.29 per cent., and acetic acid 10.06 per cent. A part of the arsenic may exist as arsenic acid as well as arsenious acid, and copper suboxide may be present. The substitution of sodium, in the sense of foreign material added, is rare with manufacturers of Paris green in the United States. The cost of production is lossened by increasing the percentage of arsenic, while the effectiveness of the product as an insecticide may be diminished.

Paris green manufactured in Germany is often and for many years the writer has received samples of Paris green, the examination of Paris green is comparatively simple, since it is soluble in slight excess of ammonia, forming a dark-blue solution; the chemical examination of a sample containing other pigments may or may not be a complex undertaking according to the number of materials that are added. When Paris green is intended for a pigment, foreign substances may be introduced to modify the color, as when chrome of lead is added to lighten it. An instance is given by E. T. Allen in which a number of analytical weights of gold-plated brass, put away for the summer in an iron safe, were found, at the end of three months, to have been attacked with moisture. The tops of all the weights were covered with a white substance which could not be removed by brushing or rubbing, and which, when scraped off, proved insoluble in water, but soluble in hydrochloric and nitric acids. The weights were, moreover, abnormally heavy. The presence of organic matter was revealed on heating upon platinum foil. Other tests showed that the substance was some compound of zinc—probably, it was thought, the hydroxide mixed with mold, or a zinc salt of some organic acid. The action was evidently due to water and mold, which were certainly present. It is well known that plated metals at exposed points are more liable to corrosion than those covered with a film of paint owing to electrolytic action. In such cases it is of course the more positive metal which is attacked. This was true in the case under consideration; the zinc was attacked, while the copper and the gold were unaffected. A microscopic examination showed that wherever corrosion had touched the gold the gold had become granulated or blistered. The author refers to a case somewhat similar to this, described by Witter, in which the amalgamated plates of a stamp mill in Småland, Sweden, were attacked by the water used, which had its source in a peat bog.

A paper on The Living Energy of Physico-chemical Reaction and Its Temperature Coefficient is contributed to the Proceedings of the American Academy of Arts and Sciences by Prof. Theodore William Richards. In it the author, starting with the close similarity between the equations of Clausius and Van t' Hoff, points out the advantages, previously recognized by Arrhenius, of considering temperature to be a quantity which determines the progress of chemical reactions; and this aspect is believed to afford a more direct method of analysis than the study of volume, concentration, or energy. An expression called the reaction metathern " is evolved, which represents in terms of pressure the temperature coefficient of the absolute activation ratios of physical and chemical reaction. The equation obtained is the mathematical expression of the theorem of Maupertuis or Le Chatelier, and when analyzed it shows that the part played by each substance in a reaction may be considered as the logarithm of the product of its physico-chemical potential." Any pressure or temperature expression may be used to determine at any given moment the concentration according to the equation of Van t' Hoff.

In the course of the president's address before the Society of Chemical Industry, Prof. Chandler, speaking of the work of American chemists, said that many important investigations in agricultural chemistry have been conducted by the chemical division of the United States Department of Agriculture. Among them were the practical determination of the number and activity of the nitrifying organisms in the soil, the influence of a soil rich in nitrogen on the nitrogen contents of a crop, the manufacture of sugar from the sorghum plant, and the comparative study of the typical soils of the United States. Chemists connected with agricultural experiment stations had done a large amount of original investigation on subjects more or less closely allied to agricultural and physiological chemistry. The author referred to the progress that had been made here in electro-chemistry, to the method of reducing aluminum practiced at Niagara, to the manufacture of corundum and artificial graphite, and to the expansion in the manufacture of water gas, which is used in whole or in part by 500 gas companies.

CHILI. A republic in South America. The Congress consists of 32 members and a House of Representatives containing 94 members, the Senators elected for six years in the provinces and the Representatives for three years in the departments by the direct vote of the adult male population. The President is elected for five
years by the indirect vote of the nation. Federico Errazuriz was elected for the term ending Sept. 18, 1901. The Cabinet, constituted in September, 1899, continued as follows: Prime Minister and Minister of the Interior, Rafael Sotomayor; Minister of Foreign Affairs, Worship, and Colonization, Rafael Errazuriz-Urmeneta; Minister of Justice and Public Instruction, Francisco Herbo; Minister of Finance, Manuel Salines; Minister of War and Marine, Carlos Byena, chief of the navy.

Area and Population.—The area of Chili is 290,829 square miles according to the most recent estimate. The population on Jan. 1, 1899, was estimated at 3,082,178. The estimated population of Santiago, the capital, was 311,704; of Valparaiso, 140,202; of Concepcion, 51,731. Of a total population of 2,712,145 for all Chili in 1899, the town population was 1,240,333 and the rural 1,471,792. The number of marriages in 1898 was 13,921; of births, 104,536; of deaths, 83,919; excess of births, 20,617. The number of immigrants in 1897 was 870. The Government grants land to immigrants, and money aid to the extent in 1898 of 616,890 pesos.

Finance.—The ordinary revenue in 1898 amounted to 88,472,093 pesos, and expenditure to 87,726,307 pesos. Including a balance of 28,930,594 pesos from the preceding year and 58,978,777 pesos of loans, the total receipts were 176,391,064 pesos. The total disbursements, including 11,968,077 pesos of special expenditure, 14,415,715 pesos of extraordinary expenditure, and 45,940,091 pesos of advances to banks and exceptional expenditure for financial purposes, were 160,651,000 pesos. The ordinary revenue for 1898 was estimated at 80,872,937 pesos in gold, of which 64,698,357 pesos were derived from customs and 16,174,580 pesos from premiums, and 19,700,000 pesos from other imports. The estimated expenditure for public works and for compulsory military service amounted to 12,427 pesos in gold and 9,305,286 pesos in paper by the Ministry of the Interior, 712,067 pesos in gold and 512,140 pesos in paper by the Ministry of Foreign Affairs, 5,000 pesos in gold and 631,138 pesos in paper for public worship, 527,300 pesos in paper for colonization, 39,480 pesos in gold and 3,474,335 pesos in paper for public instruction, 45,940,091 pesos in gold and 5,933,417 pesos in paper for public instruction, 78,982 pesos in gold and 4,655,707 pesos in paper for finance, 13,185,156 pesos in gold and 9,653,739 pesos in paper for the navy, 767,822 pesos in paper for industry, 4,323,796 pesos in paper for public works, and 12,556,892 pesos in paper for railways. The budget for 1899 amounted to 29,246,740 pesos in gold and 65,259,573 pesos in paper. The ordinary revenue for 1900, according to the budget estimate, was 95,954,390 pesos in paper, reckoning the premium on gold at 10 per cent.; extraordinary revenue, 22,494,386 pesos, making a total of 118,358,776 pesos in paper. The estimated expenditure was 104,931,933 pesos in paper. The chief source of revenue is the taxation imposed on the nitrate industry. The treaty of Ancon, signed on Oct. 23, 1883, provided that the Peruvian provinces of Tena and Arica were to be held by Chili for ten years, at the end of which a plebiscite was to be taken in the provinces to determine their future ownership, the country being chosen by the people paying the other $10,000,000. The financial difficulties of Peru have among other reasons prevented the fulfillment of this clause of the treaty. Some Peruvian politicians have been willing to appeal to the United States to intervene and compel Chili to fulfill the terms of the treaty. The Peruvian nitrate industry is based on the potash and iodine from Tarapaca since the occupation of the nitrate fields in 1879 and those which may be collected during the next thirty-five years are estimated by a Peruvian diplomatist at $8,350,000,000, and those collected and to be collected by the Bolivian province of Potosi amount to $650,000,000. A convention for the purpose of carrying out the plebiscite was signed at Santiago on April 16, 1898, but new difficulties have since arisen.

The foreign debt on Dec. 31, 1898, amounted to $18,070,080 sterling, equal to 244,934,400 pesos, and was charged at 55 cents, interest 4½ per cent.; even 6 per cent., the total interest charge being $966,455 or 12,572,733 pesos. The internal debt amounted to 72,592,119 pesos.

The Army and Navy.—By the law of 1897 the strength of the regular army is limited to 9,000 men, organized in 10 infantry, 8 cavalry, 5 artillery, 2 engineer, 4 field artillery, 4 howitzer, 4 mountain gun, 4 machine gun, 12 field ambulances, and 839 clerks. The number of officers is 884. The infantry weapon is the Mauser rifle. The navy consists of 5 armor clad, 2 second-class and 2 third-class cruisers, 11 gunboats, 4 destroyers, and 15 first-class and 4 second-class torpedo boats.

Commodity and Production.—Agriculture employs about half the population. Wheat is the principal crop, but other cereals are grown as well as vegetables and fruits in abundance. The nitrate output in 1899 was 1,360,000 tons. In Valparaiso and its environs are sugar mills, gas works, breweries, machine shops, and other industrial establishments. The total value of imports in 1898 was 102,262,618 pesos; the exports 102,262,618 pesos and the net revenue 57 cents; even 6 per cent., the total interest charge being $966,455 or 12,572,733 pesos. The internal debt amounted to 72,592,119 pesos.

Navigation.—The number of vessels engaged in foreign commerce entered at Chilian ports in 1897 was 1,734, of 3,140,760 tons; cleared, 1,625, of 2,943,514 tons. The tonnage of coasting vessels entered was 7,233,911. English and Chilian steamers trade between Chilian ports and other parts of the west coast of South America, and English, German, and French lines run between Chilian and European ports. The commercial navy of Chili consisted on Jan. 1, 1899, of 51 steamers, of
26,744 tons burden, and 111 sailing vessels, of 40,903 tons.

Railroads, Posts and Telegraphs. — The length of railroads in operation in 1898 was 2,662 miles, of which 1,223 miles belonged to the Government. The Government railroads cost 84,902,425 pesos to build. The receipts in 1898 were 13,703,676 pesos; expenses, 12,788,749 pesos.

The post office during 1898 forwarded 12,454,050 letters and postal cards, 16,920,557 packets of printed matter, and 1,423,904 other packets. The postal receipts were 953,128 pesos; expenses, 1,026,333 pesos.

The telegraph lines, belonging to the Government, had a length of 9,968 miles, with 11,200 miles of wire, in 1898. The number of messages for the year was 1,151,991. The railroads and private lines had a length of 2,013 miles.

Political Affairs. — The dispute with the Argentine Republic with regard to the boundary in Patagonia, which endangered the peace between the two nations and led to the acquisition of expensive armaments, naval and military, on both sides, was finally referred to the arbitration of the British and French officials. The representatives who met in February, 1900. The questions pending with Peru and Bolivia were still under the subject of negotiation. The Chilian Congress began its session on June 2. The state of the country was described by President Errazuriz in his opening speech as satisfactory. A surplus of 21,000,000 sols was reported. A special fund for the conversion of the paper currency, which had been accumulated without difficulty. The Government intended to bring in measures for an extraordinary amortization of the public debt.

CHINA. — An empire in eastern Asia. The Government, as laid down in the regulations of the Thirteenth Precept, has over the Manchu conquerors from the Ming dynasty, and have been established since the age of Confucius. The acts of government are largely regulated by principles derived from the Chinese classics and Confucian precepts. All important questions are decided by the Grand Council, the Chun-Chi-Chu, under the Ming emperors a purely civilian body, becoming a military council after the conquest of 1644, and now again civilian in its character and functions, but having control over the Manchu army. Unless the Emperor is right in regard to the conduct of the imperial affairs are under the direct control of the Cabinet, called Neiko, consisting of 3 members, 2 of whom must be Manchus and 2 Chinese. They are advised by 2 members of the Hanlin College, whose function it is to see that all edicts and proclamations conform in style and substance with the dynastic regulations and Confucian precepts. All important questions are decided by the Grand Council, the Chun-Chi-Chu, under the Ming emperors a purely civilian body, becoming a military council after the conquest of 1644, and now again civilian in its character and functions, but having control over the Manchu army. Unless the Emperor is right in regard to the conduct of the imperial affairs are under the direct control of the Cabinet, called Neiko, consisting of 4 members, 2 of whom must be Manchus and 2 Chinese. They are advised by 2 members of the Hanlin College, whose function it is to see that all edicts and proclamations conform in style and substance with the dynastic regulations and Confucian precepts. All important questions are decided by the Grand Council, the Chun-Chi-Chu, under the Ming emperors a purely civilian body, becoming a military council after the conquest of 1644, and now again civilian in its character and functions, but having control over the Manchu army. Unless the Emperor is right in regard to the conduct of the imperial affairs are under the direct control of the Cabinet, called Neiko, consisting of 5 or 6 of the highest officers of state, both Manchus and Chinese, wields the real authority of government. The business is transacted in secret, usually in the presence of the Emperor. Decrees and orders are issued in the Emperor’s name to the executive boards in Pekin and to the provincial authorities, and the Emperor is practically constrained to accept the decisions of his council, which in recent years always includes one or more of the princes of the royal family who hold the highest commands in the Banner army. Subordinate to the Cabinet are the boards of administration, presented over each by a Manchu and a Chinese. One board, called the Civil Office, supervises the conduct and administration of the officials, confers titles, and grants rewards and precedence for meritorious conduct; another, the Board of Revenue, manages the finances; the third, the Board of Rites, enforces the laws relating to the ceremonies of the court and all public functions. The Emperor, and regulates the rites called for by an extraordinary national calamity; the fourth, the War Board, has charge of military affairs and directs the movements of troops; the fifth is the Board of Public Works; the sixth, the Board of Punishments, is the high court of criminal jurisdiction. A seventh board, the Admiralty Office, created in 1885, sits at Tientsin and directs naval affairs. The board of censors, consisting of 40 to 50 members, presided over also by a Manchu and a Chinese, is independent of the Government, the members having the duty of watching over all branches of the administration and the right to present remonstrances and memorials to the Emperor regarding any public need or evil or any relapses from the ancient standards. Their duty is to keep the Emperor informed of all that is going on in any part of his dominions that is worthy of his notice, and in particular to keep an eye on malfeasance or oppression on the part of the officials. There are in the Ministry of the Interior a modern body which since 1801 has conducted all business with Western nations and with institutions directed by foreigners, such as the Maritime Customs and the Pekin University. It is composed of all the members of the Grand Council and about as many other high officials. The Chinese believe that the country, which they believe to occupy the greater part of the earth and to contain most of its inhabitants. The Emperor of China is not only regarded as the father of his people, possessing in theory all the property and the power of life and death, but also as the throne of Heaven, the only human being who can meditate with the celestial powers by sacrificing on the altar of heaven. China does contain over a fourth of the earth’s population, but has long been the fountain of Asiatic civilization. The rulers of Asia have willingly acknowledged a formal vassalage to the Manchu emperors, with the result that European governments brought European governments into relation with the Pekin authorities the envoys of Europe, partly through ignorance and partly because they saw no other way of facilitating their immediate business of securing trading advantages for their countrymen, accepted the position that was accorded them, that of representatives of vassal states. The Chinese, judging Europeans from their greed of money and the grosser vices exhibited by them in the seaport towns, finding them, moreover, entirely ignorant of the elaborate forms of respect displayed by Chinese toward one another and of all Chinese standards of culture and refinement, regarded them as a nation of barbarians, foreign devils who brought ill luck. While Europeans unwittingly offended Chinese proprieties and roused superstitious repugnance in countless ways, they were the unconscious objects of incessant insult and contemptuous derision. The treaty of Tientsin, signed after the occupation of Pekin by British and French troops in 1860, first recognized the right of European governments to maintain embassies in Pekin, as well as that of foreign traders to reside in Canton, Amoy, Fuchau, Ningpo, and Shanghai. Russia, for her friendly attitude toward China during the war, obtained the cession of the province of Liaoning, and a few years later acquired the northern Manchurian coast lands with the harbor of Vladivostok. All eastern Siberia was Chinese until the Russians occupied it in the time of Peter the
Great, about contemporaneously with the seizure of Macao by the Portuguese, who also conquered Formosa, which later fell to the Dutch and was retaken from them by the Chinese. After the war of 1841 Hong-Kong was ceded to Great Britain. This proved a great advantage to the English chiefly for the purpose of removing the imperial interdict against the importation of opium. When its importation was legalized once more, the Emperor issued edicts prohibiting its use, which, however, could not be enforced. The war of 1856 was likewise occasioned in part by the necessity felt by the British for preserving the opium trade and the revenue derived from it by the Indian Government. Cambodia, Annam, and later Tonquin, once tributary countries, were wrested from China by France, while Great Britain conquered first Lower Burma, the tributary Himalayan states, and finally Upper Burma, and Chinese influence in Central Asia receded before Russian conquests. Despite these successive encroachments of the military powers of Europe the Pekin court still maintained its arrogant reserve. European ambassadors were not received in audience by the Emperor till 1873, and then only in a pavilion outside of the palace. In 1890 the present Emperor formally recognized the building where envoys from Korea and Annam have been accustomed to present the annual tributes to the Son of Heaven. In 1894 the foreign envoys were first admitted within the portals of the palace. Diplomatic business can only be done with the Tsung-Hi-Yamen, the board created for the purpose after the sacking of the town of Tientsin. This board consisted at first of 3 members, and now it has 11. Although strengthened by the inclusion of members of the Grand Council, still it possesses no real power, as all its decisions must be approved by the Grand Council and ratified by the Emperor.

In 1897 Russia, having intervened after the Japanese victories to preserve Manchuria for China, obtained, in connection with the privilege of building a branch of the Siberian Railroad through Manchuria to a seaport on the Gulf of Pechili, a lease for ninety-nine years of the seaport of Tientsin to serve as the terminus of the railroad and as an outlet for the mineral products of Manchuria. Germany, in the guise of retributory damages for the murder of two missionaries by a mob, demanded and obtained the port of Kiaochau, after landing troops there in the spring of 1898, and preferential commercial and political rights throughout the peninsula of Shantung, thus establishing a claim to a sphere of influence in China. The British Government, reeding from the position of the open door which it had first taken in opposition to the Russian and German claims to exclusive spheres, acquired a lease of Wei-Hai-Wei, a naval port on the Gulf of Pechili, on the identical terms of the lease of Port Arthur to Russia agreed upon. The Chinese Government never to alienate any of the territories in the provinces adjoining the Yangtse-Kiang to any other power, whether under lease, mortgage, or any other designation. The French Government, which as protector of Roman Catholic missions and as an active and important military power formerly had important diplomatic dealings with China than any other, through French trade in the country was comparatively small, and which had engaged in hostilities with China on account of the participation of the Black Flags in the Tonquinie rebellion, now demanded and obtained a coaling station on the mainland opposite the island of Hianan, also on a ninety-nine-year lease. The nonalienation assurances which had already been obtained regarding Hai-nan were extended to the Chinese provinces adjoining Tonquin. Great Britain, asserting that parts of these provinces of Kwangtung, Kwantung, and Honan lie in the Yangtse valley, and unwilling to have the Black Flags permitted in the trade of the West river or in territory adjacent to Burma as well as to Tonquin, demanded compensation in the shape of an extension of the Kaulung settlement opposite Hong-Kong, and an assurance, identical in terms with that given to France, that two of the provinces would not be alienated. Japan, which after the victorious war of 1895 had been forced by European intervention to be content with the cession of Formosa, secured the promise now that the provinces opposite that island would never be alienated to any other nation, but did not seek any preferential economical advantages in those provinces. Italy put forward a demand for a coaling station or lease, and this, though formally supported by Great Britain, was contemptuously refused. Thirteen out of the 18 provinces of China have thus been marked out as spheres of influence by various European powers, and innumerable mining, railroad, and commercial concessions have been granted to foreign nations. From the once immense area of China, which had been to all intents and purposes been increased to 32, some of them situate far in the interior, where the people have never yet come into contact with Europeans.

The Imperial Government at Pekin has retained its authority, aside from the sentimental or symbolical reverence which Chinchens are bound by law and the customs of the land to show toward it. The Emperor is in reality the prime minister and controlling the only efficient military force in China, the Manchu banner troops of the imperial province, and by the complete control that it exercises over the official hierarchy, for the most powerful viceroy must submit to removal or degradation. This power, however, is used only for reasons that command the general approval of the official class, the support of which is the main security of the Manchu dynasty. The Imperial Government has never ventured to advance high office any favorite or tool, but only those who have entered the service by the recognized channel and risen through the regular stages and are the acknowledged superior of the plebeian elements of government and the bureaucratic spirit. The Chinese people have never willingly submitted to the Tartar conquerors. There have been four serious rebellions, the last of which, that of the Taipings, was only suppressed by the aid of European support. The great secret societies of China—the White Lily, the Triad, the Redhead, and others—were started with the object of expelling the Tartars and restoring a Chinese dynasty. Still, the Manchu rule has not been oppressive, and in recent times it has been weak. Except the tribute rice, the Chinese contribute little to the support of the imperial clan and the Manchu armies.

For the last forty years the Empress Dowager and her clique have managed imperial affairs. Tsu-Hsi, born Nov. 17, 1834, was a secondary wife of the weak Emperor Hien-Feng, who died in Mongolia, whither he had fled when the British and French troops occupied Pekin. The law of succession in China permits the Emperor to designate an successor among his eldest three wives. Tsu-Hsi, originally a concubine, had been raised to the dignity of a secondary wife on giving birth to a son, who was the only heir to Hien-Feng, and on his father's sudden death was declared Emperor under the style of Tung-Chih. As he was an infant, the first Empress and his own mother ruled as co-regents, but the latter,
MAP OF THE CITY OF PEKING, CHINA.
CHINA.

by her imperious will and talent for intrigue, wielded all the authority, even independently of the Manchu party which originally supported her. When her son died, in 1872, and his aunt was continued in the regency until he ascended the throne in 1887, but in ostensibly resigning her powers she retained the essential part of the prerogative, the great seal and the right to appoint all the principal civil and military officers. In 1898 the young Emperor, who had come under the influence of the reform party, which aimed at the regeneration of the civil and military services through the adoption of Western methods as the only means of rendering China strong enough to resist the encroachments of the European powers, called some of the reformers into his council and issued a series of edicts embodying the reform principles. The startling changes that he decreed alarmed the conservative elements, and in accordance with the sentence among corrupt mandarins and Manchu nobles, who saw their emoluments and sinecures threatened. Combining with the Empress Dowager, they compelled the Emperor to rescind his decrees, which were formally rejected by the Grand Council, and to resign his power once more into her hands, the ministry of affairs in China then being in the hands of his mother, Empress Kwangsu. Kwangsu was punished with practical imprisonment for having been unfaithful to his aunt, and for his attempt to inaugurate radical changes for which China was not yet prepared.

The internal government of the 18 provinces of China proper is practically independent of the imperial court, and is conducted by its own civil service and collects its own revenues. The maritime and riverine provinces maintain separate flotillas of war vessels. Every province should have an army, but in most cases this is nonexistent, as the Chinese despise military service, and the pay and rations of rice for the soldiers do not suffice to support them. The secret, or police, officers, who can collect his nominal quota of men from the riffraff whenever an inspection takes place. At the head of each province is a governor, and in several instances two or three provinces are grouped under a governor general or viceroy, such as the Viceroy of Nankin, who governs the three provinces of Kiangsu, Anwhei, and Kiangse; the Viceroy of Wuchang, who rules over the central provinces of Hupeh and Hunan; the Viceroy of Canton, who controls the two Kwang provinces. Admission to official life is only obtained through the examinations, the results of which are largely of ethics and the principles of government, the history and traditions of the Chinese people, and literary refinements and forms. Examinations are held in the provincial capitals twice in three years for the lower degree necessary as a passport to the public service. Although not more than 1 per cent. of the candidates are usually admitted to the degree, there are numerous literati who must be excluded from office, and these disappointed ones are often the leaders of disaffection and promoters of disturbances. For the higher degrees other examinations are necessary. In the Peking University, European languages are taught by European, Japanese, and American professors, but all such knowledge is of use to officials only as supplementing Chinese education, and is seldom sought by those seeking a public career,-but young military mandarins attend the military and naval colleges where the methods of European warfare are taught. The Christian mission schools give instruction in the English language and the lower branches of science to those who seek a career outside of China or employment with Europeans. Entrance to the public service and advancement are free not only to Manchus, but to Chinnam of the humblest origin, and until very recently no preference was given to Manchus in appointments to the highest offices in the provinces or in Pekin. Chinese officials are expected to fulfill all administrative, judicial, and military duties when required. The lowest provincial officer is the district magistrate, who is at once collector of revenue, judge, coroner, chief of police, and public prosecutor. Death sentences require in ordinary circumstances to be ratified at Pekin, though the viceroys and governors are armed with discretionary powers to be used in times of danger. They are charged with the duty of maintaining peace and order within their boundaries, and as long as they do this and carry on the government in accordance with the laws established by the central authorities do not interfere with them. Whatever dangers or disturbances occur in other provinces, no governor is disposed to go to the aid of his colleagues without express imperial orders, and even then he often evades the duty. The great body of officials constitutes the actual governing power of the empire, and to which the laws and regulations for the redress of grievances and the formulation of new legislation. Advice tendered to the throne by the viceroys and governors is invariably heeded. Independently of the Manchuk Government, with which the people of the prosperous central and southern provinces do not come into contact, independence of the various administrations, the Chinese possess a very large measure of municipal self-government and a degree of individual liberty scarcely equaled elsewhere. The principle of association in trade guilds and societies for mutual aid and protection is developed to a far higher degree than in the Occident, and the secret societies, of which only the secret organizations are interdicted but not suppressed, they exert much influence in public affairs.

All general legislation in China is enacted by imperial decrees. The penal code is the only body of statutory law in existence, and this is supposed to contain provisions to meet every case. If, however, a difficulty arises for which there is no precedent, it is referred to the board concerned, which in turn reports to the throne, whereupon a decree or rescript is issued which settles the case. From time to time the code is revised, and these various decrees are consolidated or incorporated in the imperial statutes.

Finances.—Provincial administrative autonomy is carried so far that the Imperial Government has no effective money revenue of its own, and must depend on the quotas that it can assess on the provinces. The Maritime Customs revenue, collected under European management, is now plighted to the foreign bondholders who advanced money to pay the Japanese war indemnity, and for other needs growing out of the defenseless state of the empire. The money for the support of the Manchu troops, as well as for the support of the imperial household itself, must be drawn from the profits of the Board of Revenue to indent annually for the sums required for the use of the central Government, a certain amount being assessed on each province according to its supposed means. So
long as the amount did not vary greatly from year to year and was remitted in case of flood or famine occurring in any province, imperial aid being given instead of a tax demanded when the disaster was great, the assessments were paid with some punctuality. When more and more war was demanded for counsels to meet the exigencies of "2,000,000 obtained from banks and foreign syndicates. Internal loans amounting to nearly £5,000,000 were raised at the same time. After the close of the war, in order to pay the indemnity of 200,000,000 treasury taels and 30,000,000 taels for the evacuation of Liao-Tung, a foreign loan of £25,000,000 was contracted in England, which was raised in March, 1896, an Anglo-German loan of £16,000,000 was contracted, which was followed on March 1, 1898, by another loan of £26,000,000 raised through English and German banking corporations doing business in the East, for the purpose of paying off the last installments of the war indemnity and secured on the likin collections transferred to the Imperial Maritime Customs. Foreign merchants have brought diplomatic and financial pressure on the Chinese Government to induce it to do away with the likin taxes, which are a greater inebus on trade than the similar octroi duties ever were in Europe. The Chinese Government on its part has tried to induce its representatives in foreign ports to urge the reduction of the customs duties. The import duty on foreign merchandise is fixed by treaty at the uniform rate of 5 per cent. ad valorem, and the commuted likin duty, payable at the port of entrance at 2½ per cent. Merchants have discovered that the payment of likin commutation does not altogether prevent the payment of two or three different taxes on the same mercantile goods which are constantly floating in the interior, because the provincial mandarins, unwilling to sacrifice the revenue formerly derived from likin, have imposed or revived various other taxes in the place of likin. In May, 1900, Chinese commissioners were authorized to offer to abolish likin and all further charges on imports if the European governments would consent to an increase in the import duty from 5 to 10 per cent., and in the transit pass or commuted likin duty from 2½ to 5 per cent., making 15 per cent. in all. The export duty they proposed to fix at 5 per cent., as the treaty allows, although lower rates have been charged. The Maritime Customs collection per cent. for the year ending June 30, 1900, amounting to the total of 26,661,460 taels.

The Army.—The principal military organization of China is the Army of the Eight Banners, descendants of the Manchu conquerors and their allies, subdivided into Manchu, Mongol, and Chinese groups, and constituting a military caste in which intermarriage is compulsory. This army, which is recruited constantly from among the population of Manchuria, is supposed to number 300,000 men, of whom from 80,000 to 100,000 have in recent years received a training in European fashion and been armed with modern weapons and kept on a war footing. This Manchu army is under the direct control of the Imperial Government at Pekin in the north, and, with the collection of taxes, principally the likin on imported merchandise, which by the convention of March 2, 1898, is collected in the ports of Suchau and Kiuikang and in the Shanghai district and eastern Chekiang, as also is the salt likin in the districts of Hangchow and Anhui and the port of Ichang by the Imperial Maritime Customs, who have the objects to obtain a revenue therefrom of 5,000,000 taels. The only public accounts of which reports are published are those of this branch of the service, which is superintended by Sir Robert Hart. The public debt of China has been raised mainly for the purpose of paying the Japanese war indemnity. Before the war a loan of 5,000,000 marks at 5½ per cent. was contracted in Germany in 1887, and a silver loan of 11,300,000 taels was obtained abroad in 1894 at 7 per cent. In February, 1895, a gold loan of £3,000,000 was raised on the security of the customs, which were further pledged for ten years, and the proceeds of £2,000,000 obtained from banks and foreign syndicates. Internal loans amounting to nearly £5,000,000 were raised at the same time. After the close of the war, in order to pay the indem-
Army of the North, stationed ordinarily at Tientsin, Taku, and other places convenient for the defense of the coast. These troops are taught by European instructors and have the best of modern arms. In 1899 they numbered 50,000, and afterward 20,000 more were incorporated. In emergencies, mercenary troops are raised which display varied efficiency and discipline, according to the nature of the population among which they are recruited, the ability of their commanders, and the kind of service they are called upon to perform and the experience they acquire. There is also an irregular cavalry, mostly Mongolian, nominally 200,000 strong, but really not more than a fifth or a tenth as many, and of slight military value. In the capital of the armed forces is estimated at 1,752,000, but there is no effective central authority, no common organization, little discipline except among the picked corps, and outside of these only obsolete training and armament, worthless against modern arms and tactics. Large numbers of European arms have been acquired by the Government with which to equip 10,000 picked troops and 125,000 other active troops in the capital and neighboring provinces, including the foreign-drilled detachments of Gen. Nieh and Gen. Yuan-Shih-Kai, intended for the defense of the coast of the Gulf of Pechili. The reserves are composed of 13,000 Pekin field troops, 75,000 of the Eight Flags, 40,000 Manchurian and 50,000 of the Green Flags. Miscellaneous troops, including river and canal guards, transport convoys, 103,000 Manchurian militia, and bodies formed of men of different alien races, number 858,000. The Chinese official statement of the effective troops is 95,087, including 35,925 in the navy, and artillery and 60,000 cavalry. Many of the cavalry have no horses, and only a few detachments are armed with carbines or rifles. A very small part of the artillery has received special training. Most of the Green Flags are entirely without training, and the same is generally true of the other troops.

Commerce and Production.—Land in China is held in fee simple on payment of an annual tax. Every property is registered, and when it is sold a fee of 6 per cent. of the price is paid for the conveyance. No-farm or dwelling can be sold to a stranger until all near relatives have declined to buy. Farms are generally small, and are kept in a high state of cultivation by the aid of irrigation and careful use of fertilizing materials. Oxen and buffaloes are the common farm animals, but tillage is often done by hand with primitive tools. Wheat, barley, corn, millet, beans, and peas are grown in the north, and in the south rice, sugar, cotton, and indigo are common crops. In the west and other elevated sections where the land is suitable the poppy is grown extensively for opium. Tea is cultivated only in the western and southern provinces of Fu-Kien, Hupeh, Hunan, Kiangsi, Chekiang, Anhui, Kwangtung, and Szechuen. Silk culture is not less important in all parts of China, but the best silk, and the main supply, comes from Szechuen, Kwangtung, Chekiang, and Kiangsu. Filatures with modern machinery have been started in Shanghai and Canton, capable of winding 1,600,000 pounds of silk a year, and in Canton Chinese and foreign capitalists have launched the cotton mills in operation, with 513,000 spindles running in 1898.

Coal beds exist in all the provinces. The Kaiping mines, northeast of Pekin, have been operated under European superintendence. Anthracite is mined for the supply of Pekin at Fang-Shan Hsien. Coal is mined also at Poshan, in Shantung, and other fields in that province promise an abundant supply. Shansi has a field of anthracite coal in its eastern section and one of bituminous in the west, each estimated to cover 13,500 square miles, and a British syndicate has been formed to open mines there, while German capitalists expect to develop the Shantung mines. In southeastern Hunan the beds, part anthracite and part bituminous, have an extent of 21,700 square miles, and in some places considerable coal is dug also in the central and northern parts of Szechuen. French syndicates have obtained concessions here. Coal and iron are found together in Manchuria, where a smelting industry has sprung up. Adjacent to these coal deposits in Yunnan are iron mines which have been worked from ancient times. The copper mines of Yunnan have been productive for centuries, and in the same province silver and lead are found.

The imports of foreign merchandise, according to the returns of the Imperial Maritime Customs in 1898, were 209,572,334 hong taels; imports of foreign merchandise, 159,037,149 taels. Corrected by deducting the expenses of landing, storing and selling, and duties paid, the value of imports was 184,486,528 taels; and that of exports, when commissions and export duties and the cost of storing, packing, and shipping have been added, was 177,663,884 taels. The value of the principal imports were: raw cotton, 39,295,000 taels for cotton yarn; cotton cloth, 38,324,000 taels; opium, 29,255,903 taels; kerosene oil, 11,914,699 taels; rice, 10,449,000 taels; metals, 9,787,077 taels; sugar, 9,019,000 taels; fishery products, 5,430,842 taels; coal, 5,236,620 taels; woollen goods, 3,190,198 taels; raw cotton, 2,839,730 taels; matches, 2,297,897 taels; ginseng, 2,545,000 taels; tin, 2,179,000 taels. The principal exports were raw silk, of the value of 45,413,100 taels; tea, 28,870,482 taels; silk manufactures, 10,691,000 taels; beans and bean cakes, 7,529,000 taels; skins, 6,820,000 taels; tobacco, 3,839,000 taels; matting, 3,690,000 taels; raw cotton, 3,151,000 taels; silk tea, 2,445,000 taels; braid, 3,131,791 taels; sugar, 2,445,891 taels; shoes and clothing, 1,982,072 taels; paper, 1,741,707 taels; china ware and pottery, 1,504,570 taels.

The direct commerce with various foreign ports and countries in 1898 was valued in hankwan taels as follows:

Among the imports are included re-exported merchandise of the value of 9,106,000 taels. The figures for Japan include 4,794,000 taels of imports from and 925,000 taels of exports to Formosa.
The trade of Hong-Kong is made up of goods from Europe, the United States, Australia, India, and other countries destined for China, and of Chinese goods destined for those countries.

The foreign trade of China in 1890 was marked by a great development in which the United States participated proportionally more than any other nation except Japan. The total value of imports and exports was 460,533,288 taels, more than double the figures for 1890. The United States doubled the sales in China in four years, and in 1899 sold 12,000,000 taels more than all Continental Europe. The gains of Japan were twice as great, while British trade has fallen off.

The imports credited to Great Britain as well as to Hong-Kong contain a large and increasing proportion of American goods, some of which are shipped to these countries. Besides petroleum, cotton cloth, and other staple imports from the United States, a trade has sprung up in condensed milk, which the Chinese consider a dainty, and in American cigarettes, clocks, bicycles, sewing machines, windmills, canned goods, provisions, and other miscellaneous products and manufactures, besides arms and munitions.

Navigation.—The number of vessels entered and cleared at the ports of China during 1898 was 52,661, of 34,233,580 tons, of which 43,164, of 32,896,014 tons, were steamers. Of the total number, 22,609, of 21,263,966 tons, were British; 23,547, of 8,187,572 tons, Chinese; 1,189, of 1,892,986 tons, of the Swedish; 1,560,132, of 773,239,152 tons, American; 577, of 420,078 tons, French. The Chinese treaty ports are Shanghai, Chinkiang, Suchau, and Wuhu, in Anhwei; Canton, Swatow, Kaunlin, Lappa, Pakhui, Kiungchau, Samshui, and Kungmun, with Kunmeukh, in Kwangtung; Amoy, and Fuchau, in Fukien; Chifu, in Shantung; Tientsin, in Pechili; Nankuang, in Manchuria; Ningpo, Hankchau, and Wenchau, in Chekiang; Wuchau and Luchkau, in Kwangsi; Mengtsz and Szemao, in Yunnan; Yatung, in Tibet; Kiuikiang, in Kiangsi; Hankau, Shasi, and Ichang, in Hupeh; and Chingkian, in Szechwan. The Chinese Government itself has authorized the opening of ports and residence the additional ports of Yochau, in Hunan; Sntauan, in Fukien; Chingwanzga, in Pechili; and Wusung.

Communications.—A railroad has been built from Pekin to Tientsin, 86 miles, with continuation over the 27 miles of a coal district to Shanhaikwan, 147 miles, and along the coast to Chenchau, 113 miles, with a branch to Tienchian, 7 miles, and one of 30 miles to the Nampao coal mines. The length of lines in operation at the beginning of 1900 was 404 miles. An extension to Yungkau, connecting this line with a branch of the Manchurian line, will be built by the Russians, and another extended from Chenchau to Hsinmintun, 106 miles, brings it near to Mukden. The Russian railroad through Manchuria, connecting the Siberian Railroad with the Chinese ports leased to Russia, is expected to be completed in 1902, the main line having a length of 950 miles, and the branch to Port Arthur a length of 650 miles. The section from Port Arthur to Teline, 318 miles, was finished early in 1900. A line running southwest from Pekin has been completed to Paotingfu, 88 miles, with a branch of 10 miles to the Chaokantien coal mines. Like the Tientsin line, this was built with British capital. It is to be extended from Chenchau to Hainan, to connect with the Chinese Government; that the power approached will levy no higher harbor dues on vessels of another nationality frequented any port in such sphere than shall be levied on vessels of its own nationality.
nor any higher railroad charges over lines built, controlled, or operated in its sphere on merchan-
dise belonging to its own citizens. Lord Salisbury
wrote, on Nov. 30, that Great Britain was pre-
pared to make a declaration in the sense desired
in regard to all leased territory or spheres of in-
teres at present held or hereafter to be acquired.
The German Government, which had already
given an assurance that America's treaty privi-
leges would not be impaired, raised no objections,
and in December the Count von Billow wrote a de-
claration assuring absolute equality of treatment
of all nations with regard to trade, navigation,
and commerce. The Russian Government an-
swered that the services of their troops. The officials and
literati of Hankow, Hanyang, and Wuchang
sent a deputation to Pekin to protest. All the officers
and notables of Shanghai forwarded a remon-
strance, and from all the other centers of wealth
and intelligence came similar memorials, followed
by appeals to the Chinese everywhere to stand
for the legacy of the imperial past. The edicts were
withdrawn, and another was issued in which the Prince Pu-Chun was mentioned as
their apparent only.

Edicts issued by the Empress Dowager in the early part of 1900 indicated a complete relapse into old methods. One dated Feb. 7 commanded the princes to return to the teachings of Confucius for examinations for official rank, and imposed penalties for the teaching of what were called the new, depraved, and erroneous subjects. A secret edict was issued by the Empress on Nov. 21, 1899, urging the vice-
roys and governors of the maritime and Yangtse
provinces to continue aggressive measures, and to give the princes and other officials and generals who took the lead in Pekin, that China was strong enough to);

The Manchu military forces for the support of the dynasty against either foreign or internal enemies. Of the reformers to whose advice the Emperor had lis-
tened, some were executed, some escaped abroad,
and others were exiled to the frontiers. The gov-
ermen and high officials who had leaned toward
and the former chief advisers of the Empress were sent away from Pekin to provincial posts. The Manchu troops in and about Pekin were brought up to a strength of 72,000 men, rearmed with modern weapons and
trained in European tactics. They consisted of the Pu-Chun, the Imperial Guards, and Banner Corps,
10,000 strong, under Prince Tuan, and the Imperial Guards, or Banner Corps, 12,000
men in all, under Yung-Lu, who was also gen-
eralissimo of the northern forces, and was the most
intelligent politician in the entourage of the
Empress. On Jan. 24, 1800, the Empress procured the
signature of Kwang-su to a proclamation an-
nouncing the selection of Pu-Chun, born in 1880,
son of Prince Tuan, a brother of Hien-Fung, as
heir apparent. This infant prince was declared
to be the heir, not of Kwang-su but of Tung-Che.
All China scented a plot to put the reforming
Emperor out of the way in order to prepare for a
new reign under Chinese blood. The wounded old Empress. Mutterings of remonstrance were
heard in every quarter. A month after the an-
nouncement of the new crown prince the Empress
Dowager prepared a proclamation dethroning per-
namently the Emperor Kwang-su, followed by one
of legality and the setting up of Prince Pu-Chun as
emperor. Although this new coup d'état was sanctioned by the princes of the imperial clan and approved by the majority of the Grand Council, nevertheless it was not carried into effect. The generals
of the Nanyang army declared to Viceroy Liu at
Nankin that the new Emperor would not have the
services of their troops. The officials and
by the reform party, strong in the center and the south, whose purposes she had frustrated. The anti-foreign crusade begun by the secret society known as the Boxers was begun at a time when the ignorant Manchu and Pechili were considering the policy of defying the powers and perhaps winning back the alienated seaports, or at any rate checking further encroachments, and by a firm anti-foreign attitude regaining the wavering loyalty of the Chinese provinces. The Government had purchased 125,000 Mauser rifles with 1,000 rounds of ammunition, 195 field guns with 3,000 rounds, and improved guns of large caliber for the Taku forts, which Chinese gunners had been taught to handle by German instructors.

The Boxer Uprising.—The process of slicing China alive, as the Chinese statesman Li Hung-Chang calls the setting up of territorial claims by European powers, seems to Chinamen to have been started in retaliation for the killing of two German missionaries by a mob in Shantung. In that province a strong anti-foreign feeling was evoked by the action of the Germans, which gave an impetus to a certain secret society that had already adopted the orthodox propagation of Christianity by Roman Catholic missionaries, and now adopted a general anti-foreign propaganda. Its name is I-Ho-Chuan—the League of United Patriots—but the last word can also be spoken so as to mean lists, and since athletic contests were practiced by its members foreigners gave them the name of the Ten Thousand. The native country of Confucius and Mencius and of a long list of illustrious Chinese statesmen and generals, and the home of a proud and stalwart race, resented sorely the growing pretensions of Germany and the presence of a foreign garrison. This society took advantage of the efforts of the government to suppress the Boxers and to strengthen the constabulary, in which many of its members enrolled themselves. Later it became merged in the Boxer organization, which became active in the latter part of 1899. The Boxers, although originally hostile to the Manchus, adopted as their tenets support of the heavenly dynasty and death to all foreigners. The leaders of the society were Chinese literati, and their secret purpose may have been to bring about the downfall of the Manchu Government by embroiling it with foreign powers, as well as to wrest the leased territories from the Europeans, and render their rule impossible in the spheres of influence over which they had wrung from the Empress Dowager.

The recrudescence of anti-foreign fanaticism among the country people of Shantung and Pechili and in Manchuria was caused not so much by political sentiment as by the superstitious belief that the foreign devils bring ill luck. They were suffering from the effects of a prolonged drought and with famine staring them in the face, when the Boxers told them that the celestial powers were angry because they permitted the presence of devils, and could only be appeased by the extermination of Christians, as had happened in 1870, when a massacre had brought rain; they therefore sought to satisfy the deities and with desperation and the prospect of plunder, and by envy of the Christian converts who were fed by the missions. In diplomatic and commercial circles the rising anti-foreign sentiment was, as on former occasions, laid to the charge of the missionaries, who were accused of interfering in the domestic affairs of China and of using legal process as an instrument of pressure; but the advocates of Chinese independence now seemed prepared to use force as a last resource, and by working through the courts to secure privileges and advantages for their converts, and of invoking the support of their legations when such activity brought them into conflict with the authorities or provoked the resentment of the populace. Protestant missionaries, while denying that they attempted to exert undue influence or interfere in lawsuits, affirmed that the Roman Catholics were accustomed thus to intervene in local affairs. The Roman Catholics on their part reversed the accusation and exculpated themselves. There were 800 priest missionaries who had 2,000,000 converts, while Protestant missionaries of various nationalities, but chiefly English and American, and of different denominations, numbered 1,700, with 27,000 converts. The Chinese converts are generally despised by their fellow-countrymen, who say that they embrace the foreign religion for selfish and mercenary reasons.

The Boxers gained so many converts wherever they could, especially among the poorer classes, not among the poor, the ignorant, and the disreputable alone, but among merchants, learned officials, and people of influence and standing, and especially among the Manchu nobility and military class, that the Imperial Government did not and could not treat them as members of one of the ordinary sects and laws could not be applied to them. The Boxers clothed their doings with mysterious and spiritualistic rites, besides practising boxing and fencing, and the movement had the aspect of a religious awakening. Every one looked on it as something strange and supernatural, bringing deliverance not only from foreign aggression but from the wrongs and evils increasing in the country, as well as from the growth of the sect, which gained millions of adherents in the course of a few weeks, suggested to the Governor of Shantung and to the bellicose Manchu generals the plan of utilizing the Boxers as a militia if it came to a war with the European powers. In the earlier conflicts between the Boxers and the missionaries and the Pechili, they had assumed an attitude of impartiality, and when the Boxers committed depredations that called for complaints from the foreign ministers the Government characterized the culprits as bad Boxers who had crept into the society by false professions. When, later, their acts threatened to provoke European intervention, they were spoken of as rebels in the diplomatic correspondence, and at the same time praised as patriots in secret edicts. When military intervention actually resulted, they were armed and organized as a militia.

The Boxer society was over a hundred years old when it took on new life and began to attract attention in the beginning of the ninety years when it had been under an imperial interdict. In 1898 trouble arose in northwestern Shantung over an old temple near Linchinchau which the Roman Catholics claimed to have bought and which they tore down in order to build a chapel on the site. The people of neighboring villages demolished the chapel and rebuilt their temple, which was in turn pulled down, and the chapel was re-erected by the Government. In the summer of 1899 a difficulty arose in the vicinity of a station of the London mission in southeastern Pechili, and serious trouble was only averted by the vigorous action of the British consul at Tientsin. In 1899 and the thousands, those who were less superstitious being moved by desperation and the prospect of plunder, and by envy of the Chinese
force of Chinese troops marched into the district and dispersed the Boxers after killing 98 of their number in a fight. On Dec. 31, 1899, the Rev. Mr. Brooks, an Englishman, was cruelly murdered in Shantung. Sir Claude MacDonnell addressed a grave remonstrance and warning to the Tsung-li-Yamen. The troops, under Governor Yu-Hsien, who was removed, but only to be appointed Governor of Shansi, the Tsung-li-Yamen, with Prince Tuan at its head, received with meriment the charge of the German representative, backed up by his British and American colleagues, that he was responsible for the disturbances in Shantung. Tsung-ji-Shih-Kai was appointed Governor of Shantung, and he began to put down the Boxers, giving his brother charge of his troops, which are the best disciplined soldiery in China. The brother was immediately recalled, and the new governor was made to understand that he would be held answerable for any popular disturbance resulting from his action against the Boxers.

The burning of a Christian congregation in its chapel and the cruel murder of two native preachers occurred in January, 1900. The pillage of converts and the exacting of fines for the support of the Boxers were matters of daily occurrence. Tsung-li-Yamen, Paotung-Fu, was the principal headquarters, and some of the officials were punished, but the British Government declared the settlement unsatisfactory in that no punishment was inflicted on Yu-Hsien. The British minister, on Jan. 11, warned the Tsung-li-Yamen that whether the negotiations took a friendly course or the matters were decided in the manner in which the local authorities carried out the imperial edict enjoining strong measures. On the same day another edict was issued which seemed to encourage the Boxers, and in view of its equivocal language identical notes were addressed to the Tsung-li-Yamen on Jan. 27 by the American, British, French, German, and Italian ministers protesting for the promulgation of an imperial decree condemning by name and abolishing the 1-Ho-Chuan and Ta-Tao-Hwei societies. The answer received on Feb. 25 was so unsatisfactory that the ministers demanded a joint audience of the Tsung-li-Yamen. A decree denouncing the 1-Ho-Chuan was issued, but its failure to punish the principal offenders and to recall the honors and promotion bestowed on the late Governor of Shantung, whom the foreign representatives regarded as the chief instigator of the anti-Christian movement. At every new outbreak of lawlessness fresh proclamations were issued, some of them excusing or encouraging the Boxers and their patriotic spirit while condemning their excesses. Soldiers were posted at various points, many of them being members of the Boxer society and all except troops brought from Tientsin sympathizing with its objects. These foreign-drilled troops dispersed various bands and killed numbers of their members, but the scattered bands reassembled in a safer place. Proclamations that were a warning punishment if the Boxers did not disband within a certain time were neutralized by secret edicts representing them as Chinese patriots who wished to organize a local militia to help their country in its difficulties. The society, which was originally founded by Taoist priests, practiced secret ceremonies, and claimed to be invulnerable to bullet or sword. They made no effort to procure rifles, but were armed only with swords, pikes, and three-pronged forks. Their claim to invulnerability against all kinds of weapons was believed implicitly by themselves even when they saw men in their ranks falling in numbers. The chiefs of the Manchu party believed it also, or affected to believe it; and when one of the Chinese ministers told the Empress that he had seen heaps of slain Boxers, she said that they must have been robbers who had joined the bands under false pretenses. Tung-li-Yamen, the Tsung-li-Yamen, the victorious Chinese general, ever since he arrived in this flexile, undisciplined Mohammedan troops from Kansu two years before after suppressing the rebellion in Mongolia, had been eager to engage in a war with all Europe. Prince Tuan also, who had passed much of his life at Mukden, was persuaded that the rebels and foreign army, aided by the invincible Boxers as irregulars, would prove strong enough to drive out any force that the outer barbarians were likely to send to China.

The Boxer movement had spread from Shantung into Pechili and Manchuria and invaded Tientsin and Pekin before the Boxers began openly to drill and to threaten the Christian communities. They established their headquarters at Paotung-Fu, 80 miles south of Pekin. Before the end of May this district was filled with Boxer camps, and the movement spread toward Pekin. In Chochau were many thousands of Boxers, who ate up all the food in the district, and compelled the Taotaizi to stamp out with official severity any new proclamations. Attacks were made on the small scattered communities, especially upon native Christians. These began to flock to the missions for protection. Some of the American missionaries made formal charges against the society and accused several of the provincial officials of upholding it. Yu-Hsien, Governor of Shantung, in a secret memorial advocated the society as a useful agent in driving out foreigners and preserving Shantung for the Chinese. The Empress Dowager, in a number of edicts, while condemning secret societies in general, made an exception of this patriotic organization, whose watchword was to uphold the dynasty and exterminate or expel the foreigners. Its members were declared to be peacefully practicing athletics and learning gymnastics for self-defense and to protect their villages and homes.

On May 28 some bands which set out from Tungchau destroyed the railroad station at Yung-Tai, close to the capital, where the Tientsin and Pekin Railroad and the Great Northern Railroad met. The track was torn up for many miles, and the machine shops and locomotives were destroyed. After the attacks on Catholic missions near Paotung-Fu, on May 17, Bishop Pavier, in Pekin, warned the French minister that Pekin was surrounded by Boxers, who were planning to attack the legations; that they were numerous within the city, and were compelling Catholic converts to take refuge in the mission compounds; that the Boxers were approaching from the east as well as the south, and only delayed their progress in order to exterminate all Christians on the way. The bishop fortified the Peitang cathedral, bought supplies, rifles, and ammunition, and in the end obtained guards for which he petitioned.

-32 French and 10 Italian marines. The Belgian and other engineers at Chang-Hsin-Tien, on the Lu-Han Railroad, were rescued with their families by a party of civilians from Pekin. A large number of engineers, mostly Belgians, endeavored to escape from Pekin, and after some months' delay obtained a pass with a Chinese escort, which betrayed them to the Boxers. The party, after losing the boat, divided into two companies. One company tried to return, but went astray, and the survivors finally reached Cheng-Ting-Fu, where they helped the bishop, priests, and nuns to defend the mission station against repeated attacks. The other com-
pany marched overland to Tientsin, suffering great hardships, and was at last escorted into the foreign settlement by a strong rescue party. Another attempt to relieve had failed, the Taotai, escorted by 30 Russian soldiers, having returned with the two officers and several men wounded. Three American missionaries at Kalgan made their perilous way across Mongolia to Kichta and thence to Europe by the Siberian Railroad. Other missionaries who attended a convention at Tungchau, having been warned by the Taotai that the soldiers he had obtained to protect them were untrustworthy, were brought away by a party of armed missionaries from Pekin. After the departure of the missionaries the college and mission buildings and the imperial post office at Tungchau were wrecked. The Taotai recouped the virtual prisoner of the Boxers, who compelled him, like the Chochau magistrate, to sign decrees at their dictation.

When the Boxers at Chochau were making preparations to march on Pekin the Chinese party at court obtained a majority in the Grand Council in favor of sending Gen. Nieh with his troops, supported by Lofa-Lun, to reinforce the Empress to commission two mandarins of high rank to precede Nieh and secretly reassure the Boxer leaders, and when Nieh dispersed some bands and killed 500 Boxers he was recalled and reprimanded.

Unsuccessful Relief Expedition.—Foreign warships began to assemble at Taku only a day or two before the legation guards were sent up to Pekin at the request of the ministers. A score of ships were anchored there when the request came on June 9 from the British and American ministers for more guards, as the situation was most serious. The naval commanders had been instructed to hold the enemy in check; but the result as to any concerted action that might become necessary, the ministers having urged their respective governments to give their officers such discretion at the suggestion of M. Pichon. A considerable force of marines of the various nationalities had been landed and taken up to Tientsin with their own officers as additional protection. The commanders and consuls held a conference in regard to the message, and the French consul agreed with his Russian colleague that the information was not sufficient to justify an act amounting to forcible intervention without orders from their governments. Capt. McAlla said: "My minister is in danger and asks for help; I am going." Admiral Seymour agreed with this decision, and the other commanders, being unwilling to leave the initiative to Great Britain and the United States, decided to take part in the expedition. The Chinese authorities, after first refusing, consented to furnish railroad transport. More than 400 men were brought to the shore the next morning, others were detached from the force already at Tientsin, and the expedition set out in four trains, the last one, holding the French and Russians, being delayed till the following day. The mixed force was composed of 715 British, 350 Germans, 104 Americans, 300 Russians, 158 French, 54 Japanese, 40 Italians, and 25 Austrians; total, 1,846 men. The British had 3 9-pounder muzzle-loaders, 3 Maxim's, 3 Nordenfeldts, and, mounted on a truck in front of the first train, a 6-pounder Hotchkiss quick firer; the Americans had a 3-inch fieldpiece and a Colt automatic rifle; the Russians a field gun, the Italians a machine gun, and the Germans 2 machine guns. The trains passed through Peitsang and Yangtsun without misadventure and reached Lofa the same afternoon, having been detained only by a small break, which was quickly repaired, but the stations had been burned by Boxers at Anting and Yangtsun. The forenoon of June 11 was spent in mending it. The work of repairing was done by sailors, mostly British, German, and American, with the assistance of coolies that the Japanese and British had brought from Japan. The commanding officers, after conferring, announced that the purposes of the expedition were to reopen railroad communications with Pekin and thus insure the safety of their legations and national interests in that city, and to assist the Chinese Government to restore peace and order. Admiral Seymour commanded in chief, and on each train the senior officer was in command. Beyond Lofa working with the virtual progress because the rails were torn up and often twisted. Only two or three miles had been repaired when a large body of Boxers advanced boldly to attack the troops. After misunderstanding of orders and much confusion the men were formed in line as the Boxers, who themselves had dispersed, were drawn forward, brandishing their swords and spears, but they were checked before coming into close quarters by a fusillade that killed 35 and put the rest to flight. Beyond Lang-Fang the troops were attacked by another body of Boxers who had torn up the tracks at that point just before. Again there was confusion among the commands of the different nations. The Boxers rushed rashly up to the bayonets, and were not driven off until a Maxim gun was brought into action; yet they did not hurt a single man, although they left 102 dead on the ground. The guard attached to the construction train killed 25 in another fight. No loss was sustained by the allies of 14 men and 3 horses. The guard, while guarding Lang-Fang station. The Boxers, 600 strong, advanced on the station up to within 25 yards of the line of British tars, braving the volleys of the latter and the fire of a German Maxim, which killed a quarter of their number before they retreated. The roadbed beyond was occupied, and the train was started on its way to reaching Pekin by the railroad, but planned, if Anting could be made, to dash through by a forced march. On the same day 1,500 Boxers attacked the guard left at Lofa station, and were driven off by the aid of reinforcements that were sent back, losing over 100 and wounding 2 men with missiles from an old cannon. On the bodies of Boxers were seen in the rear, and these tore up the track, destroying communications with Tientsin. Ahead the railroad was completely wrecked. On June 18 the troops at Lang-Fang were attacked by a force of 5,000, in which were many imperial troops and a large body of cavalry. The advance guard, of about 300 men, was driven back, and the train returned. The German legation of Tung-Fuhsiang's army, who had left Pekin to check the advance of Admiral Seymour's expedition. The troops formed in line, consisting of Germans, Russians, British, and Japanese, commanded by Capt. von Usedom, a German, They advanced in skirmishing order and quickly scattered the Boxers who came in the first line and charged with their usual futile courage. Behind them were the Chinese soldiers, who delivered a heavy fire from machine rifles. They also were stopped, but renewed the attack when the Europeans started back for the train. The Germans faced about quickly and, taking a position in line, opened fire on the Chinese who had charged with their usual futile courage. Behind them were the Chinese soldiers, who delivered a heavy fire from machine rifles. They also were stopped, but renewed the attack when the Europeans started back for the train. The Germans faced about quickly and, taking a position in line, opened fire on the Chinese who had charged with their usual futile courage.
this fight the allies concentrated at Yangtsun, where the decision was taken to retreat, abandoning the line of march beyond repair, and camps of Chinese troops as well as Boxers had been seen between Yangtsun and Pekin.

They started on June 19 to march down the Peiho, placing the wounded and stores on four junks that had been seized by a German reconnoitering party. The march was exceedingly slow on account of the difficulty of managing the junks in the eddies of the river. On the second day the Americans at the head of the column encountered Boxers and drove them away with a cannon. After that every village wall, every clump of trees, and every ditch gave cover to the enemy, who contested the whole way with rifles and cannon. When the Chinese appeared in the open they were easily scattered by fire from machine guns. The villages were cleared by bayonet charges. They were scarcely half a mile apart, and at every one there was a fight, while in the intervening spaces the men were constantly exposed to the fire of the Boxers, using smokeless powder, and had a small gun, fired with smokeless powder also. Peilsang was taken from a garrison of Chinese troops after a stubborn battle. Below that place they had to fight Chinese regulars having field guns and cavalry. Capt. McCalla and Cadet Taussig were wounded. The enemy could not be dislodged, and on July 22 approached the old city of Tientsin, having seized three more junks, on which they put their heavier guns as well as the wounded. They attempted a night march, but were checked by a heavy fire. The junk with the guns on board sank. In the morning they came on the other bank and were hailed by soldiers of the viceroy, who were told that the troops were going to Tientsin and had no trouble with anybody but Boxers. To the surprise of the allies, the Chinese opened fire with rifles and guns all along the wall. They knew nothing of the capture of Peilsang. They cheered against the fleet, sought cover and returned the fire. The Frenchmen on their junk stopped close to the wall and began firing on the Chinese, while a party of British and one of Americans and Germans crossed the river above and below and stormed the low wall at different points. The British entered first and succeeded in sending one of their guns into Taku, causing them to run in surprise and consternation. The Germans and Americans took two other guns and turned them on the garrison, and soon the place was abandoned by its defenders. It was the great HSiku arsenal, with a garrison of about 500 men, who were not more surprised by the attack than the Boxers were when they found besides 7 guns mounted on the walls, 60 odd stored in the buildings, all of the most modern design, and Mannlicher rifles by the thousand, with millions of rounds of ammunition. The Chinese, with 5,000 native troops, had field guns, seconded by guns of position in Tientsin. The expeditionary force therefore determined to remain there, and brought over the troops left on the other side of the river and the wounded from the junks. Large guns were mounted at every corner, with smaller rifles and machine guns along the walls. By rocket signals they found that the Europeans still held Tientsin, and then they deployed and followed up with their superior artillery against the incessant attacks of the Chinese until relief came. On June 25 came a relief column of Russian troops, and on the following morning they marched unopposed down to Tientsin after destroying guns and war stores in the arsenal worth 40,000,000 taels. The expedition had lost more than 80 killed and 260 wounded.

Reduction of the Taku. As the extra guards under Admiral Seymour set out from Tientsin, Yansu soldiery marched from Pekin to oppose them and cut the railroad, and large bodies of Boxers congregated at points along the line. On June 6, when the railroad between Admiral Seymour's party and Tientsin was cut, the American, British, French, German, Austrian, Italian, and Japanese admirals held a council of war for the purpose of arranging combined action if required. There were 25 ships in the harbor and 500 men on shore. Each government trusted its naval commander with discretion to decide, in consultation with the other commanders, what action was required by the necessities of the case for the protection of its legations and citizens. The Boxers and troops that cut the railroad in the rear of Admiral Seymour immediately invested Tientsin. Until then the officers at Tientsin did not know definitely that the relief force was cut off, or that the Peiho could not be crossed by Admiral Seymour until they saw the rockets sent up from the Chinese arsenal. When Seymour's expedition started, the Government at Pekin gave orders to the Viceroy of Pechili to resist by force the landing of any more troops. Gen. Liu had been sent to garrison the Taku forts with about 3,000 soldiers and about 1,500 Japanese in the forts, and when the additional guards started for Pekin against the protest of the Chinese Government, the works at the mouth of the Peiho, partly of modern and partly of older construction, mounted 200 guns, half or more of them of modern patterns.

On receiving information that the Chinese were re-enforcing Taku and sending troops to attack Tientsin and occupy Tangku and preparing to mine the mouth of the Peiho, the admirals determined to seize Taku. They first held a naval council on board the Russian flagship on June 15, and resolved to land 300 Japanese marines to guard the railroad station at Tangku, but not to assume the offensive unless the 2,000 Chinese reported to be coming should advance to seize the station. On June 16 they resolved at another council that although the Chinese Government, when the Boxer disturbances began, had seemed sensible of its danger and unique position, they were now so engaged in laying torpedoes in the Peiho and advancing against the railroad, and were plainly co-operating with the insurgents; therefore, since the responsibility of preserving communication with the land forces depended upon the naval commanders, it became necessary to occupy temporarily the Taku forts, with or without the consent of the Chinese authorities. This intention was conveyed to the Viceroy of Pechili and the officer commanding the forts, who were notified that unless these were evacuated hostilities would begin at two o'clock in the morning of June 18.

The admirals designed a combined attack on the forts by land and water, and for this purpose 1,500 men were landed on June 16 to take the forts in the rear while the gunboats bombarded them from the river. The Chinese did not wait for the time of the ultimatum to expire, but opened fire on the vessels a quarter before 1 p.m. of the night of June 17. The storming parties came into action only on the following morning, and the operation was therefore more costly than it would have been had the original plan been carried out. The large ships outside the bar could not assist, as no vessel drawing 20 feet of water
can get within 10 miles of the forts. The Russian Capt. Dubrowski, as senior officer, was in command of the Allied fleets, guns, and ships. The Japanese and British sailors and Russian infantry took possession of the railroad station of Tongkou and wharves 2 miles from the forts. In the river above the forts the gunboats and destroyers took their stations—the Russian Bohr, Koreetz, and Gilyak, the French Lion, the German Itlis, and the British Algerine, Whiting, and Fame. The American Monocacy was there also and was utilized as a hospital ship. Outside, 10 miles off the forts, lay the British Centurion, Barfleur, Orlando, Aurora, and Endymion, the French D'Entrecasteaux, Jean Bart, Descartes, Pasac, and Surprise, the Russian Sissioi Veliky, Rossia, Dimitri Donskoi, Makhinoff, Sivouch, and Gremischky, the Italian Elba and Calabria, the German Hansa, Hertha, Gefion, and Kaiserin Augusta, the Japanese Yoshimo-Kan and Marko-Kan, the Austrian Zenta, and the American New-ark. The Chinese Hai-Tien and Hai-Chu were there, and when notified of the intended attack they hastened to join in. In the first, the Monocacy had been ordered to observe a strict neutrality, and took no part in the affair. The Atago, besides sending landing parties ashore, was likewise inactive. An armed train with a searchlight, manned by 100 men, was sent off for Tien- tsin when night set in.

The attack was begun after midnight by one of the Chinese forts firing on the Algerine, a third of a mile distant, which replied directly, and was promptly supported by the Russian gunboats moored in line a quarter of a mile beyond. The Itlis, which had cleared for action days before and was the only vessel in perfect fighting trim out of the fleet, also fired on of the forts took up the fire. The Itlis left her moorings, and with all lights out steamed down the river to the aid of the British and Russian vessels. As soon as anchor could be lifted the Lion followed. The six gunboats were then under fire of all the forts at ranges averaging a mile, and when other gunboats came up the guns in their tops made it impossible for the Chinese to serve the new Krupp quick firers mounted in cavaliers over the high redoubts, but the guns in the angles and the parapets could not be seen, for the night was very dark. The Gilyak, moving close to Taku village, lost many men by rifle fire, and in a short time the forts opened fire on the barges. The battle cruisers, destroyers Fame and Whiting steamed up the river to the naval dockyard and captured the first-class 32-knot German-built destroyers Hai-Lung, Hai-Nui, Hai-Ching, and Hai-Hoba. They were fully manned with Chinese crews, who jumped upon the wharf and ran without striking a blow or firing a shot. During the night the six gunboats, although their shells were well placed, could do no more than hold in check the fire from the forts, which was, however, ineffective. Many of their guns had to be fired with extreme depression from the high redoubts. The powder charges were too light to carry the projectile to its mark, or sometimes they were excessive. There were no well-trained gunners among them. Yet with all these disadvantages they might have won the battle by their valorous persistency if their shells had not been worthless, most of them having either no bursters, or fuses so defective that they failed to explode. If only a part of the shells had been trained, the batteries might have had up under the fire of two miles of fortifications for six hours. When daylight broke, the Chinese poured in a much more vigorous fire, and the gunboats got under way on the flood tide—all except the Gilyak, which received a heavy pro- jectile on the water line. Steaming closer to the target, the Gilyak was invited to make an invited attack, or passing up and down to deliver their broadsides, the ships worked all their guns with desperate energy. The Itlis had to be beached, a heavy shot having pierced a boiler. An explosion of a magazine in the largest fort checked the Chinese fire for a time, but soon it was renewed more fiercely than before. The storming parties had reached the forts on the north bank of the river, the Russians from one side, the Japanese from the other. Yet it appeared that the attack had failed. The heavy guns of the south fort were brought to bear on the gunboats, and when the storm of projectiles, which exploded more fiercely than before, became too severe for the ships to live in, the main magazine of the fort blew up, sending a blast of fire, smoke, and debris a thousand feet into the air. The concession was so terrible that forts and ships ceased firing, and as cheers arose from the allies the Chinese fire was renewed with little effect. When the storming parties entered the north forts the garrison made no resistance, but was leaving as fast as possible, and when the south fort was reached, Chinese soldiers were seen fleeing across the plain. Many prisoners were taken, and employed in removing the dead, nearly one hundred out of the garrison were killed or wounded. The guns were in good order, and some of them had never been fired. The storming parties, consisting of 200 Russians in the van, 250 English and 130 Germans forming the main body, and 300 Japanese in the rear, had to advance 2 miles along a narrow road. The Russians were preceded by Japanese, the Chinese, followed by Germans marching through paddy fields made little progress in the mud. The Japanese, more accustomed to such ground, found a better path and passed the others on the double quick, entered the north fort first, and drove the Chinese out at the point of the bayonet. Their captain was killed outside the walls, and their losses were 5 killed and 4 wounded: the Russians, 18 killed and 39 wounded. In the river the Itlis was struck 8 times, the Gilyak received 4 shells, the Koreetz 4 and took fire, the Lion was struck once, and the Algerine once. There were killed in the naval action 18 Russians, 16 Japanese, 7 Germans, 1 Austrian, and 1 American. The 170 killed and wounded were conveyed to Japan for treatment. The allied naval commanders issued a proclamation from Chifu stating that the powers were not making war on the Chinese people, their only object being to rescue their countrymen and to suppress the Boxers.

The Taking of Tientsin.—The Boxers and Kuomintang that destroyed the railroad and cut off Admiral Seymour's column proceeded to invest the European settlements at Tientsin, which were defended by about 3,000 men, with few machine or other guns and a short supply of ammunition. The besiegers had modern artillery, and after the fall of Taku the guns in the forts and troop station across the river, but withdrew on June 19, having lost 7 officers and 150 men and shot away nearly all their ammunition. Relief could not be brought from Taku because the railroad
was cut on June 15. A force of 400 Russians and 150 American marines with 3 field guns attempted to break through on June 20, and were driven back. On June 20 a relief force of 1,500 Russian soldiers and 380 British, 240 German, 100 Japanese, and 50 Italian marines started in armored trains, with an abundance of artillery, followed by 750 German troops. This force raised the siege on June 23, after silencing the field guns of the Chinese and the guns of the forts in the old city. In the night of June 25 a detachment of 2,000 Russian and other troops relieved Admiral Seymour in the Chinese armory and brought his force and 200 wounded safely away. The railroad was then opened, and troops were landed at Taku and taken up to Tientsin. As the allies made no further move, the Chinese were encouraged to take the offensive again. As soon as the allies advanced on Tientsin regular Chinese troops from Pekin and other ports were ordered to oppose them. Gen. Nieh with 10,000 Chinese regulars arrived on July 4 and occupied the arsenals and forts in Tientsin. Extending their lines so as to partly inclose the settlements, the Chinese planted guns in close proximity to the lines of the allies and held the large European force practically in a state of siege. On July 6 the English and French settlements were shelled with fieldpieces concealed in the suburbs of the Chinese city. Outpost fighting was constant, and the rifle and gun practice of the Chinese continually improved. The railroad station was all the time under fire, and along the whole line the Chinese attacked nightly. Shells exploded in the buildings used as barracks with increasing frequency. The investing line was extended until it formed a crescent six miles in length. The battery of British naval 12-pounders was shelled from front, rear, and side, and this cross fire and the bombardment from a fort and several field batteries caused many casualties in the settlements. The military commanders decided to clear the flank and rear of their principal battery, when its position became precarious, by a wide flanking movement from the northwestern forts in the northeas, taking in the arsenal as the final objective. Gen. Fukushima, commanding the Japanese, suggested the plan and conducted the operation. With 1,000 infantry, 150 cavalry, and 2 mountain batteries, on July 9 he made a wide sweep, with the British in line on the right, under Gen. Dorward, consisting of the Welsh Fusiliers, a regiment of Chinese trained at Wei-Hai-Wei, a Hong-Kong regiment, and a naval brigade under Admiral Seymour, and at the pivotal point of the turning movement a force of Japanese blue jackets and 100 United States marines under Major Waller, whose duty it was, when Gen. Fukushima approached the arsenal from the left, to advance under cover of the mud wall, the whole of the forces converging on the arsenal. Gen. Fukushima's infantry charge, prepared by the British artillery and carried out under cover of his own guns, was a marvel to the military men of other nations. When the Japanese soldiers came into the fire zone they broke into a brisk run and kept it up for 2,000 yards. The Chinese, as soon as they saw the Japanese coming, stopped firing and retreated helter-skelter. The rest of the line then advanced so as to encircle the Chinese works. All the Chinese disappeared, leaving 4 guns and many banners, except 500 Boxers, who were found in a village and nearly exterminated by the Japanese infantry and cavalry. The arsenal was deserted when the Japanese and American storming party scaled the wall. In the afternoon the settlement was hotly shelled from the city, but on the following day the Chinese even refrained from attacking the outposts. The portion of Gen. Nieh's command with whom the battle had been fought was reported to be retreating, about 3,000 in number, and the rest of these trained Chinese soldiers to be quarrelling with the Boxers, who alone made a vigorous bayonet attack on the railroad station on July 11, and were only repelled after three hours of sharp fighting, in which the Japanese lost 50 men, the French 60, and the British 18. The troops were on the spot, because a general attack on the Chi-
nese position was planned for the same day. The plan was that of the Russian Gen. Stoessel, who undertook to cross the Lutai Canal on a pontoon bridge and capture the European artillery, numbering 42 guns, on the north bank, after which his force was to attack the Chinese camp and afterward the fort, while the rest of the allied forces made an attack on the south wall of the city and the neighboring suburbs. The operation was not carried out until July 13, when with the newly mounted British and French guns, the British and French, numbering 42 guns, for the first time overmatched the Chinese. A re-enforcement of 1,200 Americans arrived on July 12, bringing the international force up to 10,000, including 1,200 Japanese. The Russians advanced early the next morning on the right with 3,100 soldiers and 400 French and German marines, to capture the batteries on the Lutai Canal and clear the camps, while under cover of the naval battery on the west 2,000 Japanese, under Gen. Fukushima, and 850 French, 800 Americans, 800 British, and 50 Austrians under command of Gen. Dorward, attacked the city by another wide flanking movement. The Russians gained the city after a hard day's fight. They captured the batteries and destroyed the camps, losing 150 men, and returned in the evening, leaving a force to attack the forts at dawn. The attack on the city was begun by a heavy bombardment from the two English naval batteries, which landed their shells so well that a magazine exploded at the beginning of the battle, and the Chinese remained, which was spirited at first, soon grew slack. A terrific explosion of brown prismatic powder occurred soon after the infantry began to advance. The turning movement was made in long lines, the Japanese advancing under cover of the mud wall, the French at the gate, the other troops following in three lines; the plan of the magazine exploded, the Chinese began working round the walls. As the Japanese led the attack in the center, the Ninth American Regiment, supporting them on the left, was taken over to their center when it was seen that they urgently needed help there, and was caught in a funeral pyre of fire. Col. Liesum was killed while directing his men, and also wounded, and the regiment was forced to the support of the Japanese and lost heavily. The Japanese were brought to a stop by the heavy fire from the walls, and made only slight and intermittent progress beyond the mud wall, from which the artillery of the allies at times caused a momentary pause in the Chinese fire. The Japanese hung on to every foot they gained, although their losses were enormous. Those of the British, resting under cover, were slight excepting among detachments of sailors and marines that were sent to support the Americans and to strengthen the Japanese right. The shell fire of the allies produced considerable effect, yet evening came before the Japanese crossed the canal. In the meantime, smoke blew it up. The Chinese had destroyed the bridge over the moat. Gen. Fukushima determined to hold his position through the night, to throw a bridge over under cover of darkness, and to resume the attack early in the morning unless the Chinese, as his experience taught him they might, should evacuate their positions during the night. This most of them did, and when the Japanese crossed the moat, blew up the entrance to the bastion, and scaled the walls with remarkable quickness and skill before it was light in the morning of July 14, they met with but slight opposition. The French, British, and Australians followed. The Chinese troops retreated toward the north. The loss of the allies in the battle was 775 men among 8,000 troops engaged. The city was divided into four sections, and these were placed respectively under British, Japanese, Italian, and American jurisdiction. The guards were of little use, except the Chinese, except the battery of noncombatants began at once, and the object was the looting of this rich commercial city, in which European soldiers and officers vied with the Chinese rabbler. The Yangtse viceroy appealed to foreign powers to save Tientsin from destruction, as it would take a hundred years to restore it, and the effect would be disastrous to foreign interests as well as to Chinese commerce, saying that the foreign ministers in Pekin were protected, and that Li-Hung-Chang had been transferred to north China as Viceroy of Pechili.

After the capture of Tientsin the generals decided that, in view of the large forces that the Chinese Government had placed on its border route and of the difficulty of moving troops and transporting supplies in the rainy season, they could not safely advance to the relief of the legations until their forces were much strengthened and the organization of transport more complete.

**Capture of Pekin.**—The march from Tientsin to Pekin was made so successfully that once, 22,000 men in the relief column when it started. Of these, 12,000 were Japanese, forming 11 battalions, 3 field and 3 mountain batteries of 6 guns each, and 3 squadrons of cavalry. They were organized in two brigades, one under Gen. Yamaguchi and one under Gen. Fukushima. The chief command of the international forces devolved upon the Russian Gen. Linevich as senior officer. The British contingent consisted of a battalion of Welsh Fusileers, a Sikh and a Rajput regiment, a regiment of Punjabi infantry, one of Bengal lancers, and a naval brigade of sailors and marines, with a battery of 4 12-pounder naval guns, 6 15-pounders of the royal artillery, and 1 of muzzle-loading mountain guns, all relating to the Asiatic artillery, the total force numberin 2,800. The Americans, under Gen. Chaaffe, numbered 2,400 men of the Ninth and Fourteenth Infantry and the Sixth Cavalry, and a field battery and a number of Colt automatic and Gatling guns. The Russians had 5 battalions of 4,000 men each and 6 field batteries of 6 guns each, some Maxim guns, and a sotnia of Cossacks. The French had a force of 800 men, Anamese and Europeans, ready to start, with a battery of old field guns. The Austrians, Italians, and Germans were not in sufficient force to join the column.

During the preliminary reconnaissances Capt. de Marolles, with a party of French marines, embraced a chance to seize the Hsioku arsenal, which his men held in spite of the determined efforts of the Chinese to recapture the position. When the general movement began the Japanese had the advance on the west side of the river, supported by the British and American. The Russians and French, 4,000 strong, took the center, and then, after the river and the railroad, beyond which the Chinese had flooded the country to prevent a flanking movement. Reconnaissances had shown a long line of intrenchments at Hsiku, which were believed to be held by about 30,000 men. At day-break on Aug. 5 the Japanese cavalry made a brilliant ride into a battery of the extreme right of the Chinese line and cut down the gunners before they recovered from their surprise, though not without severe loss. This captured the artillery forces. Under cover of a heavy fire from the British naval 12-pounders, which checked for a time the battery of the Japanese infantry, without waiting for the British and Americans to come up, extended their line, advanced close to the Chinese intrenchments, and
charged on the double quick through a rain of bullets, not once faltering in spite of prodigious losses. Before they reached the trenches the Chinese fled. The main trenches, partly enfiladed by the British artillery, were evacuated when the whole line advanced, the Chinese artillery having already retired and the infantry only waiting to empty their magazine guns at long range. They evacuated the left bank also without coming into action with the Russians and French, and deserted the town of Peitang. The Russians and French precipitated their withdrawal by sending a column beyond Peitang, threatening the line of retreat. The impetuous assault on the first line of trenches gave the British the effect of demoralizing the Chinese, who believed after that that with repeating rifles behind the best intrenchments they could not stop a rapid infantry charge. From that time they would not await a Japanese attack on their trenches. Before other troops they stood their ground better. They retreated from Peitang to the much stronger position that they had prepared at Yangtun. It was the suggestion of Gen. Yamaguchi that the allies should follow up their initial victory by continuing to pound the Chinese until they became completely demoralized. Accordingly, the allies advanced on Yangtun the next day. There the British and French found their troops in a position to open fire and in a more extended position. The Americans and British began the fight with artillery preparation, and when the Chinese right retired the infantry advanced in the center. The Indian troops began to waver as the shell and small-arms fire from the railroad embankment became hot, but the men, already in the trenches, fell, dashed onward with a yell and carried the embankment, where for a time they suffered from the fire of the English artillery in the rear as much as from that of the Chinese intrenchments ahead. The casualties of the Fourteenth were 10 men killed and 55 wounded, 10 of them by British shells. Gen. Chaffee with the rest of the Americans cleared the villages on the right, coming under a severe cross fire at one point, and the Russians advanced cautiously through the already deserted villages on the left, and after a stubborn fight made themselves masters of the bridges and railroad station, losing 118 men. The Chinese had retreated southward; the Japanese and Americans followed them, most of them were undefended. The Japanese, who were in the rear, brought up their batteries in time to join the Americans in shelling the retreating columns. The fighting lasted six hours, in the midst of tall corn that shut off the view in front, and in an atmosphere so stifling that, while the casualties of the Americans were 74, more than 1,000 men dropped from exhaustion. Of the British, 45 fell in the battle. The Chinese, screened by the broom corn and evading a close fight, got away with slight losses.

The Chinese had been so well beaten at Tientsin, and chased away so easily from Peitang and Yangtun, that the generals formed a new estimate of the Chinese strength, and thought them to have been 45,000, and of their power of resistance. At a council of war the Japanese generals proposed not to wait for 7,000 additional British troops that were expected, besides American re-enforcements, nor for their own complement of supplies and transports, but to push on with what they had, the whole force of two brigades at Yangtun to guard communications, although they had provisions for less than five days and train for only a single brigade. By chasing the Chinese without giving them a chance to recover breath or courage they counted on rolling them up to the gates of Pekin without another battle. The other generals concurred. On Aug. 8 the Japanese set out before daylight, the other troops some hours later, and the next two days it was the same. Before they had marched an hour they came up with the Chinese, and they hurried their rear for the rest of the day. Fresh troops went forward each morning to form the advance guard of the day. Although the Americans had thrown away their blankets, ponchos, and other incumbrances, and the British had pack trains, none of the other troops could keep up with the Japanese, whose burden in light marching order was still the heaviest. They reached Hosiwu on Aug. 9, just in time to prevent the Chinese from working on a huge trench, from flooding the fields and roads and forming an end to boat transportation on the river above. The long marches in the hot sun were trying to all nationalities, but most so to the Americans, who were debilitated by their campaign in the Philippines, and least so to the Japanese, who rested in the middle of the day.

At Hosiwu the Chinese left behind a powder magazine. They made no determined stand in the fortified towns of Matou and Changkiawan, though their losses in the latter place were 500 men, most of them killed while trying to get away. At Huoshien they intended to give battle, having collected their forces in a position to repel the allies demoralized by the defeats they had suffered and took flight when the Japanese and European troops appeared.

Before Tungchau, on Aug. 11, the vanguard came in contact with some of Tung-Fuhsiang's troops, and preparations were made to assault the town, but in the night the Chinese evacuated it and fell back on Pekin. The total number of the allied forces between Taku and Pekin was at this time 39,000 men, with 120 guns, the Japanese and Russians making three fourths of the total. The troops mobilized by the powers would double this strength in a month's time. The generals no longer hoped to enter Pekin without a stiff battle. However, they were determined to make the assault with the forces they had at the front, knowing not only the preparations the Chinese had made for defense, but the extremity to which the legionnaires were reduced.

The commanding officers had a council of war at Tungchau on Aug. 12, and agreed upon a plan providing for a reconnaissance in force on four roads leading to Pekin on the following day. Each force was to go into camp 7 miles from Tungchau and 5 miles from Pekin and establish contact with the other forces, and on Aug. 14, when all the forces had been concentrated on the line of these camps, to make reconnaissances around the city, perhaps encircling the walls, as it was expected that there would be a hard battle to force an entrance. The general attack was planned to begin at daybreak on Aug. 15, and to be directed against the gates of the east wall. The camps were established at the places designated. The Russians pushed their reconnaissance in force up to the wall of the city, and, encountering no opposition, Major-General Vassilievski decided to force the Tung-pien gate that night. The cannonade that the Chinese in the city had begun upon the legations determined him to act quickly, and he ordered the other generals despatch their forces forward. He succeeded in blowing in the gate, which was feebly defended, and when he entered with his small force he concluded that the way was free to the Tartar city and the legations, and therefore advanced in column. The Chinese were waiting on the wall near the gate, and as soon as the Russians emerged into the street they opened a
terrible fire at short range. The Russians retreated under cover of an embankment, having lost 26 killed and 100 wounded, and in the morning the Chinese reoccupied the gate in strong force. The Japanese, whose task it was to assault the great Chihua gate, developed their attack as speedily as possible when they received word that the Russians had entered the city during the night, although only a part of their artillery and infantry was on the ground. The Americans were moved by the Japanese of the premature and presumably successful assault of the Russians. Gen. Chaffee had all his men at the front, while the British had yet to march from Tungchau. A troop of American cavalry went out early in the morning to reconnoiter the road, and when within three miles of the city they came in touch, with not superior force of the enemy. The troops dismounted and took position on a bank, and while they were returning the fire another lively fire was started in their rear, upon which they quickly retreated. This cross fire, it turned out, came from the Russians, who suffered more from the Chinese fire than the Americans, and answered it, the Japanese force being too strong for the Russian of a force of the allies on the intermediate ground. The missionary who acted as guide for the scouting party did not stop till he reached camp and told Gen. Chaffee that the reconnoitering force was cut off. Upon hearing this the commander ordered a general advance, and while it was still early in the morning Americans were marching rapidly toward Pekin. On the way Gen. Chaffee learned of the Russian night assault, and when he approached the city he found the Russians in hot action against the gate they said they had taken, the point where it was planned that the American force should enter also. The Americans were ordered at once into action, and under cover of a sealing party by a sunken road up to the wall, crossed a moat that was raked by musketry fire directed against the Russians. The two companies of infantry climbed the wall with difficulty and planted the American flag, but not until the Russians had formed the gate and hoisted their flag over it. More than 300 Americans entered the gate, where the Russians were resting, being thoroughly exhausted. The Americans halted also, and their battery shelled the walls where Chinese still showed themselves. The British, who developed their attack on the southernmost gate where the Russians were well engaged and had the American battery to assist them, had much difficulty in entering not long after the Russians. The Japanese had drawn the main force of the Chinese away to defend the Chihua and Tungchih gates of the Tartar city, against both of which they directed a heavy artillery attack. The main battle was fought by the Japanese in front of the Chihua gate, which was fougted by strong bodies on the battlemented wall on each side and on the huge tower over the gate, which contained thousands of loopholes commanding the street leading to the gate. Although Gen. Yama- guchi and Gen. Fukushima began to make their dispositions early, it was several hours before the last of their 54 guns were brought up and all were planted in an arc of a circle on the brow of a hill a mile from the gate. The bombardment was nearly constant for three hours, every attempt of the infantry to advance being met by the Chinese, who returned instantly to their loopholes and aimed a fire of musketry. The Japanese lost 200 men in attempting to storm the walls. They were still shelling the gate when the British Indian troops made their way into the suicide gate and marched into the British legation close by, with which Gen. Chaffee also established communication without bringing up his troops. The Japanese, keeping up a heavy and doggedly, could not get to the gate till night. When they did blow it open and enter they soon cleared the walls and tower. A Japanese detachment had already marched in by the Tungpian gate and gone up to the Japanese legation. Before night the different forces were encamped in the neighborhood of the legations.

The Chinese who retired from the outer walls went into the imperial city, from the walls and towers of which a fierce fire had been kept up all day upon the legations, and much firing was still going on. To stop it, the Indian troops manned the barriques about the British legation and a sent a battalion of infantry to each of the main gates of the city to guard them, in order to protect the Purple City and in case of a sortie of the palace. Their object was to establish communication with some one within who could be accepted as representing the Chinese Government, so as to open a way to begin negotiations for the settlement. These guards, however, met with violent opposition, and instead of being able to deliver their communications became involved in very sharp fighting, from which they suffered severely. The word that they endeavored to send through the gates of the Forbidden City was that they were there for the protection of the city and the Chinese within it. Gen. Chaffee’s plan, which was the one recommended by some of the ministers who went in search of a way in which they could be received by the Chinese, was to capture the Forbidden City and march in triumph into the palace, and thus humiliate the arrogant pride of the Chinese. Continued rifle firing from the lofty gates on the legations made their capture seem a necessary military measure. The advance was to be made through the Chen Mun five massive walls bar the approach to the palace, penetrated by archways that are closed by heavy gates. The first archway, screened by a false gate and surmounted by towers, was vigorously defended, and when Capt. Reilly turned back on being cut off by an enfilading fire from the gates, a French battery opened fire. Guns were brought down, and the gate was finally opened by shooting off the locks and bars. Between that and the next gate the troops were exposed to a withering musketry fire, and had to go back and wait till the Chinese were shelled out of their position, a French battery taking part in the shelling. This was the gate giving entrance to the Purple City, an enormous defensive structure on which the Chinese troops made their main stand. From the top of this gate the infantry exchanged shots with the Chinese on the next one until they ceased firing. Then that one, too, was opened by blowing in the locks; but as the Chinese opened fire the French battery, enfilading fire from the gate beyond compelled the men to fall back and remain under cover until shell fire directed through the arch cleared that
one also. But into that one, the outer gate of the palace, the Americans did not enter. Gen. Chinghsai of the Manchurian army, correspondence for the Russian chief of staff, after consulting with the other generals, he withdrew his whole force to the camp outside the Tartar city. While the Americans were engaged in heavy fighting during this day, with no ostensible object except to discourage the Chinese in the imperial city from firing into the legation grounds, the Russians rested and the British hounded in, camp, except parties that were sent in search of valuable spoils. The Japanese were busy preparing a camp outside the Tartar city. The following day and the day after were given up to looting, which was freely done by Russians and French, done by Americans against orders, and systematically done by the British, who stored up the loot to sell it later at auction and distribute the proceeds among the men as prize money. Only the Japanese abstained from looting altogether, and placed guards over buildings that were likely to be plundered; and their example was followed tardily by the other nations, but only after many prickly disagreements. The Japanese, rich embroideries, choice furs, carved jade, and other treasures. A joint administration was organized by England, France, Japan, Russia, and the United States. The Emperor, Empress Dowager, princes, ministers, and court fled before the allies entered the city, escorted by 3,000 of Tung-ki's imperial guards, and with the Emperor of Japan, in Shensi, with the intention of proceeding ultimately to Shensi to establish a new seat of government in the city of Singan-Pu. Before the departure of the Empress four high officials were executed because of their pro-foreign sympathies. On Aug. 17 Russian and French troops, led by Lord Napier and supported by American troops, marched to the relief of the Catholics in the cathedral, who were still persistently attacked by the Chinese troops in the Tartar city. The Chuchenchen gate was captured after a brief struggle. The Sihoa gate was stoutly defended, and so were a succession of earthworks that blocked the passage to the north. The German troops in the surrounding country were in a state of readiness to clear the Tartar city as well as the Chinese city of the Chinese regulars and the bands of Boxers that still held numerous points, but first to drive all the troops out of the imperial city. The French and Russians held the gates on the west side, which they occupied in relieving the boxers, and the Chinese soldiers were stationed at the gate, British at the southeast gate, and Japanese at the others. All marched in on Aug. 17, meeting with no resistance, and after a parade through the palace, sentries were posted in the palace buildings to prevent looting and destruction. The summer palace outside was occupied by Japanese troops. Small flying columns operated in the surrounding country to clear it of troops and Boxers. A Japanese force marched southward on Aug. 24. Paotang-Pu and other places were occupied. In proportion as the forces were split up their difficulties increased. Small bodies were attacked by the enemy courageously and often with success. The English and Americans made an attempt to restore and keep open the railroad. Later the task was given to the Russians by vote of the commanders, though against their protest.

Russian Campaign in Manchuria.—When the troubles arose in north China the Russians were pushing the construction of the Manchurian railroad on the least expected. The railroad from Talienwan and Port Arthur had been laid northward for 323 miles to Tielin, 40 miles beyond Mukden, and the section was rapidly being laid from Harbin southward to meet it, southeastward from Harbin toward Vladivostok, and northward to join the Siberian trunk line in the Transbaikal, 900 miles altogether in Manchuria, with lines cutting the line running from Vladivostok before the end of 1900. The activity of the Russians excited the people of Manchuria and made them especially susceptible to the Boxer propaganda, which spread in their province as in Shantung and Pechili, not without awakening the suspicion of the Russian authorities. When the Boxers began in the latter part of June to tear up the track and burn stations at points widely separated, sotnias of Cossacks were rapidly moved from place to place, and these military movements hastened an insurrection. When the Europeans seized the Taku forts the soldiers of the Chinese garrisons on the railroad in all directions and joined the bands that were formed everywhere to drive out the Russians. On June 25 the Amur troops were ordered to be put on a war footing, and reserves were called out in Siberia. The Boxers, defying the Governor of Mukden, seized arms and ammunition to attack the Russians. In a second column 1,500 Boxers were engaged in the defense of Harbin, and 3,000 Cossacks were sent to Manchuria from Port Arthur and from the Amur and Usuri, and Cossacks were brought from the Transbaikal. The governors of Tientsin, Mukden, and Kirin offered to guard the railroad to the Russian settlements and to prevent the security of their provinces if the Russians did not begin hostile action. They were assured that the troops would be used only against Hungu brigands and Boxer rebels. The French and English missionaries in Mukden who did not get away early were killed. The military officials made signs of support with the Cossacks, but did nothing. The agitation quickly spread, and several Manchu officials, as well as the Chinese troops, joined the revolutionary movement. Multitudes of Chinese coolies working on the Russian railroads left their task to drill with the Boxers, and those who would not were compelled to quit work by the Chinese railroad guards. The Mukden governor was imprisoned by his assistant, who led a large party of Boxers against Tielin. They attacked the coal mines and the railroad bridge at Lesooyang, and destroyed the Catholic church and sacked European shops in Mukden. The governors of Kirin and Tientsin, and Kirin and Chinese troops in the disorders, announced that they could not answer for the conduct of their soldiers. On July 7, having received an Imperial edict directing Chinese troops to unite with the Boxers, the governors requested all Russian engineers to transfer the line to the Chinese and leave the country under escort. The Russian chief engineer reminded them of their duties toward Russia, and exhorted them not to be afraid of the Bozoros, whom the Russians would help them to exterminate if they could not do it alone. On July 9 the chief engineer and his assistants, with the Cossack guard of 150, left from Tielin before an immense number of Chinese. Simultaneously bands of Boxers and soldiers attacked other places on the line as far north as Harbin. Soon bodies of Chinese were moving against the Russians wherever they were found in Manchuria. They were formally notified by the Chinese officials that a state of war existed, and warned to stop the fighting and allow Chinese combatants in Russian territory to return to their homes. Ample opportunity was given whenever Chinese military officers gave the notice. All able-bodied men in Manchuria were called to arms. Most of the Russians employed on the railroads were safely escorted by Cossacks to the Russian
side of the border. Those at Harbin and the guards under Gen. Gergens were besieged by the Chinese, and Gen. Gribsky gave his attention first to their rescue. A whole army corps was mobilized by this time, and another was called to arms in Siberia. A detachment of 8,000 men moved up the Sungari to Harbin, where the Russian railroad guards and workmen intrenched themselves; others advanced from the Ussuri and from Turfan. The Chinese garrison at Aigun was strengthened and the artillery increased. In the middle of July the Chinese attacked the Russian posts on the Amur frontier. A strong, well-equipped force began to bombard Blagovestensk on July 15, the Chinese of Aigun having thrown up intrenchments, and the Ussuri and from Turfan side of the river. Russian steamers with military supplies were stopped on the Amur. The attacking force was 8,000 strong, while the Russians were few, most of the troops having been sent to relieve Harbin. When the Chinese renewed their bombardment, on July 16, the Russians had 6,000 men. The next day they arrived with a relief column, and on the third day they had troops enough to attack and burn Sakhalin. The Cossacks, in cleaning out the Chinese settlements, did not show the same regard for the laws of civilized warfare that the Chinese had shown. They killed many who attempted to flee or refused to surrender. The General protested against the cruelty of massacring all the inhabitants of the Chinese villages on the Amur and Sungari, and warned the Russians at Harbin that they must depart, as the two countries were at war. The chief engineer replied that he would send away women and children, but would remain at his post until driven out by Russian and Chinese. At another point the Chinese attempted to cross into Russian territory, but were driven back by the Cossacks, who soon had the Amur line free from danger of invasion and marched rapidly to the rescue of small parties of railroad guards and engineers who were still in Manchuria. When the Chinese renewed the bombardment of Blagovestensk on July 22, Cossacks crossed the river and drove back their outposts. The Russians south of Harbin had concentrated at that place. The guards at Tielen, 200 strong, attempted to bring away not only Europeans but a great number of Chinese converts, and the defeated Russians from the border of Russia and China. At another point the Chinese attempted to cross into Russian territory, but were driven back by the Cossacks, who soon had the Amur line free from danger of invasion and marched rapidly to the rescue of small parties of railroad guards and engineers who were still in Manchuria. When the army corps reached the field of operations Gen. Grodekoff took the chief command. On July 26 captured the town of Sansing and its fortress, with 22 guns. The detachment marching from Streitsensk seized and burned the gold-mining town of Mokho. On July 27 Boxers burned the Russian settlement in the town of Kalgan, the terminus of the Russian telegraph line in China. Blagovestensk continued to be attacked daily from the opposite side of the river, where the Chinese force was increased until there were 18,000 troops, with 45 guns. On July 27 the local force that held the place, consisting of 3 battalions, 4 sotnias, and militia, with 10 guns, was re-enforced by 9 battalions and 5 sotnias, with 44 guns. The Russians then took the offensive. On Aug. 1, 3,900 Cossacks crossed over from Blagovestensk, took the town of Sakhalin, and the next day marched against Saigun, which was taken after a severe bombardment and an obstinate defense. Gen. Orloff's column occupied Hailar on July 30 after defeating several thousand Chinese. The officials and employees from Harbin and other points on the East Chinese Railroad finally departed with their families and arrived safely at Khabarofka, 6,000 persons altogether, Gen. Zakharoff having arrived on Aug. 3 with his relief column and opened the way for their passage down the Sungari. The vanguard of Gen. Chiehaghoff's detachment from Nikolaev arrived simultaneously, having on the march from the Ussuri destroyed the Chinese fortress of Eko.

On Aug. 4 the Russians under Admiral Alexieff, the Russian commander-in-chief, took possession of the Chinese city of Newchwang after a bombardment by two gunboats. The population was disarmed and the city was given over to occupation. A detachment marching from Port Arthur occupied the town of Gaiping. Most of the Chinese forces defeated in the north and north-west and the central parts of Manchuria retreated to Tsitsihar, against which the columns of Gen. Orloff, Benenkampf, Gribsky, Zakharoff, Gen. Gergens, and the artillery had advanced. Gen. Renenkampf's Cossacks, pursuing the troops that retreated from Aigun, had several severe encounters, and at Chingan cut off their heavy artillery. On Aug. 16 they captured Mengen with its fortress. The Chinese officials co-operated with the Russians in pacifying the districts that were occupied, and the Cossacks gave them excellent treatment. The Chinese, however, had been disheartened by the Chinese forces in Manchuria, and when Gen. Orloff and Gen. Renenkampf approached Tsitsihar from two directions its occupation was effected without a severe contest. Gen. Orloff's progress was contested all the way. In Liaotung the Russian troops under Gen. Fleischer hastened to the scene. The Chinese generals had left Haicheng and other points. That place was stormed and captured on Aug. 12. When Tsitsihar fell the Russians were in possession of every important place in Manchuria with the exception of Mukden.

The Southern Provinces.—Li-Hung-Chang, when Viceroy of the Kwang provinces, received a dispatch from Yung-Lu telling him to disregard edicts in the future. He consulted with the Nankin and Wuchang viceroys, and together they decided that they would act independently of Pekin, avoid disputes with the European powers, and prevent anti-foreign outbreaks in their provinces, but would make no gratuitous concessions. The Nankin viceroy, Liu-Kun-Yi, enlisted a great number of soldiers and armed them from the arsenals of Shanghai, explaining that his object was to keep order and protect foreigners. The Imperial Government feared British aggression in the Yangtse valley, and ordered him to resist it. A fleet of Chinese war ships assembled at Shanghai with the avowed object of co-operating with the powers for the protection of Chinese interests and the consuls and the threatening actions of British cruisers led to their withdrawal. The Governor of Shantung had an army ready to ward off any attack of the Germans. The British naval authorities sent no gunboats up the Yangtse after the
vice-roy's warning, neither would they permit Chinese gunboats to ascend the river. Troops were sent to be landed at Shanghai, with the explanation that British ships and forces were to be used to assist the viceroys in preserving order. The consuls of other powers declared that if the British Government landed troops, their governments would also. The two viceroys and Li-Hung-Chang requested the United States Government to use its influence to prevent the landing of foreign troops, which would only provoke disorders. On learning that Great Britain intended to land a force at Shanghai, the French Government ordered a detachment to be sent from Tonquin. The Viceroy Liu requested that no troops be landed, and the British troop ship sailed away. Eventually it was so arranged that equal forces both of British and of French troops were landed. An agreement entered into between the viceroys and the foreign consuls, whereby Liu ceased mounting guns in the Yangtse forts and stopped other war preparations in consideration of his being left to preserve the peace, was accepted by the United States Government, which promised to take no action so long as the viceroys maintained order. When the order came from Pekin to expel foreigners because their governments were making war on China, the great viceroys paid no attention to it, nor did the Governor of Shantung nor the Manchu Governor of Szechuan. The Governor of Chekiang promulgated the edict, and the Governors of Hupeh, Hunan, and Honan were inclined to disregard the instructions of Chang-Chih-Tung, and allowed massacres of native Christians and the destruction of churches to take place. The new Governor of Yunnan ordered all foreigners to leave, upon which he received a warning from the French Government that he would be held personally responsible for any injury to Frenchmen or their property. The Governor of Shansi, Yu-Hsien, who was the original patron of the Boxers, is believed to have ordered the extermination of missionaries and Christians in his province, where frightful massacres occurred. The missionaries were driven out of Shansi and Kiangsu. In Canton an agitation was started by the secret societies against both the foreigners and the dynasty. After the fall of Pekin an abortive rebellion was set on foot in the south of China by revolutionary reformers imbued with Western ideas. Funds were contributed by Chinese who have lived in America, Australia, and Singapore. Before the rising many arrests were made in different cities. The revolutionary movement extended over wide regions in the Yangtse valley, and had for its object the restoration of the Emperor Kwangsu to power and the reform of the administration. When the advance of the allied troops began, the viceroys of the central and southern provinces joined with Li-Hung-Chang in a series of appeals to the powers, asking them to send no more troops, to stay the advance, and to formulate the terms of a settlement. Troops were sent up to aid in the defense of Pekin. When the foreign troops entered Pekin the Nankin and Wuchang viceroys declared that if proper consideration and respect were not shown to the Empress they could not answer for the consequences, as it was a matter of the highest importance in the eyes of the Chinese nation.

Siege of the Legations.—For months before the destruction of the railroad and telegraph convinced the ministers at Pekin of the serious character of the anti-foreign movement, the missionaries in Shantung and Chi-Li endeavored to impress this upon them: French, Italian, and German missionaries appealing to their representatives on behalf of the Catholic missions, while the Protestants addressed the British and American ministers. The Boxers confined their operations to pillaging converts or destroying their houses if
they refused to pay the fines exacted. Such acts had been committed in other times without being followed by a general attack on foreigners. When any new outrage was reported by the missionaries the ministers made representations to the Chinese Government, and the Tsung-li-Yamen courteously expressed doubt, demanded proofs, and promised to have the Governor of Shantung or the Viceroy of Pechili investigate the case. That nothing was done to check the disturbances beyond the punishment of a few insignificant Boxers was in keeping with the ordinary history of foreign relations with China. Mr. Conger was the first minister who warned the Tsung-li-Yamen that unless the Chinese authorities re-established the security for the life and property of Americans strong measures would be taken by the United States to protect them. A joint representation was made by the ministers in January, 1900, calling attention to the secret societies as obnoxious to the missions, not as a danger to Europeans, and especially to the Great Sword Society. The ministers knew little about the Boxers at that time, nor later, until their fanatical crusade spread through north China and millions of their adherents were converted in the expulsion of foreigners and the redemption of the leased ports.

When Monsignor Favier’s letter convinced M. Pichon of the dangerous situation in Pekin itself, the ministers of the powers had almost persuaded themselves that the crisis was past. A meeting of the Ton-class was therefore called by the minister, who impressed his own apprehensions upon his colleagues. A note was prepared demanding permission and facilities for bringing up to Pekin guards for the legations. In case this were refused a majority of the representatives agreed to the suggestion of the German minister, that an ultimatum be sent to Food that the concentration of a naval force at Shanhaikwan, whence a passage to Pekin could be forced by an international body of troops. The Tsung-li-Yamen, as was expected, objected to the bringing of foreign troops to Pekin as an insult to China, and an action that would fan the flame of anti-foreign feeling. It was agreed by Prince Ching and his minister conference that it was impossible to secure troops. The ministers would not discuss the question, declaring that the guards must come, with or without the consent of the Chinese Government. Prince Ching had an audience with the Empress Dowager, and induced her to consent to the arrival of guards rather than face a rupture with the powers. The French and Russian guards had already landed, and the Tsung-li-Yamen was informed that the force would be larger if the Government persisted in refusing its acquiescence. The ministers accepted the representation of the Tsung-li-Yamen that the Boxers were rebels against the Government, but the Chinese Government that making common cause with these rebels, and this mutinous attitude of the army was the chief reason alleged for sending for their own troops to protect them. Their departure from Taku was delayed, to give time to the Chinese Government to reconsider its decision. The Government had already repaired the strip of the Tientsin Railroad that had been demolished by the Boxers, who were told in a proclamation that it was Government property, paid for by Government funds.

It was rumored that the Chinese Empress intended to flee with the Emperor and court to Sing-linghau in order to escape from the Boxers. The Russian ministers strenuously opposed any Chinese authority in Pekin that was able to maintain order in case the regular Government collapsed. On June 1 the Church of England missionaries Robinson and Norman were murdered by Boxers at Yung-Ching, 40 miles south of Pekin. Sir Claude MacDonald demanded of the Government that it should rescue the latter, who had been carried off and was not known to be dead. The ministers of the Yamen gave the stereotyped reply that the Government could only refer the matter to the viceroy, who had already been instructed to send troops to the spot. Prince Ching admitted, when the British minister warned him that failure to suppress the Boxers was letting a danger to foreign intervention, that the Government was reluctant to deal harshly with the antiforeign movement because it was popular. He did not conceal the fact that the ignorant conservative advisers of the Empress Dowager had enlisted her sympathies in favor of the anti-foreign crusade, and that the intelligent statesmen who appreciated the seriousness of the situation were powerless to remedy the matter. A force of 6,000 Chinese troops had been ordered up from Tientsin to guard the railroad.

The legation guards were delayed on their journey to Tientsin, where the governor declined to order them to march. The French and German commanders threatened to take these by force and proceed without his permission. The total number of foreign troops introduced—Russian, French, American, Japanese, British, German, Italian, and Austrian—was 450. Immense throngs looked on in complete silence when the troops marched through the streets of Pekin. Three days later all traffic on the Tientsin Railroad was suspended, the Boxers having overpowered the Chinese guards guarding the line and torn up the rails for long distances. The Russian minister offered the assistance of Russian troops to suppress the Boxer outbreak. The Boxers from the northwest had taken the Government in June 7, after Kang-Yi with secret instructions from the Empress Dowager had annulled the order for their dispersal just given by two Chinese commissioners and enforced by Gen. Nieh’s troops. At the same time Tung-Fuhsin’s Kansu troops left their camp south of Pekin and were quartered by the Japanese along the railroad. The Boxers streamed in by tens of thousands and stalked the streets, with their long swords and bright red badges, breathing destruction to the foreign devils and performing their magic rites in open places in sight of the Pekin people, who up to this time had believed that the Empress Dowager would suppress these lawless hordes. When the American missionaries were in danger at Tungchau and Paoting-Fu, the Tsung-li-Yamen promised stringent measures, and imperial edicts were issued insisting that the Boxers must reform, otherwise the Grand Secretary, Yung-Lu, would order Gen. Tung-Fuhsin and Gen. Ma-Yukin to attack and destroy them.

On June 7 a decree was published ascribing the trouble to the favor shown to converts in lawsuits and the admission of bad characters into the Christian bodies, and stating that bad characters among the Boxers, making use of the anti-Christian feeling aroused by these causes, had destroyed churches and state railroads. Ringleaders in such proceedings must be punished—not those whom they misled—and fresh authority was given to generals to effect the arrest of such ringleaders. The American Methodist compound was put into a defensible condition and stocked with provisions for a siege. Before June 9 all foreigners except those who fled by the time it was instructed that the north cathedral of the Roman Catholics were quartered, about 70 altogether, besides 600 converts whom the missionaries refused to abandon.
The Roman Catholic mission gave asylum to 2,000 converts, and several hundreds were received at different times into the British legation. A guard of 20 marines under Capt. Hall was sent by Minister Conger to help defend the Methodist compound.

The feeling of the court circles in regard to the occupation of the military ports by European governments, and their assertion of spheres of influence embracing the best parts of China, was expressed in edicts of the Empress Dowager, describing the foreigners as robbers of Chinese territory, and people who had expanded the rights of commerce and intercourse and the privilege of propagating Christianity into claims for seizing territories and subjugating Chinese to foreign rule. When the Boxers first appeared in Pekin and began to attack the native Christians, the legation guards had several fights with them in the streets and killed a number. This led the Government to abandon its attitude of impartiality between the Christian Chinese and the Boxers, and to condone the misdeeds of the latter on the ground that they were provoked by the violent conduct of the European troops patrolling the streets unlawfully. The assemblage of war ships at the mouth of the Peiho, the landing of marines, the seizure of the railroad terminus at Tangku, and the preparations to send additional guards to Pekin made the Empress Dowager throw herself into the hands of the warlike Manchu party entirely. Tung-Fuhsiang was ordered to bring his troops from the hunting park up to Pekin, and the Boxers were virtually invited into the capital.

The entrance of the Boxers and the unruly Mohammedan soldiers into Pekin was synchronous with the transfer of the principal offices in the Government to the most reactionary of the Manchus, Prince Ching, the only member of the Tsung-li-Yamen possessing a knowledge of foreign affairs, was superseded as president by Prince Tuan, and three other Manchus of the Conservative stripe were appointed, while one Chinese retired. The serious state of affairs in Pekin was reflected in the remotest provinces, where the anti-European spirit was strong. The French consular officers in Yumnan were compelled to quit their posts when Prince Tuan sent a reactionary mandarin to supersede the governor of the province.

The author of most of the acts and edicts of the Government hostile to Europeans was Kang-Yi. Whenever he was not present, Prince Ching and his Chinese colleagues prevailed, upon the Empress to issue orders and publish edicts quite different from those that had just before gone forth. Twice orders were issued to respect the sanctity of the legations and to allow the Europeans to take converts under their protection.

On June 11 Suijyama, the Japanese Secretary of Legation, while setting out for Tientsin to inform his Government of the situation, was killed by Chinese soldiers outside the city gates. On that day the telegraph line to Kalgan was cut, the Tientsin telegraph having been broken several days before. From that time for many weeks no communications passed between the foreigners shut up in Pekin and the outside world. On the next day the Boxers made an open attack on the British patrol. On June 13 the Boxers began the work of razing all buildings in Pekin not protected by foreign military, that were owned or occupied by foreigners. When the east and south Roman Catholic cathedrals were burned many native Christians lost their lives. A rescue party shot many Boxers who were massacring Christians, and a second one, led by Dr. Morrison and containing French and German marines, brought away a large number of Christians, who were lodged in a palace adjacent to the British legation. Buildings associated with foreigners or foreign methods were burned with the rest. The destruction of the compound of the Maritime Customs entailed a heavy pecuniary loss on the Chinese Government. The electric light works, and even the Pekin University with its library, were burned. For several days fires raged in all quarters of the city, obscuring the sky with their
smoke. On June 16 the flames from a steam flour mill and a foreign drug store spread to adjacent buildings, cutting off the conflagration on until the richest fur and cloth stores and the most important banks were in ashes. The Boxers supplanted the fire god in vain to spare the great tower in the south wall, which was opened only for the passage of the Emperor when he visited the Temple of Heaven or that of the God of Agriculture.

On the day following the entrance of their main body the Boxers made the first attack on the legations, to which the troops replied with a volley, killing a number, wounding many, and causing the rest to retire quickly out of sight. In their retreat they came upon and set fire to a large building, compounding that the missionaries had abandoned, leaving there 200 converts with their families, all of whom perished in the flames or were slain in trying to escape. The same night they burned several foreign houses, and on the night following, in two divisions of about 2,000 each, they renewed the attack on the legations. Several volleys were fired, and the soldiers, according to the report, fell in disorder the troops sallied out and chased them a short distance, killing a great number. After this a new proclamation of the Empress Dowager ordered the Boxers to disperse, and threatened all who remained in Pekin with arrest and punishment as bad characters, since all the Boxers, strong wind carried them in obedience to previous edicts. Soldiers were at the same detail to patrol the streets and special guards were set to protect the legations. The Boxers denounced it as false, the work of the Chinese party, and contrary to former decrees, and subsequently they murdered several high Chinese officials.

When Admiral Seymour's expedition set out without leave, the Chinese Government protested through its representatives abroad that it was a hostile act. The advocates of peace and moderation in Pekin were rendered dumb. The Boxers were supplied with weapons from the Government arsenal, armed as an offensive for the defense of the country, and, recruited by deserting soldiers from Nieh's army, they were authorized to stop the expedition, for which purpose Tung-Fuhsiang's troops also marched out.

On June 16 the Empress Dowager summoned a Grand Council. She is said to have first consulted the ministers and then announced their decision to the Grand Council, which was for war against foreigners until these should abate their pretensions. The Chinese officials protested that a general war against Christendom would be fatal, and urged that time should be taken to make a choice of enemies and also of friends, some advocating an understanding with Russia, others one with Great Britain and Japan. The Boxers in Pekin from this time grew bolder, and the lawless soldiery of Tung-Fuhsiang joined them in attacks on the legations.

In the night of June 16 American and Russian sentries were fired upon by Chinese soldiers. On June 17 a collision occurred between a detachment of German and Austrian troops and Chinese regulars, some of whom were killed, which led to a request of the Tsung-li-Yamen that the foreign guards should be withdrawn, assurance of protection being given. The ministers replied that thereafter their own soldiers would protect them. Large bodies of Chinese troops encamped near the legations.

The capture of the Taku forts by the powers and the subsequent advance of the relieving column were accepted by the Chinese Government and by all authorities in north China as acts of open war. The Empress proclaimed a state of war called on the ministers of the powers with the Europeans in the legations to withdraw under a safe conduct to within the lines of the allied at Tientsin, and sent orders to the provincial authorities to notify Europeans to leave the country, and to raise troops for the purpose of repelling the foreign奔ions and maintaining the national prestige. Gen. Nieh, who had been sent out to suppress the Boxers when they damaged the railroads and then recalled because he carried out his orders with too much violence, was commanded to assist the Boxers and the troops of Tung-Fuhsiang in resisting the advance of the allies. When the ministers were based in Tientsin under the escort of Chinese troops, they were regularly besieged in the legation compounds and attacked nightly by the Boxers and mutinous soldiery, and intermittently were shelled by the imperial troops. The first notice to the foreign ministers to leave Pekin was delivered on June 19 in an identical note from the Tsung-li-Yamen, stating that the admiral should land, and that the legations and forts and threatened to attack them and take them by force, showing the intention of the powers to break off friendly relations. The princes and ministers, astonished at this news, could not propose complete protection to the legations from the Boxer banditti if war ensued, and therefore begged the ministers to depart for Tientsin. The Chinese guards under the protection of an escort of Chinese troops that had been provided for the purpose. The ministers, who knew nothing before this of the action at Taku, asked for a conference with Prince Ching and Prince Tuan, to satisfy themselves as to the sufficiency of the military escort and the number of troops to be allowed for the members of the Tsung-li-Yamen should accompany the expedition. The Russian minister still hoped for a peaceful outcome. The German minister, Baron von Keteler, who felt called upon to uphold the interests of his Government with firmness and vigor, strongly dissented from the opinion of others that the Tientsin legation should leave Pekin, and determined to convey a serious warning to the Tsung-li-Yamen, and the Manchu princes in particular, that if they broke off diplomatic relations with European nations they would bring about the fall of the dynasty. Although he received no reply from the Tsung-li-Yamen to the German despatches, he determined to put out an armed escort in the morning of June 20, and as he passed a squad of soldiers he was shot dead in his sedan chair by the officer in command of the troops, his interpreter reported.

The death of the German minister convinced the other ministers that they could not depend on a Chinese escort, and that to form them to form the legations and defend them until the relief column arrived. The missionaries in their quarter of the city, the staff of the Maritime Customs, and other Europeans and Americans, were hastily escorted to the British legation. At the hour when the time set for their departure by the Tsung-li-Yamen was up, the troops of Tung-Fuhsiang opened a rifle fire on the Austrian legation. On the day following the Tsung-li-Yamen sent a courteous reply to the diplomatic body, stating that the warning to leave Pekin had been given in consideration of the dangers that the ministers incurred by remaining, but since the country outside was in a state of turmoil too brief for proper preparations, the Yamen agreed to the delay and to further negotiation; the relations between China and the powers had not been strained by any animosity on the part of the
Chinese Government, which could not have foreseen the outbreak of the people against the Christians, and the Government desired to learn from the foreign ministers what were the intentions and instructions of their governments. The ministers replied in a collective communication that they had none but friendly instructions, and that detachments were on their way to Pekin for no other purpose than to assure safety. In calling attention to the firing upon the legation buildings they were convinced that it was chargeable to rebels or to soldiers acting independently, and they looked to the Chinese Government to put a stop to it.

For the next three weeks no communications passed between the Chinese Foreign Office and the legations, which were closely invested by Boxers and attacked with shell and rifle fire by imperial troops. The Austrians abandoned their buildings on June 21 and retreated. The French legation. The French and Italians evacuated their legations, but resumed their positions later. The German legation was abandoned on June 22. The British legation was the main defensive position, and all adjacent buildings were torn down to deprive attacking parties of shelter, to avert the danger of fire, and to give material for fortification. When Prince Su abandoned his palace to take refuge in the imperial city it was occupied by Christian converts, some of whom he had already received in the outer court at the request of the ministers. These Chinese were employed in the work of fortification, in which all the inmates of and crowded British legation helped. Committees were formed to take charge of the administrative details. F. D. Gamewell, an American missionary having a knowledge of engineering and of Chinese construction and the management of Chinese labor, superintended the construction of the fortifications according to the plans of the military men. Sir Claude MacDonald was recognized as the chief in military as in other matters, although sometimes the military officers objected to carrying out his orders. On June 22 the Boxers burned the Italian and Dutch legations and set fire to buildings within the British compound, which were saved with difficulty. The legation guards numbered only 430—79 British, 75 French, 75 Russians, 58 Americans, 50 Germans, 40 Italians, 30 Austrians, and 25 Japanese. The periodical attacks made by organized bodies of imperial troops were mere demonstrations. A small force of them with modern guns, of which there were hundreds in Pekin, could have demolished the legations at any moment. Even the Boxers, outnumbering the defenders fifty to one, could have forced the position had they not been restrained. From June 23 the legations were completely besieged. The Imperial Guard under Yung-Lu continued to protect the legations at the distance of the Emperor and of Prince Ching and the Tsung-li-Yamen. Kang-Yi and Prince Tuan encouraged the Boxers and the troops under Tung-Fuhsiang, of whom there were 15,000 in Pekin, to attack the legations, in order to frighten the ministers into leaving Pekin. No one in authority acknowledged compliance in such attacks, which were officially ascribed to riotous Boxers and mutinous troops. The barricades of the besiegers were gradually pushed close up to those of the legations. The anti-foreign party had its own way in Pekin whenever the allies made a fresh move toward the city, but whenever they paused, more peaceful edicts were issued, and southern viceroys, who refused to support the warlike policy and petitioned the Empress Dowager to suppress the Boxers and protect the legations, appealed to the powers to stay their advance and present their terms of peace, promising on their part to check anti-foreign disturbances in their provinces, but adding that they could not guarantee the safety of the legations nor vouch for the temper of the people in their own provinces if the powers proceeded to the occupation of Pekin and the humiliation of the Empress. An imperial edict of July 1 expressed disappointment in the achievements of the Boxer militia, who should have combated the enemy and averted the outrages China had suffered at the hands of the foreigners. They were still urged to proceed northward to ward off the danger that threatened Tientsin and Pekin, but the disloyal bands that robbed and murdered in their name would be distinguished from the true Boxers and would be rigidly suppressed.

The legations were barricaded on every side with a succession of walls built of large bricks taken from houses, and on top of the walls and at the entrance of the buildings were placed sand bags, many of them made of silks, curtains, and garments, until the materials finally gave out and the fortifications had to be constructed of bricks alone.

When the allies relieved the forces besieged at Tientsin, notice was given to the ministers once more that they must leave Pekin at once, the military authorities promising to protect them on the route to Tientsin. The ministers replied that they would remain and would protect themselves. On June 27, when the time limit of this ultimatum had expired, the Chinese troops again attacked the legations with shells and rifle fire. The Chinese Government, or the military leaders who had usurped all authority, determined to expel them by force, and on June 26 a message was conveyed to the consuls in the treaty ports which announced that they were being conveyed down to Tientsin by imperial troops. The death of Baron von
Ketteler was reported, but was not officially acknowledged till July 1. When Tung-Fuhsiang renewed his legation, Yung-Lu got word to the allied forces through Sheng, the Director General of Railroads, urging their speedy advance, as he and Prince Ching were no longer able to control events in Pekin and the soldiery were rioting in the streets.

After the second attack of Tung-Fuhsiang's troops the Chinese authorities sent some food to the legations, which the ministers declined to accept. Further attacks were opposed by the 10,000 men of the Manchu garrison controlled by Prince Ching, who killed many Boxers and Kansu soldiers in endeavoring to drive them from their positions in front of the legations. At the same time edicts were published praising Boxers for their patriotic services in uprooting Christianity, and commanding viceroyos and governors to expel missionaries and compel Chinese Christians to recant. The siege of the legations became closer than ever, and the Boxers pushed their line so near that they succeeded in undermining and blowing up a corner of the French. In their determination to destroy the British legation they burned the adjoining Hanlin Academy with its invaluable library. They edged their barricades close up to those of the legation and placed two guns in position to make a breach in the defenses. The defenders had an old Chinese cannon, for which they procured ammunition, and considered their position extremely critical when the American guards sailed out in the night of July 3 and killed many Boxers, and a larger force made a sortie on July 6, killing 200 soldiers of Tung-Fuhsiang's force. Heavy guns were then put in position to bombard the legations, and the Governor of Shantung implored the Boxers to disperse and destroy the Europeans killed. All the legations still standing were burned except the British, American, German, Japanese, and parts of the French and the Russian. All the members of the diplomatic corps took refuge behind the defenses of the British legation. At this time the Empress Dowager issued warlike edicts declaring that there must be a close association with Christianity, which the whole nation, including military men, literati, nobles, and princes, had united to stamp out since the foreigners had begun a war against China; that the bitter feeling against foreigners had reached such a pitch that any attempt to put down the people would be数据中心 and after all that still remained anxious to protect the legations, the Chinese people were willing to put it to a test whether they or the foreigners were stronger; hence all governors should immediately enroll troops for the defense of their districts and act according to local circumstances on their own judgment, but for any loss of territory they would be held to strict account. The Yangtsse and southern viceroys did after this enlist troops and mount guns, but used the disreton confided to them to protest their innocence of hostile feelings toward Europeans and their intention to use their forces only for the suppression of anti-foreign or rebellious disorders. At the same time the Chinese provincial officials conveyed warnings to the Empress to protect the legations and to avoid a general war against foreigners, and through Chinese ministers abroad and foreign consuls they cautioned the powers that continued aggression, and above all an attempt to arrest the legations. The governors of 11 provinces in a joint memorial recommended protection to foreign merchants and missionaries, whether there was war or not, in order to preserve China's prestige as a civilized state, and the rescue of the ministers so as to render negotiations still possible, in which the governments of the ministers saved might use their influence in China's favor; also an apology to Germany for the murder of Baron von Ketteler, and a proposal for the mediation of other powers, with assurances of China's good intentions to be given specically to France and the United States; furthermore, full compensation for all losses of foreign lives and property, and orders to the military and civil authorities to punish bandits and mra- Gundis. Li-Hung-Chang, whom the Empress in her perplexity summoned from Canton to take the vice揆oyalty of Pehchihl and arrange matters with the powers, at the same time that he approached the United States and other powers with proposals of peace, informed the Empress that Great Britain and France made the heads of the Chinese Government personally responsible for the lives of their ministers and citizens in Pekin, and that it was necessary that the Boxer movement should be stopped altogether and the war party put down.

The first tidings received direct from the foreign ministers in Pekin was Mr. Conger's telegram of July 18, saying that they were under shot and shell and only quick relief would save them from massacre. The capture of Tientsin by the allies produced an immediate alleviation of the situation. The war party was no longer confident, and the troops that had been moved from Tientsin returned to Pekin. The allies were pushed by orders of the Chinese Government personally responsible for the lives of their ministers and citizens in Pekin, and that it was necessary that the Boxer movement should be stopped altogether and the war party put down.

up their union, although their situation was becoming desperate. On Aug. 5 shots were exchanged anew. In the incessant fighting for a month, 60 of the marines were killed and 110 wounded. The Americans, who held a strong and important position on the outer wall, had done valiant service and lost 16 men. The French and Austrians defended heroically the French legation, which was the key to the position and the post of danger, and they lost heavily, the Austrians half their number. When the Chinese forces retreated upon Pekin and the allies began their assault on the city, the legations were attacked fiercely, and were shelled even after the foreign troops entered the city. While guns were sounding the calls of the legations; and although Prince Ching ordered his officers to cease firing on pain of death, the fire was continued all day with artillery and musketry. The losses in the last days of the siege raised the total to 67 killed and 160 wounded. The losses that the legation guards inflicted on the Chinese from first to last were more than 3,000.

The Roman Catholics shut up in the north cathedral were attacked fiercely and incessantly from the time when the Boxers first entered Pekin. Bishop Favier and his priests, with 42 guards and 2,000 converts, were prepared for a long siege, having stored up food, arms, and ammunition for surrounding the converts and an abundance of supplies. The Chinese attacked them day and night and battered the east face of the cathedral with shell fire. Once they exploded a mine, which killed both of the French officers and 3 of the guards, besides nearly 300 converts. The defenders still held out, and kept the Chinese out of the great breach they had made until it was repaired.

**Intervention of the Powers.**—The ministers at Pekin made the first formal demand for the arrest of members of the Boxer society who organized street disturbances and seditious meetings or circulated manifestoes against foreigners in a collective note delivered to the Tsung-li-Yamen on May 21. The Russian representatives went alone to the Tsung-li-Yamen and endeavored to convince the Chinese ministers of the necessity of prompt and stringent measures for the suppression of the Boxer revolt. The Tsung-li-Yamen replied to the collective note on May 24, saying that the Government was ready to cooperate in any measure that the Chinese ministers should propose, except the suppression of the Boxers, which the Chinese ministers had refused to propose. They were agreed that theBoxers were a danger, and would suffer for the destruction of the society and prevent further disturbances. The foreign ministers, considering this reply evasive and unsatisfactory, came together to discuss the landing of forces.

The secretary of the Tsung-li-Yamen went to the Russian minister to inform him that severe measures had been taken to suppress the Boxers. A detachment of troops had in fact been sent against them. A few days later the Boxers defeated this force, killing the commander and 60 soldiers. At this statute the Chinese Government, in its edicts and actions, showed remarkable vacillation and infirmity of purpose. The appointment of Li-Hung-Chang—who had already been exiled from the capital to Nankin—to the viceroyalty of Canton, where he was entirely out of touch with the situation, added to the Chinese minister's desire to thrust aside every restraining influence.

When the admirals demanded the surrender of the Taku forts, Admiral Kempp refused to join in the ultimatum or in the bombardment, for he thought it was against the policy and wishes of the United States Government to be entangled with other foreign powers in such a step, and, moreover, that it endangered the lives of people in the interest of advance of absolute necessity for such drastic action. The act of the Chinese in opening fire without warning and in firing on the Monocacy he considered an act of open hostility that justified him in making common cause with the foreign forces for the protection of national honor and the preservation of American lives and property, and in this resolution he was confirmed later by the knowledge that the Chinese Government was paralyzed and in secret edicts showed sympathy with the Boxers.

When Admiral Seymour's force started from Tientsin, Boxers and a large part of the Kansu soldiery advanced from Pekin to tear up the railroad and meet the foreign invaders. They had first to deal with Nieh's troops that had been stationed along both the Tientsin and the Lu-Han lines to guard the tracks and stations. On June 5 they had a severe encounter with these troops near Tientsin, some of whom ran away, but some held their ground, and killed 500 Boxers. No further attempt was made by Nieh to protect the line, for his troops were ordered to retire, and he was censured for killing patriotic subjects. The Kansu soldiers and the Boxers then tore up the railroads very effectively, bending the rails by main strength, throwing bolts and fishplates away, and destroying the grade in the vicinity of Pekin. Tientsin was then besieged and Admiral Seymour's retreat intercepted. The United States Government decided on concurrent action with the European powers, while disclaiming an alliance, and Russia abandoned her independent attitude and joined in the accord. The admirals decided on an international blockade at Taku, and the occupation of a strip of territory where foreigners could take refuge under the guns of the fleets. This course was approved by all the foreign ministers at Pekin, who also discussed the advisability of demanding an audience with the Emperor Regent.

The proposal of the foreign representatives at Pekin that a naval demonstration should be made by the powers in the Gulf of Pechili was not at first well received by the European cabinets. Russia in particular—and France following the lead of Russia—was very reluctant to invoke the German Government at a juncture when such action would excite to a higher pitch the anti-foreign sentiment in China and render it more difficult for the Empress Dowager to become emancipated from the influence of her European-hating advisers and listen once more to the rational statesmen of China. This led the German minister at Pekin to hold aloof from the earlier representations of his colleagues. Count Muravieff, down to the time of the Boxer irruption into Pekin, would not join in menace or pressure, believing that the real state of things had been concealed from the Empress Dowager, and that if the Chinese Government were left alone, better
counsellors would prevail. The situation in southern and central China, where a strong and growing revolutionary party aimed to upset the dynasty, seemed to the Russian chancellor to be more critical. The Japanese government, were they disposed to take account of the patriotic excitement they had done most to provoke, and took the lead in menacing the Chinese Government. No government, however suspicious of the motives of others, desired to precipitate an international crisis. None was prepared for isolated action, and a previous agreement among all the powers was understood to be the condition of any important step to be taken. Japan was received into this concert more thoroughly and cordially than before, and for military action was the most important member; because Japan alone had troops sufficient and ready to accomplish any operations in China that might be necessary. More than 25,000 Japanese troops were the Chinese Government represented that the rebellion was too serious to be easily quelled with its own forces. This offer was followed by a similar one from Japan. Both were taken into consideration and courteously declined.

The admirals on the 5th decided in conference to assume, with the object of protecting the lives and property of their nationals, an attitude of armed defense, their military movements to be directed not against the Chinese Government, with which their countries were at peace, but against the insurgents seeking its overthrow. Should the rebels prove stronger than the Government, aid would be lent to the Government to quell them; but if the Chinese Government did not attack the rebels, then the allied powers would proceed to attack them. Each commander was to comply with the wishes or obtain the concurrence of his minister unless communication with Pekin should be sooner than the situation made apparent. All interests of the foreign powers in common, they agreed then to act in concert, seeking instructions from home if there were time to do so; but in case the emergency were too pressing, they would determine their course after consultation together. At a later meeting they agreed to land men at once on the motion of the American admiral. Meanwhile, when communications with Pekin were cut of, and Admiral Seymour's relieving force was stopped, troops were dispatched to Taku from the nearest foreign powersomewhere between Kiao-chow, British from Hong-Kong, Russians from Port Arthur, and Japanese troops. On June 14 a Russian force of 1,700 men left Tientsin to join Admiral Seymour, but only succeeded in rescuing his exhausted and decimated expedition. A Russian contingent of 6,000 soldiers was ordered to follow, but the Taku too, by the intervention of the United States. After the capture of the Taku forts the British Government arranged for the dispatch of 10,000 Indian troops under command of Sir A. Gaslee. A third brigade, intended for the protection of Shanghai and the British interests in the Yangtse valley, was mobilized while the allies were marching to Pekin. France arranged to bring the strength of its contingent up to 15,000 men.

The Government of Great Britain sounded the Japanese Government on June 25 with reference to the immediate dispatch of 25,000 or 30,000 Japanese troops for the restoration of order in Tientsin and Pekin, and inquired of the Russian and German governments especially if they objected. They both offered to take the task on receiving assurances that it would not lead to complications with other powers. The Russian Government, while not disposed to give a mandate, did not wish to hinder Japan's freedom of action. The German Government would not assent to Japanese intervention unless convinced that the interests of third powers were left untouched. The Japanese Government ordered the mobilization of 22,000 men, and urged the advisability of an exchange of views as to joint measures, considering the troubles in the north of China so grave that an expedition of 70,000 men would be required, which it was not prepared to furnish. At the same time both Great Britain and France undertook to make a loan of money as well as protected from complications by previous agreement among the powers. The British Government offered to guarantee the expense of an immediate expedition for the rescue of the legations, any ulterior operations to be left to future consideration.

Soon after, the bombardment of the legations began, detailed accounts were circulating from Shanghai that the ministers and other foreigners in Pekin were massacred. A report of this nature was received later at St. Petersburg from Manchuria. It was reported also that the Emperor and the Empress Dowager had been poisoned. After June 11 there was no telegraphic communication with Pekin, but a message from Sir Robert Hart came through by courier, declaring the situation desperate on June 25. The Chinese ministers in Europe and the United States and the viceroy in the south denied the stories that the ministers in Pekin were dead, though they admitted later that they had been. Secretary Hay defined the attitude of the United States in a circular dispatch of July 3. Adhering to the policy initiated by the United States in 1857, of peace with the Chinese nation, the furtherance of commerce, and the protection of its citizens by all means guaranteed by extra-territorial treaty rights or by the laws of nations, the United States Government proposed to hold responsible the authors of any wrong done to Americans, and viewed the condition in Pekin as one of virtual anarchy, whereby power and responsibility were devolved upon the local and provincial authorities, who, so long as they were not in collusion with the rebellion and used their power to protect foreign life and property, would be regarded as representing the Chinese people, with whom the United
States seeks to remain in peace and friendship. The United States would continue to act concurrently with the other powers in opening up communication with Pekin and rescuing American officials and missionaries in affectionate and friendly protection and preserving all American interests everywhere in China, and in aiding to prevent the spread of disorders and the recurrence of such disasters. The solution sought by the United States was one that should bring about permanent safety and peace in China, and preserve China as a territorial and administrative entity, protect all rights guaranteed to friendly powers by treaty and international law, and safeguard to the world the principle of equal and impartial trade with all parts of the Chinese Empire.

On July 3 the Chinese Emperor appealed to the Mikado to intervene for the salvation of China, and proposed an alliance, on the ground that China's independence were destroyed the position of Japan would become untenable; occupied in suppressing the insurgents, China might fail to resist successfully the invaders, and hence entertained Japan to restore peace and save the Chinese Empire from the ambition of the strong Western nation. The Mikado replied that if China suppressed the rising and rescued the ministers the powers would recognize her sincerity, and thus calamity to the empire would be averted; that Japan had sent troops solely for these objects, and in the ultimate negotiations would act a helpful part provided China rescued the foreigners and suppressed the insurgents. At the same time to the Czar explained that measures were taken on the insistence of the Russian minister against agitators who stirred up hatred to Christians; but, already, eminent persons and princes as well as the common people and the troops were roused by false rumors, and the Government had merely employed troops to suppress disorders because a general rising against foreigners. This attitude led the powers to suspect connivance, and their military measures had complicated the situation and weakened hopes of a peaceful issue. The Emperor applied to the Czar, on the strength of two centuries of friendship between the two countries, to prevent the Japanese intervention and save China and to take the initiative in carrying them out. The Czar replied on July 13 that, guided by traditional friendship for China, and wishing to see the misfortunes and complications threatening the Celestial Empire averted, the Russian Government was willing to render assistance to the legitimate Government in China in suppressing the agitation, and would confine its efforts solely to the restoration of order and tranquility. The Czar hoped that the Emperor of China would take determined steps to pacify the country and secure the safety of the lives and property of Russians and other foreigners, but the attitude on the part of the Russian Government rendered it difficult to intervene in China's favor at that moment.

On July 17 an imperial edict was issued expressing regret at the murder of the Japanese attaché and the German minister, and the desire of the Chinese Government to punish the murderers and to prevent any compensation for any death or loss of property of missionaries or merchants and to protect the legations. The origin of the conflict was the long-standing antagonism of the people of China to Christians and their missions. The fall of the Taku forts precipitated the meeting of force with force. The Imperial Government, mindful of the importance of international intercourse, was still unwilling to interrupt diplomatic relations, although the fighting at Tientsin could only be regarded as an act of hostility. In communicating this edict to Secretary Hay the Chinese minister, Wu-Ting-Fang, presented a telegraphic message from the Chinese Emperor to President McKinley, in which he placed special reliance on the Mikado, which sought only international commerce, and, up to then, had maintained friendly relations with China that neither country suspected or mistrusted the other, to devise measures and take the initiative in bringing about a concert of the powers for the settlement of the difficulty into which China had irresistibly been driven, incurring well-nigh universal indignation because the recent outbreaks of mutual antipathy between the people and the Christian missions had led the foreign powers to suspect that the attitude of the Imperial Government was favorable to the people and prejudicial to the missions, with the result that the Taku forts had been attacked and captured, and consequently there had been a chains of the forces with calamitous results. To this message, dated July 19, President McKinley replied on July 23, saying that the United States Government, desiring nothing but what was just and equitable, as the Emperor recognized, had the history of the mission from danger and afford protection to American as well as all other powers publicly avowed a similar motive. Inferring from the Emperor's message that the malefactors besieging the legations, far from receiving favor or encouragement, were actually in rebellion against the imperial authorities, the President urged the Emperor to afford protection to the legations and the protection of foreigners, and the restoration of order. If these objects were secured the Government of the United States believed that no obstacle would be found to exist on the part of the powers to an amicable settlement of all questions between the United States and China, and it restored its friendly offices, with the assurance of the other powers, to secure such a settlement on the fulfillment of these conditions. Simultaneously with the appeal for President McKinley's mediation a telegraph from the Emperor to the President of the French Republic stated that rebels had taken advantage of hostilities between the people and the Christians to commit depredations, and the foreign nations as a consequence suspected the court of displaying partiality toward the people and jealousy toward the Christians, whereupon occurred the capture of the forts and subsequent military operation, and that the situation complicated and dangerous. China looked chiefly to France, which had settled other questions by conciliatory methods, to settle the difficulties that now by the force of circumstances pressed so hard upon her as to bring down universal wrath; therefore the Emperor hoped that the President of the republic would find means to arrange matters and would take the initiative in changing the situation. M. Loubet replied to the Emperor that his request could not be examined until effective protection and complete liberty for their communications with their government were secured to them. The Emperor then replied in Pekin and to his colleagues: until Prince Tuan and the high officials responsible for the existing state of affairs were removed from power pending their inevitable punishment; until the authorities and troops...
throughout the empire received orders to cease hostilities against foreigners; and until measures were taken for the vigorous repression of the Boxer insurrection. So long as these indispensable guarantees were not furnished nothing was in order but military action. A message was also dispatched to the German Emperor of the same date containing a similar attestation of peaceful and friendly relations and absence of distrust on both sides, a similar explanation of the unfortunate and complicated situation in which China was placed, the foreign states having entertained the suspicion that the Government was conniving at the persecution of Christians when outbreaks of hatred between the people and the native Christians led to disturbances during which Baron von Ketteler was murdered—an unexpected outrage, for which the Emperor expressed the deepest regret. This suspicion grew at the very time that the Government was investigating the crime with the object of punishing the murderers. The seizure of the Taku forts followed and hostilities began. The position was the more difficult to reduce to order because the Chinese Government did not intend to permit any change to take place in the existing good relations. The force of circumstances placed it in a position where it was not free to act as it would wish. The only way to remove the resentment generally felt against the Chinese Government was to call in the assistance of Germany; therefore the Emperor of China begged the German Emperor to consider a plan by which the continuance of friendly relations might be secured and to assume the leadership in the restoration of the former peaceful state of affairs. Count von Billow, the German Secretary of State for Foreign Affairs, refused to communicate this telegraphic message to the Emperor-King until the truth should be known concerning the fate of the legationists and other foreigners in Pekin, and until the Chinese Government atoned for the atrocious murder of the German minister, and gave a sufficient guarantee that its conduct in future would be in accordance with the dictates of international law and of civilization.

Li-Hung-Chang was appointed a peace commissioner to deal with the powers. Only the United States, Japan, and Russia were disposed to accept his credentials, and they only provisionally. The American consul at Shanghai was instructed to place himself in communication with Li and await further orders. The present or future of the Boxers was decided in the circular note of July 3. When the ministers in Pekin were notified by the Tsung-li-Yamen that Li-Hung-Chang had been directed to negotiate with the powers, the French minister sent a dispatch on Aug. 9 protesting against negotiations that would stop the advance of the foreign troops while legations were hemmed in by barricades and reduced to siege rations of horse meat and rice, and were in imminent danger of falling into the hands of the Boxers. The Chinese Government at this time was endeavoring to force the ministers to leave with a Chinese escort, informed them that their governments had so directed, and general negotiations were impossible so that an armistice was provided. When the ministers repeatedly refused, the Chinese Government requested the powers, through the Chinese ministers in Europe and America, to order their departure for the sake of their own safety. Mr. Conger telegraphed that imperial troops were firing on the legations, and that it was necessary to have him leave immediately so that he could not be left in Pekin. In this edict the Imperial Government expressed a doubt as to its power to restore order and secure absolute safety in Pekin. In a memorandum sent through Minister Wu on Aug. 8, Acting Secretary of State Adee demanded the immediate cessation of hostile attacks by imperial troops upon the legations, and said that if the Chinese Government was unable to protect the ministers in Pekin it could not protect them on the journey to the coast; he suggested, therefore, that the Imperial Government enter into communication with the relief column and co-operate with it for the liberation of the legations, the protection of the foreigners, and the restoration of order. In a later telegram Mr. Conger said that foreign troops only could safely escort them, and they must be in sufficient force to guard 800 foreigners and 3,000 native Christians, whom they could not abandon to certain massacre. Similar messages were received by the other governments. The imperial edict appointing Li-Hung-Chang plenipotentiary on Aug. 8. The United States Government, when it was communicated with, Aug. 12, with a request for cessation of hostilities pending negotiations, expressed willingness to enter upon negotiations with Li-Hung-Chang with the desire to continue friendly relations with China, but pointed out that general negotiations were impossible so long as the ministers of the powers and persons under their protection remained in a position of restraint and danger, nor could the powers cease their efforts for the delivery of their representatives except under arrangements adequate to accomplish their peaceful deliverance. The United States stood ready to negotiate with the Chinese Government on such terms as might be agreed upon, and to hold demonstrations on condition that a sufficient body of the relieving forces be permitted to enter Pekin and escort the ministers and residents back to Tientsin, the arrangements and dispositions to be satisfactory to the commanding generals. When the allied troops approached Tungchau, Li-Hung-Chang made an earnest request that they should be left there, where they would be met by high officials of the Chinese Government empowered to negotiate an armistice. An advance on Pekin he believed would shake the empire to its foundations, besides causing the deepest alarm to the Emperor and the Dowager Empress and calamities to the people. He pleaded especially with the United States and Japan, because they had shown a willingness to stop hostile action if the ministers were delivered safely, observing that a further advance would...
wound the feelings of all China's people, high and low, while a compliance with his request would have been the same as the memorialized the Imperial Government to appoint a commission with authority to negotiate an armistice with the military commanders. Authority was sent to Gen. Chaffee from Washington on Aug. 12 to make an arrangement in concert with the other commanders to receive the ministers at the gate of the city. If it could be done with regard to their safety, in which case the United States would agree to an armistice for a specified time, with a view to arranging terms of peace. Another message from Mr. Conger mentioned attacks by imperial troops, on receipt of which a warning was sent to Li Hung-Chang that the instructions could not be carried out nor the advance of the forces on Pekin be stayed while these attacks continued.

Li-Hung-Chang made his final appeal, and Mr. Adee agreed in principle to an armistice to be arranged in concert with the other powers on the very day when the allied troops made their entry into Pekin. On Aug. 19 he approached the powers with a view to arranging friendly negotiations with powers to open negotiations for the settlement of all difficulties, they having accomplished the sole purpose of the march on Pekin, which they all declared to be the deliverance of the ministers, who were found to be in good health. Li was ready to conduct the negotiations in Pekin or elsewhere, if it suited the other powers.

The Japanese Government advised the Chinese Government to appoint plenipotentiaries acceptable to the powers, suggesting the Viceroyos of Nanking and Wuchang, and offered to further the negotiations, but only on the conditions that China should express regrets, acknowledge formally its errors, and suspend its armed forces.

The good offices of Japan on behalf of the Dowager Empress and the Emperor were volunteered previous to the capture of Pekin, with a statement of the purpose to get hold of Prince Tuan, Kang-Yi, and other officials held to be chiefly responsible. Li-Hung-Chang memorialized the Empress to re-establish the Manchu party and the disappearance of every vestige of the imperial authority from the capital left Li-Hung-Chang, who was personally distrusted by some of the powers, with no recognizable Government to which he could refer peace propositions. Russia, as well as the United States and Japan, was willing to treat with the peremptorily represented representative of the fugitive court, but Russia's willingness made England suspicious, because he was believed to have been the chief agent in extending Russian influence in China. He was formerly the chief adviser of the Empress Dowager, but in the present crisis he had taken a stand with the southern viceroyos against the Manchu party, and when summoned to Pekin went only to Shanghai, and from there memorialized the Empress to dismiss the war clique from power and destroy the Boxers. For his disobedience he was even deprived of his appointment as Viceroy of Pehchilie before the court left Pekin. His proposal for the powers to appoint plenipotentiaries was not definitely accepted by any of them. The admirals would not even let him go to Pekin or communicate with the local authorities unless he was accepted as the Chinese envoy by the powers. From this decision the American and Russian admirals dissented. The United States Government for the powers to appoint plenipotentiaries was not definitely accepted by any of them. The admirals would not even let him go to Pekin or communicate with the local authorities unless he was accepted as the Chinese envoy by the powers. From this decision the American and Russian admirals dissented. The United States Government explained its policy in a circular, declaring that the immediate objects it had in view at the outset were to protect the Russian legation and save Russian subjects from the criminal designs of Chinese rebels, and to help the Chinese Government in its struggle with them in the interest of the re-establishment of legal order. All the powers had the same objects in view, and since a comparatively insignificant detachment of the allied forces had succeeded in relieving the legations and chasing the rebels away from the capital, Russia suggested as the fundamental principles to guide the powers in China the maintenance of a common agreement among themselves, the maintenance of the former organization in China, the avoidance of everything tending to a partition of the Chinese Empire, and the establishment by the powers of a legal central government at Pekin able alone to preserve order and tranquillity. Russia had occupied Newchwang and invaded Manchuria for the purpose of warding off the aggressive acts of Chinese rebels; but as soon as lasting order could be established and indispensible measures taken for the protection of railroad construction which China had assured by formal agreement, then Russian troops would be withdrawn. The powers considered the action of other powers placed no obstacle in the way. The establishment of a legal central government with which the powers could co-operate in the establishment of order was rendered difficult by the departure from the capital of the Emperor and Empress Dowager and the Tsung-li-Amen.

The United States Government saw no good reason for the ministers accredited to the Chinese Government remaining in Pekin, and therefore intended to withdraw the Russian minister and the Russian troops to Tientsin. As soon as a legal Chinese Government should again take charge of the powers and appoint a representative with full authority, it would consider coming to an agreement with the other powers, would send a plenipotentiary to the place appointed for the negotiations. The United States Government was in full accord with this policy, seeing no prospect of the Chinese Emperor and Empress Dowager returning to Pekin while it was occupied by foreign troops, or of successful negotiations until the Chinese Government was re-established in its capital. On Aug. 29 the Secretary of State sent a circular note appealing to the powers to conclude peace with China, and indicating the readiness of the United States to withdraw from Pekin in order to permit a permanent return. The powers, however, could not easily agree on the terms to be exacted from China. The United States Government, while making the Russian policy its own, was unwilling to act with Russia or to raise any obstacle to a common agreement. Pursuing an independent course, it reduced its forces in Pekin to the proportions of a legation guard. A part of the Russian troops had already been withdrawn, and gradually the others were recalled. The Chinese Government intimated its intention to return to Pekin and open negotiations as soon as the foreign troops evacuated Chinese territory, and also its purpose to punish officials who were implicated in the anti-Foreign movement. Certain officials were executed, degraded, or exiled, and others were falsely reported to have been punished or to have committed suicide. Some of those, however, who were believed by the powers to be most guilty seemed to have been held up till Nov. 14 that an imperial edict was promulgated depriving Princes Tuan and Chuang of all rank and offices and handing them over to the imperial clan court for punishment, and decreeing the banishment of Yulisien to the frontiers. The Russian Government suggested that in case of a divergence of views the
The German Government, in a circular note on Sept. 18, had demanded as a preliminary condition that the three powers, and the other powers as a basis for negotiation, that the Chinese Government should punish the guilty parties who might be designated by the representatives of the powers at Pekin; the continuation of the interdiction against the importation of arms into China; equitable indemnities for the governments, companies, and individuals; the organization in Pekin of a permanent legation guard; the dismantling of the forts at Taku; and the military occupation of two or three points on the road from Tientsin to Pekin. Russia accepted these propositions with some reservations; Austria and Italy approved them as a whole; Germany desired to be more explicit. But the powers in Pekin had long been in a permanent legation guard; the dismantling of the forts at Taku; and the military occupation of two or three points on the road from Tientsin to Pekin. Russia accepted these propositions with some reservations; Austria and Italy approved them as a whole; Germany desired to be more explicit. But the powers in Pekin had long been

question of indemnities might be referred to the International Court of Arbitration at The Hague.

On Oct. 4 the French Government suggested that the demands to be put forward by the powers as a basis for negotiation, that the Chinese Government should punish the guilty parties who might be designated by the representatives of the powers at Pekin; the continuation of the interdiction against the importation of arms into China; equitable indemnities for the governments, companies, and individuals; the organization in Pekin of a permanent legation guard; the dismantling of the forts at Taku; and the military occupation of two or three points on the road from Tientsin to Pekin. Russia accepted these propositions with some reservations; Austria and Italy approved them as a whole; Germany desired to be more explicit. But the powers in Pekin had long been

The Chinese Government that the persons whom the powers should designate as the instigators of the crimes against the law of nations should be delivered over and punished. The ministers at Pekin, on Oct. 10, informally approved the following demands to be put forward as a basis of negotiations: (1) Punishment of the officials implicated; (2) payment of an indemnity; (3) dismantling of the Taku and other forts between Tientsin and the sea; (4) prohibition of importation of firearms; (5) establishment of permanent legation guards; (6) abolition of the Tsung-li-Yamen and appointment of one minister for foreign affairs; (7) suspension of the diplomatic missions in those districts where foreigners have been murdered; (8) provision for rational intercourse with the Emperor. All these provisions would be required to be promulgated by imperial decrees. Prince Ching and Li-Hung-Chang, on Oct. 16, in a circular note ascribing the disturbances to the Boxers, admitted that the Boxers could not be distinguished from princes and ministers, and stating that the punishment of the latter according to Chinese law had been ordered by imperial decree, proposed a preliminary convention containing the following bases of peace negotiations: (1) China expresses regret for the recent occurrences, and promises to recompense them (2) China is not liable to pay an indemnity (3) regarding commercial treaties, China is willing to reaffirm or modify the old treaties or to make new ones; (4) the general principles having been approved, China asks that the Tsung-li-Yamen may be permitted to resume its functions, and that the foreign troops may be withdrawn. The claims of the indemnities have been arranged; (5) negotiations having been begun, the foreign powers should declare an armistice and cease military action. The Chinese plenipotentiaries proposed to begin negotiations on Oct. 20. M. Fichon demanded the execution of Prince Tuan, Kang-Yi, and Tung-Fuhsiang, as the principal guilty parties, and declared that the indemnities, so far as they could be ascertained, were to be deducted from their heads which had fallen. The foreign governments, at the suggestion of M. Delcassé, had given instructions to their representatives in Pekin to begin negotiations at once with Li-Hung-Chang, who was provided with authentic powers the reality of which had been verified. Great Britain, the United States, and Japan had followed the negotiations regarding the original French propositions. The court arrived at Singan-Fu, the ancient capital, and was under the domination of Prince Tuan and Gen. Tung-Fuhsiang, whose decapitation was demanded by some of the powers, and was entirely in the power of Tung-Fuhsiang's Kansu soldiery. Meanwhile the Chinese Government divided the German division and under the general command of Field-Marshal von Waldersee, scourged the whole province of Pechili, destroying villages that harbored Boxers and executing all who were identified as Boxers or accused of molesting native Christians. After Poo-Ting-Fu was occupied, the principal officials who were responsible for the massacre at that place were executed after an investigation by an international commission.

On Nov. 11 the ministers, having presented the names of 11 high officials and princes whose death was demanded, agreed on the terms to be presented as the basis for a preliminary treaty, subject to the approval of their governments, which they intended to press upon China in a joint note, were the following: (1) An extraordinary mission headed by an imperial prince

Count von Waldersee, German field marshal, was appointed commandant in chief of the allied forces, the Czar having suggested or expressed approval of his selection in a confidential correspondence with Kaiser Wilhelm, and all the cabinets having later accepted him at the proposal of the German Government. He did not arrive in China till after the occupation of Pekin, and the large German military expedition came later. He sent flying columns through the districts adjacent to Pekin and the railroads, but did not come into contact with the principal Chinese forces. The Chinese court did not arrive in Singan-Fu until Oct. 14. Meanwhile negotiations were opened at Pekin between the ministers of the powers and the Chinese commissioners who had been suggested by the Powers, viz. Prince Ching, with whom were associated the Viceroys Liu Ch'ang and Liu Ch'ang. The French proposals, so far as they were accepted by the powers, were the bases of negotiation.
shall be sent to Berlin in order to express the regret of the Emperor of China and of the Chinese Government for the murder of Baron von Ketteler. On the scene of the murder a monument worthy of the assassinated minister shall be erected with an inscription in Latin, German, and Chinese, expressing the regret of the Emperor of China. (2) The death penalty is to be inflicted upon Prince Tuan and Chuang, upon Duke Lan, and, further, upon Ying-nien, Kang-yi, Chao-Shu-Chiao, Tung-Fuhsiang, Yu-Hsien, and other ringleaders, whose names will be given by the representatives of the powers. In all places where foreigners have been pressed or maltreated official examinations shall be suspended for five years. (3) The Chinese Government shall erect a monument in every foreign or international cemetery which has been desecrated or where the graves have been destroyed. The prohibition of the import of arms into China shall be maintained till further notice. (5) China has to pay a just indemnity to governments, corporations, and individuals, as well as to those Chinese who suffered during the recent events in person or in property in consequence of being in the service of foreigners. (6) Every single foreign power is granted the right of maintaining a permanent legation guard and of placing the quarter of Pekin where the legations are at present excepted from the jurisdiction of the Chinese Government. Chinese are not to be allowed to live in that quarter of Pekin. (7) The Taku forts and those forts which might prevent free communication between Pekin and the sea shall be razed. (8) The powers acquire the right of occupying certain points on which they will agree among themselves about the lawful and wholesome acts or proceedings which may be practised in the capital or on the sea with the consent of the Chinese Government. (9) The Chinese Government is bound to post imperial decrees for two years at all subprefectures. By these decrees to belong to any anti-foreign sect is forever forbidden under penalty of death; the punishments inflicted upon the guilty are recorded; to prevent fresh disturbances, it is declared that the viceroys, as well as the provincial and local authorities, are made responsible for the maintenance of order in their districts. In the event of fresh anti-foreign disturbances or other infringements of the treaties which are not at once stopped and avenged by punishment of the guilty, these indemnities shall be proportioned to the extent of the outrages, and the Chinese Government shall be required to pay the indemnities within a month. The powers are not to erect any monuments at Pekin, nor anywhere in China, until after the indemnities are paid, and until China shall have promised to erect a monument in Berlin in memory of Baron Ketteler. If any official of the Chinese Government, or any Chinese person, shall incite any disturbance in China or elsewhere, or shall perform any act forbidden by treaty, he shall be expelled from the Chinese territory. If any Chinese person shall commit any insult on the Chinese Government, he is to be deprived of his civil rights, and shall be punished by imprisonment or by death. (10) The Chinese Government undertakes to enter upon negotiations with regard to such alterations in the existing commercial and navigation treaties as the foreign governments consider to be desirable, as well as regarding other matters which are concerned with facilitating commercial relations. (11) The Chinese Government shall be bound to reform the Chinese Foreign Office and the court ceremonial for the reception of the foreign representatives, and to do so in the sense which shall be defined by the foreign powers. The evacuation by the allies, in accordance with a verdict of the international commission, of Ting-Yung, acting Vicereoy of Chih-li, and of other high officials, while negotiations were pending, called forth an indignant protest from the Chinese authorities. Li-Hung-Chang remonstrated against the punitive expeditions that were carried on more extensively than ever. When he was asserting that the Chinese troops were dealing effectively with rebels, and reminded the ministers that the sole avowed object of the powers in sending troops to China was to relieve the legations, his note was returned to him. The United States Government, in a circular note, urged the powers to agree upon terms that it would not be impossible for China to fulfill. To demand the decapitation of the most highly placed and powerful men in the country and the payment of an indemnity that would be beyond the power of China to raise seemed likely to prolong indefinitely the foreign occupation. After further correspondence between the ministers and their governments, and some delay, it was decided by the powers, through MacDonald as British minister by Ernest Satow, the ministers agreed, on Dec. 4, upon the text of a joint note, which was subsequently amended in accordance with the views of various governments communicated to their ministers, who were instructed to sign it, and on Dec. 22 did sign it, in the final form given below:

"During the months of May, June, July, and August of the current year serious disturbances broke out in the northern provinces of China, in which atrocious crimes unparalleled in history and outrages against the law of nations, against the laws of humanity, and against civilization, were committed under particularly odious circumstances. The principal of these crimes were the following:

1. On the 20th of June, his Excellency Baron von Ketteler, while on his way to the Tsung-hi, was murdered by Chinese armed men, in the execution of his official functions, was murdered by soldiers of the regular army, acting under orders of their chiefs.

2. On the same day the foreign legations were attacked and besieged. The attacks continued without intermission until the 14th of August, on which date the arrival of the foreign forces put an end to them. These attacks were made by the regular troops, who joined the Boxers, and who obeyed the orders of the court emanating from the imperial palace. At the same time the Chinese Government officially declared, by its representatives abroad, that it guaranteed the security of the legations.

3. On the 11th of June Mr. Suiyam, chancellor of the legation of Japan, while in the discharge of an official mission, was killed by regulars at the gates of the city. In Pekin and in several provinces foreigners were murdered, tortured, or attacked by the Boxers and the regular troops, and such as escaped death owed their salvation solely to the personal exertions of their representatives. Their establishments were looted and destroyed.

4. Foreign cemeteries, at Pekin especially, were desecrated, the graves opened and the remains scattered abroad.

These occurrences necessarily led the foreign powers to dispatch their troops to China to the end of protecting the lives of their representatives and nationals and restoring order. During their march to Pekin the allied forces met with resistance from the Chinese army and had to overcome it by force.

Inasmuch as China has recognized her responsibility, expressed regret, and evinced a desire to see an end put to the situation created by the aforementioned disturbances, the powers have determined to accede to her request upon the irreparable conditions enumerated below, which they deem indispensable to expel the crimes committed and to prevent their recurrence:

1. (a) The dispatch to Berlin of an extraordinary mission headed by an imperial prince, in order to express the regrets of his Majesty the Emperor of China and of the Chinese Government for the assassination of his Excellency, the late Baron von Ketteler, minister of Germany. (b) The erection on the spot of the assassination of a commemorative monument, befitting the rank of the deceased, bearing an inscription in the Latin, German, and
Chinese languages expressing the regrets of the Emperor of China for the murder.

"II. (a) The severest punishment for the persons designated in the imperial decree of Sept. 25, 1900, and for those whom the representatives of the powers shall subsequently designate. (b) The suspension for five years of all official examinations in all the cities where foreigners have been massacred or have been subjected to cruel treatment.

"III. Honorable reparation to be made by the Chinese Government to the Japanese Government for the murder of Mr. Suiyarna.

"IV. An expiatory monument to be erected by the Imperial Chinese Government in every foreign or international cemetery which has been desecrated or in which the graves have been destroyed.

"V. The maintenance, under conditions to be determined by the powers, of the interdiction against the importation of arms as well as of materials employed exclusively for the manufacture of arms and ammunition.

"VI. Equitable indemnities for the governments, societies, companies, and individuals, as well as for Chinese who during the late occurrences have suffered in person or in property in consequence of their being in the service of foreigners. China to adopt financial measures acceptable to the powers, and to pay in full the amount of the indemnities and the interest and amortization of the loans.

"VII. The right for each power to maintain a permanent guard for its legation, and to put the diplomatic quarter in a defensible condition, the Chinese having no right to reside in it.

"VIII. The restriction of the forts which might obstruct free communication between Pekin and the sea.

"IX. The right to the military operation of certain points, to be determined by an understanding among the powers, in order to maintain open communication between the capital and the sea.

"X. The Chinese Government to cause to be published during two years in all the subprefectures an imperial decree: (a) Embodying a perpetual prohibition, under penalty of death, of membership in any anti-friend society; (b) enumerating the punishments that shall have been inflicted already, together with the suspension of all official examinations in the cities where foreigners have been murdered or have been subjected to cruel treatment; and (c) furthermore, an imperial decree to be issued and published throughout the empire, ordering that the governors general (viceroys), governors, and all provincial or local officials shall be held responsible for the maintenance of order within their respective jurisdictions, and that in the event of renewed anti-foreign disturbances or any other infractions of treaty occurring and which shall not forthwith be suppressed and the guilty persons punished, they, the said officials, shall be immediately removed and forever disqualified from holding any office or honors.

"XI. The Chinese Government to undertake to negotiate amendments to the treaties of commerce and navigation considered useful by the foreign powers, and upon other matters pertaining to their commercial relations, with the object of facilitating them.

"XII. The Chinese Government to determine in what manner to reform the Department of Foreign Affairs and to modify the court ceremonies concerning the reception of foreign representatives, in such manner as to be indicated by the powers.

"Until the Chinese Government has complied with the above conditions to the satisfaction of the powers, the undersigned can hold out no expectation that the occupation of Pekin and the province of Chih-li by the general forces can be brought to a conclusion."

CHRISTIAN ARCHAEOLOGY, CONGRESS OF. The second Congress of Christian Archæology was held in Rome, under the presidency of the Holy See, April 17. The Abbé Duchesne presided, and in his address spoke of the science of Christian archæology as relating to the study of the material monuments and memorials of the Christian past. The literature of Christianity and its liturgies were also to be subjects of study in two additional sessions of the congress. Contributions were presented by Cardinal Rampolla concerning an ancient index of the Christian cemeteries of Rome of the first half of the fourth century and a document concerning St. Melania which he had discovered.

Père Delatre reported on the Christian anti-riot, or discipline of St. Peter. Dr. Faussi commented upon a papyrus containing a letter of a priestess of Alexandria, written during the third century, which was thought to relate to a priestess of Petesuchos who had become a Christian, but having lapsed in the persecution under Decius, was seeking a certificate that she had offered sacrifice. Six other papers were read by the ecclesiastics composing the congress were those on the discovery of the names of early teachers in the Christian schools of Alexandria; on three Roman edifices which had been preserved by the Church, viz., the tomb of Hadrian as the Castle of St. Angelo, the meeting hall of the Synagogue of the Church of Santa Maria ad Martyres; a statuette in the Berlin Museum, formerly part of a Roman lamp, supposed to be identified as St. Peter's; a recent supposed identification of the burial place of St. Peter and St. Marcellinus at the Tor Maranea, with the valuable paintings contained therein; cestaeum and basilica removed from Marcelline, near Salona, with inscriptions having an important relation to the history of dogma; the origin of the columns of the altar of St. Mark in Venice; the substitution of Christian worship for the shrines of the gods on the Roman Campagna; two ancient Christian libraries recently discovered; and a review of the progress of the study of Christian archæology of late years in papal Rome.

The discovery, by Prof. Heardy, of a Greek inscription in the Doric dialect on the gateway of the old palace at Ephesus was reported to the Archæological Congress at Rome by Prof. Bohrn, of the University of Vindiciae. A copy of the inscription has been published. The inscription purports to comprise copies of a letter from Abgarus, King of Edessa, and an answer from Jesus Christ. The letter is as follows: "I have heard of thee and the cures wrought by thee without herbs or medicines, for it is reported thou livest sight to the blind, maketh the lame walk, cleanseth the leper, raiseth the dead, casteth out devils and unclean spirits, and givest health to those tortured by diseases of long continuance. Hearing all this of thee, I am fully persuaded that thou art very God, come down from heaven to do such miracles, or that thou, the Son of God, art truly come down. Wherefore in a few lines, entreat me to come hither and cure my diseases. Besides, hearing the Jews murmur at thee and continue to do thee mischief, I invite thee to my city, which is but a little one, and beautiful and sufficient to entertain us both."

The pretended answer from Jesus is: "Blessed
art thou, believing me, whom thou hast not seen, for it is written of me, 'They that have not seen me shall not believe;' they that have not seen me shall believe.' Be saved; but concerning the matter thou hast written about, with this I acquaint thee, that all things for which I was sent hither must be fulfilled. Then I shall be taken up and returned to Him who sent me; but after my ascension, one of my disciples that shall cure thee of the distemper and give life to all them that are with thee.

In reference to this matter, Eusebius (A. D. 320) wrote that Abgarus, being a great sufferer from disease, and having heard of the miracles of Jesus, sent a letter to him, and that Jesus, in answer, sent him a picture of himself, and promised that after his death he would send one of his disciples. The discovery, while it does not afford any confirmation to the story, furnishes evidence that it was currently received in Ephesus at the time the inscription was made, probably in the fifth century A. D.

CHRISTIAN ENDEAVOR, SOCIETIES OF. The International Convention of the Societies of Christian Endeavor was held in London, beginning with meetings of welcome, July 14, in Exeter Hall, Albert Hall, and the Alexandra Palace. The general secretary reported the whole present number of societies as being 59,712, with 3,500,000 members. The enrollment in the United States represented 43,202 societies, in the United Kingdom, about 7,000; in Australasia, more than 4,000; in Germany, 168; in Africa, 130; in France, 69; in Jamaica, 120; in China, 148; in India, 459; in Mexico, 110; in Madagascar, 93; in Japan, 73; in Turkey, 60; in Spain, 36; while societies existed in nearly every other nation. Topics were discussed relative to The Dawning Age and its Problems, World-wide Endeavor, Temperance, Citizenship, The Missionary Outlook, and Pentecostal Power. A "roll call of nations" was responded to by representatives of twenty nationalities speaking of the condition and prospects of Christian Endeavor in several continents. Opportunities were given for the special representation in "denominational rallies" of the various denominations with which Christian Endeavor Societies are connected. The Bishop of London addressed the meeting on the Spirit of Christ and the Cultivation of the Christian Temper. The "Junior Gambol" was participated in by several thousand children.

CHRISTIAN SCIENCE, a doctrinal, curative, and spiritual system, discovered in 1866 by Mary Baker Eddy. In that year, shut off from the outside world because of the effects of an acrid pronounced ineradicable by physicians, and giving herself up to a close study of the Scriptures, Mrs. Eddy claims to have discovered and demonstrated in her own person the doctrine which she subsequently gave to the world, and which is now proclaimed and practiced by many thousands of her followers. In 1875 the Christian Science text-book, Science and Health, with Key to the Scriptures, prepared by Mrs. Eddy in the intervening years, was published in Boston. According to this book its tenets are as follow:

1. As adherents of Truth, we take the Scriptures for our guide to eternal Life.
2. We acknowledge and adore one Supreme Infinite God. We acknowledge one Christ, the Holy Ghost, and the wine in union as the Great Harvester.
3. God's forgiveness of sin, in the destruction of sin, and the understanding that sin and suffering are not eternal.
4. The atonement as the efficacy and evidence of divine Love, of man's unity with God, and the great merit of Jesus, the Way-Shower.

5. Universal Salvation as demonstrated by Jesus, the Galilean prophet, in the power of Truth over all error, sin, sickness, and death; and the resurrection of human faith and understanding to seize the great possibilities and living energies of divine Life.

We solemnly promise to strive, watch, and pray for the Mind to be in us which was also in Christ Jesus, to love one another, and to be meek, merciful, just, and pure.*

The Christian Science Trinity or divine Principle is "Life, Truth, Love."

Mrs. Eddy also declares, in Science and Health, that "no analogy exists between the hypotheses of agnosticism, pantheism, theosophy, spiritualism, and Christian Science," and that "electrocinicism, hypnotism, and mesmerism are its antipodes." She adds: "I have set forth Christian Science and its application to disease only as I have found them. I have demonstrated the effects of Truth on the soul, longevity, and morals of men through mind, and I have found nothing in modern systems on which to found my own except the teachings of our Great Master, and the lives of apostles and prophets."

In brief, the discovery and claim put forth by Christian Science is, that all mankind who come to it, which is true spirituality and divine mind may work upon themselves and others, the miracles wrought by Christ and his apostles, to whom he imparted the knowledge, and who, in turn, imparted it to the early Christian Church, which practiced it while faith was strong. That the promise and power to heal the sick, cast out evil, and raise the dead was not confined to any special time or period, but is a fact the wonders of the universe going on all the time, Christ being the great "way-shower."

Mrs. Eddy has explained Christian Science as follows: "There is but one God, one Christ, and one Jesus of Nazareth. God is mind and all in all; therefore there can be nothing real but infinite mind and its manifestations. The compound individual idea of divine principle is Christ's individual idea of truth, personifying the primal order of being and as perfect as its source. Jesus represented the incarnation of Christ's principle. He stood for truth, healing the sick and sinful, and triumphing over the tomb. By his metaphysical omnipotence and his person of miracles he did not violate, but fulfill, the law. The Christian Science is based upon the unreality of matter. Nothing being real but Spirit, disease is an illusion of mortal mind, growing out of false conditions of thought. There is but one real mind in the universe, viz., God. Man being the idea of God, all is well with him when he divests himself of the illusions of mortal mind and becomes at-one with God. "Man's origin is not material, but spiritual. The universe is not the result of physical propulsion, but is an evolution from the Infinite Mind. God is Spirit, Truth. As matter is the opposite of spirit, truth, so must it be the opposite of God. Matter is the subjective state of error, deflecting from everlasting uprightness and even extinguishing in false personal beliefs, in sickness and death, only to be overcome by conquering truth—eradiated not by drugs or hygienic rules—that is, laws of matter—but by the power of Mind. Jesus referred to original evil, which he cast out in healing the sick, and called it 'the devil and a liar from the beginning.' "

"Jesus's mission was not for a period, but touched universal humanity. Hence his promise,

* This statement of belief is protected by Mrs. Eddy's copyright, and is used here by special permission.
Verily, verily, I say unto you, that believeth in me, the works that I do shall he do also; and greater works than these shall he do. And, 'these signs shall follow them instead of you clearly making this assurance applicable to Christians in all ages. Jesus's atonement for sin was a human sacrifice, which demonstrated man's life in God, divine Good; and this verity, when understood, is the way of salvation, for it destroys sin. (See Romans, xii. 1.) This theory shall be corroborated by Jesus's supremacy over all phases of matter—a control not supernatural, but divinely natural in one abiding in God, Good, the center and circumference of the universe. From this it follows that genuine healing must be wrought upon thought, not body. This fulfills these headings of scientific revelation, the Bible was the writer's only textbook. When apparently near death, her convictions laid hold upon the sublime verity that all evil, whether moral or physical, must be nonexistent, because contrary to the omnipotent God, God. She found in this thought a new meaning, whereby she was sustained from the valley of shadows and her feet set on the rock. As it was through the understanding of God through Christ, God's idea, all healing must come, she adopted Christian Science as the name of this curative system.

It was a spinal injury which medical science declared case hopeless, the case of Mrs. Eddy, and several persons still living attest to it. The same year that she regained health (1866) she began healing others, and also taught her first pupil. Science and Health was written while she lived at her home in Lynn, Mass. On July 4, 1879, the First Church of Christ, Scientist was founded in Boston, with Mrs. Eddy and Mrs. Eddy as its pastor, though she did not receive ordination till 1881. For several years this congregation met in a hall, gradually increasing, though not with the giant strides it has attained of late. In the same year Mrs. Eddy founded her metaphysical college at Boston, the laws then enabling her to obtain a charter for medical instruction, a privilege which was withdrawn after 1883. Mrs. Eddy has been from the beginning president of this college. Under its auspices a yearly course of instruction is given to a limited number of applicants, with a view to fitting them for authorized teaching. A class in theory is also included in the auspices of this college by a duly appointed Christian Scientist, formerly a medical practitioner of experience and standing, who now teaches and practices only Christian Science mind-healing and its obstetrical system. In 1883 she established the Christian Science Journal, becoming its editor and proprietor. It still remains the official organ of the society. A weekly publication called The Sentinel was established in 1898.

Christian Science was introduced to New York in 1886, the first national association convening there on March 11. The same year a denominational chapel was begun at Orange, Wis., and others soon followed elsewhere. Christian Scientists never dedicate a church until it is paid for, and not until January, 1895, was the first imposing edifice, known as the Mother Church at Boston, dedicated as a testimonial to Mrs. Eddy. It was paid for by her followers throughout the world, and cost $1,250,000. The church that began with 26 members had at its dedication 5,000, with a local attendance of about 800. At the present date its total general membership is more than 20,000. In 1894 there were in the United States 300 Christian Science societies meeting regularly for worship, 26 teaching institutes, and 66 dispensaries and reading rooms. At the present writing (November, 1900) there are in the United States and other countries, all told, 441 chartered churches, and of societies organized but not yet chartered 134, making a total of 575. Of reading rooms there are 284, and of institutes 75. The total number of professing Christian Scientists is officially estimated at 1,000,000; probably 1,250,000. The headquarters of this movement are in Boston. Chicago comes next, New York third. There are now 8 congregations worshipping in Manhattan. Philadelphia has 4 churches. Kansas City ranks next in active growth, then Denver and Buffalo. In the Western States the sect has grown rapidly, and it is making headway in the South. Salt Lake City is a thriving center. A church has been begun at Dawson, Alaska. Next to the United States the sect has grown most in Canada and Australia. It has obtained foothold in England, Scotland, Germany, Sweden, Norway, France, and Italy. It has begun work in India, South Africa, and Japan, and of late in China, where Mrs. Conger, wife of the United States minister, has been an indefatigable worker in its behalf.

All the literature of the Christian Science body is published at one place, 95 Falmouth Street, Boston. Besides the Christian Science Journal (monthly) and The Sentinel (weekly), there are issued several pamphlets, and editions of Bible lessons, etc., are issued. The other published works of Mrs. Eddy include Christ and Christmas, a poem; Retrospection and Introspection, Pulpit and Press, Unity of God, Rudimental Divine Science, Christian Science and Pantheism, Message to the Mother Church, No and Yes, Christian Healing, People's Idea of God, Miscellaneous Writings.

All churches rank as branches of the Mother Church in Boston and, although independent in the conduct of their own affairs, accept only the tenets of the Mother Church. Properly speaking, the church has no ministers. Each congregation has two readers, first and second, a woman and a man, and these read the lessons and conduct worship. This claims to be a revival of an ancient custom in the Christian Church. Every Wednesday evening all churches throughout the world hold meetings at the same hour. At these meetings personal experiences and observations are related by members of the congregation, and the message of healing is nearly unbroken. The Christian Science Board of Education, with headquarters in Boston, was established, also the Board of Lectureship of the Mother Church, composed of official lecturers who reside in different parts of the United States. The Mother Church has also a Publication Committee, composed of a man who attends to the press work of the movement, especially the correction of false statements and erroneous views pertaining to Christian Science. Duly appointed persons throughout the world co-operate with this committee and look after the presentation of Christian Science in the press.

To quote from a lately published article by a member of the Christian Science Board of Lectureship of New York, the cardinal reasons for the rapid growth of Christian Science are, first, the restoration of the Christian healing of the apostolic church; second, the establishment of Christianity on a scientific and practically demonstrable basis; third, the metaphysical and spiritual interpretation of Christ's teaching, representing a general and world-wide reaction against materialism and externalism in religion. Christian Science stands pre-eminently for the religion which heals the sick, reforms the sinner, demonstrates the naturalness of divine science, and unites in one
threefold system of science, theology, and medicine the divine way taught and demonstrated by the founder of the Christian religion, and practiced by his followers during the first three centuries. (See Metaphysics, in this volume.)

COLOMBIA, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 27 members, 3 from each department, and a House of Representatives containing 66 members, 1 to 50,000 inhabitants, elected by adult male suffrage on collective tickets for the different departments. The President is elected by electoral colleges for six years. If the presidency and vice-presidency become vacant, the Congress elects an acting President for the remainder of the term. Since the abolition of state sovereignty in 1886, the President has power to appoint and remove governors, but the departments into which the former states were converted still collect and expend their separate revenues. The President elected for the term beginning Aug. 7, 1898, was M. A. Sanclenelmie.

Area and Population.—The republic has an estimated area of 512,928 square miles. The population is supposed to reach 4,000,000, including 150,000 uncivilized Indians. The capital, Bogotá, situated on a lofty plateau, has about 120,000 inhabitants; Barranquilla, on the Magdalena river, connected by 20 miles of railroad with the coast, has 40,000; the mining town of Medellin, 40,000; the seaport Panama, 30,000; Bucaramanga, a coffee market, 20,000; the seaport Cartagena, 20,000. There is a boundary dispute with Costa Rica which has been referred to the President of the French Republic for arbitration. The boundary between Colombia and Brazil has not been settled. The boundaries with Peru and Ecuador by a convention of 1894 were referred to the Queen Regent of Spain.

Finances.—The Congress votes supplies for two years. For the biennial period 1897-98 the revenue was 37,461,000 paper pesos, and the expenditure 41,429,180 pesos. Gold was worth $10 an ounce. For 1896-1900 the revenue was placed in the revised estimate at 29,918,640 pesos, of which customs duties provide 21,453,640 pesos. The estimate of expenditure balanced the revenue, the chief items being 2,524,848 pesos for military affairs, 4,493,000 pesos for justice, 3,773,500 pesos for debt charges, and 3,751,500 pesos for financial administration. The Government receives a revenue of $2,235,000 a year from the Panama Railroad concession, which in 1880 was paid up in advance till 1908. The internal debt in 1899 amounted to 11,359,074 pesos, of which 5,725,358 pesos were floating obligations and 5,633,716 pesos consolidated debt, requiring 353,300 pesos a year for the payment of interest, while for the payment of interest and principal on the floating debt the fund of 1,738,000 pesos is set aside. The paper money in circulation in 1899 was 30,984,622 pesos in amount. A law was made in 1894 to establish the gold basis, permitting the free coinage of gold. Silver has been issued in subsidiary coins to the amount of 3,000,000 pesos, but no gold has been coined. More paper currency was subsequently issued until the premium on gold rose in April, 1900, to 550 per cent. The foreign debt, held mainly in England, amounted with arrears of interest to £3,514,442 sterling, when an arrangement was made in January, 1897, to take it up by the issue of £2,700,000 of new bonds which pay only 1½ per cent. interest till 1900, 2 per cent. then till 1903, 2½ per cent. till 1906, and 3 per cent. thereafter. The revenues of the nine departments in 1899 amounted to 16,986,756 pesos in currency, and their expenditures to 17,346,040 pesos. The peace strength of the army was fixed by the law of 1898 at 1,000 men. In war time the President has authority to call the entire male population to arms. The naval force of the republic consists of a river gunboat, a small armed steamer, and a sailing vessel.

Commerce and Production.—The value of imports in 1898 was 11,083,025 gold pesos and of exports 19,157,788 gold pesos. The chief imports were cotton goods, metals and hardware, kerosene oil, foodstuffs, wine and beer, linen goods, chemicals, and paper. The export of coffee was 39,100,102 kilogrammes; of tobacco, 6,216,740 kilogrammes; of rubber, 410,423 kilogrammes; of hides and skins, 4,675,395 kilogrammes. Other exports are dyes, cinchona bark, copaiba, cabinet woods, various foodstuffs and vegetable products, live animals, gold, silver, cinabhar, emeralds, manganese, and other metals and mineral products. The gold and silver production is $4,100,000 a year in value, and is increasing. Lack of transportation prevents the more rapid development of mines of copper, lead, and other ores, and of the rich agricultural resources of the country, while the valuable forest products are diminishing under wasteful methods of exploitation. Coal and iron are mined and some iron is manufactured. The Government salt mines near Bogotá yield the value of 680,000 pesos a year.

Navigation.—The number of vessels entered at the port of Barranquilla in 1898 was 396, of
441,673 tons; cleared, 263, of 442,777 tons. In 1897 were entered at Panama, Colon, Cartagena, and Santa Maria 923 vessels, of 1,219,020 tons, cleared of 1,219,020 tons. British, German, French, Spanish, and Italian steamers visit these ports, and American lines connect them with the Gulf and Atlantic ports of the United States. The merchant marine of Colombia in 1898 consisted of 1 steamer of 457 tons, and 7 sailing vessels, of 1,770 tons. Of the Magdalena and its tributaries, affording 1,000 miles of inland navigation, are 42 steamers, of 7,331 tons. 

Railroads, Posts, and Telegraphs. — There are 11 lines of railroad, two owned by departments and the rest by companies, which had 389 miles completed, 276 miles under construction, and 85 miles contracted for in 1898. The post office in 1897 carried 2,794,069 letters and postal cards, 1,233,313 papers and pamphlets, and 161,217 packets. The telegraphs in 1898 had a total length of 8,000 miles. 

The Panama Canal. — A company for the construction of a canal across the isthmus of Panama was formed in 1881 by Ferdinand de Lesseps. After 772,545,000 francs had been raised and expended, about half the amount that it was then estimated that the canal would cost, the company went into liquidation in 1889, having failed in the attempt to obtain a popular loan of 600,000,000 francs, its work then suspended. In 1893 the Colombian Government gave an extension of the time limit to enable a new company to be formed, and in 1894 a company was formed and work was provisionally resumed and has since been carried on with more or less expedition. An American company was organized in 1898, which, in the opinion of the French engineers, could be done in ten years at a cost of 512,000,000 francs in addition to what had been expended. Of the $156,400,000 expended by the original company it was found that only $88,600,000 had been legitimately expended for excavation and construction, the rest having gone to politicians, newspapers, and dishonest promoters and contractors, creating a financial scandal in France which was the greater because the bulk of the subscriptions had come from small investors and the work had been undertaken as a patriotic enterprise. The new French company, without seeking capital to the extent of 200,000,000 francs, about half of which was cautiously expended on construction in four years, during which attempts were made in vain to induce the French public to invest the funds needed for the completion of the work, not as a tideway canal, which was the original plan, but with locks. In 1898 an auxiliary company known as the Panama Company of America was organized in the United States. Congress authorized a new commission to examine the American isthmus at every available point in order to determine the most practicable and feasible route for a ship canal. President McKinley appointed this commission in June, 1899, consisting of Rear-Admiral Walker, Colonels Ernst and Haim of the engineer corps of the United States army, and five civil engineers, who first went to Paris to study the plans of the Panama Company before examining the route and the work done on the spot, the route chosen for the French Canal, and other available routes. The directors of the new French company, after sparring of raising sufficient capital in France, voted to transfer all its property, its rights, and its powers, with those of the auxiliary American company, to a new company that was organized under the laws of the State of New Jersey, which undertook to complete the canal with American capital. The Panama Canal Company of America took over the rights of the French Panama Company in the maritime tract across the isthmus and the Panama Railway, which will pass into its possession upon the completion of the canal. It obtained powers also to operate ships and railway lines, to carry mails, passengers, and merchandise, to construct wharves, warehouses, and telegraph and telephone lines, and to enter into such arrangements with any governments as may conduce to its objects and assist in obtaining rights, grants, and privileges. The capital was fixed at $30,000,000 in the beginning, with power to increase. The arrangement with the new French company was to pay its shareholders partly in money, but mainly in shares of the American company. The original French company retains only an equity in the shape of a percentage of the profits remaining after the payment of all operating expenses and fixed charges on the dividend of the new company. They will receive 60 per cent. of these surplus net earnings. The capital for the completion of the canal, $100,000,000 or over, is expected to be raised by the issue of bonds. An international commission made up of French, German, Russian, English, and American engineers examined the French company's project. The report, in laying up its plans, estimated the cost of completing the entire canal at something over $102,000,000 if the two locks are made of a certain width, or $125,000,000 with wider locks. The extended concession from the Colombian Government runs until Oct. 31, 1910, a bonus of 3,000,000 francs having been paid, and in 1910 the Fraser will be the terminus of the extension. After the American company was incorpored and the proposition was definitely brought before the French directors, so much opposition was developed to the surrender of an enterprise that had absorbed so much French enthusiasm and entailed such sacrifices on the French people that the directors were unwilling to shoulder the responsibility of carrying out the arrangement, and they all resigned. The trustees of the De Lesseps company in particular were reluctant to sanction the total transfer of the entire management and control from France to America. A new board of directors, was chosen on Dec. 31, 1900, which continued negotiations with the American company. The prospects of the French company depended upon the report of Admiral Walker's commission giving the preference to the Panama over the Neiragua route, and the commission in its consideration of the Panama route had to be guided in a large degree by the knowledge whether the French shareholders would transfer full control to the American company. The commission made a careful examination of the work already executed or in progress at Panama in March, 1900, and requested explicit information regarding the guarantees to be offered to the American nation as to the transfer of all rights, powers, property, and management to an American company. Work was going on in various places, especially with 3,000 workmen in the great Culebra cuttings, which before July was brought down to within 45 metres of the level of the sea. 

Rebellion. — President Sanelejene died early in January, 1900, leaving a precarious and complicated political situation. The rebellion was started by the Liberal party under Gen. Gabriel Vargas Santos, who was proclaimed provisional President of Santander, the chief coffee-growing department. The rebels besieged Buea and managed to raise $3,000,000 from the State of New Jersey, which
about 6,000 men, besides 2,000 guarding different points, while the Government forces were said to number 15,000. They fought daily with determination on both sides until the losses mounted up to several hundred killed and wounded and both parties used up their ammunition. The rebels threatened, and Gen. Lozano, with the Enterprising, had made themselves masters of the greater part of the department. Their provisional Government was established at Cuenta. They received countenance and aid in men and money from Venezuelans and Nicaraguans. The Government assumed that all foreigners favored the revolution, including the British, and anybody who was treated as a rebel. An expedition of 300 men on a Nicaraguan gunboat, which the Nicara- guan authorities represented they had stolen, landed at Chiriqui and took possession of the town, killing the garrison of 25 men, and putting to flight the citizens who opposed them or were afraid. Benjamin Rui, Governor of the Venezuelan state of Zulia, aided the Colombian rebels because he hoped if they got into power they would repay him by relinquishing the whole or a part of the Colombian claims to the territory in dispute between the two republics. Besides the Monotombo, which went to Chiriqui flying the Nicaraguan flag, and a band of volunteers from the United States, the Nicaraguan steamer Rayo. The American steamer Hanaberg, chartered as a transport by the Colombian Government, was seized by the revolutionists, who had two other small steamers with which they captured San Antero, Lorina, and the other places on the Sinu river. When guerrilla bands were encountered in countries bordering on Cartagena, the Nicaraguans burned the port and the town of Cartagena, destroyed the steamer Oceana, and destroyed the United States consular post at that place, and burned the United States flag on the flagpole. The revolutionists seized and converted to their uses every kind of arms and ammuni- tion that had fallen into their hands.

The army of the compact Liberal party, under Gen. Eladio Loza- no, was able to hold its own, and the campaign was continued. The war was continued for several months, and then a truce was arranged for a day, at the end of which the Government party decided to fight it out. Gen. Carlos Alban, the governor, was forced to leave. The rebels in the streets of Panama and outside. The battle proceeded from day to day, and the landing of the reinforcements for the rebels turned the tide still more in their favor. Both parties, although they used artillery freely, refrained from injuring the city or interfering in any way with the traffic of the Panama Railroad. On July 25 the command- ers agreed to an armistice, which was extended through the efforts of the American and British consuls so as to allow the burial of the dead and care for the wounded, the number killed having exceeded 600. The fighting on both sides was of the most resolute description, especially on the part of the rebels, who tried to carry by assault a strongly intrenched position defended with Muzzle-loading rifles. The Liberty, a steamer of the United States, which had been used as a hospital depot, took refuge in the town of Colon, the rebels having been the greatest sufferers. Nearly a quarter of the people engaged on both sides were killed or wounded. The trenches were full of dead, and the wounded had crawled into houses, and many had died for want of surgical attention. Both parties were supplied with arms of the most destructive kind, and the arms and ammuni- tion served the further purpose of allowing 1,000 fresh Government troops to arrive from Savannia. As soon as these came over the railroad the Lib- erals were willing to make peace, agreeing to give up all their arms, ammunition, and ships on con- dition of receiving a complete amnesty, the officers to retain their side arms, the insurgents to be allowed to return to their homes, and all political prisoners to be set free. On the previous day a Government force led by Gen. Gonzalez Valencia took Cuenta, held by Colombian rebels and Ven- ezuelans who had come to their aid, capturing many prisoners and a large quantity of war ma- terial. The war was over in a few days, the insurgents in the rebellion were expelled from the country.

When the Congress met, Vice-President Maro- quin was intrusted with the executive power and a new Cabinet was formed on Aug. 10, composed as follows: Minister of Government and of War, Gen. Guillermo Quintero Calderon; Minister of the Interior, Dr. Pedro Antonio Molina; Minister of Public Instruction, Dr. Miguel Abadín Mendez; Minister of Finance, Alejandro Gutié- rez; Minister of Foreign Affairs, Dr. Carlos Mar- tinez Silma.

COLORADO, a Western State, admitted to the Union Aug. 1, 1876; area, 103,999 square miles. The population was 194,357 in 1880; 319,198 in 1890; and 533,700 in 1900. Capital, Denver.

Government.—The following were the State officers in 1900: Governor, Charles S. Thomas, Demo- crat; Lieutenant Governor, Francis Carney, Populist; Secretary of State, E. F. Beckwith, Populist; Treasurer, John J. Fesler, Republican; Auditor, George W. Webster, Populist; Superintendent of Public Instruction, J. C. Overmeyer, Democrat; Attorney-General, D. M. Campbell, Republican; Superintendent of Education, Helen L. Grenfell, Repub- lican; Commissioner of Mines, Harry A. Lee; Regents of the University, W. E. Anderson, C. R. Dudley, O. J. Pfeiffer, William J. Orange, D. M. Richards, Harold Thompson; Chief Justice of
Concerning the plan and scope of the new enterprise, Lieut. Farrow said: "The plan has already met with such popular approval that the Governor is actually overrun with applications from young men wishing to take the training. Many of the applications come from students of Yale and Harvard, who are to graduate this year. Fifty applications have already been received from England.

"Young men between seventeen and twenty-five years of age will be permitted to join by regular enlistment. They will be sworn to serve one year, during which time they will receive practical training in rough riding, scouting, riding, signalling, and all the arts of up-to-date warfare. For this each applicant will have to pay a tuition fee of $500, which covers his expenses for the entire year, including equipment, horse, clothing, and rations. Each applicant must also pass the United States army examination before entering the encampment for instruction."

A garden school undertaken last year at Pueblo as an experiment has proved so successful that it is to be continued indefinitely. Each pupil had a plot of his own and an interest in certain common beds. The children did all the work under instruction. During the latter part of the term the garden products were purchased, and the proceeds were made, in the profits of which all shared.

**Corrections.**—There were 533 prisoners enrolled in the Penitentiary, at Cañon City, in March, and 163 inmates at the State Industrial School for boys, at Goshen.

**State Lands.**—The annual report of the State Land Office gives the receipts of the office to have been $204,096; the number of acres of school lands sold, 2,000; internal improvement, 1,258.25 acres; total, 3,258.25 acres; area under renewal certificates, 3,317.26; total area patented, 18,523.21; town lots sold, 21. Of the money received, $35,577 goes to the permanent school fund, $14,684 to the permanent fund of the Agricultural College, and $5,695 to the income of the college. The permanent internal improvement fund receives $22,302, and the income for internal improvement $29,307.

**United States Lands.**—The report of the General Land Office for the year ending June 30, 1900, shows the internal improvements at several river lands, including the Arkansas, the Platte and the Rio Grande on the Union Pacific. Colorado had 646 mineral and mill-site patents and 1,187 mineral or mill-site claims, covering 10,528 acres. There was a tract of 99,488 acres in Colorado embraced in Indian patents.

**Products.**—Following are the figures of the State's mineral production in 1899, as reported to the Director of the Mint: Gold, $262,265.487; silver, coinage value, $29,679,706; lead, $6,031,150; copper, $1,975,518; total, $63,971,867. Other products have been estimated as follows: Zinc and manganese iron, $357,500; stone and marble, $1,825,000; iron and steel, $7,651,719; coal, $8,750,000; lumber, $3,350,000; oil, $1,500,000; live stock and their products, $11,650,000; farm and dairy products, $28,112,668.

An estimate of the beet-sugar production in 1900 placed the value of the output of the factories at $2,000,000, of which about half would go to the beet growers.

In the spring more than 531,000 trout were put into the streams of the State from the hatchery at Gunnison.

The number of sheep in the State this year is given as 2,185,327, and their value $6,250,036. Of wool 14,264,625 pounds were produced, the value of which was $1,032,322.
The number of horses, as estimated by officials, was 157,427; of swine, 29,460; of mules, 9,118; of cattle, 1,290,421.

The increase in the number of cattle since 1890 is 372,500, or over 79 per cent. The sheep increase has been remarkable. From the estimates made for 1896 and those ensuing figures of ten years ago, there has been an increase of 1,067,337 in number, or 223 per cent., and yet the highest price was paid for Colorado lambs this year that ever has been recorded.

The report of the State Board of Agriculture says that 735 varieties of fruit are grown in the State, and between 225 varieties of apples alone. The prices received for fruit in 1899 were higher than ever, and contracting agents from every large Eastern city were here last year to secure the products of the Colorado orchards.

At present quail are distributed throughout the State as trout and oiled an raging out for streams. The explanation is given as follows: "In several of the counties on the western slope the quails have become so numerous that the citizens have petitioned the Fish and Game Commissioner to do something for them. There is no open season for hunting quails in Colorado, and it is believed that if no provision is made to destroy stocks of small grain and in some instances have become so bold that chickens have been driven from their food in the farmyard and the stuff appropriated by the quails. The only good the little birds accomplished was to destroy the grasshoppers, and in this work there was nothing that could equal them. In other sections of the State there was an abundance of grasshoppers, but no quail." The Game Commissioner therefore offered a reasonable price for live quails, to be distributed to farmers applying for them.

Complaint is made that the mule deer, which formerly roamed over the plains in vast herds, is threatened with speedy extinction. This is attributed to the unrelenting work of amateur sportsmen, and to the greed of settlers, who live upon venison, though all the time raising the finest of cattle for the market. It is even said that there are children fifteen years old in these cattle districts who never have tasted beef.

A local paper says: The plains country in eastern Colorado, which was one of the best breeding grounds and home of thousands of buffalo, is now populated by thousands of coyotes, and so destructive have they become to the stock interests of the section in question that the State of Colorado and the cattle barons, working together, are offering $37.50 for every coyote scalp presented."

**The New Capitol.**—It was announced in October that the Capitol was complete. The site was given to the State by Henry C. Brown. Construction work was begun in 1886; the corner stone was laid July 4, 1890; the whole cost was about $831,000. It is of Colorado granite. The distance around the outside walls is a quarter of a mile; the height from the base line to the top of the statue on the dome is 256 feet. From the dome can be seen the Rocky mountains for a stretch of 200 miles; on a clear day Pike’s Peak, Long’s Peak, and Gray’s Peak are distinctly seen.

**Buenaventura.**—A dispatch from Cañon City, under date of Jan. 27, said that Thomas Reynolds, the convict, who, with three others, escaped from the Penitentiary after murdering Night-Captain William C. Rooney, was captured near Florence, 10 miles east of Cañon City, and brought to the latter place in a wagon, where he was taken from the officers by a mob and hanged to a telegraph pole.

In May a negro was hanged by a mob at Pueblo for assaulting and murdering two little girls. His dead body was dragged through the streets, followed by a mob of about 3,000 persons.

Most horrible was the fate of a negro boy, Preston Porter, who assaulted and murdered a girl of eleven on her way home from school at Limon, Nov. 8. He was taken to the spot where the crime was committed, chained to a stake, and burned to death. The father of the little girl applied the match. The Governor has ordered an investigation.

**Politics.**—State officers were elected in November. The Democrats, Populists, and Silver Republicans united on a fusion ticket. Following were the nominees: For Governor, James B. Orman; Lieutenant Governor, D. C. Coates; Secretary of State, D. A. Mills; Treasurer, J. N. Chipley; Auditor, C. W. Crouter; Attorney-General, C. C. Post; Judge of the Supreme Court, R. W. Steele; Superintendent of Public Instruction, Helen L. Grenfell; Regents, W. H. Bryant, F. E. Kendrick.

The Republican ticket was: For Governor, F. C. Goudy; Lieutenant Governor, P. S. Rider; Treasurer, O. Adams, Jr.; Auditor, J. S. Murphy; Secretary of State, Alfred M. Williams; Attorney-General, R. T. Yeaman; Judge of the Supreme Court, G. C. Bartels; Superintendent of Instruction, Ione T. Hanna; Regents, C. R. Dudley, W. A. Packard.

The Prohibitionists named the following: For Governor, J. R. Wiley; Lieutenant Governor, T. C. Chamberlain; Secretary of State, Mary L. Hennessy; Treasurer, W. N. Clure; Auditor, Joseph Harvey; Attorney-General, James Miller; Supreme Judge, F. I. Willson; Superintendent of Instruction, Elizabeth Smith; Regents, B. D. Sanborn, W. E. Tetzel.

The trades unions nominated a ticket through the process of the initiative and referendum, but the State Federation of Labor voted to abandon it.

The official vote of the State was as follows: For President: Bryan, 122,733; McKinley, 93,072. For Governor: Orman, 121,965; Goudy, 93,245. The entire fusion ticket was successful.

A proposed amendment to the Constitution was voted upon and appears to have been carried. The effect of the amendment is to propose as many as six amendments at one session; heretofore it has been limited to one at a session.

**CONGO, INDEPENDENT STATE OF THE.**

a sovereign, monarchical, neutral, and independent State, created out of the Congo International Association, which was founded by the King of the Belgians in 1883, and whose sovereignty was recognized by the United States and the principal European powers before the signature of the general act of Berlin. The Berlin Conference was summoned by Prince Bismarck in November, 1884, with the object of regulating the African question, and its conclusions were embodied in a general act, signed Feb. 19, 1885. The subsequent negotiations resulting in treaties with France and Portugal gave the State its present boundaries. At the end of April, 1885, the Belgian Chambers passed resolutions authorizing Leopold II, King of the Belgians, to be the chief of the State founded in Africa by the Congo International Association. The union between Belgium and the Congo State was to be exclusively personal, and King Leopold was and is King of the Belgians and sovereign of the Congo State. In April, 1887, the King obtained from the French Government the waiving in favor of Belgium of its right of pre-emption conceded by the Congo Association in April, 1884, and thus secured for his own country the undisturbed revolution to the colony he had created in Central Africa. On
Aug. 2, 1889, the King made his will as sovereign of the Congo State, bequeathing to Belgium all his sovereign rights therein. In July, 1890, a convention was signed between Belgium and the Congo State, giving the former the right to annex the latter, if it judge good, within a period which expired in January 1901.

The seat of the central Government is at Brussels, and a Secretary of State, Baron Edmond van Eetvelde, directs the administration with the assistance of secretaries in the different departments, that of Foreign Affairs being under the Chevalier A. de Cuveller. Boma is the seat of the local Government, which is generally represented by a Governor General ad interim, at present Major E. Wangermeers.

Area and Population.—The area of the Congo State is about 900,000 square miles, and the population probably not far short of 30,000,000. The population was diminished formerly by incessant slave raids and intertribal strife. These causes of depopulation have either wholly disappeared or greatly lessened in their effect, and a steady increase in the number of the blacks is anticipated.

A census of the white population, taken on Jan. 1, 1899, shows that there were 1,630 Europeans and 4,935 other whites. Of these, 123 Portuguese, 113 Italians, 94 English, 81 Swedes, 65 Dutch, 41 Danes, 29 French, 28 Americans, 21 Germans, 18 Swiss, 8 Australians, and 3 Spaniards. The table of mortality among the State agents alone shows a death rate in 1892, the worst year, of 9 per cent, from all causes, of 7.3 per cent, from sickness—that is, excluding those killed on warlike expeditions. In 1897 the rates were respectively 6.8, 8, and 5.4 per cent. Steps to improve hygienic conditions are in progress. Certain parts of the Congo region are trying for Europeans, especially for those who have newly arrived; on the other hand, there are extensive provinces—Katanga, for example—in which the climate can not be surpassed.

In the revenue is included the personal grant from King Leopold of 1,000,000 francs, and the advance from the Belgian Government of 2,000,000 francs; but the proportion of State receipts to expenditure, which had risen from less than 5 per cent, in 1886 to over 68 per cent, in 1897, shows a further increase to more than 86 per cent. An absolute equilibrium without a continuous grant was expected to be attained in 1901. The principal items in the revenue for 1899 are customs, 3,700,000 francs; transport service, 1,200,000 francs; and produce of the domain, in the form of native tribute and taxes, 10,200,000 francs. The largest amounts under the head of expenditure are the administration in Africa, 2,062,335 francs; the public force, 7,623,946 francs; the marine service, 1,481,024 francs; public works, 1,201,270 francs; agriculture, 600,530 francs; and development of the domain, 4,020,720 francs. In addition to the regular expenditure, the sum of 2,946,820 francs, provided for extraordinary works, was spent on extraordinary public works, more than half of this total for the improvement of the means of communication on the Upper Congo, and a grant of 500,000 francs was assigned to the telegraph from Lake Tanganyika to Boma. For 1900 the revenue was estimated at 26,256,500 francs. Of the 23,256,500 francs of local revenue, 11,200,000 francs were for customs, 3,800,000 francs from transport, 2,500,000 francs from administration, and 626,500 francs from various sources. The total expenditures were estimated at 27,731,254 francs, of which 15,423,681 francs were allotted to Finance, 11,050,013 francs to the Interior, 138,000 francs to Foreign Affairs and Justice, 110,500 francs to the central office, and 989,200 francs were calculated for contingencies.

Military Force.—The army of the State is known as the Congo public force. The International Association employed foreigners—Haussas and Zanzibaris—for its expeditions, but in 1888 the first national corps was raised in the form of a regiment of 500 combatants. In July, 1891, the official scheme for the public force was promulgated. The troops were to consist of two separate bodies, the first, or regulars, voluntarily enlisted for a period of seven years—five in active service and two in the reserve—and the second an enforced levy of militia by order of the Governor General. In all there were 1,200 Portuguese and 900 volunteers and 9,500 militiamen. The training of the men is carried out in fixed camps, and covers a period of eighteen months. The troops are armed with the Albini rifle and a short bayonet, while the white officers carry the Mauser with a magazine of five cartridges. Great care has been taken to provide for the welfare of the men. In 1897, 145 of the State troops were taken ill, more than 100 of them recovering with the aid of the army doctors. These events have suggested doubts as to the trustworthiness of the force, but the adoption of precautions similar to those taken in the Anglo-Indian army may avert serious danger. The two chief precautions are the employment of the men at a distance from their tribal homes, and the mixing of the tribes in the composition of each regiment. The principal of Appeal was made, to defend the rampart and ditch, but two regular forts, Chinkakassa and Kinshassa, guard the river Congo below Boma and Leopoldville respectively.

Justice and Treatment of the Natives.—In the earlier years of the Congo State the administration of justice was not thoroughly organized. The natives were smaller in number and greater in number and more law was in force. The task which precede every other was the settlement of the question whether the Arabs or the Europeans were to be supreme. The abolition of military law in the Upper Congo only became possible in 1897, and at the same time power was vested in the public prosecutor to summon Europeans guilty of some particular offense, such as murder, before the tribunal of the Lower Congo, even when such offenses were committed within the jurisdiction of the upper river tribunals. The Court of Appeal at Boma was strengthened by three councilors of different nationalities being substituted for one Belgian judge. Each accused was required to be free to say simple and to ask if the blacks might be neither unaware as to how they should proceed nor unable to do so. As a final safeguard, the lower courts are enjoined to lodge an appeal on behalf of the accused against their own decisions. A commission for the protection of natives, international in composition, with a Belgian and with representatives of other European powers, as well as Catholic among the members, was formed for the purpose of watching over the interests of the natives and preventing acts of tyranny. It has the right to notify to the judicial authorities and the Governor General all acts that are injurious to the natives or acts of violence of which they are the victims. Finally, the president of the
Courts of Appeal is required to make periodic
tours of inspection, with the view of ascertaining if there are any abuses or grievances. In 1898, when a native proved that an official had requisitioned supplies from him by force, the Court of Appeal has decided that it can by clear instructions and peremptory orders prevent tyranny in any form. Allegations that it grants its officers or servants a commission or premium for the collection of ivory or caoutchouc are opposed to the truth. All public employees are forbidden to take gratuities or commissions, and are liable to immediate dismissal for doing so. If cruelty is perpetrated by the European agents of the different commercial companies, the ill treatment of natives by whomsoever ever committed is a penal offense under the code, and the commission for the protection of the natives has a free hand to put the machinery of the law in force. Cases of harshness and even of cruelty were exceedingly rare in the conditions under which the Europeans are not conducive to sweeteness of temper, and the negro is admitted by his friends to be lazy, improvident, and inattentive. It will be long before the black races will take to work for its own sake and remain persistently at it without stimulus or coercion. The system of duties and prohibitions of the Brussels act of July, 1890, was very clear in the obligations it imposed on all its signatories to exclude spirituous liquors from the interior of Africa and to guard the natives against the curse of drink, which would outweigh all the benefits from the introduction of civilization. King Leopold, however, believed he could, and in the Upper Congo, where no prior rights had to be respected, he restricted the importation to non-Africans and limited the quantity that might be sold to any European. It was also forbidden to use alcohol as an article of barter with the natives. The sale and introduction of alcohol became the main industry on Stanley's coast. The Congo was thus made subject to the authority of the Governor General. At first the boundary was the Inkissi stream, then it became the Kwili, and finally it was fixed at the Mpozo, which may be regarded as signifying Matadi. The practical result of these changes is that the Congo Railway has been placed outside the heaviest import duty interests. The Brussels act of July, 1890, accorded the Congo the level of duty of 18, a gallon. Alcohol forms only 1 per cent. of the total imports of the state, and in the three years ending Dec. 31, 1897, there was a diminution in the quantity imported of 25 per cent. Statements having been made that the abuse of this stimulant was greatly increasing among the Europeans, the government took the direct step of prohibiting its import or sale throughout the whole of the State's territory.

Commerce and Production.—The trade of the Congo is steadily increasing, as is shown in the following returns of the total exports: 1887, 7,667,969 francs; 1888, 7,392,648 francs; 1891, 10,535,619 francs; 1892, 11,010,365 francs; 1896, 15,091,137 francs; 1897, 17,457,000 francs; 1898, 25,390,706 francs. The principal articles exported are caoutchouc, of which 8,311,900 francs worth was exported in 1897; ivory during the same year, 4,916,480 francs; palm oil, 650,206 francs; palm nuts, 1,098,579 francs. Several new products are beginning to make their appearance on the schedule. Of these, coffee and cacao are the most promising, but the young plantations can not be productive to any great degree before 1902. With the view of promoting this cultivation, the State made the following arrangement with the recognizes and protects the districts of Aru-

wini and Stanley Falls. They were encouraged to cultivate either coffee or cacao on their waste lands. The Government provided the necessary seeds, and promised a reward for each shrub on its attaining two feet in height. The chiefs are also to receive as their share 50 per cent. of the value of the coffee on the Belgian market. Nothing has yet been done toward developing the undoubted mineral resources of the country, but a large number of companies, formed for the exploitation of the Congo region, promise an early movement in this direction. The special imports in 1898 amounted to 25,084,417 francs, in which sum tissiess and clothing stand for 6,246,081 francs, food stuffs for 6,246,081 francs, and the machinery for 2,374,424 francs, other machinery for 1,925,386 francs, beverages for 1,579,000 francs, metals and hardware for 1,228,150 francs, and arms and ammunition for 872,553 francs. The special exports, or exports of produce of the State alone, in 1898 were 1,228,159 francs. The chief exports are ivory, 4,319,260 francs; palm oil, new 600,570 francs palm oil, 31,950 francs sugar, 9,720 francs hides and skins, and 1,081 francs kola nuts.

Of the special imports in 1898, Belgium furnished 15,465,565 francs' worth; Great Britain, 3,457,739 francs; Germany, 1,228,159 francs; Netherlands, 1,015,916 francs. Of the special exports, the value of 19,329,387 francs went to Belgium, 1,305,619 francs to Portuguese possessions in Africa, 738,091 francs to the Netherlands, and 298,872 francs to Great Britain.

Railways, Steamers, and Telegraphs.—Owing to the extreme distance of the plantations below Stanley Pool, access to the main course of the Congo by water is impossible. At an early stage it was recognized that a railway was essential to supply this natural defect. In 1887, accordingly, the first steps were taken by the formation of a company for the construction of a railway from Matadi to Leopoldville. The distance between these two places is 260 miles, and the principal obstacle to be overcome was presented by the Paballaba mountain, which lies at a little distance from Matadi. Four years were occupied in overcoming it, and during that period very pessimistic views were expressed as to the success of the line. Once the Paballaba was left behind, however, the difficulties of the undertaking were diminished, although a distance of not more than 26 miles had been traversed. The remaining 234 miles were completed at less cost and in a shorter time than the first section, so that the formal inauguration of the whole line was celebrated on July 6, 1898. The great advantage of this railway is that it supplies the railways of the interior, and as far as the large steamers that are to navigate the river can now be easily and expeditiously forwarded. The terminus of the line is at Ndoli, near Leopoldville, where quays, and riverside warehouses, and wharves have been prepared. Several other railway lines are urgently needed in the interior to supplement and complete the natural communications provided by the great river and its tributaries. Of these, the projected railway in the Well valley and that connecting the upper courses of the Sankuru, Lomami, and Lualaba are the most impor-

VOL. XL.—9 A
...t. A royal decree was issued in January, 1898, sanctioning a line of railway from a point to be determined on the Itimbiro through the Welle valley to another point on the Nile near Redja, and money was assigned for the necessary preliminary surveys.

The more important is the railway question, that is of improving the means of communication by water, and in June, 1898, the sum of 6,000,000 francs was assigned for the purchase of steamers, tugs, etc., the improvement of the port of Ndolo, and other similar works. Among the new river boats are stern-wheelers of 150 to 250 tons, and light fast steamers capable of carrying 12 passengers. One large steamer of 500 tons is specially designed for the conveyance of railway material. All these boats are sent in sections over the railway and put together on Stanley Pool.

Telegraphs have been neglected, and during 1900 great progress was made with them. The line from Boma to Tanganika, with branches to Redja on one side and Katanga on the other, has been built at a total cost of 3,000,000 francs.

Recent Events.—The Germans established in 1899 military stations on the river Rusisi and on Lake Kivu, and in the region of the mouth of the river, in East Africa by the mutinous Batatela troops of the Congo State. The Belgian garrisons on Lake Kivu, which had previously been withdrawn, were thereupon reinstated, and a formal protest was made against the occupation by German of Congolese territory. The German Government, in reply, asserted that it had illustrated the treaty of 1854 makes the Rusisi the frontier, and places Lake Kivu on the German side of the line. M. Beernaert went to Berlin as special envoy of the Independent State in January, 1900, to show that it was another map on which neither river nor lake appears, and that in subsequent documents Germany recognized a more easterly boundary. He arranged with the German Government to have the boundary surveyed by a mixed commission. Pending the demarcation both governments kept military forces of equal strength in the disputed district.

In the early part of 1900 a fresh outbreak of the Kasai occurred in the Mongalla district of the Congo. On March 4 the King Mush Wolfgang and another European near Jambeta, having two months before attacked the military station. The new revolt was attributed by some to cruelties practiced on the natives to compel them to collect caoutchouc for the trading companies. In the Belgian Chamber an investigation was demanded, to show how far the officers and public force in the Congo State were implicated in barbarous methods of collecting rubber whereby the population was practically condemned to hard labor under the pretext of civilizing the natives. The Belgian ministers having rejected the proposal on the ground that extensions of the loan of the Belgian Government to the Congo State gave the right to obtain financial and commercial information, not to intervene in the affairs of the Congo State, which was a foreign country, the Chamber refused to entertain the interpellation. During the debate stories were brought out of Belgian soldiers ordering hands to be cut off and sanctioned other atrocities, and charges were made that the agents of trading companies were ferocious. In suppressing the revolt in the Mongalla district, wholesale massacres of natives were alleged to have taken place. The Congo Government submitted to the judicial authorities, to be investigated. In order to prevent any complicity on the part of its own officers, it forbids all its agents to engage in trade. It also prohibits them from having recourse to arms except for legitimate defense. The state did not intervene in any way in the nomination of agents of private companies or in the direction of the work. The Belgian Government decided to retake control of the territory. The Mongalla revolt was not terminated by the first re-enforcements sent into the Budja country, and in July an additional force of 500 soldiers was sent up. On April 17 the black garrison of the Chinkakassa fort below Boma mutinied. It was composed mainly of about 100 Batalas, who had been sent to the Lower Congo when the expeditionary force of Baron Dhanis revolted. The black soldiers killed a white officer, attacked the rest in the house of the commandant, where they had taken refuge, and began to bombard Boma with the guns of the forts. Volunteers from Boma relieved the beleaguered whites, and began a fresh fort of the mutineers died and the rest surrendered.

CONGREGATIONALISTS. The Congregational Yearbook for 1900 gives in its summary of the statistics of the Congregational churches in the United States the following numbers: Of churches, 5,004; of ministers, 5,014; of members, 787,874; of families, 1,375,629; of contributions, 150,653 were "in pastoral work" and 1,919 "without charge." Amounts of contributions (4,883 churches reporting): For foreign missions, $445,508; for education, $109,376; for church building, $88,388; for home missions, $477,852; for the American Missionary Association, $141,022; for Sunday schools, $61,938; for missionary aid, $24,107; for other purposes, $6,526; making in all, as footed up in the tables, $2,110,413. Amount of contributions for home expenditures reported by 4,854 churches, $7,023,124; amount of legacies, $438,738.

The Congregational Education Society in 1899 aided 102 students preparing for the ministry, 8 colleges, and 17 academies. In the New West a ranch at Hartsburg, Missouri, was purchased from a New York firm, and New Mexico, Salt Lake College with Gordon Academy, Proctor Academy in Utah, and 10 mission schools were assisted. The receipts for the year were $147,372.

The Congregational Church Building Society in 1899 received $247,307 and expended $197,500.

The Ministerial Aid fund of the National Congregational Council, which in 1899 amounted to $118,000, furnished an income of about $5,000, which was distributed in pensions of from $25 to $200 a year to aged or disabled Congregational ministers and missionaries and their families. Fifty-nine persons or families were thus aided in 1899.

The 7 theological seminaries—Andover, Bangor, Chicago, Hartford, Oberlin, Pacific, and Yale return 22 resident licentiates and fellows, 17 members of advanced and graduate classes, and had, in 1898—99, 64 professors and 23 instructors and lecturers.

The receipts of the Congregational Sunday School and Publishing Society for 1899 were $622,900, a gain of about $5,000 over those of the preceding year. Of this amount $233,554 were Children's Day receipts. The sum of $7,500 was appropriated for missionary work. The superintendents and missionaries of the society had organized 325 Sunday schools directly and 150 through...
CONGREGATIONALISTS.

131

others, and had reorganized 191 schools. Three thousand and forty-six grants of lesson helps, periodicals, and other literature had been made to 1,278 schools.

Congregational Home Missionary Society

The seventy-fourth annual meeting of the Congregational Home Missionary Society was held in Detroit, Mich., June 5 to 7. Gen. Oliver O. Howard presided. The report showed that the receipts of the society for the year had been $346,597, showing an increase of nearly $40,000 over the receipts of the previous year. The expenditure had reached $321,672. The debt of $133,460 standing at the beginning of the year had been reduced to $108,544. The Auxiliary Societies had raised and expended, on their own fields, $199,163. Seventeen hundred and sixty-two missionaries and superintendents had been employed, preaching to 210,000 congregations, with which 260 Sunday schools were connected, having 142,812 members. Seventy-four churches had been organized during the year, 36 had assumed self-support; 62 houses of worship had been completed, 69 parsonages provided, and 7,400 persons added to church membership.

The eighteenth annual meeting of the Woman's Department was held in connection with the meeting of this society.

American Board.—The ninety-first annual meeting of the American Board of Commissioners for Foreign Missions was held in St. Louis, Mo., beginning Oct. 10. Mr. Samuel Capen presided. Recognition was made in the report of the Home Department of the death of the Rev. C. G. Storrs, D. D., ex-president, and of the value of the services he had rendered as a corporate member and as president of the board. Forty new missionaries had been sent out during the year; 39 had returned on furlough, besides those who had been driven out of north China by the Boxer scheme and one killed in those disturbances. The year had been prosperous financially, and had it not been for the extra expenses arising from the famine in India and the disturbed condition of China, the debt of the board might have been met. The plan for raising a Twentieth Century fund of $250,000 was being pushed. The receipts of the year from home sources, including $1,273 for monthly subscriptions, were $37,957—a 577 increase of $393,756 from the previous year. Of these receipts, $516,536—or $26,128 more than in the previous year—came in the form of gifts from individuals, churches, and various societies, of which sum $214,774 were contributions of the several denominations. The income from legacies showed an increase over the previous year of $52,663, and the income from the permanent funds an increase of $7,125. The increase in special donations amounted to $194,508. The "Annual Survey" of the missions represented 20 mission fields, in which were included 102 churches, 347 stations, and 1,432 mission members, a nearly complete list of all the workers in the ten countries. The story of the work in each of the mission fields was represented. In the several mission fields it was represented that the persecution of the Armenians in Turkey had opened their minds as never before to the reception of missionary instruction. The workers in China had increased tenfold. Though missionary work had been brought to an enforced halt in north China, and would not resume, in south China there had been no much active disturbance. In Madura, India, the work in the hospital had appealed so powerfully to the hearts and minds of native Hindus that men of wealth contributed to the extent of $14,600 for the erection of the building, and gave liberally toward its support. The increase in missionary converts during the year had been more than 10 per cent. The meeting following up suggestions offered in the president's address, approved of a yearly canvass in October of every church for the six benevolent societies; commended the forward movement for a "Twentieth Century fund"; and, recognizing the paramount importance of educating the rising generation in responsibility for the redemption of the world through Jesus Christ, advised the provision in the Sunday schools of a permanent place for this education. A letter of greeting was received from the Hawaiian Evangelical Association,Sandwich Islands, with a contribution of $9,000 toward the Twentieth Century fund.

The Doshisha, or College of the American Board, at Kioto, Japan, which had been for a few years under the control of trustees not in sympathy with the doctrines of the orthodox churches, having been reorganized, has begun its work again as a Bible and Christian school. The fact is explicitly set down in its constitution.

American Missionary Association.—The fifty-fourth annual meeting of the American Missionary Association was held in Springfield, Mass., October 23, 24, and 25, the Rev. Dr. F. A. Noble presiding. The treasurer reported that the receipts for the year had been $168,096 consisted of gifts from institutions and individuals, $104,641 were from legacies, and a large part of the rest from tuition fees. The expenditures had amounted to $345,049. The receipts were $38,802 larger than in the previous year, and for the third consecutive year it was possible to reduce the debt. The Executive Committee reported in the Southern educational work 29 common schools closely related to the churches, in places where there was no worthy provision in public schools, and taught chiefly by the graduates of the normal and graded schools; 43 normal and graded schools, 12 of which were under the care of negro graduates of the association's own higher educational institutions; and 5 chartered institutions; making 77 schools in all, 10 of which are otherwise classified as mountain schools, with 432 instructors and 13,203 pupils. Of the students 35 were taking theological, 85 collegiate, and 1,523 normal courses. The executive committee recommended that in these schools, in a large measure, pupils were completing their studies at an average age in which twenty years ago they began their education. The normal and graded schools were represented as enjoying, as a rule, the good will of the educated people of the localities in which they are situated; and the good character and correct behavior as citizens of their students were commended. The demand upon them for service as teachers and skilled workers was in excess of the supply, and no dependent graduates of the schools were heard of. In the Southern church work, 225 churches, with 147 ministers and missionaries, 11,536 members, and 23,220 professions of faith during the year, and 15,293 children in Sunday schools, were returned. Six-
teen new churches had been organized and 5 dropped. In the development of the Church work during the past ten years, 122 churches had been established, only 8 of which were connected with pre-existing schools. The 54 mountain churches (included in the 222) had 1,613 members. The ministrations of their pastors usually covered from 2 to 5 different church organizations, sometimes several. The Indian missions included 21 churches with 34 out stations, 1,303 members, 2,803 Sunday-school scholars, and 211 pupils in the 5 ordinary schools, and were served by 49 white and 42 Indian missionaries and teachers. The churches had contributed $2,415 for benevolence and self-support, a decrease in the number of schools during the past ten years was accounted for as the result of changed conditions of education among the Indians. In future attention would be predominantly given to direct evangelizing and mission work among these people, rather than to increase of educational work, or even to the permanent maintenance of the present schools. From the work among the Chinese were returned 21 missions, 43 workers, 15 of whom were Chinese, and 1,446 pupils in schools, 183 of whom had given evidence of conversion. A work in Porto Rico, now in its second year, comprised 2 schools with 8 instructors, 292 pupils, and 746 members. The work among evangelized Chinese was conducted by the Toronto National Congregational Societies to consider plans for the readjustment of their work so as to secure greater unity of action and economy of administration, brought in a report embodying recommendations that all the six societies hold a joint annual meeting in the month of October, while provision shall be made for the holding of a united missionary conference also each year in a part of the country where the annual meeting is not held; that the six societies adopt a common basis of representation by delegates to the annual meeting, the delegates to be selected each year either by the churches directly or by the local conferences acting for the churches; that each society have its separate executive board and committees, and its separate budget of receipts and expenses; that each society have its own secretary, to be appointed by its executive board; that the treasuries of the societies be combined in two offices with two treasurers, one to be located in Boston and the other in New York City, and that those treasurers, respectively, be chosen by the local executive boards acting together; that the solicitation and collection of funds for all the societies be under the care of a special subcommittee of 9 members, to be composed of representatives of all the societies, which shall be given the powers and facilities (specified in the report) to reach the Church in an effective manner; and that there be such an adjustment of the work or territory as will secure greater economy, and prevent two societies from doing similar work upon the same field; if two or more societies fail to agree upon the adjustment of work or territory, the committee of nine provided for above to be a committee of arbitration on the matter, the vote of 7 of them to be decisive. This report is to be submitted to the six missionary societies for discussion and future action. The committee of five appointed in 1899 to consider the relations of the Church with the denominations of the denomination and such administrative adjustments as might help toward their federation and toward the efficiency of the work of the association, presented a report, of which three resolutions were adopted, while three others were laid on the table to be taken up when the movement toward unity on the part of the other missionary societies shall have reached a stage more appropriate to their consideration. The resolutions that were adopted approve the steps already taken toward a closer alliance of the societies, and promise co-operation with the efforts of the committee of nine toward that end; recommend the holding of the general benevolent meetings of the societies each year, where the work of all the societies shall be presented, to constitute their annual meeting; and advise the publication of a single monthly magazine for the representation of the interests of all the societies. The seventeenth annual meeting of the Woman's Home Missionary Association was held in Springfield, Mass., October 18. The Bureau of Woman's Work reported that the contributions in the past twelve months from women's missionary societies had been $24,673. Forty-four missionaries had been assigned as special representatives of the State organizations to whose support the Young People's Christian Endeavor Societies and of the Young Women's Societies had amounted to $9,347, or $1,769 less than in the previous year. Seven missionaries had returned during the year to their fields after furlough; 13 were at home on furlough, 4 of them from China; 4 had returned. Some new missionaries had been adopted. Nearly $4,500 had been raised on a "Century Call" for $20,000.

Congregationalists in Canada.—A statistical report presented at the annual meeting of the Congregational Union of Ontario and Quebec included returns from 64 out of 81 churches. In the province of Quebec 17 churches had 1,907 members, with 1,872 members in 15 Sunday schools. In Ontario 47 churches had 4,322 members and 49 Sunday schools 4,507 members. The annual meeting of the union was held at Montreal in June. The Rev. Dr. George, principal of the Congregational College, was elected chairman for 1901. The work of the churches in the home field was the subject of consideration, and the reports of the missions were reviewed. Concerning foreign missions a report was made of the Chisamba Mission in Africa. An invitation which had been offered by the Canadian delegates to the International Congregational Council to hold its next meeting in Montreal was approved. A number of religious, social, and practical questions were the subjects of addresses. A committee was appointed to consider the practicability of a Congregational Union for Canada.

Congregationalists in Jamaica.—The Congregational Union Assembly in Jamaica adopted a Twentieth Century scheme, the principal features of which are the holding of special meetings in all the churches with the view of raising the standard of spiritual life and service; a revision of the lists of church members; the printing in 1901 of a memorial volume giving the history of each church with its roll of members; and a fund, to be composed of gifts of 5 shillings and upwards, to be devoted to the purer home mission work, and other objects of the union.

Congregationalists in England and Wales.—The statistics of the British Congregational churches for the year ending December 1, 1899, show that on that date there were in England and Wales (including the Channel Islands) 4,502
church and mission stations, an increase of 23, in which were provided 1,362,290 sittings. In these churches, so far as the returns show (417 churches or mission stations having failed to send information as compared with 516 in 1898), there were 388,009 members, and in their Sunday schools 614,742 scholars, an increase of 10,670; and 54,135 teachers, an increase of 7,398. Adding to these the churches and mission stations in other parts of the kingdom (those of the missions in Scotland and Ireland, however, incomplete) the whole number of places of worship was 4,551, with a total membership of 415,004, showing an increase of 37,900. The total sitting accommodation provided in these churches and schools was 7,304,163. A decided tendency of Congregationalists to ordain ministers and lay pastors, and 5,584 local preachers. Two hundred and ninety churches were without pastoral oversight, and 289 ministers were described as "without pastoral charge." The 781 churches and mission stations in the British colonies reported an income of £3,132, and 334 ordained ministers in the British Isles, 221 recognized evangelists and lay preachers, and 5,484 local preachers. Few hundred and fifty-nine missionaries were resident in the colonies, 383 of whom were in active service. The theological colleges and institutes returned 407 students for the Congregational ministry. In addition to the denominational lands belonging to the London Missionary Society, had about 300 students in training. Sixteen new churches had been formed during the year, 41 chapels erected, of which 12 were in the colonies; 37 foundation stones of new buildings had been laid, and 24 additional sites secured. The amount returned for work in 11 colonies. The report presented to the annual meeting, May 10, gave a survey of work in Canada, Newfoundland, Jamaica, Australia, New Zealand, and South Africa. The war in South Africa had naturally increased the difficulties there, both of churches and missionaries, in the discharge of their duties, but it would be difficult to tell till the war was over how much would be needed from the Emergency fund. Schemes were being considered by which the scope of the Twentieth Century fund might be so enlarged as to include all the Colonial Congregational Unions, when the effect of disestablishment would have been well known. The annual meeting of the London Missionary Society was held in London, April 30. The total ordinary income for the year had been, including legacies, £148,930; while, adding what had been received for the India Famine fund and certain sums received from other sources, an aggregate income of £223,568. The amount that Church Missionary Society had been, £214,815. The whole amount so far obtained from the Centenary fund was £105,938. The annual meeting of the Congregational Union of England and Wales was held in London, beginning May 7, with Mr. Carvell Williams as chairman for the year. The report of the Executive Committee represented that the total amount of the year's receipts and stock was £116,248, and that there remained a balance of receipts over expenditure of £180. The Publication Department reported a falling off in the year's business, which was attributed to the inauguration of the pamphlet series "Reading Room," and to the various war funds. The effect of the canvassing for the Twentieth Century fund was spoken of as "in the widest and best sense of a propagandist character." It had afforded opportunities for the inculation of Congregational principles and for instruction in Congregational church history which had been diligently and successfully enjoyed by the churches that had profited by them. The council of the Young People's Union was organizing its work in London, a part of it being a bureau through which young people coming up to the metropolis might be introduced to Congregational churches. A number of active district branches had been formed. Several manuscripts of historical value, among them some unpublished works of ejected ministers, had been added to the collections in Memorial Hall. A resolution was adopted commending the Simultaneous Mission of the Free Church Federations of the United Kingdom to the recent educational proposals of the Government. There was a profound conviction of the assembly that the children of the people should receive the best possible education in public schools, free from retrograde limitations and sectarian tests, and under popular and representative—not private and clerical—control. Papers were read upon "The Place of the Church in the Liturgy of the Morning: Provisions for the Church, The Present Position of the Temperance Question, Doctrine and Ethics in Modern Preaching, The Present Position of the Sacerdotal Movement in the Established Church; and a Young People's meeting was addressed on The Sacrament of God's Grace. The Attraction of Nonconformity and Sex. The training of the Rev. Joseph Parker, D.D., was elected chairman for 1901. The autumnal session of the union was held at Newcastle-upon-Tyne, beginning October 16. The address of the chairman, Mr. Carvell Williams, was on the subject of Present-day Evils and Duties, and related to denominational questions and the duties of the faithful, and his tone was one of //vigorous and Christian Life, The Attractions of Nonconformity and Sex". The despatching of the members under the London Missionary Society, to the Simeon School for Chinese boys, and the opening of a new settlement in China, was alluded to. Mr. T. L. Williams, the secretary, gave an account of the work of his department, which had won an acknowledged place among the religious forces at work in the nation. The recent Church Congress had given evidence that some of the ablest men in the Anglican Church had come to recognize the necessity of adopting toward Nonconformists a more generous and Christian sentiment, and more consonant with the facts of the case. Regarding the sacerdotal controversy within the Church of England, it was observed that Congregationalists would have had no right to interfere with the internal arrangements of a Church from which they had seceded, and which claimed to represent the whole nation within its fold. The appointment of a Dutch minister—taking opposite ground respecting questions of the war—had been referred to the Special Purpose Committee for acknowledgment. The treasurer of the Publication Department reported the receipt of £10,377 from sales. A special committee was appointed to investigate the subject of ministerial removals and settlements. A report made on behalf of the Twentieth Century fund showed that while the amount contemplated at first had been more than promised, it had been so allotted by the donors that the average price of the objects on which the hearts of its projector were most set would not be realized. A very large proportion of the money had been set apart by the givers exercising the privilege allowed them
under the terms of the scheme for local purposes, to the neglect of the great public societies of the denomination. A discussion of The Problem of Congregational Churches in Large Towns resulted in the appointment of a committee to consider the whole subject, together with that of village churches, with power to take such immediate steps as might be considered desirable and found to be practical. A deputation was appointed to represent the union and convey its congratulations at the celebration of the Union of the Free and the United Presbyterian Churches of Scotland, about to be held. A resolution passed by the assembly urged a uniting of all Christians in order to promote any practical measures for the restriction of the liquor traffic. Other resolutions affirmed that the internal strife within the Established Church itself showed the necessity for a definite change in the ecclesiastical conditions, and that in the opinion of the assembly the only change which would prove satisfactory was a discontinuance; declared the various proposals for a Union of Church in Ireland in toto to be unwise and reactionary attempts to meet the case by a remedy contrary alike to wise principle and sound policy; and emphasized the necessity of the application of the fundamental principles of religious equality to the question of national education. A meeting was held in behalf of the Congregational societies of Mansfield (Canningtown), the Women's Settlement (Canningtown), Brown- 

A Congregational Historical Society is in course of formation, the object of which will be to collect, examine, edit, and publish the documents and records of Congregationalism, which are described as being numerous and interesting.

**Congregational Union of South Africa.**—The amalgamation of the Congregational unions of Natal and the Cape Colony as "the Congregational Union of South Africa was consummated at a joint meeting held for that purpose in Durban, Natal, early in the fall. About 50 ministers and delegates from all parts of South Africa were present on the occasion. The Rev. W. Friend, of Port Elizabeth, presided. The Rev. J. F. Ritchie was chosen secretary, to devote all his time to the work of that office. Besides an anticipated year's income of £500, the union expects to receive grants from the London and the Colonial Missionary Societies.

**CONGRESS.** The Fifty-sixth Congress met for its first session Monday, Dec. 4, 1899. Its membership was as follows:

### SENEATE

<table>
<thead>
<tr>
<th>State</th>
<th>Senators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Arkansas</td>
<td>James H. Berry, D. 1901.</td>
</tr>

</tr>
</tbody>
</table>

Senator Sullivan, Mississippi, was appointed in place of E. C. Walthall, deceased; Senator Allen, Nebraska, in place of M. L. Hayward, deceased; and Senator Ross, Vermont, in place of Justin S. Morrill, deceased. The Senate refused to admit Mr. Quay, appointed by the Governor of Pennsylvania, and Mr. Clark, of Montana, resigned, May 15, 1900, to anticipate action on charges of bribery brought against him. The vacancies in Delaware and Utah remained unfilled.

Amos L. Allen, Maine, was elected in place of Thomas B. Roger, who resigned; William F. Aldrich, Alabama, took his seat March 8, 1900; Charles A. Chickering, New York, died Feb. 9, 1900; W. T. Crawford, North Carolina, was unseated May 10, 1900; S. P. Epes, Virginia, died March 3, 1900; Alfred C. Harmer, Pennsylvania, died March 6, 1900; Smith McPherson, Iowa, resigned June 6, 1900; G. A. Robbins, Alabama, was unseated March 8, 1900; B. H. Roberts, Utah, was refused admission Jan. 25, 1900; J. W. Smith, Maryland, resigned Jan. 12, 1900; W. A. Young, Virginia, was unseated March 12, 1900; June W. Gayle, Kentucky, was elected in place of E. E. Settle, deceased; Joseph J. Gill, Ohio, in place of Lorenzo Danforth, deceased; Henry D. Green, Pennsylvania, in place of Daniel Ermont, deceased; Francis R. Lasser, in place of Sydney P. Epes, Virginia, deceased; C. E. Littlefield, Maine, in place of Nelson Dingley, deceased; William Neville, Nebraska, in place of W. L. Greene, deceased; D. W. Sickenfeld, Missouri, in place of Richard P. Bland, deceased; E. R. Vreeland, in place of Warren B. Hooker, resigned.

The first business of the House of Representatives after roll call was the election of a Speaker. David B. Henderson, of Iowa, was chosen, receiving 181 votes, to 156 for James D. Richardson, of Tennessee, 4 votes for John C. Bell, of Colorado, and 2 votes for Francis G. Newlands, of Nevada. There were 12 members not voting. The organization of the House was completed by adopting the following resolution, offered by Mr. Grosvenor, of Ohio:

"Resolved, That Alexander McDowell, of the State of Pennsylvania, be, and he is hereby, chosen clerk of the House of Representatives; That Henry Casson, of the State of Wisconsin, be, and he is hereby, chosen sergeant-at-arms of the House of Representatives; That William J. Glenn, of the State of New York, be, and he is hereby, chosen doorkeeper of the House of Representatives; That Joseph C. McElroy, of the State of Ohio, be, and he is hereby, chosen postmaster of the House of Representatives; and That Henry N. Couden, of the State of Michigan, be, and he is hereby, chosen chaplain of the House of Representatives."

The rules of the Fifty-second Congress were then adopted by a vote of 178 to 159. In opposition to that course Mr. Richardson, of Tennessee, said:

"I feel certain that either the power of the Committee on Rules could be curtailed or the membership of that committee could be enlarged. I remember that the first time I ever had the honor to address this House it was in opposition to the power of the Committee on Rules in the Fifty-second Congress, and I predicted that the three members who constitute a majority of that committee would in time become a legislative triumvirate. Under these rules the Committee on Rules not only decides what business the House must transact, but also what business the House shall not transact.

"It is enough to clothe the Speaker with the power of recognition and to supplement that by adding the power to appoint the committees of the House; but to add to those powers, great almost to the point of being dangerous, the absolute control of the House through its Committee on Rules is giving greater power to the Speaker of this House than any one man in this free republic ought to possess. To say that the power still remains with the House is a subterfuge, because the House can never pass upon a question until the Committee on Rules see fit to report. To say that the committee can be controlled by the majority is not true, because the House has curtailed the Speaker's official family, and no gentleman of the Speaker's party would serve upon it unless he could support the Speaker's policy. If a Democrat were the Speaker of this House, and I could not cordially and loyally support his policy in that committee, I would resign my membership upon it.

"I respect the gentleman from Pennsylvania, and no man on this side of the Chamber respects the gentleman from Iowa, now the honorable Speaker of this House, more than I do; and yet I divulge no secrets of the committee room when I say that with these gentlemen on it the Speaker of the Fifty-fifth Congress, with their help, absolutely controlled the Committee on Rules. I know that the Speaker of the Fifty-third and the Fifty-second Congresses—a great and splendid Democrat, whom we have mourned even until this day—completely dominated the Committee on Rules when the House was Democratic. I know that the honorable Speaker of this House, if they are adopted, will be practically the Committee on Rules; and the Committee on Rules is practically the House of Representatives. In view of that it does seem to me that if you will not curtail the power of that committee, certainly its membership ought to be enlarged."
Dec. 5 the Congress notified the President that it was ready to proceed to business, and he sent in his annual message, as follows:

To the Senate and House of Representatives:

At the threshold of your deliberations you are called to mourn with your countrymen the death of Vice-President Holkar. He passed from this life on the morning of Nov. 21 last. His great soul now rests in eternal peace. His private life was pure and elevated, while his public career was ever distinguished by large capacity, stainless integrity, and exalted motives. He has been removed from the scene of action which he honored and dignified, but his lofty character, his devotion to duty, his honesty of purpose, and noble virtues remain with us as a priceless legacy and example.

The Fifty-sixth Congress convenes in its first regular session with the country in a condition of unusual prosperity, of universal good will among the people at home, and in relations of peace and friendship with every government of the world. Our foreign commerce has shown great increase in volume and value. The combined imports and exports for the year are the largest ever shown by a single year in all our history. Our exports for 1899 alone exceeded by more than half that of any previous year which has been computed in 1870. The imports per capita are 20 per cent. less than in 1870, while the exports per capita are 58 per cent. more than in 1870, showing the enlarged capacity of the United States to satisfy the wants of its own increasing population, as well as to contribute to those of the peoples of other nations. The total agricultural products were $754,776,142. Of manufactured products we exported in value $339,592,146, being larger than any previous year. It is a noteworthy fact that the only years in all our history when the products of our manufactories sold abroad exceeded those bought abroad were 1890 and 1899.

Government receipts from all sources for the fiscal year ended June 30, 1899, including $11,709,314.14, part payment of the Central Pacific Railroad indebtedness, aggregated $610,982,004.35. Customs receipts were $206,128,481.75, and those from internal revenue $273,437,161.51.

For the fiscal year the expenditures were $700,003,502,091. Of this amount $350,003,502,091 in interest charges on the funded debt, including $2,885,000 direct interest on the National Bank and $30,000,000 interest on the National Gold Loan.

The Secretary of the Treasury estimates that the receipts for the current fiscal year will aggregate $40,055,112, and upon the basis of present appropriations the expenditures will aggregate $60,055,112, leaving a surplus of $40,000,000.

For the fiscal year ended June 30, 1899, the internal-revenue receipts were increased about $100,000,000.

The present gratifying strength of the Treasury is shown by the fact that on Dec. 1, 1899, the available cash balance was $275,004,837.72, of which $239,744,905.36 was in gold coin and bullion. The conditions of confidence which prevail throughout the country have brought gold into more general use, and customs receipts are now almost entirely paid in that coin.

The strong position of the Treasury with respect to cash on hand and the favorable showing made by the revenues have made it possible for the Secretary of the Treasury to take action under the provisions of sections 300, 301, 302, 310, relating to the sinking fund. Receipts exceeded expenditures for the first five months of the current fiscal year by $15,413,380.91, and, as mentioned above, the Secretary of the Treasury estimates that there will be a surplus of approximately $40,000,000 at the end of the year. Under such conditions it was deemed advisable and proper to resume compliance with the provisions of the sinking-fund law, which for eight years has not been done because of deficiencies in the revenues. The Treasury Department therefore offered to purchase during November $25,000,000 of the 5-cent note for 1899 or the 4-cent. funded loan of 1907, at the current market price. The amount offered and purchased during November was $18,408,600. The premium paid by the Government on such purchases was $2,263,321, and the net saving in interest was about $2,885,000.

The success of this operation was sufficient to induce the Government to continue it, until it is further to purchase bonds to and including the 23d day of December, instant, unless the remainder of the $25,00,000 called for should be presented in the meantime for redemption.

Increased activity in industry, with its welcome attendant—a larger employment for labor at higher wages given to the people of the country to absorb the circulating medium. It is further true that year by year, with larger areas of land under cultivation, the increasing volume of agricultural products, cotton, corn, and wheat, calls for a larger volume of money supply. This is especially noticeable at the crop-harvesting and crop-moving season approaching.

In its earlier history the national banking act seemed to prove a reasonable avenue through which needful additions to the circulation could from time to time be made. Changing conditions have apparently rendered it now inoperative to that end. The high margin in bond securities required, resulting from large premiums which the Government is compelled to pay to induce the banks to purchase bonds to and including the 23d day of December, instant, appear to be the influences which impair its public utility.

The attention of Congress is respectfully in-vited to this important matter with the view of ascertaining whether or not such reasonable modifications can be made in the national banking act as will render its service in the particulars here referred to more responsive to the people's needs. I again urge that national banks be authorized to organize with a capital of $25,000.

I urgently recommend that to support the existing gold standard, and to maintain "the parity in value of the gold coin (all silver) and the equal power of every dollar at all times in the market and in the payment of debts," the Secretary of the Treasury be given additional power and charged with the duty to sell United States bonds and to employ such other effective means as may be necessary to these ends. The authority should include the power to sell bonds on long and short time, as conditions may require, and should provide for a rate of interest lower than that fixed by the act of Jan. 14, 1875. While there is now no commercial fright which withdraws gold from the Government, but, on the contrary, such widespread confidence that gold is not averse to the Treasury demanding paper money or exchange, yet the very situation points to the present as the most fitting time to make adequate provision to insure the continuance of the gold standard and of public confidence in the ability and purpose of the Government to meet all its obligations in the money which the civilized world regards as the best. The financial transactions of the Government are conducted upon a gold basis. We receive gold when we sell United States bonds, and use gold for their payment. We are maintaining the parity of all the money issued or coined by authority of the Government. We are doing these things with the means at hand.
Happily at the present time we are not compelled to resort to loans to supply gold. It has been done in the past, however, and may have to be done in the future. It belies us, therefore, to provide at once the best means to meet the emergency when it arises, and the best means are those which are the most certain and economical. Those now authorized have thevirtue neither of directness nor economy. We have already elimi-

nated one of the causes of our financial plight and embarrassment during the years 1893, 1894, 1895, and 1896. Our receipts now equal our expendi-
tures; deficient revenues no longer create alarm. Let us remove the only remaining cause by con-
ferring the full and necessary power on the Secret-
ary of the Treasury and imposing upon him the duty to uphold the present gold standard and preserve the coins of the two metals on a parity with each other, which is the repeatedly declared policy of the United States.

In this connection I repeat my former recom-
mendations that a portion of the gold holdings shall be placed in public deposits, and fractional 

backs shall be redeemed upon presentation, but when once redeemed shall not thereafter be paid out except for gold.

The value of an American merchant marine to the extension of our commercial trade and the strengthening of our power upon the sea is incalculable. Of the gradual devolution of our maritime responsibility, a single fact will -

be sufficient to show its magnitude; the commercial development will be one-sided and unsatisfactory so long as the remarkable growth of our inland industries remains unaccompanied by progress on the seas. There is no lack of con-
stitutional authority for legislation which shall 
give to the country maritime strength commen-
surate with its industrial development and with its rank among the nations of the earth.

The past year has recorded exceptional activity in our shipyards, and the promises of continual prosperity in shipbuilding are abundant. Ad-

vance legislation for the protection of our seamen has been enacted. Our coast trade, under regulations wisely framed at the beginning of the Government and since, shows results for the past fiscal year unequalled in our records or those of any other power. We shall fail to realize our opportunities, however, if we complacently regard only matters at home and blind ourselves to the necessity of securing our share in the valuable carrying trade of the world.

Last year American vessels transported a smaller share of our exports and imports than during any former year in all our history, and the measure of our dependence upon foreign shipping was painfully manifested to our people. Without any choice of our own, but from necessity, the departments of the Government charged with military and naval operations in the East and West Indies had to obtain from foreign flags merchant vessels essential for those operations.

The other great nations have not hesitated to adopt the required means to develop and as one of the surest and swiftest means of obtaining for their producers a share in foreign markets. Like vigilance and effort on our part can not fail to improve our situation, which is regarded with humiliation at home and with surprise abroad. Even the smallest sacrifices, which at the beginning may be involved, will be offset later by more than equivalent gains.

The expense is as nothing compared to the ad-

vantage to be achieved. The re-establishment of our merchant marine involves in a large measure our continued industrial progress and the exten-
sion of our commercial triumphs. I am satisfied that the judgment of the country favors the policy of aid to our merchant marine, which will broaden our commerce and markets and build up our sea-
carrying capacity for the products of agriculture and manufacture; which, with the increase of our navy, mean more work and wages to our countrymen, as well as a safeguard to American interests in every part of the world.

Combinations of capital organized into trusts to control the conditions of trade among our citi-
zens, to stifle competition, limit production, and determine the prices of products used and con-
sumed by the people, are justly provoking public discussion, and should early claim the attention of the Congress.

The Industrial Commission, created by the act of the Congress of June 18, 1898, has been engaged in extended hearings upon the disputed questions involved in the subject of combinations in restraint of trade and competition. They have not yet completed their investigation of this sub-
ject, and the recommendations at which they may arrive are undetermined.

The subject is one giving rise to many divergent views as to the nature and variety or cause and extent of the injuries to the public which may result from large combinations concentrating more or less numerous enterprises and establish-
ments. The unity or diversity of the combination of the two metals were carried on separately.

It is universally conceded that combinations which engross or control the market of any par-

ticular kind of merchandise or commodity neces-
sary to the general community, by suppressing natural and ordinary competition, whereby prices are unduly raised and the public supplies are obnoxious not only to the common law, but also to the public welfare. There must be a remedy for the evils involved in such organizations. If the present law can be extended more certainly to control or check these monopolies or trusts, it should be done without delay. Whatever power the Congress possesses over this most important subject should be promptly asserted and ac-

President Harrison, in his annual message of Dec. 3, 1889, says:

"Earnest attention should be given by Con-
gress to a consideration of the question how far the remedies commonly called 'trusts' is matter of Federal jurisdic-
tion. When organized, as they often are, to crush out all healthy competition and to mo-

nopolize the production or sale of an article of com-
merce and general necessity, they are dangerous conspiracies against the public good, and should be made the subject of prohibitory and even penal legis-
lation."

An act to protect trade and commerce against unlawful restraints and monopolies was passed by Congress on the 2d of July, 1890. The pro-

visions of this statute are comprehensive and 

stringent. It declares every contract or combina-
tion, in the form of a trust or otherwise, or con-
spiracy in the restraint of trade or commerce 
among the several States or with foreign nations, 
to be unlawful. It denominates as a criminal every person who makes any such contract or engages in any such combination or conspiracy, and provides a punishment by fine or imprison-
ment. It invests the courts of the United States with jurisdiction to prevent and restrain violations of the act, and makes it the duty of the several United States district attor-
neys, under the direction of the Attorney-Gen-

eral, to institute proceedings in equity to prevent
and restrain such violations. It further confers upon any person who shall be injured in his business or property by any other person or corporation by reason of anything forbidden or declared to be unlawful by the act the power to sue therefor in any circuit court of the United States without respect to the amount in controversy, and to recover treble the damages by him susto and the costs of the suit, including reasonable attorney fees. It will be perceived that the act is aimed at virtually every kind of combination in the nature of a trust or monopoly in restraint of interstate or international commerce.

The prosecution by the United States of offenses for violation of the act has been resorted to in the Federal courts, and notable efforts in the restraint of interstate commerce, such as the Trans-Missouri Freight Association and the Joint Traffic Association, have been successfully opposed and suppressed.

President Cleveland in his annual message of December, 1890, referred to the enactment of this law—after stating the evils of these trust combinations, says: "Though Congress has attempted to deal with this matter by legislation, the laws passed for that purpose thus far have proved ineffective, not because of any lack of disposition or attempt to enforce them, but simply because the laws themselves are not adequately supported by the courts, and cannot reach the difficulty. If the insufficiencies of existing laws can be remedied by further legislation, it should be done. The fact must be recognized, however, that all Federal legislation on this subject may fall short of its purpose because of inherent obstacles, and also because of the complex character of the forms of combination, while making the Federal authority supreme within its sphere, has carefully limited that sphere by metes and bounds which can not be transgressed. The decision of our highest court on this precise question renders it quite doubtful whether the evils of trusts and monopolies can be adequately treated through Federal action, unless they seek directly and purposely to include in their objects transportation or intercourse between States or between the United States and foreign countries.

"It does not follow, however, that this is the limit of the remedy that may be applied. Even though specific acts of monopoly may be facts in evidence of the existence of a monopoly, the power is not broad enough to fully reach the case, there can be no doubt of the power of the several States to act effectively in the premises, and there should be no reason to doubt their willingness to judiciously exercise such power."

The State legislation to which President Cleveland referred relief from the evils of trusts has failed to accomplish fully that object. This is probably due to a great extent to the fact that different States take different views as to the proper way to discriminate between evil and injurious combinations and those associations which are beneficial and necessary to the business prosperity of the country. The great diversity of treatment in different States arising from this cause and the intimate relations of all parts of the country to each other without regard to State lines in the conduct of business have made the enforcement of State laws difficult.

It is apparent that uniformity of legislation upon this subject is much to be desired. It is to be hoped that such uniformity founded in a wise and just discrimination between what is injurious and what is useful and necessary in business operations may be obtained and that means may be found for the Congress within the limitations of its constitutional power so to supplement an effective code of State legislation as to make a complete system of laws throughout the United States adequate to compel a general observance of the salutary rules to which I have referred.

The whole question is so important and far-reaching that a part of it will be lightly considered, but every phase of it will have the studied deliberation of the Congress, resulting in wise and judicious action.

A review of our relations with foreign states is presented with such recommendations as are deemed appropriate.

The long-pending boundary dispute between the Argentine Republic and Chili was settled in March last by the award of an arbitral commission, on which the United States minister at Buenos Ayres served as umpire. Progress has been made toward the conclusion of a convention of extradition with the Argentine Republic. Having been advised and consented to by the United States Senate and ratified by Argentina, it only awaits the adjustment of some slight changes in the text before exchange.

In my last annual message I adverted to the claim of the Austro-Hungarian Government for indemnity for the killing of certain Austrian and Hungarian subjects by the authorities of the State of Pennsylvania, at Pittsburg, in supressing an unlawful tumult of miners, Sept. 10, 1897. In view of the verdict of acquittal rendered by the court before which the sheriff and his deputies were tried for murder, and following the established doctrine that the Government must not be held accountable for injuries suffered by individuals acting in an unauthorized manner while acting in the line of duty in suppressing disturbance of the public peace, this Government, after due consideration of the claim advanced by the Austro-Hungarian Government, was constrained to decline liability to indemnify the sufferers.

It is gratifying to be able to announce that the Belgian Government has mitigated the restrictions on the importation of cattle from the United States, to which I referred in my last annual message.

Having been invited by Belgium to participate in a congress, held at Brussels, to revise the provisions of the law of July 2, 1890, for the repression of the African slave trade, to which the United States was a signatory party, this Government preferred not to be represented by a plenipotentiary, but reserved the right of access to the result. Notable changes were made, those especially concerning this country being in the line of the increased restriction of the deleterious trade in spirituous liquors with the native tribes, which this Government has from the outset urgently advocated. The amended general act will be laid before the Senate, with a view to its advice and consent.

Early in the year the peace of Bolivia was disturbed by a successful insurrection. The United States minister remained at his post, attending to the American interests in that quarter, and using beside his good offices for the protection of the interests of British subjects in the absence of their national representative. On the establishment of the new Government our minister was directed to enter into relations therewith.

Gen. Pando was elected President of Bolivia on Oct. 23. Our representative has been instructed to use all permissible friendly endeavors to induce the Government of Bolivia to amend its marriage laws
so as to give legal status to the non-Catholic and
civil marriages of aliens within its jurisdiction,
and where hopes are entertained that the Bo-
livian law in this regard will be brought, as was
that of Peru some years ago, into harmony with
the general practice of modern states.
A convention of extradition with Brazil, signed
May 14, 1897, has been ratified by the Brazilian
Legislature.
During the past summer two national ships of
the United States have visited Brazilian ports on
a friendly mission and been cordially received.
The voyage of the Wilmington up the Amazon
river gave rise to a passing misunderstanding,
owing to confusion in obtaining permission to
visit the interior and make surveys in the gen-
eral interest of navigation, but the incident found
a ready adjustment in harmony with the close
relations of amity which this Government has
always sedulously sought to cultivate with the
commonwealths of the Western Continent.
The claim growing out of the American-occupied
island of Cuba was submitted to the arbitration
of a committee consisting of a British, a French
and an American, and the award was made as
would be expected. The American party de-
manded that the United States should be
salvaged in the event of the island being ceded
to Spain. The counterclaim was for the
right to a coastal limit of 12 miles, which
Spain had refused to recognize and which the
award considered was a due of this United
States. This concession the United States
have refused to admit or receive, and the pro-
duct of the dispute, the case now pending
before the decision of the arbitrators and
their award, is a live question between the
United States and Spain.

The President's Message.

The Marshall Islands, under the title of the
Pacific States or the Marshall Group, have been
unanimously acceded to by the United States
and five other nations, the United Kingdom,
the French Republic, Germany, Japan, and
Portugal, and there is good reason to believe
that they will soon be joined in the same
assent by China, Russia, and the Spanish
Islands, which will make of the Marshall
Group an American possession.

The Suez Canal Company, a British public
utility, have announced that they are going to
construct an extension of the canal, and the
administration has been pleasured at the
painstaking manner in which the work has
proceeded, and is proceeding. The company
have stated that the completion of the
extension will be hastened by the new
financial arrangements made with the British
Government.

The United States Government has been
promised an increase of $5,000,000 for
the Suez Canal, and the administration has
agreed to this increase, and has also agreed
to the construction of a link in Panama,
which will be a united enterprise of the
United States and the Panama Canal
Company.

The New York Central and Hudson River
Railroad Company have declared that they
intend to construct a link in Panama,
and the United States Government has
agreed to furnish $5,000,000 for this
purpose, and the company have agreed
to the construction of a link in Panama,
which will be a united enterprise of the
United States and the Panama Canal
Company.

The United States Government has been
promised an increase of $5,000,000 for
the Suez Canal, and the administration has
agreed to this increase, and has also agreed
to the construction of a link in Panama,
which will be a united enterprise of the
United States and the Panama Canal
Company.
Claims Commission and for the adjudication of claims heretofore presented but not determined during the life of the previous commission has been delayed by reason of the necessity for fresh action by the Chilian Senate upon the amendments attached to the ratification of the treaty by the Senate. This formality is soon to be accomplished.

In view of disturbances in the populous provinces of northern China, where are many of our citizens, and of the imminence of disorder near the capital and toward the seacoast, a guard of marines was landed from the Boston and station there during last winter in the legation compound at Peking. With the restoration of order this protection was withdrawn.

The interests of our citizens in that vast empire have not been neglected during the past year. Adequate protection has been secured for our missionaries and some injuries to their property have been redressed.

American capital has sought and found various opportunities of competing to carry out the internal improvements which the Imperial Government is wisely encouraging, and to develop the natural resources of the empire. Our trade with China has continued to grow, and our commercial rights and privileges have been everywhere maintained during the past year, as they will be in the future.

The extension of the area open to international foreign settlement at Shanghai and the opening of the ports at Nankin, Tsing-Tao (Kiao-Chao), and Ta-Lien-Wan to foreign trade and settlement will doubtless afford American enterprise additional facilities and new fields, of which it will not be slow to take advantage.

In my message to Congress of Dec. 5, 1898, I urged that the recommendation which had been made to the Speaker of the House of Representatives by the Secretary of the Treasury on the 14th of June, 1898, for an appropriation for a commission to study the commercial and industrial conditions in the Chinese Empire and report as to the opportunities for, and obstacles to, the enlargements of markets in China for the raw products and manufactures of the United States, should receive at your hands the consideration which the subject merits, but the Congress failed to take action.

I now renew this recommendation, as the importance of the subject has steadily grown since it was first submitted to you, and no time should be lost in studying for ourselves the resources of this great field for American trade and enterprise.

The death of President future in February last called forth those sincere expressions of sympathy which befit the relations of two republics as closely allied by unbroken historic ties as are the United States and France.

Preparations for the representation of the industries, arts, and products of the United States at the World's Exposition to be held in Paris next year continue on an elaborate and comprehensive scale, thanks to the generous appropriation provided by Congress, and to the friendly interest the French Government has shown in furthering a typical exhibit of American progress. There has been allotted to the United States a large sum,-the granting of a special line, and to procure on our shores of a cable from Borkum Emden, on the North Sea, by way of the Azores, and also by the conclusion on Sept. 2 of a Parcells Post Convention with the German Empire. In all that promises closer relations of intercourse and commerce and a better understanding between two races having so many traits in common, Germany
can be assured of the most cordial co-operation of this Government and people. We may be rivals in many material paths, but our rivalry should be generous and open, ever aiming toward the attainment of larger results and the mutually beneficial advancement of each in the line of its essential capabilities.

The several governments of the empire seem reluctant to admit the natural excellence of our food productions and to accept the evidence we constantly tender of the care with which their purity is guarded by rigid inspection from the farm, through the slaughterhouse and the packing establishments, to the port of shipment. Our system of control over exported food staples invites examination from any quarter and challenges respect by its efficient thoroughness.

It is to be hoped that in time the two governments will act in common accord toward the realization of their common purpose to safeguard the public health and to insure the purity and wholesomeness of all food products imported by either country from the other. Were the Congress to authorize an invitation to Germany, in connection with the pending reciprocity negotiations, for the constitution of a joint commission of experts entitled to access to the technical men of affairs to conduct a searching investigation of food production and exportation in both countries and report to their respective legislatures for the adoption of such remedial measures as they might recommend for either, the way might be opened for the desirable result indicated.

Efforts to obtain for American life insurance companies a full hearing as to their business operations in Prussia have, after several years of patient representation, happily succeeded, and one of the most important American companies has been granted a concession to continue business in that kingdom.

I am also glad to announce that the German insurance companies have been readmitted by the superintendent of insurance to do business in the State of New York.

Subsequent to the exchange of our peace treaty with Spain, Germany acquired the Caroline Islands, which furnishing them another market for their ships. Assurances have been received from the German Government that the rights of American missionaries and traders there will be considerately observed.

In my last annual message I referred to the pending negotiations with Great Britain in respect to the Dominion of Canada. By means of an executive agreement a joint high commission had been created for the purpose of adjusting all unsettled questions between the United States and Canada, embracing twelve subjects, among which were the questions of the fur seals, the fisheries of the coast and contiguous and contiguous inland waters, the Alaskan boundary, the transit of merchandise in bond, the alien labor laws, mining rights, reciprocity in trade, revision of the agreement respecting naval vessels in the Great Lakes, a more complete marking of parts of the boundary, provision for the conveyance of criminals, and for wrecking and salvage.

Much progress had been made by the commission toward the adjustment of many of these questions, when it became apparent that an irreconcilable difference of views was entertained respecting the delimitation of the Alaskan boundary. An amendment of the agreement as to the meaning of Articles III and IV of the treaty of 1825 between Russia and Great Britain, which defined the boundary between Alaska and Canada, the American commissioners proposed that the subject of the boundary be laid aside and that the remaining questions of difference be proceeded with, some of which were so far advanced as to assure the probability of a settlement. This being declined by the British commissioners, an adjournment was taken until it is hoped that the negotiations now in progress between the two governments will end in an agreement for the establishment and delimitation of a permanent boundary.

Apart from these questions growing out of our relationship with our northern neighbor, the most friendly disposition and ready agreement have marked the discussion of numerous matters arising in the vast and intimate intercourse of the United States with Great Britain.

This Government has maintained an attitude of neutrality in the unfortunate contest between Great Britain and the Boer states of Africa. We have remained faithful to the precept of avoiding entangling alliances in which the Government of the United States is not immediately concerned. Had circumstances suggested that the parties to the quarrel would have welcomed any kindly expression of the hope of the American people that war might be averted, good offices would have been gladly tendered. The United States representative at Pretoria was early instructed to the effect that all neutral American interests be respected by the combatants. This has been an easy task in view of the positive declarations of both British and Boer authorities that the personal and property rights of our citizens should be observed.

Upon the withdrawal of the British mission from Pretoria by the United States consul was authorized, upon the request of the British Government and with the assent of the South African and Orange Free State governments, to exercise the customary good offices of a neutral for the care of British interests. In the discharge of this function I am happy to say that abundant opportunity has not been wanting for the promotion of this Government toward both the combatants.

For the fourth time in the present decade question has arisen with the Government of Italy in regard to the lynching of Italian subjects. The latest of these deplorable events occurred at Talulah, La., whereby five unfortunate of Italian origin were taken from jail and hanged.

The authorities of the State and a representative of the Italian embassy having separately investigated the occurrence, with discreditable results, particularly as to the alleged citizenship of the victims, and it not appearing that the State had been able to discover and punish the violators of the law, the Government of Italy has been persuaded to be lenient, set off foot, through the agency of the Department of State, and is still in progress. The result will enable the Executive to treat the question with the Government of Italy in a spirit of fairness and justice. A satisfactory solution will doubtless be reached.

The recurrence of these distressing manifestations of blind mob fury directed at dependents or natives of a foreign country suggests that the contingency has arisen for action by Congress in the direction of conferring upon the Federal courts jurisdiction in this class of international cases where the ultimate responsibility of the Federal Government may be involved. The suggestion is not new. In his annual message of Dec. 9, 1891, my predecessor, President Harrison, said:
It would, I believe, be entirely competent for Congress to make offenses against the treaty rights of foreigners domiciled in the United States cognizable in the Federal courts. This has not, however, been done, and the Federal officers and courts have no power in such cases to intervene either for the protection of a foreign citizen or for the punishment of his slayers. It seems to me to follow, in this state of the law, that the officers of the State charged with police and judicial powers in such cases must, in the consideration of international questions growing out of such incidents, be regarded in such sense as Federal agents as to make this Government answerable for their acts in cases where it would be answerable if the United States had used its constitutional power to define and punish crimes against treaty rights.

A bill to provide for the punishment of violations of treaty rights of aliens was introduced in the Senate, March 1, 1892, and reported favorably March 30. Having doubted in view the language of that part of Article III of the treaty of Feb. 26, 1851, between the United States and Hawaii, that "the claims of the high contracting parties shall receive, in the States and Territories of the other, most constant protection and security for their persons and property, and shall enjoy in this respect the same rights and privileges as are or shall be granted to the natives, on their submitting themselves to the conditions imposed upon the natives," the bill so introduced and reported provided that any act committed in any State or Territory of the United States in violation of the rights of a citizen or subject of a foreign country secured to such citizen or subject by treaty between the United States and such foreign country and not inconsistent with the laws of the United States of the States or Territory shall constitute a like crime against the United States and be cognizable in the Federal courts. No action was taken by Congress in the matter.

I earnestly recommend that the subject be taken up anew and acted upon during the present session in circumstances for some such provision abundantly appears. Precedent for constituting a Federal jurisdiction in criminal cases where aliens are sufferers is rationally deducible from the existing statute, which gives to the district and circuit courts of the United States jurisdiction of civil suits brought by aliens whose rights are invaded by the conditions imposed upon the natives. If such jealous solicitude be shown for alien rights in cases of merely civil and pecuniary import, how much greater should be the public duty to take cognizance of matters affecting the life and the rights of aliens under the settled principles of international law no less than under treaty stipulations. It would be a certain dodge, as in the case of mob murder, especially when experience has shown that local justice is too often helpless to punish the offenders.

After many years of endeavor on the part of this Government to that end the Italian Government has consented to enter into negotiations for a naturalization convention, having for one of its objects the regulation of the status of Italians (except those of an age for active military service) who, having been naturalized in the United States, may revisit Italy. It is hoped that with the mutually conciliatory spirit displayed a success will be the result. The treaty of commerce and navigation between the United States and Japan on Nov. 22, 1894, took effect in accordance with the terms of its nineteenth article on the 17th of July last, simultaneously with the enforcement of like treaties with the other powers, except France, whose convention did not go into operation until Aug. 4, 1894. The United States being, however, granted up to that date all the privileges and rights accorded to French citizens under the old French treaty. By this notable conventional reform Japan's position as a fully independent sovereign power is assured, control being gained of taxation, customs revenues, judicial administration, coasting trade, and all other domestic functions of government, and foreign extraterritorial rights being renounced.

Comprehensive codes of civil and criminal procedure according to Western methods, public instruction, patents and copyrights, municipal administration, including jurisdiction over the former foreign settlements, customs tariffs and procedure, public health, and other administrative measures have been proclaimed. The working of the new system has given rise to no material complaints on the part of the American citizens or interests, a circumstance which attests the wise and considerate with which the change has been prepared.

Valuable assistance was rendered by the Japanese authorities to the United States transport ship Morgan City while stranded at Kobe. Permission has been granted to land and pasture army horses at Japanese ports of call on the way to the Philippines. These mutually evidences of good will are highly appreciated.

The Japanese Government has shown a lively interest in the proposition of the Pacific Cable Company to add to its projected cable lines to Hawaii, Guam, and the Philippines a branch connection with the coast of Japan. It would be a gratifying demonstration of friendly feeling if the contemplated scheme were to be carried out and the United States and Japan into direct telegraphic relation.

Without repeating the observations of my special message of Feb. 10, 1899, concerning the necessity of a cable to Manila, I respectfully invite attention to it.

I recommend that, in case the Congress should not take measures to bring about this result by direct action of the Government, the Postmaster-General be authorized to invite competitive bids for the establishment of a cable; the company making the best responsible bid to be awarded the contract; and the company given the contract to give ample bonds to insure the completion of the work within a reasonable time.

The year has been marked by constant increase in the intimacy of our relations with Mexico and in the magnitude of mutually advantageous interchanges. This Government has omitted no opportunity to show its strong desire to develop and perpetuate the ties of cordiality now so long happily unbroken.

Following the termination on Jan. 29, 1899, by Mexico of the convention of extradition of Dec. 11, 1861, a new treaty more in accordance with the ascertained needs of both countries was signed Feb. 22, 1890, and exchanged in the city of Mexico on the 22d of April last. Its operation thus far has been effective and satisfactory. A recent case has served to test the application of its fourth article, which provides that neither party shall be bound to deliver up its own citizens, but that the executive authority of each shall have the exclusive right to deliver up if in its discretion it be deemed proper to do so.

The extradition of Mrs. Mattie Rich, a citizen of the United States, charged with homicide committed in Mexico, was after mature consideration
directed by me in the conviction that the ends of justice would be thereby subserved. Similar action, on appropriate occasion, by the Mexican Executive will not only tend to accomplish the desire of both governments that grave crimes go not unpunished, but also to repress lawlessness along the border of the two countries. The new treaty stipulates that neither government shall assume jurisdiction in the punishment of crimes committed exclusively within the territory of the other. This will obviate in future the embarrassing controversies which have heretofore arisen through Mexico's assumption of a claim to try and punish an American citizen for an offense committed within the jurisdiction of the United States.

The International Water Boundary Commission, organized by the convention of March 1, 1889, for the adjustment of questions affecting the Rio Grande frontier, has not yet completed its labors. A further extension of its term for one year, until Dec. 24, 1899, was effected by a convention signed Dec. 2, 1898, and exchanged and proclaimed in February last.

An invitation extended to the President of Mexico to visit Chicago in October, on the occasion of the centennial of the United States Government building in that city, was cordially accepted by him, with the necessary consent of the Mexican Congress, but the illness of a member of his family prevented his attendance. The Minister of Foreign Relations, however, came as the personal representative of President Diaz, and visited the city with distinguished honors.

Claims growing out of the seizure of American sealing vessels in Bering Sea have been under discussion with the Government of Russia for several years, with the recent happy result of an agreement to submit them to the decision of a single arbitrator. By this act Russia affords proof of her adherence to the beneficent principle of arbitration which her plenipotentiaries conspicuously favored at The Hague Disarmament Conference when it was advocated by the representatives of the United States.

A suggestion for a permanent exposition of our products and manufactures in Russia, although not yet acted upon, has been heartily welcomed by the Imperial Government that it may not inaply take a fitting place in whatever legislation the Congress may adopt looking to enlargement of our commercial opportunities abroad.

Important events have occurred in the Samoan Islands. The election, according to the laws and customs of Samoa, of a successor to the late King, Malietoa Lauapea, developed a contest as to the validity of the result, which issue, by the terms of the general act, was to be decided by the Chief Justice. Upon his rendering a judgment in favor of Malietoa Tamu, the rival chief, Mataafa, took up his residence and declared himself to be the rightful holder of the crown. 

In this emergency a joint commission of representatives of the United States, Germany, and Great Britain was sent to Samoa to investigate the situation and provide a temporary remedy. By its active efforts a peaceful solution was reached for the time being, the kingship being abolished and a provisional government established. Recommendations unanimously made by the commission for a permanent adjustment of the Samoan question were taken under consideration by the three powers parties to the general act. But the more they were examined the more evident it became that a radical change was necessary in the relations of the powers to Samoa.

The inconveniences and possible perils of the tripartite scheme of supervision and control in the Samoan group by powers having little interest in common in that quarter beyond commercial rivalry had been once more emphasized by the recent events. It is evident that the joint commission, like the scheme it aimed to replace, amounted to what has been styled a tridominium, being the exercise of the functions of sovereignty by a unanimous agreement of three powers. The situation had become far more intricate and embarrassing from every point of view than it was when my predecessor, in 1894, summed up its perplexities and condemned the participation in it of the United States.

The arrangement under which Samoa was administered had proved impracticable and unacceptable to all the powers concerned. To withdraw the United States Government from the islands to Germany and Great Britain would not be compatible with our interests in the archipelago. To relinquish our rights in the harbor of Pago Pago, the best anchorage in the Pacific, the occupancy of which had been leased to the United States in 1875 by the first foreign treaty ever concluded by Samoa, was to be the equivalent of a surrender to the navies of our navy or the interests of our growing commerce with the East. We could not have considered any proposition for the abrogation of the tripartite control which did not confirm us in all our rights and safeguard all our national interests in the islands.

Our views commented themselves to the other powers. A satisfactory disinterested arrangement was concluded between the governments of Germany and of England, by virtue of which England retired from Samoa in view of compensations in other directions, and both powers renounced in favor of the United States all their rights and claims over and in respect to that portion of the group lying to the east of the agreement and settlement of the first degree of west longitude, embracing the islands of Tutulua, Ofoo, Olosenga, and Manua. I transmit to the Senate, for its constitutional action thereon, a convention, which besides the provisions above mentioned also guarantees us the same privileges and conditions in respect to control as has been conceded to Germany in respect to its islands of Samoa as those possessed by Germany.

Claims have been preferred by white residents of Samoa on account of injuries alleged to have been suffered through the acts of the treaty governments in putting down the late disturbances. A convention has been made between the three powers for the investigation and settlement of these claims by a neutral arbitrator, to which the attention of the Senate will be invited.

My annual message of last year was necessarily devoted in great part to a consideration of the Spanish war and of the results it wrought and the conditions it imposed for the future. I am gratified to announce that the confidence and trust stored friendly relations between the two powers. Effect has been given to its most important provisions. The evacuation of Porto Rico having already been accomplished on the 18th of October, 1898, nothing remained necessary there but to continue the provisional military control of the island. The President of the United States was invested by the Congress with the authority to establish the government for the ceded territory. Of the character and scope of the measures to that end I shall treat in another part of this message.

The withdrawal of the authority of Spain from the island of Cuba was effected by the Ist of January, 1899. I announced that the full re-establishment of peace found the relinquished territory held by us in trust for the inhabitants, maintaining, under the
direction of the Executive, such government and control as therein as should conserve public order, restore the productive conditions of peace so long disturbed by the instability and disorder which prevailed for the greater part of the preceding three decades, and build up that tranquil development of the domestic state whereby alone can be realized the high purpose, as proclaimed in the joint resolution adopted by the Congress on the 19th of April, 1898, by which the United States disclaimed any disposition or intention to exercise sovereignty, jurisdiction, or control over Cuba, except for the pacification thereof, and asserted its determination when that was accomplished to leave the government and control of the island in its own hands. The pledge contained in this resolution is of the highest honorable obligation and must be sacredly kept.

I believe that substantial progress has been made in this direction. All the administrative measures adopted in Cuba have aimed to fit it for a regenerated existence by enforcing the supreme medidas and fostering other practicable the machinery of administration in the hands of the inhabitants; by instituting needed sanitary reforms; by spreading education; by fostering industry and trade; by inculcating public morality, and, in short, by taking every rational step to aid the Cuban people to attain to the social and self-governmental unity which fits an enlightened community for self-government within its own sphere, while enabling it to fulfill all outward obligations.

This nation has assumed before the world a grave responsibility for the future good government of Cuba. We have accepted a trust the fulfillment of which requires the exercise of the highest wisdom. The new Cuba yet to arise from the ashes of the past must needs be bound to us by ties of singular intimacy and strength if its enduring welfare is to be assured. Whether those ties shall be organic or conventional, the destinies of Cuba are in some rightful form and manner irrevocably linked with our own, but how and how far the future to determine in the ripeness of events. Whatever be the outcome, we must see to it that free Cuba be a reality, not a name; a perfect entity, not a hasty experiment bearing within itself the elements of failure. Our mission, to accomplish these conditions of battle, is not to be fulfilled by turning adrift any body of men, but to make the Commonwealth to face the vicissitudes which too often attend weaker states whose national wealth and abundant resources are offset by the incongruities of their political organization and the recurring occasions for internal rivalries to sap their strength and dissipate their energies. The greatest blessing which can come to Cuba is the restoration of her agricultural and industrial prosperity, which will give employment to idle men and re-establish the pursuits of peace. This is her chief and immediate need.

On the 19th of August last an order was made for the taking of the census in the island, to be completed by the 28th of November. By the treaty of peace the Spanish people on the island have until April 11, 1900, to elect whether they will remain citizens of Spain or become citizens of Cuba. Until then it can not be definitely ascertained who shall be entitled to participate in the formation of the new government of Cuba. By that time the results of the census will have been ascertained and we shall proceed to provide for elections which will commit the municipal governments of the island to the officers elected by the people. The experience thus acquired will prove of great value in the formation of a representative convention of the people to draft a constitution and establish a general system of independent government for the island. In the meantime and so long as we exercise control over the island the products of Cuba should have a market in the United States on as good terms and with as favorable rates of duty as are given to the West India Islands under treaties of reciprocity which shall be made.

For the relief of the distressed in the island of Cuba the War Department has issued supplies to destitute persons through the officers of the army, which have amounted to 5,493,000 rations, at a cost of $1,417,554.07.

To promote the disbandment of the Cuban volunteer army, and in the interest of public peace and the welfare of the people, the sum of $75 was paid to each Cuban soldier borne upon the authenticated rolls, on condition that he should deposit his arms with the authorities designated by the United States. The sum thus disbursed aggregated $87,807.00, which was paid from the emergency fund provided by the act of Jan. 5, 1899, for that purpose.

Out of the Cuban island revenues during the six months ending June 30, 1899, $1,712,014.20 was expended for sanitation, $235,851.70 for charities and hospitals, and $88,044.03 for aid to the destitute.

Following the exchange of ratifications of the treaty of peace the two governments accredited ministers to each other. Peace was proclaimed at Washington by the Duke of Arecos, an eminent diplomatist, previously stationed in Mexico, while the United States transferred to Madrid Hon. Bellamy B. Strong, of Indiana. His appointment was followed by the respective appointment of consuls, thereby fully resuming the relations interrupted by the war. In addition to its consular representation in the United States, the Spanish Government has appointed consuls for Cuba, who have been provisionally recognized during the military administration of the affairs of that island.

Judicial intercourse between the courts of Cuba and Porto Rico and of Spain has been established, as provided by the treaty of peace. The Cuban political prisoners in Spanish penal stations have been and are being released and returned to the United States in accordance with the third and sixth articles of the treaty of April 22, 1898. Negotiations are about to be had for defining the conventional relations between the two countries, which fell into abeyance by reason of the war. 1 trust that these will include a favorable arrangement for commercial reciprocity under the terms of sections 3 and 4 of the current tariff act. In these, as in all matters of international concern, no effort will be spared to respond to the good disposition of Spain, and to cultivate in all practicable ways the intimacy which should prevail between two nations whose past history has so often and in so many ways been marked by sincere friendship and by community of interests.

I would recommend appropriate legislation in order to carry into execution Article VII of the treaty of peace with Spain, by which the United States assured the payment of certain claims for indemnity of its citizens against Spain.

The United States minister to Turkey continues, under instructions, to press for a money payment in satisfaction of the just claims for injuries suffered by American citizens in the disorders of several years past and for wrongs done to them by the Ottoman authorities. Some of these claims are of many years' standing. This
Government is hopeful of a general agreement in this regard.

In the Turkish Empire the situation of our citizens remains unsatisfactory. Our efforts during nearly forty years to bring about a convention of naturalization seem to be on the brink of final failure through the announced policy of the Ottoman Porte to refuse recognition of the alien status of Turks of Ottoman extraction abroad since 1867. Our statutes do not allow this Government to admit any distinction between the treatment of native and naturalized Americans abroad, so that ceaseless controversy arises in cases where persons owing in the eye of international law a dual allegiance are prevented from naturalizing abroad. Our law in this regard contrasts with that of the European states. The British act, for instance, does not claim effect for the naturalization of an alien in the event of his return to his native country, unless the change be recognized by the law of that country or stipulated by treaty between it and the naturalizing state.

The arbitrary treatment, in some instances, of American productions in Turkey has attracted attention of late, notably in regard to our flour. Large shipments by the recently opened direct steamship line to Turkish ports have been denied entrance there that the composition and unquestioned purity, the flour was pernicious to health because of deficient "elasticity," as indicated by antiquated and untrustworthy tests. Upon due protest by the American minister, and in appearing that the act was a virtual discrimination against our product, the shipments in question were admitted. In these, as in all instances, wherever occurring, when American products may be subjected in a foreign country, upon specious pretexts, to discrimination compared with the like products of another country, this Government will use its earnest efforts to secure fair and equal treatment for its citizens and their goods. Failing this, it will not hesitate to apply whatever corrective may be provided by the statutes.

The International Commission of Arbitration, appointed under the Anglo-Venezuelan treaty of 1897, rendered an award on Oct. 3 last, whereby the boundary line between Venezuela and British Guiana is determined, ending a controversy which has existed for the greater part of the century. The award, as to which the arbitrators were unanimous, while not meeting the extreme contention of either party, gives to Great Britain a large share of the interior territory in dispute and to Venezuela the entire mouth of the Orinoco, including LaGuara Peninsula and the Caribbean littoral for some distance to the eastward. The decision appears to be equally satisfactory to both parties.

Venezuela has once more undergone a revolution. The insurgents, under General Castro, after a sanguinary engagement in which they suffered much loss, rallied in the mountainous interior and advanced toward the capital. The bulk of the army having sided with the movement, President Andrade quitted Caracas, where General Castro set up a provisional government with which our minister and the representatives of other powers entered into diplomatic relations on the 29th of November, 1899.

The fourth section of the tariff act approved July 24, 1897, appears to provide only for commercial treaties which should be entered into by the President and also ratified by the Senate within two years from its passage. Owing to delays inevitable in negotiations of this nature, none of the treaties initiated under that section could be concluded in time for ratification by the Senate prior to its adjournment on the 4th of March last. Some of the pending negotiations, however, were near conclusion at that time, and the resulting conventions have since been signed by the plenipotentiaries. Others, within both the third and fourth sections of the act, are still under consideration. Acting under the constitutional power of the Executive in respect to treaties, I have deemed it my duty, while observing the limitations of concession provided by the fourth section, to bring to a conclusion all pending negotiations, and submit them to the Senate for its advice and consent.

Conventions of reciprocity have been signed during the congressional recess with Great Britain for the respective colonies of Guiana, Barbados, Bermuda, Jamaica, and Turks and Caicos islands, and with the republic of Nicaragua.

Important reciprocal conventions have also been concluded with France and with the Argentine Republic.

In my last annual message the progress noted in the work of the diplomatic and consular officers in collecting information as to the industries and commerce of other countries, and in the care and promptitude with which their reports are printed and distributed, was referred to. For the current year, with increasingly valuable results in suggesting new sources of demand for American products and in pointing out the obstacles still to be overcome in facilitating the remarkable expansion of our foreign trade, it will doubtless be gratifying to Congress to learn that the various agencies of the Department of State are co-operating in these endeavors with a zeal and effectiveness which are not only receiving the cordial recognition of our business interests, but are exciting the emulation of other governments. In any rearrangement of the great and complicated work of obtaining official data of an economic character which Congress may undertake it is most important, in my judgment, that the results already secured by the efforts of the Department of State should be carefully considered with a view to a judicious development and increased utility to our export trade.

The interest taken by the various states forming the International Union of American Republics in the work of its organic bureau is evidenced by the fact that for the first time since its creation in 1890 all the republics of South and Central America are now represented in it.

The unanimous recommendation of the International American Conference, providing for the International Union of American Republics, was stated that it should continue in force during a term of ten years from the date of its organization, and no country becoming a member of the union should cease to be a member until the end of said period of ten years, and unless twelve months before the expiration of said period a majority of the members of the union had given to the Secretary of State of the United States official notice of their wish to terminate the union at the end of its first period, that the union should continue to be maintained for another period of ten years, and thereafter, under the same conditions, for successive periods of ten years each.

The meeting for notification of withdrawal of the maintenance is therefore assured for the next ten years. In view of this fact and of the numerous questions of general interest and common benefit to all of the republics of America, some of which
were considered by the first International American Conference, but not finally settled, and others which were done by the bureau and the appreciation of its value are further emphasized by the active co-operation which the various governments of the Latin-American republics and their diplomatic representatives in this capital are now exhibiting and the zealous endeavors they are making to extend its field of usefulness, to promote through its commercial intercourse, and strengthen the bonds of amity and confidence between various members and the nations of this continent.

The act to encourage the holding of the Pan-American Exposition on the Niagara frontier, with the identity of Erie or Niagara, in the State of New York, in the year 1901, was approved on March 3, 1899.

This exposition, which will be held in the city of Buffalo, in the near vicinity of the great Niagara cataract, and within a day’s journey of which reside 40,000,000 of our people, will be confined entirely to the Western Hemisphere. Satiation of the materials through the diplomatic representatives of Great Britain, Mexico, the Central and South American republics, and most of the States of the United States that these countries and States will make an unique, interesting, and instructive exhibit, peculiarly illustrative of their material progress during the last several decades.

The law provides an appropriation of $500,000 for the purpose of making an exhibit at the exposition by the Government of the United States from its executive departments and from the Smithsonian Institution and National Museum, the United States Commission of Fish and Fisheries, the Department of Labor, and the Bureau of the American Republics. To secure a complete and harmonious arrangement of this Government exhibit a board of management has already been created, and charged with the selection, purchase, preparation, transportation, arrangement, and safe-keeping of the articles and materials to be exhibited. The interest manifested in the organization of the board has already entered upon the performance of its duties, as provided for by the law.

I have every reason to hope and believe that this exposition will tend more firmly to cement the cordial relations between the nations on this continent.

In accordance with an act of Congress approved Dec. 21, 1898, and under the auspices of the Philadelphia Commercial Museum, a most interesting and valuable exposition of products and manufactures especially adapted to export trade was held in Philadelphia from the 14th of September to the 1st of December, 1899. The representative character of the exhibits and the widespread interest manifested in the special objects of the undertaking afford renewed encouragement to those who look confidently to the steady growth of our enlarged exportation of manufactured goods, which has been the most remarkable fact in the economic development of the United States in recent years and which is likely to become of permanent and increasing utility to our industries is the collection of samples of merchandise produced in various countries with special reference to particular markets, providing practical object lessons to United States manufacturers as to qualities, styles, and prices of the specified consumers and may be exported with advantage.

In connection with the exposition an International Commercial Congress was held, upon the invitation of the Philadelphia Commercial Museum, transmitted by the Department of State to the various foreign governments, for an exchange of information in opinions with the view to the promotion of international trade. This invitation met with general and cordial acceptance, and the Congress, which began its sessions at the exposition on the 13th of October, proved to be of great practical importance, from the fact that it developed a general recognition of the interdependence of nations in trade and a most gratifying amount of accommodation with respect to the gradual removal of existing impediments to reciprocal relations, without injury to the industrial interests of either party.

In response to the invitation of his Majesty, the Emperor of Austria, delegates from 26 countries assembled at The Hague on the 18th of May, as members of a conference in the interest of peace. The commission from the United States consisted of the Hon. Andrew D. White, the Hon. Seth Low, the Hon. Stanford Newel, Capt. Alfred T. Mahan, of the United States navy, Capt. William Crozier, of the United States army, and the Hon. Frederick W. Haggard, secretary. This seemed to be opportune for the serious consideration of a plan for the pacific adjustment of international differences, a subject in which the American people have been deeply interested for many years, and a definite project for a permanent international tribunal was included in the instructions to the delegates.

The final act of the conference includes conventions upon the amelioration of the laws and customs of war on land, the adaptation to maritime warfare of the principles of the Geneva Convention of 1864, and the extension of judicial methods to international cases. The Convention for the specific Settlement of Maritime Disputes by diplomatic bodies the leading features of the American plan, with such modifications as were rendered necessary by the great diversity of views and interests represented by the delegates. The four titles of the convention provide for the maintenance of general peace, the exercise of good offices and mediation, the formation of commissions of inquiry, and international arbitration.

The mediation provided for by the convention is purely voluntary and advisory, and is intended to avoid any invasion or limitation of the sovereign rights of the adhering states. The commissions of inquiry proposed consist of delegates to be specifically constituted for particular purposes by means of conventions between the contesting parties, having for their object the clear understanding of international differences before resorting to the use of force. The provision for arbitration contemplates the formation of a permanent tribunal before which disputed cases may be brought for settlement by the mutual consent of the litigants in each separate case. The advantages of such a permanent tribunal over imperfect commissions of arbitration are conceived to be the actual existence of a competent court, prepared to administer justice, the greater economy resulting from a well-organized system, and the accumulating evidence which such a tribunal would soon possess.

While earnestly promoting the idea of establishing a permanent international tribunal, the delegation of the United States was not unmindful of
the inconveniences which might arise from an ob-
trusive exercise of mediation, and in signing the
convention carefully guarded the historic position of
the United States "as a nation," and made it plain that
nothing contained in this convention shall be
so construed as to require the United States of
America to depart from its traditional policy of
not intruding upon, interfering with, or entangling
itself in the political questions or policy or internal
administration of any foreign state; nor shall
anything contained in the said convention be con-
strued to imply a relinquishment by the United
States of America of its traditional attitude toward
purely American questions."

Thus interpreted, the Convention for the Pacific
Settlement of International Conflicts may be re-
garded as realizing the earnest desire of great
numbers of American citizens, whose deep sense
of justice, expressed in numerous resolutions and
memorials, has urged them to labor for this noble
achievement. The general character of this con-
vention, already signed by the delegates of more
than 20 sovereign states, further commends it to
the favorable action of the Senate of the United
States, with the assent of the President.

Since my last annual message, and in obedience
to the acts of the Congress of April 22 and 26,
1898, the remaining volunteer force enlisted for
the Spanish war, consisting of 34,834 regulars and
110,262 volunteers, with over 5,000 volunteer of-
cers, has been discharged from the military service.
On or about July 31, 1907, 14,831 men were
serving in the Philippines, and 1,650 of the
regulars, who were entitled to be mustered out
after the ratification of the treaty of peace.
They voluntarily remained at the front until their places
could be filled by new troops. They were returned
home in the order in which they went to Manila,
and are now all in time on up of the service list
in the ranks of citizenship. I recommend that the
Congress provide a special medal of honor for the
volunteers, regulars, sailors, and marines on duty
in the Philippines who voluntarily remained in the
service after their terms of enlistment had expired.

By the act of March 2, 1899, Congress gave au-
tority to the Secretary of War to contract for
a minimum not exceeding 65,000 enlisted men, and
to enlist a force of 35,000 volunteers, to be recruited
from the country at large. By virtue of this au-
thority the regular army has been increased to
the number of 61,999 enlisted men and 2,248 of-
icers, and the volunteer regiments have been or-
ganized aggregating 53,030 enlisted men and 1,524
officers. Two of these volunteer regiments are
made up of colored men, with colored line officers.
The new troops to take the places of those returning
from the Philippines have been transported to
Manila to the number of 581 officers and 26,322
enlisted men of the regular army and 594 officers
and 15,388 enlisted men of the volunteer force,
while 504 officers and 14,119 men of the volunteer
force are on the ocean en route to Manila.

The force now in Manila consists of 905 officers
and 39,578 regulars, and 594 officers and 15,388
of the volunteers, making an aggregate of 1,499
enlisted men and 45,966 men. When the troops now
under orders shall reach Manila the force in the
archipelago will comprise 2,051 officers and 63,483
men. The must out of the great volunteer army
organized for the Spanish war and the creation of
a new army, the transportation from Manila to
San Francisco of those entitled to discharge, and
the use of the old men of the new troops to take
their places have been a work of great magnitude
and ability done, for which too much credit can not
be given the War Department.

During the past year we have reduced our force
in Cuba and Porto Rico. In Cuba we now have
334 officers and 10,796 enlisted men; in Porto Rico,
2,855 officers and 58,553 enlisted men, a battle-
ment of 400 men composed of native Porto Ricans; while
stationed throughout the United States are 910
officers and 17,317 men, and in Hawaii 12 officers
and 453 enlisted men.

The operations of the army are still presented in
the report of the Secretary of War. I can not
abridge labor, but shall summarize the highest recom-
mandation for their soldierly conduct in trying
situations, their willing sacrifices for their country,
and the integrity and ability with which they
have performed unusual and difficult duties in our
island possessions.

In the organization of the volunteer regiments
authorized to apply it so far as practicable the re-
cruit rule has been rigorously and faithfully
applied.

The appointment of Director General of Posts
of Cuba was given to an expert who had been Chief
Post Office Inspector and Assistant Postmaster-
General, and who united large experience with
administrative capacity. For the postmastership
Here comes the key to a number of officers
was scanned, and the choice fell upon one who had
been twenty years in the service as deputy post-
master and postmaster of a large city. This prin-
ciple governed and determined the selection of the
American officials sent not only to Cuba, but to
Porto Rico and the Philippines, and they were
instructed to apply it so far as practicable the re-
cruit rule has been rigorously and faithfully
applied.

The civil service in Cuba, though remaining
under the general guidance of the Post-
master-General, was made essentially independent.
It was felt that it should not be a burden upon
the postal service of the United States, and pro-
vided that the amount of any defect in the postal
revenue should be charged to the general re-
venues of the island.

Though Porto Rico and the Philippines hold a
different relation to the United States, yet, for
convenience of administration, the same principle
of an autonomous system has been extended to
them. The development of the service in all the
islands has been rapid and successful. It has
moved forward on American lines, with free deliv-
ery, money order, and registry systems, and has
given the people mail facilities far greater and
more reliable than any they have ever before en-
joyed. It is thus not only a vital agency of in-
fluence in promoting the progress of the coun-
try, but an important influence in diffusing a just understanding
of the true spirit and character of American ad-
ministration.
The domestic postal service continues to grow with extraordinary rapidity. The expenditures and the revenues will each exceed $100,000,000 during the current year. Fortunately, since the revival of prosperous times the revenues have grown much faster than the expenditures, and there is reason to hope that this period will witness the obliteration of the annual deficit. In this connection the report of the Postmaster-General embodies a statement of some evils which have grown up outside of the contemplation of law in the treatment of some classes of mail matter which wrongfully exercise the privilege of the pound rate, and it shows that if this matter had been properly classified and had paid the rate which it should have paid, instead of a postal deficit for the last fiscal year of $6,610,000, there would have been on one basis a surplus of $17,637,570, and on another of $5,733,836. The reform thus suggested, in the opinion of the Postmaster-General, would not only put the postal service at once on a self-sustaining basis, but would permit great and valuable improvements, and I commend the subject to the consideration of the Congress.

The navy has maintained the spirit and high efficiency which have always characterized that service, and has lost none of the gallantry in heroic action which our country is justly proudest of. The navy of the present period is the navy of the glorious past. The nation has equal pride in its early and later achievements. Its habitual readiness for every emergency has won the confidence and admiration of the country. The people are interested in the continued preparation and prestige of the navy and will justify liberal appropriations for its maintenance. The vessels of the navy have shown peculiar adaptation for the performance of new and delicate duties which our recent war has imposed. It can not be doubted that Congress will at once make necessary provision for the armor plate for the vessels now under contract and building. Its attention is respectfully called to the report of the Secretary of the Navy, in which the subject is fully presented. I unite in his recommendation that the Congress enact such special legislation as may be necessary to enable the department to make contracts early in the coming year for armor of the best quality that can be obtained in this country for the Mississippi. In addition to that the provision of the act of March 3, 1889, limiting the price of armor to $300 per ton be removed.

In the matter of naval construction Italy and Japan, of the great powers, laid down less tonnage in the year 1899 than this country, and Italy alone has less tonnage under construction. I heartily concur in the recommendations for the increase of the navy, as suggested by the Secretary.

Our future progress and prosperity depend upon our ability to equal, if not surpass, other nations in the enlargement and advance of science, industry, and commerce. To invention we must turn as one of the most powerful aids to the accomplishment of such a result. The attention of the Congress is directed to the report of the Commissioner of Patents, in which will be found valuable suggestions and recommendations.

On the 30th of June, 1899, the pension roll of the United States numbered 391,510. These include the pensioners of the army and navy in all our wars. The number added to the rolls during the year was 19,504. The number of pensioners for reason of death, remarriage, minors by legal limitation, failure to claim within three years, and other causes, was 43,186, and the number of claims disallowed was 107,419. During the year 89,054 pension certificates were issued, of which 37,977 were for new or original pensions. The amount disbursed for army and navy pensions during the year was $138,355,052.95, which was $1,651,401.61 less than the sum of the appropriations.

The Grand Army of the Republic at its recent national encampment held in Philadelphia has brought to my attention and to that of the Congress the wisdom and justice of the appropriation of the third section of the act of June 27, 1890, which provides pensions for the widows of officers and enlisted men who served ninety days or more during the War of the Rebellion and were honorably discharged, provided that such widows are without other means of support than their daily labor and were married to the officer, sailor, or marine on account of whose service they claim pension prior to the date of the act.

The present holding of the department is that if the widow's income aside from her daily labor does not exceed in amount what her pension would be, to wit, $96 per annum, she would be deemed to be without income aside in support than her daily labor, and would be entitled to a pension under this act; while if the widow's income independent of the amount received by her as the result of her daily labor exceeds $96, she would not be pensionable under the act. I am advised by the Commissioner of Pensions that the amount of the income allowed by the above mentioned provision has varied widely under different administrations of the Pension Office, as well as during different periods of the same administration, and has been the cause of just complaint and criticism. With the approval of the Secretary of the Interior the Commissioner of Pensions recommends that, in order to remove the difficulty of administrative action and to provide a uniform and to do justice to the dependent wife, the amount of income allowed independent of the proceeds of her daily labor should be not less than $250 per annum, and he urges that the Congress shall so amend the act as to permit the Pension Office to grant pensionable status to widows under the terms of the third section of the act of June 27, 1890, whose income in excess of the proceeds of daily labor is not in excess of $250 per annum. I believe this to be a simple act of justice and heartily recommend it.

The Dawes Commission reports that gratifying progress has been made in its work during the preceding year. The field work of enrollment of four of the nations will be completed by the end of the year, and it is believed that Congress at an early day make liberal appropriation for educational purposes in the Indian Territory.

In accordance with the act of Congress approved March 3, 1896, the preliminary work in connection with the twelfth census is now fully under way. The officers required for the proper administration of the duties imposed have been selected. The provision for securing a proper enumeration of the population, as well as to secure evidence of the industrial growth of the nation, is broader and more comprehensive than any similar legislation in the past. The director advises that every needful effort is being made to push this great work to completion in the time limited by the statute. It is believed that the twelfth census will emphasize our remarkable advance in all that pertains to national progress.

Under the authority of the act of Congress approved July 7, 1895, the commission consisting of the Secretary of the Treasury, the Secretary of the Interior, and the Secretary of the Navy, under whose direction the commission is operated, and the Secretary of the Interior has made an agreement of settlement, which has had my approval, of the indebtedness to the Government growing out of the issue of bonds to aid in the construction of the Central Pacific and Western Pacific Railroads. The agreement secures to the
Government the principal and interest of said bonds, amounting to $58,812,715.48. There has been paid thereon $11,702,543.12, which has been covered into the Treasury, and the remainder, payable within ten years, with interest at the rate of 3 per cent. per annum, payable semiannually, is secured by the deposit of bonds issued by the contractors of the Pacific Railway companies. The amounts paid and secured to be paid to the Government on account of the Pacific Railway subsidy claims are:

Making a total of .................................. $124,421,067.96

The whole indebtedness was about $130,000,000, more than half of which consisted of accrued interest, for which sum the Government has realized the entire amount less about $6,000,000 within a period of two years.

On June 30, 1898, there were 30 forest reservations (exclusive of the Afognak Forest and Fish Culture Reserve in Alaska), embracing an estimated area of 46,710,474 acres. In the following year, three of those forest reserves, the Tamuco Cañon (California) and Black Hills (South Dakota and Wyoming) have been considerably enlarged, the area of the Mount Rainier Reserve, in the State of Washington, has been somewhat reduced, and six additional reserves have been established, namely, the San Francisco Mountains (Arizona), the Mesa (Arizona), Lake Tahoe (California), Gallatin (Montana), Gila River (New Mexico), and Fish Lake (Utah), the total estimated area of which is 5,205,775 acres. This makes at the present time a total of 36 forest reservations, embracing an estimated area of 46,021,999 acres. This estimated area is the aggregrates areas within the boundaries of the reserves. The lands actually reserved are, however, only the vacant public lands therein, and these have been set aside and reserved for sale or settlement in order that they may be of the greatest use to the people.

Protection of the national forests, inaugurated by the Department of the Interior in 1897, has been continued during the past year, and much has been accomplished in the way of preventing forest fires and the protection of the timber. There are now large tracts covered by forests which will eventually be reserved and set apart for forest uses. Until that can be done Congress should increase the appropriations for the work of protecting the forests.

The Department of Agriculture is constantly consulting the needs of producers in all the States and Territories. It is introducing seeds and plants of great value and promoting fuller diversification of crops. Grains, grasses, fruits, legumes, and vegetables are imported for all parts of the United States. Under this encouragement the sugar-beet factory multiplies in the North and far West, semitropical plants are sent to the South, and congenial climates are sought for the choice productions of the Far East. The hybridizing of fruit trees and grapes is conducted in the search for varieties that will grow in all parts of the United States. Under this encouragement the introduction of tea gardens into the Southern States promises to provide employment for idle hands, as well as to supply the home market with tea. The subject of irrigation where it is of vital importance to the people is being carefully studied, steps are being taken to reclaim injured or abandoned lands, and information for the people along these lines is being printed and distributed.

Markets are being sought and opened up for surplus farm and factory products in Europe and in Asia. The outlook for the education of the young farmer through agricultural college and experiment station work, an opportunity given to specialize in the Department of Agriculture, is very promising. The people of Hawaii, Porto Rico, and the Philippine Islands should be helped, by the establishment of experiment stations, to a more scientific knowledge of the production of coffee, India rubber, and other tropical products, for which there is demand in the United States.

There is widespread interest in the improvement of our public highways at the present time, and the Department of Agriculture is cooperating with the people in each locality in making the best possible roads from local material and in experimenting with steel tracks. A more intelligent system of managing the forests of the country is being put in operation and a careful study of the whole forestry problem is being conducted throughout the United States. A very extensive and complete exhibit of the agricultural and horticultural products of the United States is being prepared for the Paris Exposition.

In the year 1898, the treaty of peace between the United States and Spain was signed. It provided, among other things, that Spain should cede to the United States the archipelago known as the Philippine Islands, that the United States should pay to Spain the sum of $20,000,000, and that the civil rights and political status of the inhabitants of this territory thus ceded to the United States should be determined by the Congress. The treaty was ratified by the Senate on the 6th of February, 1899, and by the Government of Spain on the 10th of March following. The ratifications were exchanged on the 11th of April and the treaty publicly proclaimed. On the 21st of March the Congress voted the sum contemplated by the treaty, and the amount was paid over to the Spanish Government on the 1st of May.

In this manner the Philippines came to the United States. The islands were ceded by the Government of Spain, which had been in undisputed possession of them for centuries. The President is authorized by the Congress to dispatch accessions of commissioners in Paris, under the direction of the Executive, but by the constitutional and well-considered action of the representatives of the people of the United States in both houses of Congress. I had every reason to believe, and I still believe, that this transfer of sovereignty was in accordance with the wishes and the aspirations of the great mass of the Filipino people.

From the earliest moment no opportunity was lost of assuring the people of the islands of our ardent desire for their welfare and of the intention of this Government to do everything possible to advance their interests. In my order of the 10th of May, 1898, we instructed the concessioners dispatched to the Philippines to declare that we came not to make war upon the people of that country, "nor upon any party or faction among them, but to protect them in their homes, in their employments, and in their personal and religious rights." That there should be no free-france or free-commission territory, and that it was the intention of the Government, on the 17th of August it was directed that "there must be no joint occupation with the insurgents." that the United States must preserve the peace and protect persons and property within the territory occupied by their military and naval forces; that the insurgents and all others must recognize...
the military occupation and authority of the United States. As early as Dec. 4, before the cession, and in anticipation of that event, the commander in Manila was urged to restore peace and tranquillity and to undertake the establishment of a benevolent government, which should afford the Filipinos full self-government and peace.

On the 21st of December, after the treaty was signed, the commander of the forces of occupation was instructed "to announce and proclaim in the most public manner that we come, not as invaders and conquerors, but as friends to protect the natives in their homes, in their employments, and in their personal and religious rights." On the same day, while ordering Gen. Otis to see that the peace should be preserved in Hoilo, he was admonished that "it is most important that there should be no conflict with the insurgents." On the 1st day of January, 1899, urgent orders were reiterated that the kindly intentions of this Government should be in every possible way communicated to the insurgents.

On the 21st of January I announced my intention of dispatching to Manila a commission composed of three gentlemen of the highest character and distinction, thoroughly acquainted with the Orient, who, in association with Admiral Dewey and Major-General Otis, were specially commissioned to make humane and effective extension of authority throughout the islands, and to secure with the least possible delay the benefits of a wise and generous protection of life and property to the inhabitants." These gentlemen were Dr. Jacob Gould Schurman, president of Cornell University; the Hon. John H. Denby, for many years minister to China; and Prof. Dean C. Worrester, of the University of Michigan, who had made a most careful study of life in the Philippines. While the treaty of peace was under consideration in the Senate these commissioners set out on their mission of good will and liberation. Their character was a sufficient guarantee of the benevolent purpose with which they went, even if they had not borne the positive instructions of this Government, which made their brand pre-eminently one of peace and friendship.

But before their arrival at Manila the sinister ambition of a few leaders of the Filipinos had created a situation full of embarrassment for us, and the consequent consequences to themselves. The clear and impartial preliminary report of the commissioners, which I transmit herewith, gives so lucid and comprehensive a history of the present insurrectionary movement that the story need not be here repeated. It is enough to say that the claim of the rebel leader that he was promised independence by any officer of the United States in return for his assistance has no foundation in fact and is categorically denied by the very witnesses who were called to prove it. The most the insurgent leader hoped for when he came back to Manila was the liberation of the islands from the Spanish control, which they had been laboring for years to attain.

The prompt accomplishment of this work by the American army and navy gave him other ideas and ambitions, and insidious suggestions from various quarters perverted the purposes and intentions with which he had taken up arms. No sooner had our army captured Manila than the Filipino forces were advised with threats of vengeance and hostility which the utmost efforts of our officers and troops were unable to disarm or modify. Their kindness and forbearance were taken as a proof of cowardice. The aggressions of the Filipinos continually increased until finally, just before the time set by the Senate of the United States for a vote upon the treaty, an attack, evidently prepared in advance, was made all along the American lines, which resulted in a terribly destructive and sanguinary repulse of the insurgents.

Ten days later an order of the insurgent government was issued to its adherents who had remained in Manila, of which Gen. Otis justly observes that "for barbarous intent it is unequalled in modern times." It directs that at 8 o'clock on the night of the 15th of February the "territorial militia" shall come together in the streets of San Pedro armed with their bolos, with guns and ammunition, where they can be ordered to fire the next day, while ordering Gen. Otis to see that the peace should be respected; but that all other individuals of whatever race they may be, shall be exterminated without any compassion, after the extermination of the army of occupation, and adds: "Brothers, we must avenge ourselves on the Americans and exterminate them, that we may take our revenge for the infamies and treacheries which they have committed upon us. Have no compassion upon them; attack with vigor." A copy of this fell by good fortune into the hands of our officers, and they were able to take measures to control the rising, which was actually attempted on the night of Feb. 22, a week later than was anticipated. Our officers reported that an armed insurgent entered the city by water ways and swamps, and in concert with confederates inside attempted to destroy Manila by fire. They were kept in check during the night, and the next day driven out of the city with heavy loss.

This was the unhappy condition of affairs which confronted our officers on the arrival in Manila. They had come with the hope and intention of co-operating with Admiral Dewey and Major-General Otis in establishing peace and order in the archipelago and the largest measure of self-government compatible with the true welfare of the people. What they actually found can best be set forth in their own words:

"Deplorable as war is, the one in which we are now engaged was unavoidable by us. We were attacked by a bold, adventurous, and enthusiastic army. No alternative was left to us except ignominious retreat.

"It is not to be conceived of that any American would have sanctioned the surrender of Manila to the insurgents. Our obligations to other nations and to the friendly Filipinos and to ourselves and our flag demanded that force should be met by force. Whatever the future of the Philippines may be, there is no course open to us now except the prosecution of the war until the insurgents are reduced to submission. The commission is of the opinion that there has been no time since the destruction of the Spanish squadron by Admiral Dewey when it was possible to withdraw our forces from the islands either with honor to ourselves or with safety to the inhabitants."

The course thus clearly indicated has been unflinching pursued. The rebellion must be put down. Civil government can not be thoroughly established until order is restored. With a devotion and gallantry worthy of its most brilliant history, the army, ably and loyally assisted by the navy, has carried on this unwelcome but most righteous campaign with richly deserved success. The noble self-sacrifice with which the last minuter of service had expired refused to avail themselves of their right to return home as long as they were needed at the front forms one of the brightest pages in our annals. Although their operations have been somewhat interrupted and checked by a rainy season of unusual violence and duration, they have gained ground steadily.
The advisory council discharges all the ordinary duties of a legislature. The usual duties pertaining to said offices are to be performed by the secretaries of the treasury, interior, agriculture, public instruction, the attorney-general, and the auditor. The judicial power is vested in three judges, who are to be appointed by the military governor of the island. Inferior courts are to be established.

Free public schools are to be established throughout the populous districts of the island, in which the English language shall be taught, and this subject will receive the careful consideration of the advisory council. The benefits of government must be distributed equally and equitably among the people. The military authorities will collect and receive the customs revenue, and will control postal matters and Philippine interisland trade and commerce.

The military governor, subject to the approval of the military government in the Philippines, determines all questions not specifically provided for and which do not come under the jurisdiction of the advisory council.

The authorities of the Sulu Islands have accepted the succession of the United States to the rights of Spain, and our flag floats over that territory from the 10th of August, 1899, Brig.-Gen. C. Bates, United States and Philippine military governor, having concluded an agreement with the Sultan and his principal chiefs, which I transmit herewith. By Article 1 the sovereignty of the United States over the whole archipelago of Jolo and its dependencies is declared and acknowledged.

The United States flag will be used in the archipelago and its dependencies, on land and sea. Piracy is to be suppressed, and the Sultan agrees to co-operate heartily with the United States authorities to that end and to make every possible effort to arrest and bring to justice all persons engaged in piracy. All trade in domestic products of the archipelago of Jolo when carried on with any part of the Philippine Islands and under the American flag shall be free, unlimited, and undeniable. The United States will give full protection to the Sultan in case any foreign nation should attempt to impose upon him. The United States will not sell the island of Jolo or any other island of the Jolo archipelago to any foreign nation without the consent of the Sultan and his associates in the administration of the islands have been agreed upon to the amount of $700 monthly.

Article X provides that any slave in the archipelago of Jolo shall have the right to purchase freedom by paying to the master the usual market value. The agreement by Gen. Bates was made subject to confirmation by the President and to future modifications by the consent of the parties in interest. I have confirmed said agreement, subject to the action of the Congress, and with the reservation, which I have directed shall be communicated to the Sultan of Jolo, that this agreement is subject in any way to authorize or give the consent of the United States to the existence of slavery in the Sulu archipelago. I communicate these facts to the Congress for its information and action.

Everything indicates that with the speedy suppression of the Tagalo rebellion life in the archipelago will be conducted in such a manner that the protection of our sovereignty, and the people of those favored islands will enjoy a prosperity and a freedom which they have never before known. Already hundreds of schools are open and filled with children. Religious freedom is sacroyly assurred and enjoyed. The courts are dispensing justice. Business is beginning to circulate in its

officers; and as to several other matters of detail touching the interests both of the island and of the Federal Government.

By the resolution of annexation the President was directed to appoint five commissioners to recommend to Congress such legislation concerning the Territory as should be necessary and proper. These commissioners were duly appointed, and after a careful investigation and study of the system of laws and government prevailing in the islands, and of the conditions existing there, they prepared a bill to provide a government under the title of "The Territory of Hawaii." This bill, with the bill which they prepared, was transmitted to me on Dec. 6, 1898, but the bill still awaits final action.

The people of these islands are entitled to the benefits and privileges of our Constitution, but in the absence of any act of Congress providing for Federal courts in the islands, and for a procedure by which appeals, writs of error, and other judicial proceedings necessary for the enforcement of civil rights may be prosecuted, they are powerless to secure their enforcement by the judgment of the courts of the United States. It is manifestly important, therefore, that an act shall be passed as speedily as possible erecting these islands into a Territory of the United States, and creating appointment of a judge and other proper officers and methods of procedure in appellate proceedings, and that the government of this newly acquired territory under the Federal Constitution shall be fully defined and provided for.

A necessity for immediate legislative relief exists in the Territory of Alaska. Substantially the only law providing a civil government for this Territory is the act of May 17, 1884. This is meager in its provisions, and is fitted only for the administration of affairs in a country sparsely inhabited by civilized people and unimportant in trade and production, as was Alaska at the time this act was passed. The increase in population by immigration during the past few years, consequent upon the discovery of gold, has produced such a condition as calls for more ample facilities for local self-government and more numerous conveniences of civil and judicial administration. Settlements have grown up in various places, constituting in part a population of thousands of inhabitants, yet there is no provision of law under which a municipality can be organized or maintained.

In some localities the inhabitants have met together and voluntarily formed a municipal organization for the purpose of local government, adopting the form of a municipal constitution and charter, under which said officials have been appointed; and ordinances creating and regulating a police force, a fire department, a department of health, and making provision for the care of the insane and indigent poor and sick and for public schools, have been passed. These proceedings and the ordinances passed by the class that are without statutory authority and have no sanction except as they are maintained by the popular sentiment of the community. There is an entire absence of authority to provide the ordinary instruments of local police control and administration, the population consisting of the usual percentage of the fugitive class of the Hawaiian people that flock to new fields of enterprise or discovery, and under circumstances which require more than ordinary provision for the maintenance of peace, good order, and lawful conduct.

The whole vast area of Alaska comprises but one judicial district, with one judge, one marshal, and one district attorney, yet the civil and criminal business has more than doubled within the past year, and is many times greater both in volume and importance than it was in 1884. The duties of the judge require him to travel thousands of miles to discharge his judicial duties at various points in the islands.

The Territory should be divided into at least two districts, and an additional judge, district attorney, marshal, and other appropriate officers be provided.

There is practically no organized form of government in the Territory. There is no authority, except in civil cases, to confer or extend any authority, local or trivial, and the difficulty of conveying to the Congress an adequate conception and understanding of the various needs of the people in the different communities is easily understood. I see no reason why a more complete form of Territorial organization should not be provided. Following the precedent established in the years when a temporary government was provided for the recently acquired territory, then known under the name of Louisiana, it seems to me that it would be advantageous to confer greater executive power upon the governor and to establish, as was done in the case of the Territory of Louisiana, a legislative council having power to adopt ordinances for localities, and to subject such ordinances to confirmatory action. I believe a provision of this kind would be satisfactory to the people of the Territory. It is probable that the area is too vast and the population too scattered to make it wise at the present time to provide for an elective legislative body, but the conditions calling for local self-government will undoubtedly very soon exist, and will be facilitated by the measures which I have recommended.

I recommend that legislation to the same end be had and that the same system of government and administration which now exists on Porto Rico be applied also to Porto Rico.

The system of civil jurisprudence now adopted by the people of this island is described by competent lawyers who are familiar with it as thoroughly modern and scientific, so far as it relates to matters of internal business, trade, production, and social and private right in general. The cities of the island are governed under charters which probably require little very or no change. So that with relation to matters of local concern and private right, it is not probable that much, if any, legislation is desirable; but with relation to police and other matters of public order and regulation, the relations of the island to the Federal Government, there are many matters which are of pressing urgency. The same necessity exists for legislation on the part of Congress to establish Federal courts and Federal jurisdiction in the island as has been previously pointed out by me with reference to Hawaii. Besides the administration of justice, there are the subjects of the public lands; the control and improvement of rivers and harbors; the control of the waters or streams not navigable, which, under the Spanish law, belonged to the Crown of Spain, and have by the treaty of cession passed to the United
The fundamental requirements for these people, as for all people, is education. The free schoolhouse is the best preceptor for citizenship. In the introduction of modern educational methods care, however, must be exercised that changes be not made too abruptly and that the history and racial peculiarities of the inhabitants shall be given due weight. Systems of education in these new possessions founded upon common-sense methods, adapted to existing conditions and looking to the future moral and industrial advancement of the people, will commend to them in a peculiarly effective manner the blessings of free government.

The love of law and the sense of obedience and submission to authority are so deeply imbedded in the hearts of our people, and any violation of these sentiments and disregard of their obligations justly arouses public condemnation. The guarantees of life, liberty, and of civil rights should be faithfully upheld; the right of trial by jury respected and defended. The rule of the courts should assure the public of the prompt trial of those charged with criminal offenses, and upon conviction the punishment should be commensurate with the enormity of the crime.

Those who, in disregard of law and the public peace, unwilling to await the judgment of court and jury, constitute themselves judges and executors of the law, should not escape the severest penalties for their crimes.

What I said in my inaugural address of March 4, 1897, I now repeat:

"The constituted authorities must be cheerfully and vigorously upheld. Lynchings must not be tolerated in a great and civilized country like the United States; nor may the penalties of the laws be lightly or summarily meted out. The preservation of public order, the right of discussion, the integrity of courts, and the orderly administration of justice must continue forever the rock of safety upon which our Government securely rests."

In accordance with the act of Congress providing for an appropriate national celebration in the year 1900 of the establishment of the seat of Government in the District of Columbia, I have appointed a committee, consisting of the governors of all the States and Territories of the United States, who have been invited to assemble in the city of Washington on the 2st of December, 1899, which, with the Committee of the Congress and the District of Columbia, is charged with the proper conduct of this celebration.

Congress at its last session appropriated $5,000 "to enable the chief of engineers of the army to continue the examination of the subject and to make or secure designs, calculations, and estimates for a memorial bridge from the most convenient point of the Potomac River, or adjacent thereto, across the Potomac river to the most convenient point of the Arlington estate property."

In accordance with the provisions of this act the chief of engineers has selected four eminent bridge engineers to submit competitive designs for a bridge combining the elements of strength and durability and such architectural embellishment and ornamentation as will fitly apply to the dedication, "A memorial to American patriotism." The designs are now being prepared, and as soon as completed will be submitted to the Congress by the Secretary of War. The proposed bridge would be a convenience to all the people of the country and subject the city of Washington to the appropriate architectural embellishment and ornamentation an ornament to the capital of the nation, and forever stand as a monument to American patriotism. I do not doubt that Congress will give to the enterprise still further proof of its favor and approval.
The Executive order of May 6, 1896, extending the limits of the classified service, brought within the operation of the civil service law and rules nearly all the executive civil service not previously classified.

Some of the inklings were found wholly illogical and unsound, but the work of the several depart- ments. The application of the rules to many of the places so included was found to result in friction and embarrassment. After long and very careful consideration it became evident to the heads of the departments responsible for their efficiency, that in order to remove these difficulties and promote an efficient and harmonious adminis- tration, certain amendments were necessary. These amendments were promulgated by me in Executive order dated May 29, 1899.

The principal purpose of the order was to except from competitive examination certain places in- volving fiduciary responsibilities or duties of a strictly confidential, scientific, or executive charac- ter which it was thought might better be filled either by noncompetitive examination, or in the discretion of the appointing officer, than by open competition. These places were comparatively few in number. The order provides for the filling of a much larger number of places, mainly in the offices of Assistant Secretaries. In each case, by the President is known as the registration system, under regulat- ions to be approved by the President, similar to those which have produced such admirable results in the navy yard service.

All of the amendments had for their main ob- ject a more efficient and satisfactory administra- tion of the system of appointment establish- ing the civil service law. The results attained show that under their operation the public service has improved and that the civil service system is re- lieved of many objectionable features which here- tofore subjected it to just criticism and the ad- ministrative officers to the charge of unbusiness- like methods in the conduct of public affairs. It is believed that the merit system has been greatly strengthened and its permanence assured. It will be my constant aim in the administration of gov- ernment in our new possessions to make fitness, character, and merit essential to appointment to office, and to give to the capable and deserving incident a preference in appointment.

The 14th of December will be the one hundredth anniversary of the death of Washington. For a hundred years the republic has had the priceless advantage of the lofty standard of character and conduct which he bequeathed to the American people. It is an inheritance which time, instead of wasting, continually increases and enriches. We may justly hope that in the years to come the benign influence of the Father of His Coun- try may be even more potent for good than in the century which is drawing to a close. I have been glad to learn that in many parts of the country the people will fittingly observe this historic anni- versary day.

Presented to this Congress are great opportuni- ties. With them come great responsibilities. The power confided to us increases the weight of our obligations to the people, and we must be pro- foundly sensible of them as we contemplate the new and grave problems which confront us. Aim- ing at the highest good, we can not do good. A right interpretation of the people's will and of duty can not fail to insure wise measures for the welfare of the islands which have come under the authority of the United States, and insure to the common interest and lasting honor of our country. Never has this nation had more abundant cause than during the past year for thankfulness to God for manifold blessings and mercies, for which we make reverent acknowledgment.

William McKinley.

Executive Mansion, Dec. 5, 1899.

The Financial Measure.—The most important legislation of the session was the passage of the bill "to define and fix the standard of value, to maintain the parity of all forms of money issued or coined by the United States, to refund the pub- lic debt, and for other purposes." It was intro- duced in the House of Representatives on Dec. 4, 1899, and on Dec. 7 the member of the majority voted to refer the bill to an immediate consider- ation by unanimous consent. In behalf of the minority objection was made that the measure had been prepared during vacation by a special Republican committee; that it had never been acted upon by a regular committee of the House; that the Democratic members had no knowledge of it; and that they wanted time to study it and discuss it. Dec. 8, the Committee on Rules re- ported a resolution shaped to provide for its rapid passage. The special rule ordered consideration in committee of the whole to begin on Monday, Dec. 11, general discussion to continue until Friday after- noon, then discussion under the five-minute rule until a final vote. The rule was adopted, and the bill was to be reported to the House with amendments. The vote on the final passage of the measure was set for Monday, Dec. 18, after the reading of the journal. The space of forty minutes allowed for the discus- sion of the proposed rule before a vote on it was spent—apart from the usual bickerings about in- and out-party interests in amendments proposed. The vote was 10 or 1, and it was reported to the House with amendments.

The debate that followed covered points that have been discussed directly or indirectly in Con- gress year after year, and no summary of the long discussion in both branches of Congress would be feasible, or perhaps desirable, though many able speeches were made in the House and in the Sen- ate, and a wealth of financial information is spread over the pages of the Record. It may be worth while to give, merely as a suggestive outline of many points of new interest, the following:

Mr. Overstreet, of Indiana, who was in charge of the measure in the House, in arguing for the necessity of a declaration in favor of the gold standard, reviewed briefly the national legis- lation, and maintained that we had already en- tered upon that policy and that it was essential to formulate it in the law. He said:

"The first effort in this country toward estab- lishing a monetary standard was in 1786, when the Congress of the Confederation chose as the unit of value the 'Spanish milled dollar,' contain- ing 375.84 grains of pure silver. There was then no mint in the United States, and the milled dollar was never coined.

"The first coinage law under the republic was enacted April 2, 1792, and sought to establish a double standard of gold and silver at a ratio of 1 to 15. Whatever the result of the operation of the law, and the failure of the two metals to main- tain the relative values fixed by statute, nevertheless it left the public government in a position of the lawmakers power to provide and legal- ize a double standard of value.

"The subsequent act of June 28, 1834, changing the ratio from 1 to 15 to 1 to 16, by reducing the weight of the eagle from 250 grains to 235 grains, was in the hope of maintaining the double stand.
and by regulating the ratio to conform to the commercial values of the metals.

"Less than three years thereafter, by the act of Jan. 18, 1837, which changed the ratio from 1 to 16 to 1 to 13.988 by again modifying the quantity of metal in the coins, the effort to maintain the double standard was apparent. The remarkable discovery of gold in California in 1847 and 1848 and in Australia in 1851 had a material influence upon the relative value of gold and silver, and the bullion in the silver coins of the United States increased in value beyond the value noted by their face. This condition bore fruit in the act of Feb. 21, 1853, which provided for the redenomination of the silver half dollar, quarter, and dime, and prohibited the further coinage of subsidiary silver coins, except upon Government account. The bullion value of a silver dollar prior to 1853, and, indeed, prior to 1873, was, the great proportion of the time, in excess of the face value, and comparatively few were coined.

"The difference between the bullion and face value of silver coin accounted for their withdrawal from the channels of trade as a medium of exchange, and their conversion into commodities, regulated in value by the laws governing trade and commerce, irrespective of the statute establishing the coin and increasing it in value at fixed valuations. The necessity for small change created the demand for the half dollars, quarters, and dimes, which remained in circulation because the bullion was reduced and circulated at par because of the guarantee of the Government. By the provision of the law these subdivisions were intended to be kept in exchange for gold coins at par, and there has never been a doubt but that their redemption would be equally at par. The struggle of the Government to maintain the double standard by law continued for nearly sixty years. The shifting of the ratio between the two metals was met by the change of statute.

"The universal experience in business transactions marked the withdrawal from circulation of the undervalued coin. The debates in Congress just prior to the passage of the act of Feb. 21, 1853, clearly mark the change of sentiment against the further effort to maintain a double standard, and the declaration of the House that in practice the gold standard was in force, and that it was the clear purpose of the Government to accept the single gold standard. While no statute was made to this end, the operations of the laws of trade gave recognition to this basis of values. No effort was made to change this sentiment, and for twenty years the question of coinage commanded but little attention by the American people. The struggle of the Government through the civil war crippled the credit of the republic, and for a time specie payments were suspended and the Government degenerated to a paper basis.

"The act of March 18, 1869, to strengthen the public credit, directed the Government to the payment of its demand notes and obligations in coin. This was the dawn of a new day in American finance and marked the resurrection of Government credit from the abyss into which it had fallen. The only coin in circulation at the time of the passage of the act of March 18, 1869, was gold. The Government coinage provision for the redemption of the demand notes, and the universal policy of the Government to make redemption in the best coin known at the time of redemption, demonstrates beyond doubt that this pledge of the Government has been faithfully kept. It was but a short step, in principle as well as in time, to the provisions in the act of July 14, 1879, to authorize the refunding of the national debt, which made the bonds of that issue "redeemable in coin at the present standard of value.

"The steps approaching the adoption of the gold standard became short and rapid. For five years prior to 1873 the question of legalizing the gold standard was under discussion in financial circles. As early as the winter of 1869 a bill was prepared in the Treasury Department containing provision for the discontinuance of the coinage of the silver dollar and the adoption of the gold dollar piece, at the standard weight of 25.8 grains, as the unit of value. This bill was placed for consideration and circulated among experts in finance, whose suggestions and criticisms were invited. On April 25, 1870, this bill, as S. 819, was introduced, and on Dec. 19 following was favorably reported.

"From the date of its preparation, in all of its forms, and throughout its discussions, covering several sessions, the provisions before mentioned remained intact. Not only that, but these two provisions were the only provisions relative to the standard of value and the silver dollar ever contained in the bill, either as it was originally drawn or throughout its entire consideration. The old standard silver dollar was never mentioned in the bill. There was no discussion of it.

"For more than a quarter of a century preceding that date the commercial world had treated gold as the standard of measurement of values. The 'act of 1873' was merely the policy and practice of our people crystallized into statute law. The change from the unwritten to the written law was simple and unattended by the slightest disturbance in trade.

"If there had been no further legislation concerning the coinage of silver, there would exist to-day no single doubt of the money standard of the United States. The law of Feb. 12, 1873, clearly adopts the gold one-dollar piece, at the standard weight of 25.8 grains of gold, as the unit of value. That statute has never been repealed nor directly amended, and by legal construction is in force to-day. Yet subsequent acts have so affected it that there is some doubt as to whether gold is fully recognized as our monetary standard. The act of Feb. 28, 1873, authorizing the coinage of the silver dollar, and the act of July 14, 1890, directing the purchase of silver bullion and the issue of Treasury notes thereon, brought into circulation such a tremendous quantity of silver guaranteed by the Government to circulate at par that the burden of the Government was so increased as to make doubtful the strength and stability of the standard.

"The fall in the price of silver gave courage to the advocates of cheap money, who sought, by restoring the silver dollar to circulation at less than its intrinsic value, to accomplish what they had failed to accomplish in their battle for cheap money at an earlier period. Public sentiment so suddenly changed upon this question that a free coinage bill passed the House of Representatives on the 13th of December, 1876, by a vote of 167 to 53. Fortunately it was not acted upon by the Senate. A similar measure passed the House on Nov. 3, 1877, by a vote of 165 to 34. Early in the year 1878 this bill was considered by the Senate and criticized. The question of the passage of the so-called 'Bland-Allison act' on the 15th of February, 1878.

"With all the ills which this measure brought upon the country, it was far to be preferred to an absolute free-coinage bill which threatened the country at that date.
President Hayes vetoed the bill, but on the 28th of February, 1878, it was passed over his veto by both houses, and the vote in the House being 196 to 73, and in the Senate 46 to 19. The rapidity with which the silver dollars were coined and issued into circulation greatly stimulated the advocates of cheap money, who became restless at the delay occasioned by the mints, which were not able to coin the money as rapidly as the people desired, and the law of July 14, 1890, providing for the immediate issue of Treasury notes based upon the bullion purchased, to be redeemed by the dollars as coined, enabled the issue of the money more rapidly than was provided by the capacity of the mints.

The act of Oct. 26, 1890, Congress discontinued the coining of the one-dollar gold piece, which the law of Feb. 12, 1873, had declared to be the "unit of value." This act further confused the legal status of the standard. While the actual existence of the gold one-dollar piece is not essential, yet, it having been declared by law to be the "unit of value," disappeared, cast doubt upon the character of the standard. The purchasing clause of the law of July 14, 1890, was repealed Nov. 1, 1893. So grievous had grown the burden upon the Government because of the vast issue of a depreciated coin that confidence in the Government's ability to maintain it was shaken. The one-dollar gold was withdrawn from circulation, the purchasing clause of the act of July 14, 1890, contained the provision declaring it to be the fixed purpose of the Government to maintain its gold and silver of equal intrinsic and exchangeable value.

"But for this declaration the silver coins would have circulated only at their intrinsic value, which would make it impossible to circulate either specie or paper. With the pledge of the Government for the maintenance of their parity created an obligation as sacred as a national bond. By this pledge the Government made additional recognition of the standard of gold, in which by implication it proposed to measure the value of the silver dollar?"

Mr. Bell, of Colorado, took the opposite view of the same topic. He said:

"The present legal standard of this nation is bimetallic, or based on both gold and silver, and $18,000,000,000 of debts have been contracted under the bimetallic standard and $1,300,000,000 of United States obligations are now outstanding under the standard, with a silver basis of value July 14, 1870, the time when the act was passed which embraced the present silver dollar as well as gold coin. The correctness of this version is proved not only by the decisions of the Attorney-General, but by the declaration of the Matthews resolution, which passed both houses of Congress with great unanimity in 1877.

"The second section of this bill provides—

"That all interest-bearing obligations of the United States for the payment of money now existing or hereafter to be entered into shall be deemed and held to be payable in gold coin."

"What does the payment of these debts in gold which were contracted to be paid in gold and silver mean to the creditors of this nation?"

"It means that after a struggle of over a quarter of a century the money changers and speculative agents have secured such a change of the money standard as to give them hundreds of millions of dollars in value more than they really lent.

"Sirs, this is in the nature of revolution; it is demonstrated through the actual offers of speculation for our bonds payable in coin or in gold alone. On Feb. 8, 1895, President Cleveland sold $62,315,435 thirty-year coin bonds to August Belmont & Co., N. M. Rothschild & Sons, J. P. Morgan & Co., and J. S. Morgan & Co., and obtained an offer at the same time that if he would have Congress provide that they should be payable specifically in gold coin that they would reduce the annual interest payment$539,159, a saving in thirty years of$16,174,770.

"President Cleveland used this day in a special message to Congress:

"'The arrangement just completed . . . develops such a difference in the estimation of investors between bonds made payable in coin and those specifically made payable in gold in favor of the latter, as represented by three fourths of a cent in annual interest. In the agreement just referred to, the syndicates of the bonds to the Government, if 3-per-cent. gold bonds should be substituted for 4-per-cent. coin bonds under the privilege reserved, would be $539,159, amounting in thirty years, or at the maturity of the coin bonds, to $16,174,770.'"

"And this sum was offered the Government to make certain pay a bill that is payable. Now, the same men who made this advanced bid for bonds made specifically payable in gold hold largely our other coin bonds. If it was worth to them over $500,000 a year to have $200,000,000 made specifically payable in gold instead of in coin, then it was worth just as much in proportion to have the $1,300,000,000 outstanding coin bonds made payable in gold. The value of the annual interest on the $1,300,000,000 coin bonds, if converted into gold bonds, would be enhanced in value over $9,000,000 per annum.

"Now, sirs, there is no dodging the question. When this bill is passed, there is taken from the pockets of the people $9,000,000 per annum by the speculators who conduct our financial operations, except love and affection, and which will be thrown into the opulent laps of the bondholders and national bankers of the country.

"The legislation of money from the pockets of the taxpayers into the pockets of the syndicates now controlling legislation has become so common and so open that it is appalling.

"The audacity of this move would be astonishing if Congress had not succeeded in the last few months in voting untold millions into the hands of these syndicates without arousing much public indignation.

"Do you not think that the national bank and bond syndicates have received enough thus far as to have the vile popular loan scheme wherein comes era, this, and the millions, whether rich or poor. Every one knows now, and they should have known then, that if it was the speculators' scheme to have the $1,100,000 or $12,000,000 of the people's money voted into the pockets of the syndicates. The whole thing was so gaudy and cheap that a great many banks coin dealers, through the aid of the banks used their customers to subscribe for the bonds, but the banks paid for them and owned them at all times. On the 9th of this month these bonds were worth on the market $109, or $19,500,000 above par, a gift voted into the pockets of the purchasers.

"The Speaker of this House, Mr. Hendricks, Mr. Brownson, Mr. Cannon, Mr. Hopkins, Mr. Hepburn, and many other leading Republicans refused to vote to put 'gold' in this issue, though we could save more than $16,000,000 thereby, because, as said by Mr. Hopkins, the precedent would cost us
CONGRESS. (The Financial Measure.)

$100,000,000. However, now these same men are supporting this bill, with its gift of $100,000,000, under the pressure of a party caucus and a party pressure.

"One of the most essential attributes of a money is to establish a standard of value, so that in case of deferred payments and long-time loans the creditor can not collect more than he lent or the debtor pay less than he received.

"This standard must be based on full legal-tender money.

"While a bank currency forms a good circulating medium when times are normal and confidence is unshaken, however it is credit money and it must be paid or redeemed in gold.

"It has been the experience of the financial world that as the standard of value contracts and as confidence is disturbed, instead of bank paper or to let its legislature dictate what it contracts in sympathy with the money in which it is to be redeemed as a standard and as a means of storing values.

"Because gold has been scarcer, it has generally been used for large payments and for storing great values; and silver, because more abundant, and small payments and as a means of storing smaller values, and the two jointly make an ideal currency for the masses of the people.

"If this bill passes, the 89,000,000 Treasury notes, the 346,000,000 greenbacks, and 482,000,000 silver dollars will circulate among the people or will be used in the banks as the whim of the dictator of some great banker at the head of our Treasury may direct.

"In the discussion in the Senate, Mr. Vest, of Missouri, argued for a State banking system as against the national banking system, which the measure was designed to strengthen. He said:

"Let each State control its own banking system.

"They can not work to have a medium for their own people.

"They do not care to have a currency that will go outside of their State. The object is not to have it go away from home. Whatever other pretenses may be made, this means will be antagonized by only one class of people, the money-owning and consequently the money-lending class, since it stands for the best interests and welfare of all others.

"Gen. M. C. Butler, who formerly represented in this body the State which I in part now represent, used the following strong language recently in an open letter to a friend in South Carolina:

"I regard the repeal of the 10-per-cent. tax of far more value to the welfare of the great masses of the people than the free coinage of silver. The present evil in our monetary system is the inadequacy in the volume of currency and the inequality of its distribution—the latter the greater of the two evils. This inequality of distribution would be corrected if we could have local State banks of issue, under proper safeguards, and just so much currency would be put out by them as the local demands required. It has always struck me as very absurd to suppose that any State would or could permit "wild-cat banking," which is about the only argument ever urged against State banks of issue. No State, under our modern methods of transacting business through quick correspondence by mail and wire and the vigilance of the commercial and business agencies, could tolerate loose or "wild-cat banking" for forty-eight hours, and there is no good reason why State-bank currency could not be made as sound and safe as the present national bank currency.

"I have said the free coinage of silver would inevitably follow the reopening of State banks, and for this reason: These banks would absorb every dollar of coin, both gold and silver, as security for their circulation and to maintain whatever reserve the law might require. For domestic purposes, as a domestic currency, silver to-day as good as gold. Silver only becomes and used by local banks as a redemption and reserve fund.

"This scheme of circulation does not require the issuance of a single bond or the payment of a dollar by the United States Treasury in interest. The bonds issued during President Lincoln's administration amounted to $22,315,400. There was received for the bonds the sum of $235,454,286.74. The quotation of Fiske & Robinson shows that these bonds are worth to-day in the market $349,753,866. This makes a profit to the banks of $36,299,580. The last issue of bonds are now quoted at $1.10, which gives the banks a profit of $19,800,000 upon the issue. The bonds are now quoted in New York at $1.10, at which figure the income is only 1/2 per cent. They meet with ready sale, which shows that the Government can borrow money at that figure and that the banks which receive $6,000,000 a year make a net profit of $2,500,000 a year upon the last issue of bonds alone. Since 1892 the increase in interest paid annually by the United States has been $17,000,000. It is now proposed to increase it still further.

"These enormous sums are direct subsidies to the Eastern banks. The total indebtedness of the United States is less than it was in 1892, while the interest paid is as high as it was then.

"During President Harrison's administration the interest-bearing debt of the United States was $385,029,330. The noninterest-bearing debt was $1,000,045,039.37. In the Treasury statement of the public debt for the month of November, 1899, the interest-bearing debt has been increased to $1,037,049,600. The noninterest-bearing debt has been decreased to $385,048,760.16. The proposition in this currency bill is to wipe out this noninterest-bearing debt by replacing it with interest-bearing debt. The interest paid by the United States Government in 1892 was $22,503,883. The interest paid for the fiscal year ended June 30, 1899, was almost $35,000,000.

On Dec 9 the bill was laid before the Senate, referred to the Committee on Finances, and reported with amendments. It was debated at great length, amended, and passed by that body Feb. 15, 1900, by the following vote:

The Senate substitute for the House measure was entitled “A bill to affirm the existing standard of value, to maintain the parity in value of all forms of money, to refund the public debt, and for other purposes,” and it made various important changes. The House recommendations in the Senate amendments, a Committee of Conference was appointed and agreed upon a substitute, and the report was adopted March 13. The measure in its final enacting enact as follows:

“That the dollar consisting of 25.8 grains of gold 0.9 fine, as established by section 3511 of the Revised Statutes of the United States, shall be the standard of value for all money issued or coined by the United States shall be maintained at a parity of value with this standard, and it shall be the duty of the Secretary of the Treasury to maintain such parity.”

“Sec. 2. That United States notes, and Treasury notes issued under the act of July 14, 1890, when presented to the Treasury for redemption, shall be redeemed in gold coin of the standard fixed in the first section of this act, and in order to secure the prompt and certain redemption of such notes as herein provided it shall be the duty of the Secretary of the Treasury to set apart in the Treasury a reserve fund of $150,000,000 in gold coin to be used for such redemption purposes only, and whenever and as often as any of said notes shall be redeemed from said fund it shall be the duty of the Secretary of the Treasury to use said notes so redeemed to restore and maintain such reserve fund in the manner following, to wit: First, by procuring gold coin by the use of said notes, in accordance with the provisions of section 3700 of the Revised Statutes of the United States, second, by accepting deposits of gold coin at the Treasury or at any subtreasury in exchange for the United States notes so redeemed; third, by procuring gold coin by the use of said notes, in accordance with the provisions of section 3700 of the Revised Statutes of the United States, forth, by procuring bullion by the use of said notes, in accordance with the provisions of section 3700 of the Revised Statutes of the United States, and for the debt thus incurred to issue and sell coupon or registered bonds of the United States, in such form as he may prescribe, in denominations of $50 or any multiple thereof, bearing interest at the rate of not exceeding 3
per cent. per annum, payable quarterly, such bonds to be payable at the pleasure of the United States after one year from the date of their issue, and to be payable, principal and interest, in gold coin of the present standard value, and to be exempt from taxation in any form by or under State, municipal, or local authority; and the gold coin received from the sale of said bonds shall first be covered into the general fund of the Treasury and then exchanged, in the manner hereinafter provided, for an equal amount of Treasury silver, bullion, or currency certificates, and United States, as well as from taxation in any form by or under State, municipal, or local authority; and the gold coin received from the sale of said bonds shall first be covered into the general fund of the Treasury and then exchanged, in the manner hereinafter provided, for an equal amount of Treasury silver, bullion, or currency certificates, and the Secretary of the Treasury may, in his discretion, use said notes in exchange for gold, or to purchase or redeem any bonds of the United States, or for any other lawful purpose the public interests may require, except that they shall not be used to meet deficiencies in the current revenues. That United States currency certificates, and currency certificates therefor shall be transferred from the accounts of the general fund of the Treasury of the United States, and taken up on the books of said divisions, respectively, accounts relating to the reserve fund for the redemption of United States notes and Treasury notes, the gold coin held against outstanding United States notes, gold certificates, and currency certificates therefor, and the silver dollars held against outstanding currency certificates, and the silver dollars held against outstanding silver certificates, and each of the funds represented by these accounts shall be used for the redemption of the notes and certificates for which they are respectively pledged, and shall be used for any other purpose, the same being held as trust funds.

"Sec. 5. That it shall be the duty of the Secretary of the Treasury, as fast as standard silver dollars are coined under the provisions of the acts of July 14, 1890, and June 13, 1898, from bullion purchased under the act of July 14, 1890, to retire and cancel an equal amount of Treasury gold certificates therefor by exchange in accordance with the provisions of this act or in the ordinary course of business, and upon the cancellation of Treasury notes silver certificates shall be issued against the silver dollars so coined.

"Sec. 6. That the Secretary of the Treasury is hereby authorized and directed to receive deposits of gold coin with the Treasurer or any Assistant Treasurer of the United States in sums of not less than $20, and to issue gold certificates therefor in denominations of not less than $20, and the coin so deposited shall be retained in the Treasury and held for the payment of such certificates on demand, and used for no other purpose. Such certificates shall be receivable for customs, taxes, and all public dues, and when so received may be reissued, and when held by any national banking association may be counted as a part of its lawful capital, and that when any gold coin held in the reserve fund of the Treasury for the redemption of United States notes and Treasury notes shall fall and remain below $100,000,000 the authority to issue certificates as herein provided shall be suspended: And provided further, That whenever and so long as the aggregate amount of Treasury gold certificates and silver certificates in the general fund of the Treasury shall exceed $60,000,000 the Secretary of the Treasury may, in his discretion, suspend the issue of the certificates herein provided for: And provided further, That the amount of such outstanding certificates one fourth at least shall be in denominations of not less than $500, and such certificates in denominations of $10,000, payable to order. And section 5138 of the Revised Statutes of the United States is hereby repealed.

"Sec. 7. That hereafter silver certificates shall be issued only in denominations of $10 and under, except that no silver certificates shall be issued for more than 1 per cent. of the total volume of said certificates, in the discretion of the Secretary of the Treasury, may be issued in denominations of $20, $50, and $100; and silver certificates of higher denomination than $10, except as herein provided, shall be reissued at the Treasury or redeemed, be retired and canceled, and certificates of denominations of $10 or less shall be substituted therefor, and after such substitution, in whole or in part, a like volume of United States notes of less denomination than $10 shall from time to time be retired and canceled, and notes of denominations of $10 and upward shall be reissued in substitution therefor, with like quantities and restrictions as those retired and canceled.

"Sec. 8. That the Secretary of the Treasury is hereby authorized to use, at his discretion, any silver bullion in the Treasury of the United States purchased under the act of July 14, 1890, for coinage into such denominations of subsidiary silver coin as may be necessary, and the requirements for such coin: Provided, That the amount of subsidiary silver coin outstanding shall not at any time exceed in the aggregate $100,000,000. Whenever any silver bullion purchased under the act of July 14, 1890, shall be used in the coinage of subsidiary silver coin, an amount of Treasury notes issued, under said act, equal to the cost of the bullion contained in such coin shall be canceled and not reissued.

"Sec. 9. That the Secretary of the Treasury is hereby authorized and directed to cause all worn and uncurrenxt subsidiary silver coin of the United States now in the Treasury, and hereafter received, to be reeded, and to reimburse the Treasurer of the United States for the difference between the nominal or face value of such coin and the amount the same will produce in new coin from any moneys in the Treasury not otherwise appropriated.

"Sec. 10. That section 5138 of the Revised Statutes is hereby amended so as to read as follows: "Sec. 5138. No association shall be organized with a less capital than $100,000, except that banks with a capital of not less than $50,000 may, with the approval of the Secretary of the Treasury, be organized in any place the population of which does not exceed 5,000 inhabitants,
and except that banks with a capital of not less than $25,000 may, with the sanction of the Secretary of the Treasury, be organized in any place where the population of which does not exceed 3,000 inhabitants. No association shall be organized in a city that has not more than 50,000 persons with a capital of less than $200,000.

"Sec. 11. That the Secretary of the Treasury is hereby authorized to receive at the Treasury any of the outstanding bonds of the United States bearing interest at 5 per cent. per annum, payable February 1, 1904, and any bonds of the United States bearing interest at 4 per cent. per annum, payable July 1, 1907, and any bonds of the United States bearing interest at 3 per cent. per annum, payable Aug. 1, 1908, and to issue in exchange therefor an equal amount of coupon or registered bonds of the United States in such form as he may prescribe, in denominations of $50 or any multiple thereof, bearing interest at the rate of 2 per cent. per annum, payable quarterly, such bonds to be payable at the pleasure of the United States after thirty years from the date of their issue, and said bonds to be payable, principal and interest, in gold coin of the present standard value, and in the bonds and notes or other evidences of the debt of the United States, as well as from taxation in any form by or under State, municipal, or local authority: Provided, That such outstanding bonds may be received in exchange at a valuation not greater than their present worth to yield an income of 2½ per cent. per annum; and in consideration of the reduction of interest hereby authorized, the Secretary of the Treasury is authorized to pay to the holders of the outstanding bonds surrendered for exchange, out of any money in the Treasury not otherwise appropriated, a sum not greater than the difference between their present worth, computed as aforesaid, and their par value, and the payment interest hereon shall be held to be payments on account of the sinking fund created by section 3694 of the Revised Statutes: And provided further, That the 2-per-cent. bonds to be issued under the provisions of this act shall be issued at not less than par, and they shall be numbered consecutively in the order of issue, and the sums made by the payment of the face value of all the bonds made the last numbers issued shall be first paid, and this order shall be followed until all the bonds are paid, and whenever any of the outstanding bonds are called for payment interest thereon shall cease three months after such call; and there is hereby appropriated out of any money in the Treasury not otherwise appropriated, to effect the exchanges of bonds provided for in this act, a sum not exceeding one fifteenth of 1 per cent. of the face value of said bonds, to pay the expense of preparing and issuing the same and other expenses incident thereto.

"Sec. 12. That upon the deposit with the Treasurer of the United States, by any national banking association, of any bonds of the United States in the manner provided by existing law, such association shall be entitled to receive from the Comptroller of the Currency circulating notes in blank, registered and countersigned as provided by law, equal in amount to the par value of the bonds so deposited; and any national banking association now having bonds on deposit for the security of circulating notes, and upon which an amount of circulating notes has been issued less than the par value of the bonds, shall be entitled, upon due application to the Comptroller of the Currency, to add to the circulating notes in blank to an amount which will increase the circulating notes held by such association to the par value of the bonds deposited, such additional notes to be held and treated in the same way as circulating notes of national banking associations heretofore issued, and subject to all the provisions of law affecting such notes: Provided, That nothing hereby contained shall authorize or permit the repeal of the provisions of section 5167 of the Revised Statutes of the United States, authorizing the Comptroller of the Currency to require additional deposits of bonds or of lawful money in case the market value of the bonds held to secure the circulating notes shall fall below the par value of the circulating notes outstanding for which such bonds may be deposited as security: And provided further, That the circulating notes furnished to national banking associations under the provisions of this act shall be of the denominations prescribed by law, except that no national banking association shall, after the passage of this act, be entitled to receive from the Comptroller of the Currency, or to issue or reissue or place in circulation, more than one third in amount of its circulating notes of the denomination of $5: And provided further, That the total amount of such notes issued to any such association may equal at any time but shall not exceed the amount of the outstanding circulating notes theretofore paid in: And provided further, That under regulations to be prescribed by the Secretary of the Treasury any national banking association may substitute the 2-per-cent. bonds issued under the provisions of this act for any of the bonds deposited with the Treasurer to secure circulation notes of any other association, and the proceeds of such substitution shall be applied toward the purchase of such of the bonds deposited with the Treasurer as shall be the equivalent of the amount of such substitute bonds, the Treasury and the banks being thereby entitled to the same advantages as under the original bond laws. An act to enable national banking associations to extend their corporate existence, and for other purposes, approved July 12, 1882, as prohibits any national bank which makes any deposit of lawful money in order to withdraw its circulating notes from receiving any increase of its circulation for the period of six months from the time it made such deposit of lawful money for the purpose aforesaid, is hereby repealed, and all other acts or parts of acts inconsistent with the provisions of this section are hereby repealed.

"Sec. 13. That every national banking association having on deposit, as provided by law, bonds of the United States bearing interest at the rate of 2 per cent. per annum, issued under the provisions of this act, to secure its circulating notes, shall pay to the Treasurer of the United States, in the months of January and July, a tax of one fourth of 1 per cent. each half year upon the average amount of such of its notes in circulation as are based upon the deposit of said 2-per-cent. bonds; and such taxes shall be in lieu of existing taxes on its notes in circulation imposed by section 5214 of the Revised Statutes.

"Sec. 14. That the provisions of this act are not intended to preclude the accomplishment of international bimetallism whenever conditions shall make such an expedient consistent with the same by concurrent action of the leading commercial nations of the world and at a ratio which shall assure permanence of relative value between gold and silver."

The most compact statement of the changes in the measure is that of the House members of the Conference Committee. It is as follows: "The effect of the conference agreement is a bill along similar lines adopted in the original House bill, with the exception that the bill for the refunding of the public debt, agreed to by the Senate, has been accepted as a part of the bill submitted by the Senate. The bill as herewith submitted retains the same arrangement as to subjects as in the original House bill."
The first change from the House bill is in phraseology and arrangement of section 1. While the House bill partially confined the first section to the definition of the standard of value, the new section embodies with the definition the declaration for the maintenance of parity of all forms of money issued or coined by the United States, and the duty of the Secretary of the Treasury to maintain the reserve fund.

The next change is in section 2, where the provision for payment of interest-bearing obligations is omitted, for the reason that the same result is obtained by the refunding of the public debt into gold-bearing bonds. The provision for the payment of private obligations, in conformity with the gold standard, is also omitted from section 2. The provision in the same section relative to the legal-tender quality of the silver dollar and other money coined or issued by the United States is placed in a new section, designated as section 3.

The next change is the arrangement relative to the gold reserve fund for the redemption of United States notes and silver certificates. This is found in section 4 of the House bill, but is changed to section 2 of the bill agreed upon, and is made a fixed amount of $150,000,000, instead of one fourth of the outstanding United States notes and Treasury notes. Provision is also made for replenishing said fund whenever reduced below $100,000,000. The entire amount is limited exclusively to the redemption of United States notes and Treasury notes, and the provisions for maintaining said reserve fund are modified by directing specifically that such fund may be replenished by exchange of redeemed notes for gold from the general fund of the Treasury, or in lieu thereof, by the sale of surpluses under the provisions of the 1890 and 1898 Acts. A further change in this same section permits the use of United States notes, when redeemed, for the purchase or redemption of any bonds of the United States, or for any other lawful purpose the public interest may require, except that they shall not be used to meet deficiencies in the current revenues.

The next change is in the phraseology of section 3 of the House bill, which is made section 4 of the new bill, relative to divisions of issue and redemption, which changes specifically direct the use of the funds pledged for the redemption of outstanding notes and certificates to the sole purpose of such redemption, said funds being held as the sine qua non of the section.

The next change is the acceptance of the section in the Senate bill, being section 5 of the bill herewith submitted, providing for the retirement and cancellation of United States Treasury notes whenever received into the Treasury, such cancellation to take effect as standard silver dollars are coined, under the provisions of the acts of July 4, 1890, and June 12, 1898.

The next change is the acceptance of the Senate provision, being section 6 of the bill herewith submitted, authorizing the issue of gold certificates for the deposit of gold coin. The provision in the Senate bill was modified by change of phraseology limiting the issue of gold certificates under certain conditions of the Secretary of the Treasury. This section also contains provision for the cancellation of United States currency certificates.

Sections 5 and 6 of the House bill are accepted and the sections 6 and 9 of the bill agreed upon, the only change being a limitation of issue of subsidiary coin to $100,000,000, instead of an unlimited issue permitted by the repeal of the present statute, as was originally provided for in section 6 of the House bill.

The next change is in section 7, which is also section 7 of the bill agreed upon. The original House bill provided for the issue of United States notes in such denominations, not less than $1, as the Secretary of the Treasury might prescribe, and the issue of silver certificates in denominations only of $1, $2, and $5, and the reconversion of silver certificates of denominations above $5 into lower denominations. It is now so changed that silver certificates shall be issued in denominations of $10 and under, except that not exceeding in the aggregate 10 per cent. of the total volume of silver certificates may be issued in denominations of $20, $50, and $100. All silver certificates of denominations higher than $10, except the provisions concerning 10 per cent. of the aggregate of certificates, shall, when received at the Treasury, be retired and canceled, and certificates of denominations of $10 or less shall be substituted therefor, and a like volume of United States notes of less denomination than $10 shall be retired and canceled and notes of denominations above $10 and upward reissued in substitution therefor.

The next change is the dropping out of sections 8 and 9 of the House bill. These two sections of the House bill made provision for the increase of bank-note circulation to the par value of the bonds deposited, not exceeding, however, the amount of surplus capital stock in the banks having been embodied in section 12 of the bill agreed upon.

The next change is the dropping out of section 10 of the House bill, which provided for the taxation of franchises of national banks and the repeal of the statute imposing a tax upon bank-note circulation.

The next change is in section 11 of the House bill, whereby the limit of population in a place where a national bank of $25,000 capital stock may be organized is fixed at 3,000 inhabitants, instead of 2,000 inhabitants, as specified by the House bill. This section becomes section 10 of the bill agreed upon.

Sections 11, 12, and 13 of the bill agreed upon make provision for the refunding of the 5-per-cent. bonds of 1904, the 4-per-cent. bonds of 1907, and the 3-per-cent. bonds of 1908 into 2-per-cent. gold-bearing bonds. Permission is thereby given to all national banks exchanging any bonds of 1904, 1907, and 1908 for 2-per-cent. bonds to increase their note circulation to the par value of the bonds, not exceeding, however, the amount of surplus capital stock in the banks, as specified by the measure.

Section 14 of the bill agreed upon provides that 'this act is not intended to preclude the accomplishment of international bimetallism whenever conditions shall make it expedient and practicable to secure the same by concurrent action of the leading commercial nations of the world, and at a ratio which shall insure the permanence of relative value between gold and silver.' This section has no legislative effect different from existing law, and is merely declaratory that any future effort in that direction shall not be foreclosed by the enactment of this measure.
The Porto Rico Measures.—Though of far less intrinsic importance than the financial measures, the bill "temporarily to provide revenues and a civil government for Porto Rico, and for other purposes," took up even more time for discussion, as it involved a constitutional issue as to the standing of our new possessions. Legislation began with a bill, introduced Jan. 19, 1900, by Mr. Payne of New York,—"to extend the laws relating to customs and internal revenue over the island of Porto Rico, ceded to the United States." The measure was referred to the Committee on Ways and Means, and, Feb. 8, Mr. Payne reported a substitute from that committee, recommending its passage. The purpose of the substitute was to prevent the extension of the original measure. It established the tariff of the United States in Porto Rico, so far as imports from foreign countries were concerned, but also provided for a duty of 25 per cent. of our regular tariff rates on trade between that island and the United States, and an additional duty on certain articles equal to the amount levied on them for internal revenue. The fund that should be raised in this way was to be kept separate, and put in the hands of the President, to be used for the government and the benefit of Porto Rico.

In supporting the bill, Mr. Payne made a statement as to the customs of the island, and gave an account of what had been exported to the United States. He said:

"Spain collected in taxes from these people over 5,000,000 pesos annually. A peso is a Spanish or Porto Rican silver dollar, containing about 2.55 per cent. of silver, or 0.22 per cent. of American silver dollar. It is worth now in the market 41 cents; but by an Executive order it was made exchangeable in United States money at the rate of 60 cents for a peso. So it was worth 60 cents of our money. Spain collected these 5,000,000 pesos from these people. But instead of building schoolhouses or providing a school system, they took about half of this money to support the Spanish army and navy and to help out poor Spain from year to year.

"The exports of the island were about 17,000,000 pesos and the imports about the same amount. The three principal items of export were coffee, sugar, and tobacco.

"Coffee: The coffee of the island had been the source of its prosperity, and Cuba, which it had grown, was the chief source of our coffee. About 60 per cent. of the total exports were coffee, about 2000 cent. sugar, and about 5 per cent. tobacco.

"The market for the coffee was found principally in Spain, and also in Cuba. That which went to Spain found its way to France and Germany, and some of it to the United States, where it is sold for the best Mocha and the best Java, and I am told by competent experts that the best grade of it are fully equal if not superior to any Mocha or Java coffee that can be bought anywhere in the world.

"When the war was over Spain put a prohibitive duty on coffee, as she did upon tobacco, and a corresponding duty on sugar. Cuba, while we hold in trust, demanded of the United States that we put a duty upon Porto Rican coffee and Porto Rican tobacco. A large portion of the tobacco crop was brought to Cuba in the years gone by free of duty, and there it was made up into cigars, sometimes mixed with Havana tobacco and sometimes not, but most of it in the United States in the shape of the best Havana tobacco. The better qualities of this were exported. There were some minor grades that went to Europe, principally to Germany, selling at 5 or 10 cents a pound.

"The export of tobacco was 4,000,000 pounds annually. One year it went up to 6,000,000 pounds, but the normal average exports were 4,000,000 pounds. They raise a million or two more pounds, which are consumed in the island. These were made into cigars and cigarettes by the natives and sold there.

"Of sugar about three fifths came to the United States and two fifths went to Spain. That is about the proportion that has been exported to the two countries for the last ten years. Some of the time perhaps we got two thirds of it. So that a part of the sugar market was in Spain and the rest in the United States. Spain cut off the market for sugar, cut off the market for coffee, cut off the market for tobacco, which was $6 per cent. of their exports, and the legions of the oriental market for these commodities save that they had in the United States.

"In addition to that, Cuba demanded of the Government not only a duty on coffee which was prohibitory, but a duty of $5 a pound on tobacco, which was also prohibitory, and under which not a pound of the beverage escaped, and then the rain descended, so that when they saw the flag go up and knew that 'prosperity followed the flag,' as a matter of course they expected to get a little of that prosperity themselves. Instead of that, Cuba, first of all,规定的, and exported more than that, on the 8th of August last there occurred there a storm, or hurricane, which swept that island from end to end; such a storm as had not been known there since 1867. This occurred at a time when they were just getting ready to harvest the crop of coffee, which then bade fair to be a great one, for it was a good season and for the ordinary crop the wheat was a great success, and great was the expectation of the people that the crop which was thus gathered would be a great one.

"One man, an extensive coffee planter, estimated that the entire output of coffee would exceed that of any previous year by 7,000,000 pesos in value. The normal crop is somewhere about 8,000,000 or 10,000,000 pesos. This crop, which was expected to be a double crop, was by the storm wiped out by existence, because the winds swept the barries from off the new growth of of coffee, and what was not swept away was washed away by the floods, and so that when the sun came out there was nothing left but the dry and shriveled part, of no use whatever. Not 10 per cent. of the ordinary crop was harvested in consequence of the effect of that storm. And that was not the worst of it. The market had been tied up for a year by these adverse circumstances. Of the unmarketed coffee and tobacco crop of the year before was sheltered in their little huts and in crudely constructed buildings all over the land. The wind razed those huts to the ground, destroying the greater portion of the crop of the previous year. So a double calamity came upon these people.

"The wind did great damage and created great desolation. In addition to the damage to the sugar crop and the tobacco crop, more than 2,000 people perished in the storm, while hundreds of thousands were turned out of their rude homes, shelterless to the blasts that beat upon them.

"This was the condition in August last. And these people, who had begun to despair under what had come to them from the loss of the markets, had still more reason to despair because of the devastation by this terrible storm.

"Mr. Chairman, after I had heard these representations from the gentlemen who appeared before the Committee on Insular Affairs, particularly the representatives of the United States, that it was impossible for the government to afford some relief as quickly as possible to the people of these islands. The President had recommended that we give them free trade with the
United States. The Secretary of War had also recommended it in his report; and without consultation with any one, on my own individual motion, I introduced a bill and had it referred to the Committee on Ways and Means, establishing customs ports in Porto Rico, giving to the people of that island free trade with the United States, and between the United States and the ports of that island, and also extending the internal revenue laws to the island and the islands adjacent to Porto Rico. I wanted to relieve these people from the position in which they were placed.

"My own sympathies were entirely enlisted in their behalf. I sympathized with their distress then as I sympathize to-day. They have not rebelled and have never used their arms against the Government of the United States; they have submitted quietly, and I wanted to do something for their relief."

Mr. Payne then went on to state the considerations which led him to change his original scheme, and gave reasons why he thought the new one was preferable. He said:

"The first thing that was to be considered in devising a plan for the revenues of the island—because the money was to be expended there—was to provide a government for the island. Gen. Davis, a careful investigator, says that the expenditure would amount to $1,942,675.71 next year, and $2,000,000 the following year, for schools and about $300,000 for the highways. We must meet this question, therefore, and provide revenue for the support of the island. If we are to provide for these necessities it must be done by taxation in some way, or else we can not help the island. Where would it be best, then, to direct our attention? Shall it be upon the sugar tax or the property tax? The sugar tax would be a natural tax, and it would be the question of the nature of the question that confronted us, and that we had to consider.

"I sought Gen. Davis. I sought other men who were acquainted with the circumstances, knew the imports, knew the revenues, knew all the surroundings in Porto Rico, and I was assured that we could collect not exceeding $300,000 from the tariff, and $500,000 from the internal revenue, in all, $1,000,000, to meet $2,000,000 of expenditures. Then I began to look around me and saw what effect the internal revenue taxes would have upon the people of these islands.

"They manufacture there annually 1,500,000 gallons of rum, and all sold here over the island. It is a matter of life, or they think so; for the poor people of that island. These 1,500,000 gallons retail at from 25 to 40 cents a gallon. The internal revenue tax upon that, under the law that we were about to extend, would amount to $1.20 a gallon. The price to these people would be multiplied by four. How could they get their rum? Who would furnish it to them?

"Well, now, some gentlemen may say they would be better off without the rum. I think that myself; that constitutionally and in the matter of laying up money they would be better off without the rum, but they have been used to it all their lives. They are poor people, and when a government comes along and arbitrarily cuts off rum from a community that has been accustomed to it, every man of whom wants it, why there is bound to be trouble, and there would have been trouble with those Porto Ricans if we had passed that act in that way to cut off their supply of rum.

"In addition to that, Porto Rico has been importing rum about 1,500,000 gallons a year, year after year. The Porto Ricans have made 1,000,000 pounds of their own tobacco up into cigars and sold them over the island each year.

"Gen. Davis says it will be very difficult to collect this tax on tobacco. 'I suppose there are 2,000 or 3,000 shops in Porto Rico. A man has a hut in which he lives in one room, and in another sells a little rum, rolls cigarettes and sells them, and sells tobacco, and cigars, and fruits, and beans, and codfish, and has a general store, and he is in himself a tobacco manufacturer and retailer, salt-loom keeper and grocer.'

"Suppose we applied our internal revenue taxes to these items? This is the cheap tobacco, cheaply made up, thrown together into cigars for the poor people of the island, these people whose coffee crop has been annihilated, and hundreds of thousands of whom have depended upon the charity of the good people of the United States to keep them from starving and to furnish them shelter, the only relief that they have received thus far from becoming a part of the territory of the United States.

"Mr. Chairman, the taxation would simply have destroyed these industries and would not have given us any relief to such industries as schools, no money for highways, no money for anything except the hard, stern realities of governing those people. So as a revenue raiser the bill which I first introduced was a failure, and, as I understand it, the first and paramount thing in a tariff bill, under the idea of the Republican party, to provide revenue to support the Government as we go along.

"Then the further question came along, Mr. Chairman, how much we were giving to these producers of sugar under the bill as first introduced. It would only benefit a moderate percentage of the people. They had been selling and sending abroad $300,000 a year, and are not likely to be benefited by that.

"According to the statistics, they have 76,000 acres in sugar plantations. Other gentlemen say that they average a production of a ton to an acre, and that it takes a man to cultivate an acre, or 60,000 people to cultivate this sugar during the season. These men would be benefited by free sugar, and the owners of the plantations, some of them small ones and some of them with 700 and the largest with 1,500 acres, plantations, would receive the direct benefit. If the Porto Rican is the shrewd man that they say he is, and I hope and trust he may prove so, the laborers on those sugar plantations would get a part of this benefit, but largely, of course, as I have said, the local merchant, the planter.

"I understand there are some 3,000,000 pounds of tobacco now in the hands of the merchants ready to be exported. Who will get the benefit of the reduction of the duty on tobacco? Why, the merchants in the first instance; afterward the planter. Would it not be fair that these people who are to get these benefits should pay the expense of the government?

"Suppose we cut off 75 per cent. of the duty which they now have to pay to get into our market and present it to them. How much does that mean to the producers of sugar and to the producers of tobacco in these islands? They will produce and sell and export 45,000 tons of sugar this year. It must all come to our market, because the Spanish market is absolutely cut off. Suppose we remit this duty. What does it mean?

"This will not injure our industries. We consumed 2,000,000 tons of sugar last year. We imported about 1,400,000 tons on which we paid duty. We also imported 300,000 tons from Hawaii, which came in free of duty. The balance was produced in this country. Our increased consumption amounts to from 50,000 to 100,000 tons annually.
If this 60,000 tons comes in from Porto Rico, it will be but a drop in the bucket. Even should it double or triple, it could have no influence on our market. Our sugar producers have nothing to fear if we stop with sugar from Porto Rico at the duty in this bill.

"Nor will this bill injure the tobacco industry. Their tobacco is quite different from ours. The best of it ranks with the Cuban or nearby so. Nearly all of it is filler tobacco and very little is fit for wrappers. My own impression is that it will add to the sale of wrappers in the United States and make a better market for our tobacco growers. I have yet to see the tobacco man who fears the introduction of the Porto Rican product."

"Their great fear is that if I succeed in giving free trade to Porto Rico we shall follow it with free trade with the Philippine Islands, and ultimately with Cuba. Neither they nor the sugar producers fear anything from Porto Rico alone, and when Congress asserts its power under the Constitution to deal in the manner proposed by this bill, I can see them returning confidence to believe that Congress has the power and can be trusted to care for their interests when we come to deal with the other islands.

"I find from the Bureau of Statistics that the sugar imported into this country in 1898 under 16 Dutch standard of color brought an average price of 81 a hundred pounds, an average of $1.60 a hundred for the two years upon sugar such as these men would export to the United States. That makes a pretty figure if you remit all that duty of $1.60 in Porto Rico to us. It would cost, in all, a duty of $1,600,000 on the 45,000 tons that they will export to the United States this year. Suppose we take a quarter of that and give them three fourths.

"Suppose we take $400,000, or rather give it into the hands of the President of the United States, in order to carry out the benevolent object of building roads and building schoolhouses for these Porto Ricans; are we not dealing more generously with these whole people to do—that is, to provide schools for the mountains and on the mountain sides, where the poor coffee planters are struggling along for an existence—than to give the whole of it to the sugar planters and let the schools go?

"So, instead of putting upon these men the 4,000,000 pounds of tobacco, at 35 cents a pound, would amount to $1,400,000. We might give this to the tobacco planters, because on all these articles, gentlemen, make no mistake, the price of sugar and the price of tobacco is made in the United States, and they have to pay these duties to get into our markets. And when we know the duty, we remit for them. Suppose we say, then, we will divide with these people; that we will give them $1,000,000 out of their duty on tobacco, and take $550,000 and add it to the revenue to come from these islands."

Anticipating that the opposition to the measure would rest mainly on the denial of its constitutionality, Mr. Payne made an argument for the authority of Congress, saying in conclusion:

"I want to make this further suggestion. Gentlemen who are lawyers are honestly divided on this question—this constitutional question. We believe that the United States means the United States. We say the United States has a Constitution. But that the words that are added, giving us power to dispense of and make rules and regulations respecting the territory and other property belonging to the United States, refer to a different subject from the United States itself—to territory belonging to the United States. We believe that there is that plain distinction. Some gentlemen profess to believe otherwise."

"If this bill is passed it will give the Supreme Court of the United States the first opportunity it has ever had to meet that question fairly and squarely and say whether the limitation for uniform taxation in the United States refers to the United States or to the United States and the territory belonging to the United States. It may be an important question to be considered in the future when we come to legislate for the Philippine Islands, when we come to legislate, if we have to, with respect to Cuba, and I think it would be a good proposition to submit that question now to the Supreme Court. If you and I, in your contention, we shall have difficulty when we come to legislate for our other islands. We shall have difficulty in protecting the interests of the people, the manufacturers, the farmers of the United States. If we are right in our contention, our way is more simple."

"As for Porto Rico, I would move as fast as their own good will warrant. Pass this bill, which even the gentleman from Massachusetts admits is a well-considered measure from a fiscal standpoint, and give them better markets and abundant revenue. Do not tie down their destinies to the whim of the 88 per cent. illiterate or to the conscience of the people. We have no right to say we have known no government except Spanish misrule. Keep them all in leading strings until you have educated them up to the full stature of American manhood, and then crown them with the glory of American citizenship. In the meantime give them all the rights accorded to our own people under the Constitution consistent with their intellectual and material well-being.

"Our duty now, Mr. Chairman, is, in the first place, to restore, may, to give law and order in the Philippine Islands, then to investigate, then to legislate, remembering that these people are uneducated, remembering that it would be unsafe to give the full power of government to the illiterates or to the people who can read and write.

"The rights of neither would be preserved. The rights of either would be unsafe.

"We can proceed as did the fathers a hundred years ago, who had no scruples on that question, but believed that Congress had the absolute power over the territory of the United States.

"It is absolutely necessary to this people and educate them and lift them up and give them the privileges of the Constitution and the privileges of government as they shall grow in education and in knowledge.

"And finally, whether we send them forth among the nations of the earth or annex them as States in this Union, we will bring them up to the full level and stature of American manhood. Wherever the flag is raised it shall not go down until it covers beneath its folds a people enjoying the blessings of civilization, of freedom, and of sovereign citizenship.

"Opening the discussion in opposition to the measure, Mr. Richardson, of Tennessee, said:

"Mr. Chairman, I am not an alarmist. Those on this floor who know me and have done me the honor to listen to what I have had to say on former occasions when speaking to pending measures will bear me witness that I have not been accosted to indulge in extravagant statement or vehement denunciation at all times to be conservative, and I may add I am naturally inclined to optimism. With this much of preface of a personal character, I begin by saying that in my judgment the pending bill is more dangerous to the liberties of the people of this republic than any
measure ever before seriously presented to the American Congress. It will prove more far-reaching in its results than any other bill that has been enacted into law than any act ever passed by Congress.

He went on to declare that the ground of opposition would be constitutional:

"Those of us who oppose this measure, I believe without exception, maintain this bill to be a violation of the spirit but the express letter of the Constitution. In the report the majority of the committee say:

"First. That upon reason and authority the term of the United States.'"

"The claim or content thus made was never before set up on the floor of Congress in so far as I know. This country has grown from a small and feeble territory on the Atlantic Ocean, with about 27,000,000 square miles, to the mightiest republic of this earth, with an area of 3,500,000,000 square miles. It has increased its population from 3,000,000 to over 70,000,000. This marvelous expansion to continental growth and grandeur has taken place within about one hundred years. The Louisiana territory, Florida, Texas, California, New Mexico, Oregon, and Alaska have all been acquired under our Constitution without a jar or strain to any of its wise and beneficent provisions and without any impairment, collected, and formed it into part of the Federal Union. These acquisitions were of desirable lands without people, but we should beware of the acquisition of undesirable people without lands. I am partisan enough to stop here a sufficient time to call attention to the fact that every foot of this vast domain was acquired and annexed by the Constitution and is not a devoted to its execution and application as fully as I have time to say with great emphasis that those of us opposing this measure are not basing our opposition to it on the ground that it is a measure for expansion. This is not a measure of expansion. Whether the Constitution of the United States is extended to the island of Porto Rico, ex proprio vigore, or not, it may be said that when we enter upon legislation for the islands of Porto Rico and other territories, the value of this bill, that question will be put at rest and the territory will then be a part of the United States.

"The control of the President and of the military will have ceased and the expansion as to the island will have been completed. Legislation by Congress for the island at once makes it a part of the United States. If this bill passes, it must follow that it is then a part of the United States. Being true, the proposition which this bill carries for unequal taxation of the island as a portion of the United States is the baldest form of imperialism.

"The submission to this bill plants itself upon this ground. The measure is imperialism itself. In the former acquisitions to which I have referred no such measure as the pending one was ever proposed or deemed necessary. When the Louisiana territory was acquired, when Texas was annexed, when California and Arizona and New Mexico and other Territories were acquired, did any one in this House or the other body of this Congress and offer such a legislative proposition as the pending one? This effort, therefore, clearly marks the dividing line between all former acquisitions and that of Porto Rico, if it be conceded that the enactment of this bill is required.

The bill passed the House, Feb. 28, by a vote of 172 yeas to 160 nays; not voting, 21. It had been amended so as to reduce the tariff on Porto Rico goods from 25 per cent. of the regular rates to 15 per cent. The full text of the measure was as follows:

"Whereas, The people of Porto Rico have been deprived of markets for a large portion of their products, and have lost property and crops by severe and unusual storms, whereby they are impoverished and are unable to pay internal revenue and direct taxes; and

"Whereas, Temporary revenue is necessary for their schools, their roads, and their internal improvements, the administration of their government; now, therefore,

"Be it enacted, etc., That the provisions of this act shall apply to the island of Porto Rico and to the adjacent islands and waters of the islands lying east of the seventy-fourth meridian of longitude west of Greenwich, which was ceded to the United States by the Government of Spain by treaty concluded April 11, 1899; and the name Porto Rico, as used in this act, shall be held to include not only the island of that name, but all the adjacent islands as aforesaid.

"SEC. 2. That on and after the passage of this act the same tariffs, customs, and duties shall be levied, collected, and paid upon like articles of merchandise imported into Porto Rico from ports other than those of the United States which are required by law to be collected upon articles imported into the United States from foreign countries.

"SEC. 3. That on and after the passage of this act all merchandise coming into the United States from Porto Rico shall be entered at the several ports of entry upon payment of 15 per cent. of the duties which are required to be levied, collected, and paid upon like articles of merchandise imported into Porto Rico from ports other than those of the United States shall be entered at the several ports of entry upon payment of 15 per cent. of the duties which are required to be levied, collected, and paid upon like articles of merchandise imported into Porto Rico and withdrawn for consumption or sale upon payment of a tax equal to the internal revenue tax imposed in the United States upon the like articles of merchandise of domestic manufacture; such tax to be paid by internal revenue stamp or stamps to be purchased and provided by the Commissioner of Internal Revenue, and to be surrendered to the collector of internal revenue at or most convenient to the port of entry of said merchandise in the United States, and to be affixed under such regulations as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe; and on all articles of merchandise of United States manufacture coming into Porto Rico in addition to the duty above provided upon payment of a tax equal in rate and amount to the internal revenue tax imposed in Porto Rico upon the like articles of Porto Rican manufacture.

"SEC. 4. That the duties and taxes collected in Porto Rico in pursuance of this act, less the cost of collecting them and the expenses incidental to the collections of duties and taxes in the United States upon articles of merchandise coming from Porto Rico, shall not be covered into the general fund.
of the Treasury, but shall be held as a separate fund, and shall be placed at the disposal of the President to be used for the government and benefit of Porto Rico until otherwise provided by law.  

"Sec. 5. This act shall be taken and held to be provisional in its purposes and intended to meet a pressing present need for revenue for the island of Porto Rico, and shall not continue in force after the first day of March, 1902."  

In the Senate a bill had been introduced early in the session "to provide for the government of Porto Rico and other purposes," and when the House bill came up for consideration it was referred to the Committee on Pacific Islands and Porto Rico, and that committee reported it with an amendment in the form of a substitute, which was the Senate bill for the government of the island slightly modified. This measure defined the term Porto Rico as including that island and those adjacent, and made San Juan the capital. It declared the political status of the people; continued existing laws in force excepting those in which provision was an element; extended the laws of commerce and navigation over the islands; provided for quarantine stations; established the value of the silver coins, and made United States coins legal tender; adopted the rate of duty in the House bill on trade between the islands and Porto Rico the collection of which was suspended until March 2, 1902; made the island an internal revenue district; and declared the authority of all United States statutes not locally inapplicable.  

The measure provided also for a governor, to be appointed by the President, by and with the advice and consent of the Senate, and having the usual powers of a territorial executive. It established also an executive council, consisting of a secretary, attorney-general, auditor, treasurer, and commissioner of education, with the usual authority of such officials, and five other members, all to be appointed by the President, and at least five to be natives of Porto Rico. It created a body, to be called the House of Delegates, the members to be elected by the people, and constituting, with the Executive Council as an upper house, the local Legislature of the island. It provided for a local supreme court and district courts, and made the island a judicial district of the United States.  

The measure was passed by the Senate, April 3, by a vote of 40 years to 31 nays; not voting, 16. April 11 the House concurred in the Senate amendments, in gross, by a vote of 161 years to 153 nays; not voting, 37.  

Outside of Congress there was no little Republican opposition to the measure, and that element of hostile opinion was represented in the speech of Congressman H. C. Smith, of Michigan. He said:  

"This bill puts it upon the statute books, where it may be read of all men, for all the days of coming time, that the general in command of our armies, appointed by the commander in chief of the armies of the republic, may not have his promises carried out—promises ratified by two years of silence, ratified by the opinion and report of the Secretary of War, ratified by the public speeches of the President, and ratified by the President's message, written in unfading ink, on paper that will outlast this generation. We can not, as a nation, afford to say to the world and to the people of the earth that such promises may be repudiated and are only to be used to stimulate false hopes in the throbbing bosoms of oppressed subjects.  

"And we are told that the plain duty to give to the Porto Ricans free trade did not mean a pres-
The provision of our Constitution—The taxes, duties, and imposts shall be uniform throughout the United States—was placed there for a purpose, and the purpose was to insure the absolute equality and sisterhood of the States.

The framers of the Constitution saw with prophetic vision that the differing soil, climate, waterways, and circumstances of one part might naturally lead to the advantage of one part and the disadvantage to another, of our great domain. That it would breed rivalry, strife, and discontent; that one part would become more valuable and influential than another.

That the money gathered from tariff might be used beneficially and needlessly to one portion of the country than another, as the pensions are now paid largely in the North.

To prevent this strife and turmoil and contest, and that we might really become one family—a sisterhood of States—it was determined in the beginning that no State should be discriminated against or in favor of, as concerning duties and imposts.

This bill is taxation without representation. It is idle and childlike that we should gather money from them, turn it over to them, expend it for them and for their advancement, instead of permitting them to raise the money themselves, for themselves, and expend it as they see fit.

It may not be right that they should be taxed without having any voice as to the method of taxation or the use that shall be made of the money.

To my mind the amount of the taxes cuts little figure. King George III offered to strike from the stamp act all but the title. He only wished to prevent the collection of the tax. It may not be right that they should be taxed without having any voice as to the method of taxation or the use that shall be made of the money.

The advocates of this bill seem to be the King George of this century. Willing to accept any amount so that the principle may be saved; that it may be established; that different taxation may obtain in one territory from that of another.

The measure was approved by the President, April 12, 1900.

March 2 the President sent to Congress this brief message:

The evacuation of Porto Rico by the Spanish forces on the 18th day of October, 1898, the United States has collected on products coming from that island to the ports of the United States the duties fixed by the Dingley act and amounting to $2,095,455.88, and will continue to collect under said law until Congress shall otherwise direct. Although I had the above mentioned bill in mind the best interests of the people of the island used it to modify duties on goods and products entering into Porto Rico, I did not have the power to remit or modify duties on Porto Rican products coming into the ports of the United States. In view of the pressing necessity for immediate revenue in Porto Rico for conducting the government there and for the extension of public education, and in view also of the provisional legislation just inaugurated by the House of Representatives, and for the purpose of making the principle embodied in that legislation applicable to the immediate past as well as to the immediate future, I recommend the sums so collected and the sums hereafter collected under existing law shall, without waiting for the enactment of the general legislation now pending, be appropriated for the use and benefit of the island.

A bill was at once introduced in the House and passed the same day. It was amended and passed the Senate, March 16, and after a conference of the two houses it was finally passed in this form:

That the sum of $2,095,455.88, being the amount of customs revenue received on importations by the United States from Porto Rico since the evacuation of Porto Rico by the Spanish forces on the 18th of October, 1898, to the 1st of January, 1900, together with any further customs revenue collected on importations from Porto Rico since the 1st of January, 1900, or that shall hereafter be collected under existing law, shall be placed at the disposal of the President, to be used for the government now existing and which may hereafter be established in Porto Rico, and for the aid and relief of the people thereof, and for public education, public works, and other governmental and public purposes therein until otherwise provided by law; and the revenues herein referred to, already collected and to be collected under existing law, are hereby appropriated for the purposes herein specified, out of any money in the Treasury not otherwise appropriated.

It was approved by the President, March 24, 1900.

The Nicaragua Canal.—Dec. 7, 1899, a bill was introduced in the House of Representatives "to provide for the construction of a canal connecting the waters of the Atlantic and the Pacific Oceans," and it was requested that the treaty of Aug. 29, 1850, with Costa Rica and Nicaragua control of territory necessary for the construction and defense of a ship canal from Greytown on the Caribbean Sea, by way of Lake Nicaragua, to Breto on the Pacific Ocean, and it appropriated the money needed to secure such control. It then authorized the President to enter into an agreement with Nicaragua to construct the canal, make safe harbors at the terminal points, and erect fortifications for defense and for the safety and protection of the vessels using it. Among other details it was provided that the Secretary of War might have the work done by contract, and the limit of expenditure was set at $140,000,000. The measure passed the House, May 2, 1900, by a vote of 224 yeas to 36 nays; not voting, 92.

It was reported in the Senate, but consideration of it was put over to the next session of the Congress, as the Senate had not taken action on the Hay-Pauncefote treaty. That treaty was made by the Senate and declared ratified June 5, 1900, and was commonly regarded as a renewal of the policy of the Clayton-Bulwer treaty. It is as follows:

"The United States of America and her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, being desirous to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans, and to that end remove any objection which may arise out of the convention of April 10, 1850, commonly called the Clayton-Bulwer treaty, to the construction of such canal under the auspices of the Government of the United States, without impairing the 'general principle' of neutralization established in Article VII of that convention, have for that purpose appointed as their plenipotentiaries:

'The President of the United States, John Hay, Secretary of State of the United States, and her Majesty the Queen of Great Britain and Ireland, Empress of India: the Right Hon. Lord Pauncfote, G. C. B., G. C. M. G., her Majesty's ambassador and plenipotentiary for the United States; who, having communicated to each other their full powers, which were found to be in due and proper form, have agreed upon the following articles:

"'Article I. It is agreed that the canal may
be constructed under the auspices of the Government of the United States, either directly at its own cost, or by gift or loan of money to individuals, corporations, or through subscription to or purchase of stock or shares; and that, subject to the provisions of the present convention, the said Government shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal.

"Art. II. The high contracting parties desiring to preserve and maintain the "general principle" of neutralization established in Article VIII of the Clayton-Bulwer convention, adopt, as the basis of such neutralization, the following rules, substantially as embodied in the convention between Great Britain and certain other powers, signed at Constantinople, Oct. 29, 1888, for the free navigation of the Suez Maritime Canal—that is to say:

"1. The canal shall be free and open, in time of war as in time of peace, to vessels of commerce and of war of all nations, on terms of entire equality, and shall be free from discrimination against any nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise.

"2. The canal shall never be blockaded, nor shall any right of war be exercised nor any act of hostility be committed within it.

"3. Vessels of war of a belligerent shall not be revictual nor take any stores in the canal except so far as may be strictly necessary, and the transit of such vessels through the canal shall be effected with the least possible delay, in accordance with the regulations in force, and with only such interference as may result from the necessities of the service, and shall be conducted in the same manner and under the same rules as vessels of war of the belligerents.

"4. No belligerent shall embark or disembark troops, munitions of war, or warlike materials in the canal, except in case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible dispatch.

"5. The provisions of this article shall apply to waters adjacent to the canal, within 3 marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than twenty-four hours at any one time except in case of distress, and in such case shall depart as soon as possible. Transit of vessels of war of a belligerent shall not depart within twenty-four hours from the departure of a vessel of war of the other belligerent.

"6. The plant, establishments, buildings, and all works necessary to the construction, maintenance, and operation of the canal shall be deemed to be part thereof, for the purposes of this convention, and in time of war, as in time of peace, shall enjoy complete immunity from attack or injury by belligerents and from acts calculated to impair their usefulness as part of the canal.

"7. No fortifications shall be erected commanding the canal or the waters adjacent. The United States, however, shall be at liberty to maintain such military police along the canal as may be necessary to protect it against lawlessness and disorder.

"Art. III. The high contracting parties will, immediately upon the exchange of the ratifications of this convention, bring it to the notice of the other powers and invite their adherence to it.

"Art. IV. The present convention shall be ratified by the President of the United States, by and with the advice and consent of the Senate thereof, and by her Britannic Majesty; and the ratifications shall be exchanged at Washington or at London within six months from the date hereof, or earlier if possible.

"In fact, the representatives of the respective plenipotentiaries have signed this convention and thereunto affixed their seals."

The House bill was introduced before the negotiation of this treaty, but passed after its terms had been made known, and it was urged in the face of the policy which the treaty was designed to carry out. Mr. Hepburn, of Iowa, who was in charge of the measure, said in his speech, May 1:

"We are met by another class of gentlemen who say that while this route is practicable, while the canal is needed, while it should be an object of solicitude and fostering care and speedy completion by the Government, yet there are certain difficulties of a diplomatic nature that absolutely prevent us from doing anything.

"They say truthfully that in 1850 a treaty was negotiated between Great Britain and our country, popularly known as the Clayton-Bulwer treaty, and that one of its provisions declares that neither party alone, except in conjunction with the other, has the right to attempt in any way to defend it without the consent of the other, and they say these provisions are a barrier, and until that is removed the Government of the United States cannot in good faith undertake this work.

"I would refer you to an authority upon a grave question like this, but I want to call your attention to names of a long list of statesmen who have declared that that instrument—the Clayton-Bulwer treaty—is not now of operative force against us; that it either had been violated by Great Britain in such degree as to justify us in no longer recognizing its potency, or that it had become obsolete or superannuated in such manner that that treaty having been abandoned by both parties, or that both parties had themselves abandoned it by making no effort to carry out its provisions.

"In that list of statesmen that have taken one or the other of those positions all insist that at most or at the worst we can only declare it void and no longer binding. All of them have gone to that extent. I name Secretary Marcy and President Pierce, Secretary Cass, and every President from Pierce down to the present incumbent, excepting Presidents Lincoln and Johnson. Douglas, Marcy, Frelinghuysen, Blaine, and Cleveland, all have urged that the treaty stood to-day, in the position, from the acts of other parties, that entitle us to declare that we would no longer be bound by its provisions.

"But, Mr. Chairman, if this is not true, I insist that we occupy that position now before the world that justifies us in caring for our own; in the pursuit of our own supreme interests, to say that that obligation undertaken fifty years ago will no longer bind us. I want to call attention to this fact that while writers upon the subject of international law tell us that in the letter of the law treaties, without there is a limitation as to time stated within them, or without they are carried out and completed, they are irremediable and are to exist forever. That is the letter of the law, but not its spirit.

"Look where you can in all the diplomacy of the world, and how many treaties do you find today which are fifty years old? All writers say that the right of a nation to determine a treaty is always left to the people of the environment; that no general law or rule can be established, and that it becomes a question of morals rather than of law, a question of whether the circumstances are such as justify the nation
in saying that it will no longer be bound by the long-time agreement made under other conditions, and made desirable by other surroundings or made by other generations of men.

"Look at this case in 1850, and what is the situation? We were then a weak nation of 23,000,000 people. Only two years before we had acquired our Pacific coast, or the California portion of it. We owned nothing beyond. There was no Alaska for us; we had no coastwise trade. Now our coastwise traffic is measured by millions of tonnage. Then 10,000 families would have been all that could be found in all that Pacific region. Now we have three great States. Then there was poverty then; now their wealth is enum- erated by billions of dollars. There then was no commerce except the trader in hides and furs; now the commerce of that coast reaches hundreds of millions of dollars annually. I say that the conditions have so changed, I say that our neces- sities have so changed, I say that our interests are so great as to demand that the people of this generation do not longer be bound by the barrier that was interposed by another generation half a century ago."

Noteworthy Election Cases.—Probably noth- ing connected with the session was of such sen- sational interest as the contest over the admis- sion of Brigham H. Roberts as a Representative from Utah. The matter was of necessity brought to the bar of the House throughout the country long before the Congress met, and public opinion was strongly against ad- mitting him to the House—or at least strongly in favor of expelling him, as a polygamist, from membership. The main difference of opinion in Congress was as to the method of excluding him, whether he should be expelled or admitted, and then expelled. The special com- mittee appointed to consider his case reported two resolutions, Jan. 23, 1900. The majority reso- lution was in favor of refusal to admit:

"Resolved, That under the facts and circum- stances of this case, Brigham H. Roberts, Repre- sentative-elect from the State of Utah, ought not to have or hold a seat in the House of Representa- tives, and that the seat to which he was elected is hereby declared vacant."

The minority resolution was in favor of ad- mission and subsequent expulsion:

"Resolved, That Brigham H. Roberts, having been duly elected a Representative in the Fifty-sixth Congress from the State of Utah, with the qualifications requisite for admission to the House as such, is entitled, as a constitutional right, to take the oath of office prescribed for members- elect, his status as a polygamist, unlawfully co--habiting with plural wives, affording constitu- tional ground for expulsion, but not for exclusion from the House.

"And if the House shall hold with us and swear in Mr. Roberts as a member, we shall, as soon as recognition can be had, offer a resolution to expel him as a polygamist, unlawfully cohabiting with plural wives."

The contest of opinion on the course to be taken was very sharp, as a constitutional question was involved. In advocating exclusion, Mr. Taylor, of Ohio, who was in charge of the majority reso- lution, argued that Mr. Roberts was ineligible to membership, on the ground that Utah had been admitted into the Union with a condition against polygamy and that the Edmunds law denied not only the right of suffrage, but even the title to hold office, to a polygamist; and that, as the claimant was a notorious violator of the law of the land, the House might of its own inherent authority declare him ineligible. In answer to the
I lay that proposition down as absolutely sound, and as not contradicted anywhere; and both Houses of Congress have in many instances refused to expel members where the proof of guilt was absolutely clear, because the acts complained of were unrelated to the members as such, because the acts complained of were not inconsistent with the trust and duty of the member as such.

Neither House has ever expelled a member for any other cause. So I say this here and now: To exclude is to be in harmony with principle and precedent; to expel is to do violence to principle and precedent. There is no precedent in the House against exclusion. There is no precedent in the American Congress for expulsion under such circumstances as exist here.

Three reasons are asserted why this man should not be permitted to enter the House of Representatives:

First, because of his violation of the Edmunds law and the disqualification created thereby.

Second, independent of any statutory ineligibility, independent of any joint action of the two Houses in the passage of a law, but because of the inherent power of the House, by that inherent power which in all cases of exclusion has been invoked—and the House has never excluded for any other reason except for that which it itself declared, independent of any law, for the violation of a law the House had declared a violation of law; his declarations, words, and acts that he was above the law, that the law did not speak to him, in the very necessity of things, made him ineligible; and

Third, because the State of Utah was admitted into the Union under the express understanding that polygamy practices would not be tolerated and would not be renewed. And now it sends as its Representative the most conspicuous example, the most conspicuous practitioner of the very thing the abandonment of which was the condition precedent to its admission into the Union.

Mr. Littlefield, of Maine, in charge of the minority resolution, while holding that the Edmunds act, made for a Territory, could not bind a State, and that a condition imposed on the admission of a Territory to statehood could not limit its equality of rights in the sisterhood of States, nevertheless made his main argument on constitutional grounds. He said:

The House of Representatives is now sitting under the clause of the Constitution which makes it the judge of the election, the return, and the qualifications of the gentleman from Utah. We believe that it is the duty of the House of Representatives to now sit as a judge, to determine what qualifications are required and whether or not the gentleman from Utah possesses those qualifications. We do not believe, when this House sits as this great constitutional court, that it sits here to legislate and create disqualifications. We believe it sits here to ascertain and determine, to ascertain what qualifications are prescribed by the Constitution, to determine whether or not the gentleman from Utah possesses those qualifications.

The qualifications prescribed by the Constitution are age, citizenship, and inhabitancy.

No person shall be a Representative who shall not have attained to the age of twenty-five years and seven years a citizen of the United States, and who shall not, when elected, be an inhabitant of that State in which he shall be chosen.—(Constitution, Article I, section 2).

The report of the committee finds that the gentleman from Utah possesses these qualifications. Here the majority and the minority part company. The majority hold that this House sitting here, alone, of its independent action, can add to the qualifications mentioned in the Constitution. The minority hold that they can not add to them. The minority hold that when this House sits as this great constitutional court and ascertains the qualifications required, and ascertains that the gentleman from Utah possesses these qualifications, that it is its duty under the Constitution to render a judgment in accordance therewith, no matter what the consequences may be, because we believe the Constitution to be the supreme law of the land.

I call attention to the several propositions relied upon by the minority, in order that we may understand at the outset the questions which divide us.

The majority state, first, that they propose to exclude the gentleman from Utah—

By reason of his violation of the Edmunds law.

Second—and this is the main ground—

By reason of his notorious and defiant violation of the law of the land, of the decisions of the Supreme Court, and of the proclamations of the President, holding himself above the law and not amenable to it. No government could possibly exist in the face of such practices. He is in open war against the laws and institutions of the country whom he seeks to represent.

This proposition, stripped of its verbage and rhetoric, simply means that this House of Representatives, here and now, can create and impose qualifications or disqualifications not mentioned in the Constitution, by its own independent, individual action.

This is the first proposition of which, as I understand, the majority are principally enamored.

They say, on page 40 of their report:

The principles underlying the second main ground of disqualification, herebefore asserted, have already been fully discussed, but the ground is appropriately restated at this point.

We assert before the House, the country, and history that it is absolutely and imprudently sound, not to be effectively attacked, consonant with every legislative precedent, in harmony with the law and with the text-books on the subject.

This is the first proposition to which I propose to address myself. It involves the construction of the Constitution, and true and important other questions. Reflect for a moment. Let us see what the proposition is. This House by its own independent action can add a disqualification or a qualification not mentioned in the Constitution.

At this time it is proposed to add the disqualification of polygamy. At a future time it may be proposed to add the disqualification of adultery, of fornication. At another time it may be proposed to add the disqualification of membership in a trust or an octopus, or the attorney of a trust or an octopus, or any misdemeanor or obnoxious conduct, and so on ad infinitum.

No man when he is elected to this House under this proposition, suggested by the majority, can ever tell whether he possesses the qualifications, or is affected by the disqualifications, that are thus to be asserted. It is only when he stands at the threshold of the House and knocks at the door, that he discovers that the House of Representatives, using one of its wisdom, deeming him obnoxious, then creates and declares the disqualification that may exclude him. No constitution can know whether its choice is eligible: in fact, between the election and organization popular excitement may demand the imposition of a disqualification, before unthought of, and their
choice, though qualified when elected, would be ineligible when he presented himself for admission. And inasmuch as the action of this House does not conclude the action of another, the man who is admitted to-day may be excluded to-morrow."

Mr. Roberts, in his dissent, called the proceedings unjust, and observed that the indulgence in immorality with the individual is its end. He called your attention to the seriousness of departing from the Constitution to respond to the clamor of misled people. What is it that is invoked as an excuse for this proposed action?

"We are employed in a sober presentation of facts before the House of Representatives and breathes too much of rhetoric and passion. Just for a few moments I want to pay attention to the nature of this crime of polygamy, not with a view of showing that the American people have not the right to establish monogamy as a system of morals, but in order the man for the purpose of defending polygamy either. In the early debate that took place with reference to this case on the floor of the House I then said that I was not here to represent polygamy, that I was not here to defend it; that we had long ago passed that stage of the case; that the thing itself was taken out of the realm of discussion. So I do not wish my remarks to be construed as any defense of the doctrine of polygamy; but I do want to call attention to the nature of this crime, in order that we may ascertain whether it is as awful as the description of it in the committee's report, and if it warrants a more lawless act than polygamy itself in order to rebuke a man supposed to be guilty of it who has been elected to the House of Representatives.

"The Jewish people were made the depositary of God's revelation to humanity. You will not find the crime of polygamy referred to regarded among the people as of the character that it is described here only in order to rebuke a man supposed to be guilty of it who has been elected to the House of Representatives.

"The case of a bribe taker or of a burglar or of a murderer is trivial, is a mere ripple on the surface of things, compared with this far-reaching, deep-rooted, audacious lawlessness."
"They knew him as an advocate of his religious faith and the defender of his political principles, until every platform in the State rang with his voice in the maintenance of what he believed to be the right. You knew him, also, as a member of the constitutional convention which helped settle this vexed question of polygamy upon the basis of its settlement under that Constitution.

"What do you propose in the rejection of the member from Utah? Why, you propose to teach the inhabitants of the State of Utah a lesson! You propose to discipline them. You propose to summon them before the bar of this House and administer a rebuke.

"These people, however, to whom you have proposed to administer this reproof are worthy of better treatment. They are the pioneers pre-eminent of the western half of the United States; they have redeemed a desert and given a State to civilization."

Mr. Roberts closed with the charge that religious animosity was responsible for the attempt to exclude him from Congress:

"At whose behest are you called upon to administer this rebuke? What is the source of it? Why, three sectarian preachers from the State of Utah made a formal protest before the last Congress; and, I understand, before this House, against this member. The Christian hand that took it upon themselves to run throughout the land and stir up religious prejudice against the Mormons, until a wonderful petition is rolled in on the floor of this House that makes members quake and tremble with fear in its presence—a petition gathered from Sabbath schools, sectarian clergymen. Much has been said about interference between Church and state.

"Suppose that the Mormon Church undertook to defeat the will of the people of a sovereign State, or that the Catholic Church undertook to do the same thing? There would be such warnings uttered, there would be such protests pronounced, against such interference of the Church with the state in a purely political matter that we would be made to believe that the very foundation of the Government was in danger. But here, without protest, you permit the Church to interfere with the state when the case of a Mormon is involved. I do not, however, refer to the worthiness of my personal worthiness now is made upon them for the purpose of influencing your action in the matter now pending before you. As I said in the commencement of this discussion, when last speaking upon the floor of this House, I am not here begging the question; I am not here asking for favors; I am not here on my own behalf, but on behalf of my people, to demand for myself and for them our constitutional rights. Clear your vision; look to the charter that should guide your action; find warrant in it for your proposed action of exclusion or expulsion if you can; and if you find it, I will walk out without complaint. You can not find it without adding qualifications for membership in this House not enumerated in the Constitution, and that you have no right to do."

"If you can not find warrant in the Constitution for either of the proposed methods of unseating the member from Utah, then it becomes your duty under the oath that you have taken and in order to be law-abiding people yourselves, to show re- sistance to the law of the land and the protecting agis of the Constitution overshadows this man, and you can neither exclude him nor expel him without doing such violence to the Constitution as would menace representative government."

"Some of the papers in discussing the Roberts case have said, 'Brand this man with shame and send him back to his people.' Mr. Speaker, I thank God that the power to brand me with shame is something quite beyond the power of this House, great as that power is. The power to brand with shame rests with each man and nowhere else. The Almighty God has conferred it upon no one else. I have lived up to this day in all good conscience in harmony with the moral teachings of the community in which I was reared and am sensible of no act of shame in my life. Brand me with shame! Why, if you finally determine either to exclude or expel me, I shall leave this august chamber with head erect and brow undaunted and walk God's earth as one of the angels of the law, with no sense of shame upon me. And, if in response to the sectarian clamor that has been invoked against the member from Utah, you violate the Constitution of your country, either in excluding or expelling me, all the shame that there is in this case will be left behind me and rest with this House."

The resolutions, majority and minority, came to vote Jan. 25, 1900. The minority resolution, declaring Mr. Roberts eligible to admission but open to expulsion on constitutional grounds, was rejected by a vote of 81 years to 244 nays; not voting, 29. The majority resolution, refusing admission, was carried by 242 majority to 64, not voting, 36. A majority of two thirds would have been required to expel Mr. Roberts had he been admitted to membership, but the divisions on these resolutions show that such a vote would have been given in case of the adoption of the minority resolution.

The case of Matthew S. Quay, who claimed to be a Senator from Pennsylvania by the appointment of the Governor of the State, involved an old issue of constitutional interpretation; but it commanded unusual interest because of the political opposition to Mr. Quay, who had been made the object of bitter attack by influential members of his own party. He had been appointed after the adjournment of the Pennsylvania Legislature, but the senatorship fell vacant during the legislative session; and so the point to be considered was whether the Governor had power to appoint when the Legislature had refused to elect. The Constitution gives the Governor power to appoint only when a vacancy occurs during a session of the Legislature and the Senate has decided in a succession of cases that no appointment is valid when made after a Legislature adjourns without electing. It was natural, therefore, to expect that Mr. Quay would not be admitted to the Senate, as the precedents were strongly against him; but certain circumstances not dwelt upon in the discussion gave him unusual sympathy. He had been personally popular in the Senate; he was a leader of his party in a great State; he had been fiercely attacked and accused of political rascality and even crimes; and an indictment against him for conspiracy to defraud had been brought to trial during the legislative session, in which the prosecution by the Governor's attorney was able to take up the point before the Senate. On this point, Senator Penrose, of Pennsylvania, in his preliminary statement of facts, suggested the peculiar party conditions that prevailed. He said:

"The full term of the Hon. Matthew Stanley Quay, senior United States Senator from Pennsylvania, expired on the 3d day of March, 1899, while the Senate was still in session, under the provisions of Article II, section 4, of the Constitution of Pennsylvania the General Assembly shall meet at 12 o'clock on the first Tuesday of January every second year, and accordingly the Legislature met upon the first Tuesday of January, 1899. At
the beginning of the session, in order to expedite the legislative business and to economize in the expenditure of public funds, a concurrent resolution was offered in the Senate fixing the time for final adjournment on the 20th day of April following. This resolution unanimously passed both houses and was then presented to the Legislature, and, under our parliamentary practice, could not be changed except by a two-thirds vote. Pursuant to a published call, signed by the chairman of the Republican caucuses of the Senate and the House of Representatives, respectively, the same having been issued at the regular session time and place by its officials and in the manner prescribed by the party regulations, a joint caucus of the Republican members of the Senate and House of Representatives was held Jan. 3, 1899, for the purpose of nominating a person to be voted for as the Republican candidate for the office of United States Senator.

"At this caucus several candidates were voted for, but Senator Quay, having received 98 out of the 109 Republican votes present, was unanimously declared the caucus nominee of the Republican party. Under the act of Assembly of Jan. 11, 1897, reaffirming the similar act of Congress of July 25, 1866, regulating the election of United States Senators, it was provided that the Senate was to elect on the third Tuesday of January, 1899. Upon the following day the members of the two houses convened in joint assembly, and it appearing upon the reading of the journal of each house that the same person had not received a majority of the votes in each house, as required by the act of Assembly aforesaid, the joint session then proceeded to choose a person for the office of United States Senator, and continued to ballot each succeeding day until the Legislature adjourned on the 20th day of April, as required by the resolution aforesaid. Inasmuch as none of the candidates received a majority of the votes cast, no election resulted. On the first ballot taken in the joint Assembly, Quay, Republican, received 112 votes; Monks, Democrat, 82; leaving scattering and absent, 60.

"On account of members and Senators absent and not sworn in, it required 126 votes to make the majority necessary to elect. In this manner the balloting proceeded day after day until the eleventh, on which day Senators, representing from the western counties of the regular Republicans, Monks of all the Democrats, and the other Senators and members dividing their strength among the various candidates. Seventy-nine ballots had been taken when the Legislature adjourned without day on the date above mentioned. On the 21st day of April, 1899, the Legislature having adjourned and a vacancy in the office of United States Senator existing by reason of the failure of the Legislature to elect, the Governor, believing that the State was entitled to a full representation in the Senate under the provisions of section 2 of Article II of the Federal Constitution, appointed Mr. Quay to fill the vacancy until the next meeting of the Legislature.

"The Senate at its first meeting adjourned, and the decision of the case singularly close. The Senate committee to which Mr. Quay's credentials had been referred reported a resolution that he was not entitled to take his seat as a Senator, and, April 24, 1900, a motion to amend by striking "not until" until the resolution was lost by a vote of 32 years to 33 nays. This resolution being passed. The resolution refusing to admit him was then passed by a vote of 33 years to 32 nays; not voting, 22. The Senate preserved its consistency by a majority of 1.

Another sensational case was that of William A. Clark, who had been elected a Senator from Montana. Charges of bribery and corruption were brought against him, and the Senate ordered an investigation. The report of the committee was against him, and a resolution was submitted declaring that he was not duly and legally elected to a seat in the Senate of the United States. May 15, 1900, Mr. Clark rose in the Senate to a question of personal privilege and amended the resolution, for his own defense, submitted a letter of resignation, sent to the Governor of Montana. The resolution in his case was then passed over. In the meanwhile, during the absence of the Governor of Montana in California, the Lieutenant Governor appointed Mr. Clark to fill the vacancy caused by his own resignation, and, after a statement in his own behalf, appointed Mr. Maginnis.

Miscellaneous.—The most elaborate piece of legislation perfected during the session was "an act making further provision for a civil government for Alaska, and other purposes." It covers 251 pages of the volume of statutes.

Of more political importance was the act "to provide a government for the Territory of Hawaii," though, in the nature of the case, it dealt far less with mere details. It established the new Territory and created a Territorial government.

The measure for a civil government in the Philippine Islands, introduced in the Senate, was not acted upon.

An important pension measure was approved May 9, 1900. It is an amendment to the act of June 27, 1890, and provides for the aggregation of disabilities in granting pensions for incapacity to earn a living, and also fixes the basis and the limit of a widow's claim. It is as follows: "Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That sections 2 and 3 of an act entitled "an act granting pensions to soldiers and sailors who are incapacitated for the performance of manual labor, and providing for pensions to widows, minor children, and dependent parents," be and the same are hereby amended so as to read as follows:

"Sec. 2. That all persons who served ninety days or more in the military or naval service of the United States during the late war of the rebellion and who have been honorably discharged therefrom, and who are now or who may hereafter be adjudged insane or insane, or who have lost the use of any member due to wounds, or who have become disabled by wounds or disabilities of a permanent character, not the result of their own vicious habits, which so incapacitates them from the performance of manual labor as to render them unable to earn a support, shall, upon making due proof of the fact, according to such rules and regulations as the Secretary of the Interior may provide, be placed upon the list of invalid pensioners of the United States, and be entitled to receive a pension not exceeding $12 per month and not less than $6 per month, proportioned to the degree of inability to earn a support; and in determining such inability each and every infirmity shall be duly considered, and the aggregate of the disabilities shown by a rating, and such the Commissioner of Pensions, in such form as he may prescribe, showing themselves entitled thereto, receive the benefits of this act; and nothing herein contained shall be so construed as to prevent any pensioner thereunder from prosecuting his claim and receiving his pension under any other general
or special act: Provided, however, That no person shall receive more than one pension for the same period: And provided further, That rank in the service shall not be considered in applications filed under this act.

"Sec. 3. That if any officer or enlisted man who served ninety days or more in the army or navy of the United States during the late war of the rebellion, or who was honorably discharged has died, or shall hereafter die, leaving a widow without means of support other than her daily labor, and an actual net income not exceeding $250 per year, or minor children under the age of sixteen years, such widow shall, upon due proof of her husband's death, without previous notice of death, be placed on the pension roll from the date of the application therefor under this act, at the rate of $8 per month during her widowhood, and shall also be paid $2 per month for each child of such officer or enlisted man under sixteen years of age; and in case of the death or remarriage of the widow, leaving a child or children, or of an officer or enlisted man under the age of sixteen years, such pension shall be paid such child or children until the age of sixteen: Provided, That in case a minor child is insane, idiotic, or otherwise physically or mentally helpless, the pension shall continue during the period of such disability; and this proviso shall apply to all pensions heretofore granted or hereafter to be granted under this or any former statute; and such pensions shall commence from the date of application therefor after the passage of this act: And provided further, That said widow shall have married said soldier prior to the passage of the said act on June 27, 1890.

Another general act of interest was that providing "for free homesteads for actual and bona fide settlers, and reserving the public lands for that purpose," approved May 17, 1900. The text of it is as follows:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That all settlers under the homestead laws of the United States upon the agricultural public lands, which have already been opened to settlement, acquired prior to the passage of this act by treaty or agreement from the various Indian tribes, and who have resided upon the tract entered in good faith for the period required by existing law, shall be entitled to a patent for the land so entered upon the payment to the local land officers of the usual and customary fees, and no other or further charge of any kind whatsoever shall be required from such settler to entitle him to a patent for the land covered by his entry: Provided, That the right to commute any such entry and pay for said lands in the option of any such settler and in the time and at the prices now fixed by existing laws shall remain in full force and effect: Provided, however, That all sums of money so released which it not released would belong to any Indian tribe shall be paid to such Indian tribe by the United States, and that in the event that the proceeds of the annual sales of the public lands shall not be sufficient to meet the payments heretofore provided for agricultural colleges and experimental stations by an act of Congress, approved Aug. 30, 1890, for the purchase and improvement of colleges for the benefit of agriculture and mechanic arts, established under the provisions of an act of Congress, approved July 2, 1862, such deficiency shall be paid by the United States: And provided further, That no lands shall be herein included on which the United States Government had made valuable improvements, or lands that have been sold at public auction by said Government. "Sec. 2. That all acts or parts of acts inconsistent with the provisions of this act are hereby repealed."

The Senate passed a bill for the reorganization of the army, on which the House failed to act; and the House passed a bill for the restriction of trusts, which the Senate failed to reach.

Bills, in moderate number, for public buildings, bridges, and right of way, were passed.

The Appropriations.—The appropriations made by the Congress at its first session, for the fiscal year 1890—1891, were as follows: Agriculture, $22,500; army, $11,220,096; diplomatic, $1,771,169; District of Columbia, $7,576,389; fortifications, $7,383,028; Indian, $8,195,089; legislative, $24,176,532; Military Academy, $653,509; navy, $655,097,017; pension, $14,254,250; post office, $113,648,289; river and harbor, $561,000; sundry civil, $65,288,886; deficiences, $15,679,012; miscellaneous, $3,550,000; total regular, $77,177,237; permanent, $132,712,220; grand total, $709,729,477.

CONNECTICUT, a New England State, one of the original thirteen, ratified the Constitution Jan. 9, 1788; area, 4,900 square miles. The population, according to each decennial census, was 237,946 in 1790; 251,002 in 1800; 261,942 in 1810; 357,174 in 1820; 460,147 in 1830; 491,792 in 1840; 537,454 in 1870; 622,700 in 1880; 746,258 in 1890; and 908,335 in 1900. Capital, Hartford.

Government.—The following were the State officers in 1890: Governor, George E. Lounsbury; Lieutenant Governor, Lyman A. Mills; Secretary of State, Henry C. Warner; Secretary of the Treasury, Charles R. Nick; Comptroller, Thompson S. Grant; Attorney-General, Charles Phelps; Adjutant General, Louis N. Van Keuren; Insurance Commissioner, Edwin L. Scofield—all Republicans; Factory Inspector, George L. McLean; Building and Loan Commissioner, George F. Kendall, succeeded in March by Edward E. Fuller; Dairy Commissioner, John B. Noble; Commissioner of Agriculture, A. O. Averill; State Auditors, Walter A. Riley and D. Ward Northrop; Board of Arbitration, George A. Parsons, Franklin T. Ives, Gilbert L. Smith; Railroad Commissioners, O. R. Fyler, Washington F. Willcox; Highway Commissioner, James H. MacDonald; Bank Commissioners, P. W. C. Underhill, Charles H. Neely; Superintendent, Sidney J. Amsden of the Insane Asylum; Secretary of the Senate, Henry E. Balderston; Clerk, George A. Conant.

Population.—The census returns give the population by counties as follows:

The population of Hartford is 79,850; in 1890 it was 53,230; taken with the cities and towns connected with it by the trolley system—viz., New Britain, Manchester, Bristol, Vernon, East Hartford, Glastonbury, Windsor, Farmington, Berlin, West Hartford, Wethersfield, South Windsor,
Plainville, and Newington—the total is about 170,000, against 120,000 in 1800. The larger towns and their populations are: New Haven, 108,827; Hartford, 79,850; Bridgeport, 70,996; Waterbury, 51,139; Meriden, 28,695; New Britain, 28,202; Norwich, 24,637; Norwalk, 19,932; Danbury, 19,474; Stamford, 18,880; New London, 17,548; Middletown, 17,486; Ansonia, 12,681; Torrington, 12,452; Greenwich, 12,172; Manchester, 10,301; Naugatuck, 10,541; Windham, 10,137; Bristol, 9,643; Wallingford, 9,001; Stonington, 8,540; Vernon, 5,483; Derby, 7,930; Winchester, 7,763; Putnam, 7,348; Orange, 6,995; Killingly, 6,835; Enfield, 6,699; Thompson, 6,442; East Hartford, 5,447; East Lyme, 5,362; Branford, 5,706; Huntington, 5,572. Of the 39 incorporated cities and boroughs, only 6 have fewer than 2,000 inhabitants in 1900.

Finances.—The Treasurer's statement, showing the condition of the treasury Sept. 30, is as follows:

1899, to $2,579,586.53, a gain of $127,583.03. The increase in the receipts from all sources is $2,876,856.83, or, $20,876.53, or, $2,579,586.53, a gain of $127,583.03. The increase in the receipts from all sources is $2,876,856.83, or, $20,876.53, or, $2,579,586.53, a gain of $127,583.03.

The expenditures were $2,528,514.13, a decrease of $1,766,250. The receipts for the year exceeded the expenses by $384,342.70, and as there is included in the expenditures $100,000 paid for the redemption of State bonds, the treasury, as compared with its condition a year ago, is $44,000 better off.

The balance in the treasury to the credit of the civil list funds was $682,884.

The funded debt less the civil list fund in the treasury is now $2,108,873.29, as compared with $2,579,215.99 a year ago.

The State has claims against the United States Government growing out of the Spanish war, now in process of collection. These claims will amount to $150,000. The State also has unsettled claims on account of the civil war.

The principal items of expenditure were: Expenses of the General Assembly, $148,355.08; common schools, $835,647.71; State prisons, $215,330.32; normal schools, $65,747.97; board of prison guards in county jails, $112,682.02; salaries and expenses in executive offices, $38,417.23; State Capitol and grounds, $45,294.16; State Board of Education, $28,865.88; State Prison, $64,917.30; School for Boys, $65,155.10; School for Girls, $42,240.82; sick and hospital insurance, $75,246; agricultural affairs, $45,767.14; printing and circulating documents, $43,973.92; Highway Commissioner, $117,973.56; Insurance Commissioner, $32,500.31; interest on State bonds, $104,700.

Education.—The annual report of the State Board of Education, submitted in July, contains in its opening paragraphs a review of the work of education in Connecticut for the past twenty-five years, from 1875 to 1899. The report says: "The total expenditure from all sources on public education in Connecticut, including maintenance of normal schools during the period under review, is $52,174,064.72. Of this sum, $84,995,217.83. In the twenty-five years ending Sept. 1, 1899, the State, by its annual reports, has been paid for completion or enlargement of schoolhouses. The value of all school property, including buildings and sites, increased from $4,294,403.35 in 1884 to $10,197,473.35 in 1899. The value of school property, per capita of the population is $11.62. The number of pupils on the enumeration lists increased from 134,976 to 189,717; the number on the registers increased from 119,489 to 151,325, and the number in average attendance increased from 68,593 to 108,951. The number of public kindergartens has increased from 5 in 1890 to 77 in 1900, and the number of children from 628 to 6,965."

An increasing interest in the providing of school libraries is attested by the fact that the number has increased from 240 in 1884 to 784 in 1899. The number of books is reported to be 158,073, compared with 28,035 in 1883.

Since 1875 the total amount contributed to these libraries is $113,105, and districts and individuals have added $244,060.99. The total expenditure for libraries has been $357,163.90.

"The number of teachers has increased from 2,013 to 4,085. There has been a great increase in the number of women, compared with the number of men, both as principals and as teachers. The average monthly salary of men rose from $70.05 in 1875 to $89.87 in 1899, and that of women from $37.35 to $43.61."

By the enumeration this year, the children of school age were 194,817, a gain in one year of 5,100. The cost for each was $24.20.

The State Normal School at New Britain celebrated its fiftieth anniversary June 21. It was the sixth in date of establishment in the United States. New Britain, then a parish of Berlin, appropriated $16,250 for a building, and the school opened with 67 pupils for its first term. Only one of its first graduating class of 5 in 1851 is now living. There are now 1,720 students. Of these about 1,500 are living, about 700 being engaged in educational work. The number of scholars registered in 1890 was 250 and the number in attendance in June, 1900, was 225.

There were 13 graduates from the Agricultural College in June, 10 of whom were women. The whole number previously graduated since the opening was 166, of whom only 12 were women.

The enrollment of undergraduates at Wesleyan University in October was 332. The alumni considered majority and minority reports, and submitted one to the trustees in the summer in regard to women students. The trustees referred the first minority report, after one change, to a special committee, to be reported upon in six months. This declared Wesleyan to be a man's college, but as women had been admitted it agreed that the college should continue open to them to the extent of admitting 15 girls to each 100 young men, and that those chosen few should have privileges in all respects equivalent to those accorded to men. The majority of the first minority reports, however, agreed in many provisions for keeping the work of the man and woman students separate, including careful provision against their competing in public. The only change made in the

George P. McClean, Governor of Connecticut.
report by the trustees was to increase the percentage of woman students from 15 to 20.

The one hundred and ninety-ninth commencement of Yale University took place June 27. The number of graduates in each department was: Academic, 324; scientific, 132; medical, 23; law, 52; music, 12; candidates for doctorate, 36. The president's address reported changes in the courses of study, notably an increase of elective work. The entire work of the senior year is now elective. The study which has most generally grown in favor is English. At the Sheffield Scientific School an independent course in sanitary engineering has been established, and a special course preliminary to the study of forestry. The Peabody Museum has received from London a collection of Egyptian antiquities presented by the Connecticut junior members of the American Archeological Association.

The treasurer's report to the corporation in November showed that for the fiscal year ending July 31, 1900, the permanent funds of the university have been increased by $427,336.59. Salaries to professors, instructors, and others for tuition amounted to $76,000, while the expenses and disbursements for tuition were in amount $114,742.82. Assistance paid to students amounted to $58,411.82.

The enrollment at Hartford Theological Seminary in September was as follows: Senior class, 22; middle class, 22; junior class, 18; special mission class, 3; post-graduates, 3; fellows, 3; candidates for degree of Ph.D., 1; special student, 73.

Corrections.—The report of the State Prison for the year ending Sept. 30, 1899, showed 503 inmates. The average for the year was 507.38. Of the $95,000 appropriation granted the institution by the Legislature of 1897, there remained an unexpended balance in the State treasury of $10,883.45. Total amount of offi ces granted is 53. The total earnings from all sources for the year ending at this date were $48,088.63.

Insurance.—The premium receipts increased in 1899 over 1898 as follows: Connecticut companies, $1,365,490.73; companies of other States, $19,920.05; fire insurance companies, $6,892,571.99; total increase in 1899 of $27,588,900. Receipts on mortgages and collateral loans of Connecticut companies decreased in 1899 $433,203.45, while companies of other States increased $302,952.60, and industrial companies received $201,648.86 more than in 1898. Receipts of interest and dividends on bonds and stocks increased in 1899 over 1898 $145,286.44, while receipts of other income increased in 1899 $10,937,969.64, an increase over 1898 of $13,283,946.64. The Connecticut companies reduced their loans on bond and mortgage during 1899 $1,823,611.44, while companies of other States increased their loans on the same security $9,679,362.50, and the industrial companies $3,435,890.65.

Banks.—The number of institutions in the State under the supervision of the Bank Commissioners is 117. These include the savings banks, the State banks, and the trust companies. The amount of deposits in the Connecticut savings banks Jan. 1, 1900, was $176,275,403.60. There was an increase of $10,298,396.75 in deposits in 1899. The assets of the banks at the beginning of the year were in round numbers $185,000,000.

Railroads.—The length of main line and road in the State is 1,013.35 miles, an increase of 3.10 miles, and a total, including sidings, etc., of 1,819.21 miles. The property accounts of all the companies show an increase to $174,923,090 from a decrease of $1,040,481.79. The funded debt per mile of road is $26,801.99. The current liabilities of the companies show a net increase of $2,299,135.48, and now amount to $8,002,023.36, being $5,471.13 per mile of road. The gross earnings of the companies were $38,063,322.77, an increase of $1,109,867.17. The operating expenses of the year were $26,668,354.44, an increase of $1,978,848.14.

The total length of street railways is 26,351 miles. The total amount of capital stock authorized is $23,328,000, and the amount issued is $12,715,948, an increase of $2,264,908 during the year. The net earnings for the year were $1,121,508.36. The total number of passengers carried was 59,084,702. The number of passengers carried by the steam railroads during this same period was 50,260,468.

Labor.—The thirteenth annual report of the Factory Inspector, covering the year ending Sept. 30, 1899, says that 1,466 factories, employing 151,152 persons, and 214 bakeshops were visited by agents of the department, besides many places where the manufacture of clothing, cigars, and artificial flowers is carried on, the inspection of which was added to the duties of this department by the General Assembly of 1899. At that session a law was passed regulating the manufacture of coats, vests, trousers, knee pants, overalls, skirts, shirts, ladies' waists, artificial flowers, purses, handbags, and the like, and also regulating the parcel intended for sale. This law was intended to regulate manufacturing of such goods in tenements. It was said that the sweatshops located in New York city were being moved into Connecticut and practicing the same system of sweating as was carried on in New York city. Careful inspection of the premises showed the fact that we are left to work 16 hours. The law of 1897 requiring bakeshops to be properly drained, plumbed, lighted, and ventilated, and kept in sanitary condition, with proper regard to the health of the operatives and the production of wholesome food, has had the effect of bringing many former cellar bakeshops above ground. No cases of any kind of unemployment were reported.

Building and Loan Associations.—At the date of the last report, for the year closing Sept. 30, 1899, there were 15 associations, all of the State, the foreign associations having withdrawn. There were 7 mortgage investment companies, all but 2 of which are closing up their business. One of the two companies that are continuing is carrying on a small business. The amount of business which the 15 associations for the year ending Sept. 30, 1899, are $3,774,526.40, which shows an increase over Sept. 30, 1898, of $245,452.11. The liabilities in installments paid and earnings credited of domestic associations show an increase of $157,611.05, and a decrease of liability on single payment shares of $28,983.83. There is no evidence to indicate that 2,000 homes have been built with the assistance of the associations since their organization.

Historical.—Anniversaries of some of the old towns of the State were celebrated this year. Middletown is two hundred and fifty years old. The date of its settlement is given as 1650, though a gravestone in the cemetery is marked 1648. It was first called Mattabeseeck, but in 1653 the name was changed to Middletown.

East Haddam celebrated its bi-centennial June 6, and also the birthday of Nathan Hale, who was born June 6, 1755. After his graduation at Yale he taught in East Haddam in a little schoolhouse which was presented on this anniversary to the Connecticut Society, Sons of the Revolution, by the Sons of the Revolution of New York. It was purchased by Richard H. Greene and moved to a plot of ground on a bluff overlooking the town and the Connecticut river. Ex-Gov. Bulkeley bought some of the land in the school to be known as Nathan Hale Memorial Park.

The Sons of the Revolution of New York State have since relieved Mr. Greene of his personal responsibility in the matter.
COSTA RICA.

On Nov. 12 Bridgeport commemorated the one hundredth anniversary of its creation as a borough with a parade of 20,000 men, a display of fireworks, and a banquet.

Nov. 22, Trinity Parish (Episcopal), of Southport, town of Fairfield, observed the one hundred and seventy-fifth anniversary of the dedication of its first house of worship and the one hundred and ninety-ninth of the founding, in London, England, of the Venerable Society for the Propagation of the Gospel in Foreign Parts; to which the parish was largely indebted in the first half century of its existence.

Camp Field and a soldiers' monument built upon it were presented to the city of Hartford, and dedicated Oct. 4. The field, which was given by John C. Parker, is the site of the encampment of 7 regiments that were enlisted for the civil war. Of these men, 394 were killed in action, 230 died of wounds, and 834 died of disease. The monument is a statue of Gen. Griffin A. Stedman.

Political.—At the town elections, Oct. 1, 125 went Republican and 37 Democratic, the same as in the last elections and very identical. One more town voted for no license—90 in 1900 against 89 in 1899; 78 were for license.

The State Republican Convention was held Sept. 5-6, at New Haven. Following were the candidates: For Governor, George F. McLean; Lieutenant Governor, Edwin O. Keeler; Secretary of State, Samuel W. Albbott; Treasurer, Edwin C. Finney; Comptroller, William H. Gallup; Auditor, Abiram Chamberlain.

The candidates chosen at the Democratic convention at Hartford, Sept. 20-21, were: For Governor, Samuel L. Bronson; Lieutenant Governor, Cyrus G. Beckwith; Secretary of State, Robert N. Stanley; Treasurer, Oliver G. Beard; Comptroller, William Ingalls.

The ticket of the Socialist-Labor party was: For Governor, Major Max Metcalf; Lieutenant Governor, James M. Parker; Secretary, Faustin Serrr; Treasurer, Edward Laphorn; Comptroller, Henry Mathern.

The Social Democratic party named: For Governor, G. A. Sweetland; Lieutenant Governor, W. E. White; Secretary, I. G. Chatfield; Treasurer, W. F. Upham; Comptroller, Samuel B. Williams.

The election resulted in favor of the Republican ticket. The vote on the presidential electors stood: McKinley, 102,572; Bryan, 74,014. For Governor: McLean, 95,822; Bronson, 81,420; Steele, 1,548. The Socialist vote on Governor was 1932. The Senate will have 22 Republicans and 2 Democrats. The House will be composed of 291 Republicans and 54 Democrats.

COSTA RICA, a republic in Central America.

The legislative power is vested in the Congress or House of Representatives, 32 in number, elected for four years, one half being replaced every two years, in the proportion of 1 to 5,000 of population, by electoral colleges, for which every male citizen who is self-supporting has a vote. The President, who is elected for four years, is Rafael Iglesias, re-elected for the term beginning May 8, 1898. The Vice-President is Iglesias Llorente. The Cabinet at the beginning of 1900 was composed as follows: Secretary of State for Foreign Affairs, Worsley; Secretary of State for War, the Inspector of Mines, J. A. Faudo; Secretary of the Interior, Police, and Public Works, Ricardo Pacheco; Secretary of the Treasury, Juan B. Quiros; Secretary of War and the Navy, José Astúa Aquilar.

Area and Population.—The area of the republic is about 23,000 square miles. The population was reckoned 294,940 in March, 1897. Since 1894 the net immigration has been about 1,000 a year. In 1892 there were 6,298 foreigners, of whom 831 were Spanish, 634 Jamaican, 622 Italian, 342 German, 246 English, and 204 from the United States. The Government has made liberal concessions for the purpose of attracting colonists. The descendants of Spanish settlers live in and around the towns, chief of which is San José, the seat of government, with about 25,000 inhabitants. The public schools number 327. There are also 5 institutions for superior education. Education is free and compulsory, and the law is strictly enforced. A regular military force of 600 men is maintained, and there is a militia of 12,000 men kept in training, which can be increased in war to 34,000 by calling out all males between eighteen and fifty years of age. The naval force consists of a gunboat and a torpedo boat.

Finances.—The revenue for 1899 was $4,813,190, of which $2,735,574 pesos were derived from internal taxes and $2,077,616 from foreign. The expenditure was $8,059,748 pesos, of which 5,222,168 pesos were spent for government and 1,377,525 pesos for debt. The foreign debt, incurred mainly for an interoceanic railroad that was not built, has been scaled down on the ground of the depreciation of silver, the Government having failed to pay interest for some years. The nominal value of the principal is much as the principal. Of the new bonds, $1,475,000 pay 2 1/2 per cent, and $525,000 pay 3 per cent. Besides these the Government owes £200,000 of foreign debt and 2,922,221 pesos of internal debt. The adoption of the gold standard was voted in 1896, and the ratio of gold to silver was fixed at 20:1. The ratio of the gold coin is 1:1.

The silver coinage in circulation is 350,000 pesos, and there is no gold, the principal currency being bank notes, 3,300,000 pesos in 1896, protected by a specie reserve of 1,250,000 pesos, but worth only 46 per cent, of their nominal value in exchange.

Commerce and Production.—Coffee is the most profitable article of commerce of Costa Rica. Corn, rice, yams, and potatoes are the principal food crops. Cacao culture is not of long standing, and is rapidly extending. The live stock, mostly cattle, was valued in 1897 at 12,695,000 pesos. The working of gold and silver mines has nearly ceased. The value of imports in 1898 was 4,258,896 pesos and of exports 5,535,690 pesos. The value of exports, 5,474,774 pesos in 1897 and 5,650,219 pesos in 1898. The export of coffee in 1899 was 19,486,125 kilogrammes, valued at 4,209,570 pesos. Of bananas, 2,231,036 bunches were exported. Other exports are cedar wood, various cabinet woods, and hides. The number of vessels that called at Limon and Puntarenas in 1898 was 449. The shipping of Costa Rica consists of 3 steamers, of 600 tons, and 2 sailing vessels, of 551 tons.

Railroads, Posts, and Telegraphs.—The section of the long projected transisthmian railroad that runs from Fort Limon inland stops at Alajuela, 117 miles from the Gulf coast. The Pacific section, from Puntarenas to Esparza, is only 14 miles long. There are 917 miles of telegraph lines. The number of messages in 1897 was 382,116. The number of letters and other papers carried in the mails in 1896 was 1,164,807 in the internal and 882,160 in the foreign service.

The Colonial Boundary.—An old frontier dispute between Costa Rica and Colombia was referred to the decision of the President of the French Republic. This was rendered in September, 1900. The award makes the cordillera of the
mountains the frontier line, which starts from Punta Mona, on the Atlantic coast, crosses northward the valleys of the Tarina and Sixola rivers, then follows a line drawn about 4 miles in a north-northwest direction between the Chiqui Viejo and the streams falling into the Gulf of Dulce, and ends on the Pacific at Punta Burica. All the islands near the coast east of Punta Mona belong to Colombia, and those farther away from the continent lying between the Mosquito coast and the Isthmus of Panama. In the Pacific, the Burica Islands and all islands to the eastward of them are Colombian; all those west of that point are assigned to Costa Rica.

CRETE, an island in the Mediterranean, formerly a Turkish vilayet, now an autonomous province under the suzerainty of the Sultan. Insurrections of the Christian part of the population have occurred at frequent intervals since the Hellenes won their independence. When the people again rose in 1896, aided by volunteers from Greece, the great powers intervened. The naval forces of England, Austria, France, Germany, Italy, and Russia, combined, prevented the arrival of re-enforcements and the landing of arms, either for the insurgents or the Turkish garrison, and detachments of marines occupied the ports to preserve order. The powers intervened also in the war between Greece and Turkey that grew out of the Cretan insurrection. The Sultan granted autonomy to the island of Crete and to the Cretan islands by treaty signed at Hanover, Feb. 29, 1899, and finally confirmed by treaty of Berlin, July 17, 1899. The United States Government assumed the responsibility of preserving order and protecting life and property until such time as the Cuban people should organize a stable government capable of maintaining internal order and fulfilling international obligations. Under Gen. John R. Brooke, who became governor of Crete in 1897, the three districts of Crete, which had control of the civil administration as well as of military affairs, Cuban mayors and aldermen were appointed in every municipality and a Supreme Court was established. The post office was organized on the model of that of the United States. A new and more general system of public education was introduced by the American public schools in 1899. Gen. Leonard Wood was appointed Governor General late in 1899.

Area and Population.—The area of Cuba is estimated at 45,572 square miles. The population enumerated at the census of 1887 was 1,631,687, comprising 882,600 males and 749,087 females. The estimated population in 1895 was 928,766. Havana, the capital, comprised 290,448 inhabitants in 1895. The total population in 1895 was estimated at 2,018,000. In 1899, in consequence of the war of liberation, it had diminished to 1,572,797, according to a census taken under the direction of the United States military authorities, showing a decrease of 58,840 in twelve years, attributable to the war of liberation, especially the starvation and exposure incident to Gen. Weyler's reconcentration policy. The census was taken by Cubans under Cuban superintendents, who were instructed for their work in Washington. The enumerators were women, it being the first time that Cuban women were employed in the public service. In 79 districts of the 4 western provinces of Havana, Santander, Cienfuegos, and Pinar del Rio—there was a diminution of population compared with 1887. In the remaining 16 districts there were slight gains, and in the 47 districts of Santiago and Puerto Principe, the eastern provinces, the population increased considerably. The districts of the western provinces that suffered most were those which were termed trudos were collected or those in which there was little or no reconcentration. There are 96 towns of more than 1,000 inhabitants, 16 of which have more than 8,000, 5 more than 25,000, and 1 more than 200,000. The population of Havana was 164,881. The center of population is in Santa Clara province, 8 miles northeast of Cienfuegos, having moved 24 miles to the southeast since 1887. The native whites constitute 57.8 per cent. of the total
population, foreign whites about 5 per cent., colored 32 per cent., and Chinese less than 1 per cent. The foreign-born live mostly in the cities, nearly one third of them in Havana. Of the total population, 83 per cent. are Cubans, 1 per cent. claimed Spanish citizenship, and 11 per cent. had not declared their intentions when the census was taken. There were 1,094,884 persons, 63.9 per cent. of the total, who could neither read nor write; 33,093, or 2.1 per cent., who could read but not write; 514,340, or 32.7 per cent., who could read and write, but had no superior education; and 19,158, or 1.2 per cent., who had superior education. The persons born out of wedlock constitute 13 per cent. of the population.

Finance.—The revenue for 1899 was estimated at $26,359,650, of which $14,705,000 came from customs, $6,142,500 from taxation, $1,900,000 from the lottery, $1,640,650 from stamps, etc., $435,000 from national property, and $1,536,000 from other sources. The expenditures were estimated at $23,356,731, including $12,574,700 for the debt, $2,645,000 for the maintenance of the national church and justice, $5,896,741 for war, $1,035,130 for marine, $1,036,582 for agriculture, industry, and commerce, $708,979 for finance, $247,033 for education, and $142,290 for other expenses. The approximate amount of the unpaid debt was $23,538,000. About $184,000 were due on the Cuban people, who were released also from the additional debt of about $100,000,000 incurred by Spain in attempting to suppress the last insurrection.

Commerce and Production.—There were 90,900 plantations in Cuba in 1891, having an estimated value of $229,000,000, or $1,700,000 a year. The live stock consisted of 584,725 horses and mules, 2,485,766 horned cattle, 78,494 sheep, and 570,194 hogs. In the course of the war of independence the animals were consumed and almost disappeared, not more than 23,000 cattle, 5,500 horses, 2,150 mules, 8,500 hogs, and 4,500 sheep remaining, according to an estimate made in 1899. The sugar plantations were devastated, of the former not more than 526 being worked in 1899 out of 1,300 that existed in 1895, of the latter not more than 1,250 out of 9,487, and of coffee plantations only 115 out of 908. Fruit and vegetable cultivation as well as stock farming was practically abandoned, and 120,000 plantations that had existed in 1895 were abandoned. The farms of the United States, many of which are of the wild state. Against 22,156 commercial houses and manufacturing businesses in 1895 there were only about 13,500 in 1890. The exports, amounting to $100,000,000 before the war, were reduced by four years of guerrilla warfare to a fifth of that sum. The sugar crop exceeded from 1,904,264 tons in 1895 to 225,221 tons in 1898, 212,051 tons in 1897, 204,123 tons in 1898, and 25,098 tons in 1899. The average tobacco crop has been 590,000 bales of 110 pounds, of which 338,000 bales were exported and 222,000 bales were made up into cigars and cigarrettes in the factories of Havana. There were $185,914,000 cigars exported in 1896 and 123,417,000 in 1897, but only 91,812,000 in 1898. The export of cigarrettes in 1895 was 48,163,846 packages. The leaf tobacco exported goes mostly to the United States, and about half of the exports of cigars. Minor exports from Cuba are mahogany and other woods, oranges and other fruits, and beeswax and honey. Mining is carried on in the province of Santiago de Cuba. There are two American companies, which ship from 30,000 to 50,000 tons of ore to the United States every month. In 1891 there were 138 iron, 88 manganese, and 53 copper mines.

Railroads and Telegraphs.—There are 1,153 miles of railroad, besides private branches running to the larger sugar plantations. The telegraphs have a total length of 2,301 miles, with 3,450 miles of wire. The number of messages in 1894 was 357,914.

Constitutional Convention.—A convention to frame a constitution for the Cuban republic was elected by the people and opened on Nov. 6 by Gov. Gen. Wood, who said that it would be the duty of the delegates to draft and adopt a constitution adequate to secure stable, orderly, and free government and to formulate what ought to be the relations between Cuba and the United States in their opinion, after which the Government of the United States would doubtless take such action as should lead to a final agreement between the two nations. For the moment, his position was to secure their common interests. The convention, consisting of 31 delegates, elected as temporary chairman Señor Llorente, Justice of the Supreme Court. The delegates took an oath renouncing any allegiance to or compact with any state or nation, swearing to uphold the sovereignty of the free and independent people of Cuba, and to respect the solution that the convention should adopt as well as the government to be established by the constitution. Mendez Capote, who was Vice-President of the revolutionary government and Secretary of State under Major-Gen. Brooke's administration, was elected on Nov. 24 to be president of the Cuban Constitutional Convention, receiving 17 votes from the Radical Republicans against 11 cast by the Nationals for Eudalo Tamayo.

DELAWARE, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 7, 1787; area, 2,120 square miles. The popu-
DELAWARE.

91,532 in 1850; 112,216 in 1860; 125,015 in 1870; 146,608 in 1880; 168,493 in 1890; and 184,735 in 1900. Capital, Dover.

Government.—The following were the State officers in 1900: Governor, Ehe W. Tunnell; Secretary of State, James H. Hughes; Treasurer, L. Heisler Ball; Auditor, John A. Lingo, who died Jan. 26, and was succeeded by Isaac N. Fooks; Attorney-General, Robert C. White; Commissioner of Insurance, Edward Fowler; Adjutant General, Garrett J. Hart; Inspector of Agriculture, E. H. Baneroff; Chancellor, John R. Nicholson; Chief Justice, Charles B. Loe; Associate Justices, Ignatius C. Grubb, W. C. Spruce, James Pennewill, and William H. Royce; Clerk, William Virgil. All are Democrats except Messrs. Ball and Lingo and Justices Spruce and Pennewill, who are Republicans.

Population.—The population of counties in 1890 and in 1900 was as follows:

<table>
<thead>
<tr>
<th>COUNTY</th>
<th>1890</th>
<th>1900</th>
</tr>
</thead>
<tbody>
<tr>

</table>

The government of the principal cities in 1900 was: Wilmington, 76,558; New Castle, 3,380; Dover, 3,329; Milford, 2,500; Lewes, 2,239; Smyrna, 2,148; Laurel, 1,825; Seaford, 1,724; Georgetown, 1,658; Middletown, 1,567; Harrington, 1,424; Newark, 1,213; Delaware City, 1,132.

Finances.—The joint committee of the Legislature to settle with State officers found that the Secretary of State had received from incorporation fees $90,739.89 since March 13, 1899, and that 396 counties had not paid their annual fees to the general corporation act. The accounts of the State Treasurer for the year ending Jan. 9 showed the following figures in recapitulation: Balance in general fund, $65,152.33; Delaware General Electric Railroad Company (guarantee fund), $11,500; New Castle and Delaware City Railroad Company (guarantee fund), $4,500; total, $81,222.33. Balance in school fund, Jan. 9, 1900, $34,435.90; balance in sinking fund, Jan. 9, 1900, $4,453.73; total, $38,889.63; guarantee fund, $22,000; grand total, $103,671.96. There was practically no money at the beginning of 1899, as there were debts amounting to more than was in the treasury. Taxes amounting to $35,000 were paid in the year.

The amount of State licenses of all kinds for the year ending Sept. 29 is given as $114,359.23, an increase of $8,250 over the amount of the year preceding. The revenue from taxation of railroads, according to the Treasurer's report, was $68,653.30. The Adlum law for taxation of investments has been attacked as unconstitutional.

Wilmington had a bonded debt of $1,965,100 at the beginning of the year.

Military.—The National Guard, which was somewhat broken up by enlistments for the Spanish war, is improving, companies being refilled. The Government appropriation under the new law is $3,175 a year, to be drawn in clothing, arms, and camp and garrison equipage.

Education.—The reports of the public schools of the State, outside of Wilmington, give the following statistics: Total enrollment in all schools (white), 22,254; monthly attendance, 15,993; number in graded schools (those having more than one teacher), 10,289; in rural districts—white, 11,974; colored, 4,677; amount paid in salaries in white schools, $141,059; colored, $18,627.94; for text-books—white, $8,277.18; colored, $1,439; total expenditures for white schools, $194,300.63; for colored, $22,820.94; number of graded schools having libraries—New Castle County, 47; Kent, 7; Sussex, 1; number of schools in rural districts having libraries—Kent County, 2, where are good circulating libraries under the control of the State Federation of Women's Clubs; average monthly salary of principals in New Castle County, $34; Kent, $50; Sussex, $53.50; assistants, New Castle County, $36; Kent, $32.75; Sussex, $29.25.

There are 22 Delaware students in the State Normal School at Westchester, Pa.

Delaware College granted diplomas to 14 students, June 20. The class that entered in September numbered 25, of whom 19 are in the agricultural and mechanical-engineering courses. A new course in marine engineering went into effect this year, giving more freedom for elective studies. The college and the experiment station have about 10,000 books, of which 3,000 are in the general library.

The Wilmington Military Academy graduated 4 in the scientific course and 1 in a special course in music.

Attention was called this year to a so-called "University of Delaware," which was offering inducements to residents of Europe and parts of the United States who desire the degree of doctor of philosophy. The incorporators were found to be a dentist, a saloon keeper, and a trimmer for bootleggers, and incorporated under the name of a general corporation. The charter of the "university" can teach dental surgery and the science of philosophy, and confer degrees for these courses, and also confer honorary degrees. The charter is perpetual, and the "university" can operate in any part of the world.

Public Institutions.—The Hospital for the Insane, at Farnhurst, had 320 patients in August. The expenses for the first four months of the year were $8,176.46.

The Ferris Industrial School for Boys had 70 inmates at the beginning of the year. The receipts, including a balance of $1,207.31, were $17,447.07; the balance remaining, $2,846.59. A farm of 200 acres is cultivated by the boys.

The Industrial School for Girls is supported in part by the State and in part by voluntary subscriptions. There were 19 girls present in May; accommodations are provided for 40.

The Delaware Orphan Home and Industrial School for Colored Boys was opened at Wilmington in November. It is maintained by colored residents.

Business.—From statistics of failures in 1899 it is learned that there were 30 in Delaware, with liabilities amounting to $83,954 and assets to $47,431. In 1898 there were 21, with $130,430 liabilities and $71,700 assets; and in 1897, 45, with $210,800 liabilities and $91,950 assets.

The clearings at Wilmington banks for one week of April, 1900, were $1,139,314.52, as against $876,657.57 for the corresponding period of 1899. The clearings for 1899 were about $87,900,000, and in 1900 $82,000,000. For the six months ending April 1 they were $24,353,054.

Railroads.—The report of the Delaware Railroad Company for the year ending Oct. 31, 1899, shows the following figures: Freight earnings, $865,833.92; passenger, $404,575.54; mail, express receipts, and mail receipts, $311,127; total gross earnings, $1,391,530.46; operating expenses, $898,743.52; net earnings, $402,792.94; interest and premiums on securities matured, $8,110.54; gross income, $416,903.48; interest, taxes, and sundry charges, $385,833.92; passenger, $404,575.54; mail, express receipts, and mail receipts, $311,127; total gross earnings, $1,391,530.46; operating expenses, $898,743.52; net earnings, $402,792.94; interest and premiums on securities matured, $8,110.54; gross income, $416,903.48; interest, taxes, and sundry charges, $385,833.92; passenger, $404,575.54; mail, express receipts, and mail receipts, $311,127; total gross earnings, $1,391,530.46; operating expenses, $898,743.52; net earnings, $402,792.94; interest and premiums on securities matured, $8,110.54; gross income, $416,903.48; interest, taxes, and sundry charges, $385,833.92; passenger, $404,575.54; mail, express receipts, and mail receipts, $311,127; total gross earnings, $1,391,530.46; operating expenses, $898,743.52; net earnings, $402,792.94; interest and premiums on securities matured, $8,110.54; gross income, $416,903.48; interest, taxes, and sundry charges.
DENMARK.

The Republicans carried the State. On presidential elections the vote stood: Average Republican, 22,528; Democratic, 18,858; Prohibitionist, 538; Social Democratic, 57. For Governor: Republican, 22,421; Democratic, 18,808; Prohibitionist, 574; Social Democratic, 59.

The Legislature will stand: Republicans, 9; Democrats, 8. House: Republicans, 20; Democrats, 15.

DENMARK, a kingdom in northern Europe. The legislative body, called the Rigsdag, consists of an upper house, the Landsting, containing 66 members, 12 appointed for life by the Crown and 54 elected for eight years by indirect suffrage, and a popular assembly, the Folketing, containing 114 members elected by the direct suffrage of all male citizens thirty years of age, excepting criminals, paupers, and servants, for three years, one member for every 15,000 inhabitants. The reigning King is Christian IX, born April 18, 1818, son of the Duke of Schleswig-Holstein-Sonderburg-Glücksburg, appointed by the treaty signed at London on May 8, 1852, heir to Frederik VII, the last sovereign of the house Oldenburg, whom he succeeded on the death of his father, Prince Frederik, born June 3, 1843. The Cabinet of Ministers at the beginning of 1900 was composed of the following members: President of the Council and Minister of Finance, H. E. Hørring, appointed May 25, 1897; Minister of the Interior, Vilhelm de Linden Krabbe, appointed Aug. 28, 1898; Minister of Justice and Attorney-General, F. F. Schnack, appointed Aug. 28, 1899; Minister of War, Col. J. G. F. Ravn, ad interim; Minister of Foreign Affairs, N. F. Ravn, ad interim; Minister of War, Col. J. G. F. Schnack, appointed Aug. 28, 1899; Minister of Marine, Vice-Admiral N. F. Ravn, appointed Jan. 4, 1879; Minister of Education and Worship, Bishop H. V. Styr, appointed May 25, 1897; Minister of Agriculture, Alfred Hage, appointed May 25, 1897.

Area and Population.—Denmark has an area of 15,289 square miles, and in 1890 had 2,183,335 inhabitants, of whom 1,659,322 were males and 1,112,983 females. The annual increase since 1870 had averaged 1 per cent. Of the total population 882,000 depended directly on agriculture, 11,622 on industries, and 208,000 were day laborers or of no fixed occupation. The number of marriages in 1898 was 17,872; of births, 71,677; of deaths, 36,669; excess of births, 35,008. The number of emigrants, nearly all destined for the United States, was 2,340 in 1898 and the same number in 1899.

Finances.—The revenue in 1899 was 71,193,060 kroner, and expenditure 74,259,212 kroner. The estimated revenue for 1900 was 67,672,188 kroner; estimated expenditure, 69,494,095 kroner. For 1891 the revenue was estimated at 72,857,070 kroner, and expenditure at 72,178,455 kroner. Of the revenue the indirect taxes give 51,389,100 kroner, being mainly customs and excise receipts; direct taxes, 10,638,700 kroner; interest on state assets, 4,443,043 kroner; revenue from capital and funding of debt, 3,659,905 kroner; balance from lotteries, 1,090,000 kroner; balance from domains, 893,424 kroner; separate revenues, 538,317 kroner; posts and telegraphs, 222,581 kroner. The expenditures include: Military, 11,622 kroner; Ministry of State, 419 kroner; Ministry of Marine, 7,575,316 kroner; interest and management of state debt, 7,650,300 kroner; Ministry of Public Worship and Instruction, 6,344,134 kroner; Ministry of Finance, 4,784,848 kroner; pensions, civil and military, 3,549,514 kroner; Ministry of Agriculture, 3,223,082 kroner;
improvement of state property and reduction of debt, 1,802,731 kroner; civil list and appanages, 1,203,200 kroner; Ministry of Foreign Affairs, 707,956 kroner; Rigsdag and Council of State, 319,016 kroner; Iceland, 76,564 kroner. The reserve fund which is kept in order to provide funds to meet any sudden emergency amounted on March 31, 1898, to 326,361,000 kroner. The amount of the state debt on March 31, 1898, was 208,193,351 kroner. The foreign debt, most of which pays 3 per cent, amounted in 1899 to 138,512,250 kroner.

The interest on public debts after deducting productive investments is only a little over 2 kroner per capita. The invested funds amount to 73,069,424 kroner, including the railroads, valued at 228,661,820 kroner, not the domains.

The Army.—All able-bodied Danes are liable to serve in the army, the period of service being eight years in the regular army and reserve and eight years more in the extra reserve. Conscripts receive six months of training for the infantry, eight for the cavalry, four for siege artillery, and three for field artillery and engineers. A second course of training for the less intelligent and diligent recruits lasts eight months for the infantry, eleven for the cavalry, and twelve for the artillery and engineers. The peace strength of the regular army in 1898 was 829 officers and 3,945 men. The war strength amounted to 1,483 officers and 15,156 men.

The Navy.—The Danish war fleet, intended only for the defense of the coasts, contains 5 armor clads of various sizes and designs, from the Tordenskjold, torpedo ship, of 2,530 tons, carrying a 52-ton gun in an armored barbette, to the Heligoland, of 5,370 tons, armed with a 36-ton, 422-ton, and quick-firing guns. General Henrik Trolle and an uncompleted sister ship carry a pair of 26-ton guns and have 9 inches of side armor. Three old ironclads are kept in commission for coast defense. There are 5 deck-protected cruisers of various classes, 8 old gunboats, a torpedo vessel, and 13 first-class and 12 second-class torpedo boats. The navy is manned by 285 officers and 1,337 sailors, gunners, miners, mechanics, and workmen.

Commerce and Production.—The production of wheat in 1898 was 1,054,000 hectolitres; barley, 7,705,000; oats, 14,620,000; rye, 5,684,000; potatoes, 5,570,000; root, etc., 2,570,000. The live stock in 1898 comprised 1,743,414 cattle, 444,264 horses, 1,074,413 sheep, 31,505 goats, and 1,178,514 pigs. The export of horses in 1898 was 15,423 in number; of cattle, 36,066; of sheep, 2,644. There were 75 distilleries in 1898, and they produced spirits containing 3,514,000 gallons of pure alcohol. The production of taxed beer was 21,050,000 gallons; of light beer, 30,070,000 gallons. The beet sugar, produced in 7 factories, amounted to 35,080 tons. The value of fish caught in 1897 was 6,415,148 kroner.

The total value of imports in 1898 was 462,219,000 kroner; of exports, 326,361,000 kroner. The exports of domestic products were 235,525,000 kroner in value, in which sun 204,200,000 kroner represent food substances, 25,400,000 kroner raw materials, 6,500,000 kroner articles of personal and household consumption, and 2,400,000 kroner seeds, fodder, and fertilizers. The special imports were 307,600,000 kroner in value, in which sun foodstuffs, 230,000,000 kroner, personal and domestic articles to 72,800,000 kroner, fuel, 27,900,000 kroner, fodder, manure, and seeds to 56,700,000 kroner, and raw products to 122,600,000 kroner. The imports of colonial products were 36,603,000 kroner in value; beverages, 7,209,000 kroner; textile products, 35,211,000 kroner; metals and metal manufactures, 38,107,000 kroner; wood and wood manufactures, 27,619,000 kroner; coal, 30,197,000 kroner; animals, 2,445,000 kroner; pork, butter, eggs, and lard, 35,875,000 kroner; cereals, 69,281,000 kroner. The domestic exports of colonial goods were 1,013,000 kroner; beverages, 685,000 kroner; textiles, 630,000 kroner; metals and hardware, 2,369,000 kroner; wood and wood manufactures, 632,000 kroner; coal, 5,000 kroner; animals, 15,417,000 kroner; butter, eggs, lard, etc., 171,400,000 kroner; cereals, 9,394,000 kroner. In the general exports colonial goods came to 13,198,000 kroner; beverages, 3,352,000 kroner; textiles, 6,585,000 kroner; metals and hardware, 7,239,000 kroner; wood and manufactures 1,192,000 kroner; coal and coke, 5,666,000 kroner; manufac- tures, 15,437,000 kroner; butter, eggs, and pork products, 194,115,000 kroner; cereals, 17,351,000 kroner. The general commerce with different countries in 1898 was in kroner as follows:

Navigation.—The number of vessels in the foreign trade entered at Danish ports during 1898 was 32,166, with 2,884,441 tons of cargo; cleared, 32,716, with 725,657 tons of cargo. The number of coasting vessels was 3,009, and of internal, 3,932. The merchant navy on Jan. 1, 1899, consisted of 3,774 vessels, of 394,685 tons, counting all of or above 4 tons, and of the total number 510, of 225,422 tons, were steamers.

Railroads, Posts, and Telegraphs.—The railroads in 1898 had a total length of 1,568 miles, of which 1,108 miles belonged to the state.

The postal traffic for 1898 was 84,877,838 letters and post cards, and 79,613,655 newspapers, samples, etc.

The length of telegraphs in the Government network in 1898 was 3,029 miles, with 8,733 miles of wire. There were dispatched during that year 2,106,276 messages, of which 573,656 were internal, and 1,532,620 foreign, of which 1,590,276 were meteorological and official messages. The telephone lines had a length of 596 miles, with 1,476 miles of double wire.

Change of Ministry.—The Hôrring ministry took office in May, 1897, in the face of a strong adverse majority in the popular chamber, where 25 Moderate Liberals, 55 Radicals, and 2 Socialists were united in the Opposition, and only 24 Conservatives supported the Government. The ministry was appointed to carry on the old conflict which hinges on the question whether the King shall choose his advisers or whether the ministers shall represent the popular majority. The retention of the minority party in power provoked the conflict which caused a stoppage in normal constitutional government, so that from 1885 to 1894 no budget was voted in Denmark, and the Government promulgated provisional finance laws by royal decree. Baron Recutz-Thott, Hôrring’s predecessor, endeavored to win the Opposition to his standpoints in his course by this policy went further than the Conservatives of the Landsting approved, and so fell between two stools. The Hôrring ministry was a continuation of the former one, in which Hôrring held the post of Minister of the Interior, and it therefore encoun-
DISCIPLES OF CHRIST.

The report of the General Statistician to the General Missionary Convention of the Disciples gave the whole number of churches as 10,528, and of members as 1,149,092, showing gains for the year of 127 churches and 31,982 members; and the amount raised for all benevolent and educational purposes as $3,714,638, an increase of $244,043. The number of Christian Endeavor Societies was 5,001, or 10 more than in the previous year. The schools for ministers, including the Bible chairs at the University of Virginia and Ann Arbor, Mich., and the Disciples’ Divinity House, Chicago, and two other schools, returned 442 students; while more than 1,300 students were taking the Bible Extension course of the Ann Arbor school.

The annual meeting of the American Christian Missionary Convention began at Kansas City, Mo., Oct. 11, and the business of the session will be considered in a later number. The Board of Missions. This society had received during the year $106,723, and had co-operated in expenditure and labor with the work of the other societies represented in the convention. Arrangements were made with the American Christian Missionary Society for the transfer of $31,982 for the work of Evangelization and Education to its care. The American Christian Missionary Society, whose work is in the United States and Canada, met Oct. 13, 15, and 16. It had employed during the year 168 missionaries, together with 27 laborers of the Board of Negro Evangelization and Education, in 37 states and territories, and had received $31,982 for Evangelization or city missions in 16 large cities. The missionaries reported 6,028 additions to the churches, 53 churches organized, and 23 houses of worship completed during the year. The total receipts of the board had been $63,627, while the various State and district societies had raised and expended $14,305 for their respective fields, and the Woman’s Board of Missions had expended $30,000 for home missions. The aggregate results of all the three agencies showed 13,633 places helped, 202 churches organized, and 16,009 additions to the churches. The society had begun the year with a balance of $3,460 in the treasury and had spent $3,845 for the year, their receipts having been larger than ever before, had closed it with a debt of about $3,000. A committee was appointed at the meeting to confer with a like committee of the Free Baptists with reference to union.

The meeting of the Foreign Christian Missionary Society was held Oct. 19. The report represented that the past year had been the most prosperous in its history. The receipts from all sources had amounted to $130,016, showing a gain of $27,289 over those of the previous year. The offerings of the 3,067 contributing churches, as churches—$63,964 in all—showed an average of $21.50 per church, a gain of 40 per cent, over the average four years ago. Four churches had been added to the number of these supporting one missionary each. The Sunday schools had contributed $42,705, and the Christian Endeavor Societies $3,966. Twenty-two hundred and twenty-nine dollars had been received from bequests, and $30,425 on the annuity plan. Twelve magazines during the year, 2 had resigned, and 1 had united with another mission. Reports were made from missions in India, where 65 converts had been added and 1,831 children were enrolled.
in the Sunday schools and 515 in the day schools, and more than $35,000 had been sent by and through the society for the relief of sufferers by famine: Japan, where 95 converts, 706 members, 738 children in Sunday schools and 138 in day schools were returned; China, where 183 members had been added, making the present membership 563, and the missions had escaped damage from the disturbances; Turkey, where the converts numbered 63 and the present membership was 529; England, where the prevalence of the war spirit had prevented advance, and a small loss was returned; and Scandinavia, where 81 converts and a present membership of 1,200 were returned, but emigration had helped to thin the ranks. A new mission had been begun in the Sandwich Islands. Missionaries had been laboring during the year at Bolengi, on the Congo river, where friendly relations were maintained with the Baptist missions. A mission had been opened in Havana, Cuba, in December, 1899, where 11 persons had been baptized and the Sunday school had an attendance of free scholars. The report of the General Board of Church Extension began with a reference to the fact that the last three national conventions had recommended efforts to make the fund for that work $250,000 by the close of the year 1900. The fund had now actually reached $272,129, more than realizing the hope implied in the recommendation. The new receipts of the year, including interest, had been $37,119, exceeding those of the previous year by $9,454; further, $23,907 had been collected on loans, making the total receipts of the board for the year $81,116, and showing a gain of $16,830. Sixty loans, aggregating $50,025, had been closed during the year, and 56 loans, aggregating $14,700, granted but not closed. From the beginning of the fund 563 churches had been aided, and 166 churches had returned their loans in full, and 339 loans were still outstanding. The annuity fund had received $8,050 during the year, and amounted now to $96,251. Requests amounting to $8,621 had been received. Two new-named loan funds had been founded, making the whole number of such funds (of $5,000 each) 9.

The Conference of the Churches of Christ in Great Britain and Ireland met at Mount Pleasant, Liverpool, July 31. Mr. David Drummond, of Glasgow, was president. One hundred and seventy-three churches, having 12,000 members, were represented. Reports were made on missions and Sunday schools.

EAST AFRICA. The strip of coast over which the sultan of Zanzibar formerly exercised sovereign rights was leased by him to Germany, Great Britain, and Italy, and by agreements made by these three powers among themselves the Hinterland has been divided between them. German East Africa, embracing about 350,000 square miles with a population officially estimated at over 6,000,000, is divided from the Portuguese colony of Mozambique on the south by the river Rovuma, from British Central Africa on the southwest by Lake Nyasa and a line from the northern end of this lake to the southern end of Lake Tanganyika, from the Independent State of the Congo on the west by Lake Tanganyika and a conventional line drawn from its northern end, and from British East Africa on the north by a conventional boundary starting from the extremity of that line in 1° of south latitude, running due east to Victoria Nyanza, and from its eastern shore running south-eastward to the Umbe river and the sea, with a deflection that leaves Kilimanjaro in German territory. The British protectorate of East Africa extends northward from this boundary to the line agreed with Italy in 1891, which is 6° of north latitude from 35° of east longitude eastward to the Juba river, and the course of that river due west to the Indian Ocean, the boundary on the west being the agreed boundary of the Congo State, which is the water parting between the Congo and the Nile. To the northwest of the protectorate and the basin of the Nile as far north as 10° of north latitude, formerly subject to Egypt, is claimed as a British sphere of influence, and the Egyptian Soudan farther north is under an Anglo-Egyptian condominium. British East Africa includes the territory acquired from the Sultan of Zanzibar and its back country as far as the Victoria Nyanza, the country formerly administered by the British East Africa Company, having an estimated area of 270,000 square miles, with 5,000,000 inhabitants, and the native kingdom of Uganda; the conquest of which the resources of that company, having an area of about 38,000,000 square miles and 1,000,000 inhabitants; also the islands forming the sultanate of Zanzibar, which have an area of 888 square miles and 210,000 inhabitants. The northern limit separating the British from what was recognized as the Italian sphere is no longer respected since Italy resigned to Abyssinia her claim to Galland and the German rights. The boundaries separating both the British sphere and the Egyptian Soudan from Abyssinia are indefinite. The Italian sphere in East Africa is now restricted to the Gonceal coast from Cape Guardafui southward to the Juba river, which has an area of about 100,000 square miles and a population estimated at 400,000. British Somaliland extends westward from the Italian sphere along the shore of the Gulf of Aden, and is 68,000 square miles in extent. At the head of the gulf, between British Somaliland and the Italian colony of Eritrea, bounded on the west by Abyssinia proper, is Frenth Somaliland. Beyond the bounds of the Italian sphere, which has a breadth of about 150 miles, according to the treaty of peace made between Italy and Abyssinia in 1896, the British have endeavored to extend their East Africa protectorate northward by successive expeditions into the countries over which the Negus of Abyssinia holds an uncertain and precarious dominion, and the Negus, aided unofficially by the French and the Russians, has sent counter-expeditions to establish his rule southward as far as the shores of Lake Rudolf and westward toward the banks of the Nile, laying claim to wide regions that in the Anglo-Italian agreement were recognized as lying within the British and the Egyptian spheres. British military explorers have made treaties with native chiefs in the countries of Uganda, as far as the shores of Albert Nyanza, and with Somali and other tribes northeast of Uganda, and have sought commercial access to the Galla country. The total extent of the British sphere is asserted to be over 1,000,000 square miles.

Zanzibar.—The Seyyid, or Sultan, Hamud bin Mohammed bin Said, born in 1858, is still the nominal ruler of Zanzibar, though not only the political control but the civil administration has passed to the British agent and consul general, Sir Arthur H. Hardinge at present, whose sanction is necessary for any new law or decree and for

EAST AFRICA.
the expenditure of the public revenue, while the Sultan has the function of administering the existing Mohammedan laws under an English officer, the harbor works and other public improvements, and the general purposes of government. The port of Zanzibar, which has about 30,000 inhabitants, is the chief distributing point for the trade of all East Africa, and it is mostly in the hands of East Indians, whose connections are in Bombay and who for centuries have been the principal merchants of East Africa. There are about 7,000 of these Banyan traders in Zanzibar. The landowners are Arabs who have clove plantations in Pemba, and who grow rice, copra, and other products in Zanzibar and on the mainland and deal in ivory, rubber, and sometimes slaves. The imports of Zanzibar in 1898 amounted to £1,555,070 and the exports to £1,497,883. These figures include not only the foreign trade, but that between the port of Zanzibar and the other ports of the sultanate. Imports of cloves were valued at £158,507 and exports at £143,730; imports of rice at £197,160 and exports at £214,329; imports of sugar at £217,348 and exports at £212,914; imports of coal at £32,801; imports of copra at £59,315 and exports at £106,114; imports of groceries at £58,006; imports of rubber at £30,853 and exports at £34,622. The trade was divided among different countries as follows:

The year 1898 was one of great prosperity, resulting from an enormous clove crop, which reached 21,000,000 pounds of manila rice. The money trade was stimulated by the building and opening of the railroad from Mombasa. This was followed by a year of dearth caused by the Boer war and the failure of rains. Countries that usually export grain became buyers at famine rates. The clove crop was only 9,065,000 pounds—the smallest on record. The only export that increased was rice, which could not be fed, and died or were killed, the largest quantity of the hides and of goatskins going to the United States. The supply of ivory does not diminish, although the elephants are being killed off. It is kept up by the finding of old hoards and by pushing the caravans farther inland each year. Imports from the United States are gray sheetings and shirtings and kerosene. The number of vessels entered at the port of Zanzibar during 1898, excluding coasting vessels, was 183, of 286,209 tons. The unit of value is the Maria Theresa dollar, though the Indian rupee is universally current at the exchange value of 47 cents. Justice between the Sultan's subjects is administered by about 300 men under an English officer, and cases are usually brought before the British court, from which an appeal lies to the High Court of Bombay. There is an admiralty court which confronts captured slave dhows. The British court has jurisdiction over slaves freed by the British agent, but usually if a slave wants freedom he must go before the British consul. The legal slave traffic was abolished by the decree of April 6, 1897. Many were emancipated in the beginning, and then there was a pause, due mainly to the interpretation put by the British authorities on a clause of the emancipation decree which says that any person whose right to freedom may have been formally recognized is bound to show that he possesses a regular domicile and means of subsistence on pain of being declared a vagrant. Slaves who applied to the British authorities for emancipation were refused unless the owner or some other responsible person undertook to give them land and to be responsible for their future. Under this interpretation a slave could obtain his freedom in his master's shambu, running the risk of arrest for vagrancy while endeavoring to find an employer. None will employ him until he has obtained his certificate of freedom, and this the courts will not grant unless the prospective employer will appear or send a letter guaranteeing his future good behavior. The British consul has added the interpretation put upon the emancipation by the local authorities. However slow the progress of emancipation, the decree has altered the position of the slave, who is now paid for his labor the same as a freeman.
probably reach the shore of Victoria Nyanza. Parliament in 1896 voted £3,000,000, the sum that was raised, and additional contribution of £2,000,000 was voted by a large majority without any assurance that the larger sum will not be exceeded, for both parties in England are committed to the project. Instead of a light, unballasted line, with temporary timber bridges to be replaced with iron ones after the line was in operation, it was found necessary to ballast the line throughout and to build more substantial bridges than the surveyors planned who went over the country in the dry season. The expectation that the tribes would furnish the labor at the current rate of 4d. or 6d. a day was disappointed.

Out of 16,000 laborers, only 2,000 were found in the country, and 14,000 were brought from the coastal coast 14d. a day. The original estimate of cost was £3,000 a mile, and after a good part of the railroad had been laid and it was found that it had to be rebuilt this was increased to £5,500 a mile. The present estimate is £5,500. Of 580 miles, the total distance from the coast to the lake, 362 miles was opened up by 1896, at the cost of £89,000 of the close of 1000. The estimates of the future profitableness of the line have all been discarded since the estimates of cost and running expenses have been doubled.

The present traffic affords no basis for calculation, consisting as it does to a large extent in taking supplies up for the coolie workmen. The full extent of the iron track can now be seen and is provided. American locomotives are used, and have been found satisfactory. Even the water for the boilers must be brought from Mombasa, because the river water of the interior is corrosive. Jetties have been built at the terminus on the lake, and when the railroad is completed the Gov- ernor-General has the power to require the lake by boat service. The prospect of profitable private enterprises dwindles with a better knowledge of the conditions of the country. The railroad will be carried out as an imperial undertaking, with the object of consolidating British power and influence in Africa and extending civilization. Already as much land has been opened, the slave trade and cannibalism are being brought to a standstill.

Whatever chance there is of securing a paying traffic for a long time to come lies in the possibility of diverting the trade that now passes through German East Africa and the Congo State. If this can be drawn to the new railroad Mombasa will succeed the old coast line as the chief port of East Africa.

After the decree was issued abolishing the slave trade in 1897, the status of slavery in the islands of Zanzibar and Pemba Mr. Balfour pledged the Government to take similar steps on the 10-mile strip of the mainland where British sovereignty succeeded that of the Sultan of Zanzibar. On this coast strip the Arab planters have about 200,000 slaves. In the rest of the protectorate slavery is not recognized by law, and slaves within the coast strip can obtain their freedom by running away over the border. In February, 1899, Mr. Brodrick renewed Mr. Balfour's pledge, and said that the Government hoped to extend to the mainland the process carried out in the islands at the earliest opportunity; but in February, 1900, he declared that the reason the Government had not and could not interfere with the status of slavery was due to an undertaking given when the British administration was proclaimed. This undertaking was contained in a speech of Sir Lloyd Matthews, who told the House of Commons on April 1885, that all affairs connected with the faith of Islam must be conducted to the honor and benefit of religion, and all ancient customs would be allowed to continue, and the wish of the head of the new administration, the consul general at Zanzibar, who would issue all orders under the sovereignty of the Sultan, was that the work should be done in accordance with justice and law.

Uganda.—A British protectorate was declared over the kingdom of Uganda on June 19, 1894, the British East Africa Company, which attempted to establish a control over the administration of the country in 1892, having withdrawn in March, 1893, in consequence of a war with the natives, which was brought to a conclusion by Indian troops under British officers. The protectorate was extended in July, 1896, so as to take in Unyoro and other newly conquered countries to the westward of Uganda as far as the boundary of the Congo State, and as well as Usoga on the eastward of the line of King Mwanga proclaimed King of Uganda after the suppression of the rebellion, and regents were appointed to act in his name, but the actual administration was assumed wholly by the British commissioner, who has a force of 300 Indian troops and 2,000 Soudanese under Brit- ish officers to uphold his authority. The British governor and his officers live a good deal in Mukono. The seat of administration is Port Alice, on Victoria Nyanza. A chain of forts extends along the borders of Uganda, and these are garrisoned by Soudanese soldiers, who live there with their large families and cultivate land for themselves while overawing the people of Unyoro and the other subject tribes. No respect has been shown for the traditional respect for British dominion. Owing to the great extent of high table-land Uganda is believed to be as healthful for Europeans as the best parts of north or south Africa. The plateau extends 300 miles in a northwesterly direction and has an average width of 100 miles. The only markedly unhealthy parts of it are the banks of the Nile toward the eastern shores of Victoria Nyanza. The total population within the limits of the protectorate is estimated at 4,000,000, which is considerably less than the former population, civil wars, invasions, and famines having brought about a decrease in recent years. The Baganda are of all the races inhabiting this region the most capable of a high state of civilization. The Kabaka, who has already made much progress, Sir Harry H. Johnston, as special commissioner, proposes to raise a local revenue by imposing a hut tax of 4s., which should bring in an annual income of £100,000. A license tax for the privilege of shooting elephants would increase the revenue and have a good effect in restricting the slaughter of elephants, which is the principal food of the people, and they can grow it so easily that there is little incentive to industry. The soil is capable of producing many food crops and commercial products and would amply repay better cultivation. It is said to be especially suitable for growing coffee. Such trade benefits as business men can get for themselves are usually received by Indian firmers, owing to the fact that porterage in German East Africa is far cheaper and better or- ganized than on the routes through British terri- tory. When the Uganda Railroad is completed the conditions of transportation will be changed, and it is expected that British trade will rise. By an arrangement made by Sir H. H. Johnston with the regents and chiefs of the king- dom of Uganda, the King receives a stated allow- ance from the Government, and salaries are paid to the Katekiro, or Prime Minister, the Chief Justice, and the Treasurer of the King's revenues.

A new native council has been appointed by the British officials, which includes the proposed hut and gun taxes. Al- though the new taxes are heavier than those hitherto in force, the chiefs raised no serious ob-
ecuador.

German East Africa.—The German protectorate is under the administration of an imperial governor at present by Major Gen. Liebenroth, residing at Dar-es-Salam. The population consists of tribes of mixed Bantu race, with a strong admixture of Arab and Indian blood near the coast. The European residents on July 1, 1899, numbered 1,090, of whom 881 were Germans, 38 English, and 34 Greeks. There are 7 Protestant and 3 Roman Catholic missionaries from Dar-es-Salam. The military force in 1899 consisted of 176 Germans and 1,572 colored troops, besides a military police numbering 15 Germans and 482 Askaris. The Government has several experimental stations to test methods of tropical agriculture and the breeding of animals. A scientific investigation, which the British press has designated the coast the forests contain mangroves, coconut palms, baobabs, and tamarind trees, and those of the higher lands in the interior consist of the acacia, cotton tree, sycamore, banyan, and many other species. The minerals already discovered include iron, coal, malachite, and salt. Gold is known, but its value is perhaps not yet fully realized. The native planters raise coconuts, vanilla, tobacco, rubber, and cacao in the coast region, and on higher ground coffee. They have displayed great enterprise in these undertakings, looking far ahead for the profits of their investments, and some are already obtaining satisfactory results. The authorities are trying to create a thorough system of roads throughout the protectorate. Mules have been introduced as transport animals because they resist the tsetse fly better than horses or asses. The native planters have large groves of banana trees and cultivate maize and pulse. Their common domestic animal is the goat, though cattle and sheep are also raised. The city of Dar-es-Salam and Bagamoyo, with about 13,000 inhabitants each; Saadani, Pangan, and Kilwa, with 10,000; and Lindi, Mikindani, and Tanga, with 5,000. Their harbors are too shallow for large ocean steamers, and therefore the trade centers in Zanzibar, as it has for centuries. Indian merchants carry on a great part of the trade, and the importation of goods from the English possessions, and they complain of the heaviness of German taxation, not appreciating that the attention given by the German authorities to police, navigation, industry, commerce, agriculture, roads, transport, schools, and public health enables them to carry on a larger, safer, and more profitable trade than they did before the advent of the German administration. The imports and exports increase year by year. In 1898 imports amounted to 16,852,456 marks and exports to 5,955,929 marks. Cotton goods amount to nearly half the imports, foodstuffs coming next. The main exports are ivory, rubber, copra, gum copal, sponges, and other valuable products. Cargo ivory goes now to the west coast, and that from Uganda is exported through Mombasa. The German authorities take elaborate measures to counteract the effects of the climate, including substantial stone houses, hospitals, an ample medical staff, inspection of meat, covered wells, vaccination, inspection of native houses in the towns, drainage, and a study of the blackwater fever and other endemic diseases by medical investigators. Steps have been taken to check the spread of Texas fever among cattle. The smallpox has caused great mortality among the natives, and the plague and leprosy have appeared. The drought, which occurred in the winter of 1898 brought the people to the verge of famine, and their distress was prolonged by the ravages of locusts. The revenue for 1900 amounted to 8,495,000 marks, including the imperial contribution of 5,995,000 marks. A hut tax was introduced which yielded 300,000 marks during 1899. For 1901 the imperial contribution was fixed at 6,280,000 marks. The Government encourages the building of railroads by granting subsidies, which are given also to steamship companies. A railroad from Tanga, of which 10 miles were completed in 1899, is being built to Karagwe and Nomba, and plans have been made to extend it to Dar-Es-Salam. A line is being built from Dar-es-Salam to Kilossa. The coast stations are connected with one another by telegraph and with Zanzibar by a cable.

Ecuador, a republic in South America. The Constitution, amended last in 1897, vests the legislative power in the Congress, consisting of a Senate and a House of Representatives, the latter of 52 members elected for two years, and a House of Representatives containing at present 33 members, 1 for every 15,000 of population, elected likewise for two years by the suffrage of all adult male citizens who can read and write. The President is elected for four years by direct vote of the people, and the person who is elected to act as President, is elected in the same manner after an interval of two years. The President elected for the term beginning Feb. 6, 1897, is Gen. Eloy Alfaro. The Vice-President is Freila Zaldumbide. The Cabinet at the beginning of 1900 was composed as follows: President ex-officio, Vice-President Zaldumbide; Minister of the Interior, Police, Public Works, Agriculture, and Public Charity, Gomez de la Torre; Minister of Foreign Affairs and Justice, Jose Peralta; Minister of War and Marine, Gen. Nicolote Arelano; Minister of Finance, Public Instruction, and Immigration, Abelardo Monseve.

Area and Population.—The area of Ecuador is about 129,000 square miles. The Peruvian boundary has not been determined, and the treaty arranged on May 2, 1890, having been altered by the Peruvian Government in 1893, was revoked altogether by the Ecuadorian Congress in the following year. Ecuador also disputes with Colombia the territories on the left bank of the Napo. The population of the republic is 1,271,526, of whom about 100,000 are whites of Spanish descent, 300,000 are of mixed race, and the rest are Indians. Quito, the capital, has about 80,000 inhabitants; Guayaquil, the seaport, 50,000. Public education is provided free and is compulsory. There are 9 superior, 35 intermediate, and 1,088 primary schools, with 1,408 teachers and 68,380 pupils.

Finances.—The revenue for 1897 was 6,760,545 sucres, of which 5,355,629 sucres came from customs, and the expenditure was 5,690,229 sucres. The estimate of revenue for that year and for 1898 was 9,085,531 sucres, and that of expenditure 11,605,314 sucres. The same estimates were officially adopted for 1899, except that military and naval appropriations were omitted, reducing the expenditure to about 7,000,000 sucres. The foreign debt of Ecuador was inherited from the
original republic of Colombia when it split up in 1830. This debt, originally £1,524,000 in amount, has been at different times repudiated and recognized, and various compromises have been made with the bondholders. The arrangement of 1892, reducing the capital to £750,000, was revised in 1893, and in the following year the suspended bonds were taken up and exchanged for others, and arrangements were begun for one more advantageous. The bonds outstanding in 1899 amounted to £693,160. Arrangements were completed in 1904 for the redemption of these bonds by the Guayaquil andQUITO Railroad Company, which assumes the debt and agrees to redeem at par the principal, interest and sinking funds of £693,160, in 18 years, in any 10 per cent. of its own bonds to be given in exchange for part and applying to the payment of others in half-yearly drawings an extraordinary sinking fund of £12,500 per annum, while for the amortization of another part is provided the ordinary sinking fund of £5,370 per annum.

The internal debt in 1897 amounted to 7,500,000 sucre. The notes of the two banks of issue, 5,600,000 sucre on Jan. 1, 1899, are protected by gold and silver reserves considerably above the legal requirement of one third. A law of 1897 provides that half the reserve shall be in gold, and in case the total value of the coinage in the gold standard in 1901 and the redemption of 2,000,000 sucre at their nominal value. This is about two thirds of the silver coin in circulation, about the proportion that is held by the banks in their metallic reserves. The gold condor, the unit of the new coinage, will contain the same quantity of gold as the English sovereign and will exchange for 10 silver sucre.

Commerce and Production.—The chief exportable product is cacao, which is grown in the coast districts, where there are 47,200,000 trees. The export of cacao from Guayaquil in 1898 was 425,883 quintals, against 331,045 quintals in 1897. The export of coffee was 26,126 quintals in 1897 and 28,577 quintals in 1898. Of sugar 15,500 quintals were exported in 1898. The export of ivory nuts was 115,400 quintals. Other commercial products are rubber, cotton, hides, Panama hats, embroidery, and sarsaparilla. Gold is obtained by crushing at Oro and by hydraulic machinery from mountain gravel beds. Indians wash gold from the beds of many streams. Silver is mined in Cauca province, and in other parts of the country copper, lead, iron, and coal are present in quantities, and also petroleum. The total value of the imports in 1897 was 18,004,048 sucre, and the value of the exports was stated by the President to have been 31,025,382 sucre.

Navigation.—The number of vessels entered at the port of Guayaquil during 1898 was 206, of 298,805 tons; cleared, 200, of 290,855 tons. About 45 per cent. of the vessels and of the tonnage is British.

Railroads and Telegraphs.—An American company acquired the railroad from Duran, opposite Guayaquil, to Chimo, 58 miles, and signed a contract on June 14, 1897, to rebuild this section, changing it to the standard gauge, and to continue it 292 miles to Quito. The route passes through a productive region where coffee, cacao, and sugar cane are grown. Work was begun in May, 1899. The laying of the cables connecting Quito with Guayaquil and with Colombian ports and the ocean cable.

EGYPT, a principality in northern Africa, tributary to Turkey, and under the military occupation and political and financial control of Great Britain. The Government is an absolute monarchy of the Mohammedan type, though the throne passes by the European law of primogeniture, and the Khedive, or Viceroy, is advised by a Council of Ministers. The reigning Khedive is Abbas Hilmi, born July 14, 1874, who succeeded his father, Mehemet Tevfik, on Jan. 7, 1892. The British occupation has lasted since the suppression of the conspiracy of Dr. Zakariya, in 1862, and since Jan. 18, 1883, an English financial adviser has possessed the right of veto over financial measures, and has generally exercised a decisive voice in all important measures, imposing such as he and his Government consider expedient and desirable, and preventing the enactment of others that they disapprove. The first three representatives of the powers that was held at Constantinople to consider the situation caused by the bankruptcy of the Egyptian treasury dissolved when England, after the signature of a self-denying protocol, intervened single-handed in Egypt, and France, having refused to join in the intervention, was excluded from the dual control, leaving England alone in control of the finances. The assurance was given at that time that Great Britain would evaucate Egypt as soon as Egypt should be able to maintain a firm and orderly government, and this pledge was afterward reiterated by successive governments in England.

The national budgets, constituted on April 16, 1894, consisted in the beginning of 1900 of the following members: President of the Council and Minister of the Interior, Mustapha Fehmi Pasha; Minister of War and Marine, Mohammed Abani Pasha; Minister of Public Works and of Education, Hussein Paskhy Pasha; Minister of Foreign Affairs, Mahmoud Butre, and Arabi Pasha; Minister of Finance, Ahmet Mazlum Pasha; Minister of Justice, Ibrahim Fuad Pasha. The British diplomatic agent is Viscount Cromer; financial adviser, J. L. Gorst; commander in chief of the army of occupation, Major-General R. A. J. Talbot.

Area and Population.—Egypt proper has a total area of about 400,000 square miles, of which only 12,976 square miles, comprising the narrow valley of the Nile and the delta, are fertile and inhabited by a settled population. The census of June 1, 1897, makes the total population 9,734,405, of whom 9,047,905 are sedentary Egyptians, 573,974 nomads, and 112,574 foreigners. Of the Egyptian population 3,198,524, comprises, 1,172,530 males and 2,025,994 females, were above that age. Of the total number above that age 142,089 males and 3,088,673 females had no declared occupation; 2,049,258 males were employed in agriculture; 532,322 males and 21,496 females were engaged in industries and trades; 184,096 males were laborers and 61,577 clerks, and 4,901 females followed one or the other of these occupations; 4,072 males and 2,553 females depended on the liberal professions; 156,623 males and 2,218 females were engaged in religion and instruction, including 2,171 Christian ecclesiastics and Jewish rabbis, 113,438 readers of the Koran, 4,934 school-teachers, and 40,441 pupils above the age of nine, 30,000 of whom were above that age; 30,201 males and 18,487 females were above that age; 30,201 males and 18,487 females were above that age; 285,385 males were agriculturists, 35,496 males and 2,371 females were engaged in commerce and trades, 1,172 males laborers and 6,631 clerks, and also 148 females, 1,959 males and 189 females in liberal professions, 4,361 males and 2,049 females in religions or educational calling, 6,530 males in the public force, and 1,712 males and 2,683 females domestic, while 5,309 males and 30,229 females
were without stated occupation. Only 5.8 per cent. of the sedentary population over seven years of age could read and write, in lower Egypt 7.02 per cent., and in upper Egypt 4.07 per cent. Of the foreign population 74 per cent. could read and write. There were 107 Government, national, and Waif schools, with 750 teachers and 10,430 pupils. On Dec. 31, 1898, 157 mission schools, with 792 teachers and 20,080 pupils; and 9,703 other schools, with 14,590 teachers and 180,573 pupils. The European schools number 43, with 285 teachers and 4,869 pupils, besides 34 schools for girls, with 170 teachers and 3,345 pupils. In the Government schools there were 3,893,134. Jews, with a language foreign, either French or English, whichever their parents or guardians select. French is being gradually displaced by English, which was taken by 78 per cent. of the pupils in 1899, and French by only 22 per cent. The population of Egypt in 1897 was divided as to religion into 8,575,773 Muslims, 608,446 Copts, 56,349 Roman Catholics, 53,479 Greek Orthodox, 25,200 Jews, 11,894 Protestants, and 268, undeclared—Muslims thus forming 92.23 per cent., Christians 7.5 per cent., and Jews 0.26 per cent. of the total.

Finances.—The revenue in 1899 amounted to £ 11,415,000, and expenditure to £ 13,253,000. The surplus of £ 1,171,000, of which £ 4,759,000 were paid into the economies fund and £ 4,020,000 were left at the disposal of the Government. The budget estimate of revenue for 1900 was £ 12,703,000, of which the land tax produces £ 4,423,000, various direct taxes £ 137,000, the tobacco monopoly £ 1,000,000, £ 1,000,000, £ 150,000. £ 400,000, various indirect taxes £ 193,000, railroads and telegraphs £ 1,877,000, port dues £ 152,400, the post office £ 125,000, various services £ 91,000, law courts £ 562,000, military service exemption £ 100,000, various other sources £ 214,000, and £ 215,000 is taken into the reserve fund. The expected surplus for 1900 was estimated in the budget at £ 10,380,000, of which £ 4,306,018 were required for the consolidated debt, £ 301,358 for various other debts, £ 417,179 to cover the Sudan deficit, £ 605,041 for the Turkish tribute, £ 437,000 for pensions, £ 253,801 for the civil list, £ 80,000 for the annual payments of the Councils, £ 1,764,927 for the ministries, £ 298,837 for provincial administration, £ 204,743 for cost of collection, £ 599,412 for railroads and telegraphs, £ 36,165 for the ports, £ 108,150 for the post office, £ 30,327 for various services, £ 439,570 for the Egyptian army, and £ 84,925 for the army of occupation.

The foreign debt of Egypt had its inception in the issue of £ 2,922,800 sterling of bonds in 1862 by Ismail Pasha to extinguish floating obligations that he had incurred in carrying out schemes for irrigation, the reclamation of lands, the establishment of sugar factories, the extension of cotton cultivation, and various other economic improvements. Other loans followed in quick succession, as the enterprises were extended with feverish haste during the American civil war, when Egyptian cotton brought an enormous price. Reckless extravagance and official corruption combined to drain a great deal of the money that Ismail obtained, which through misuse of the public credit and the machinations of the European houses that financed the operations was only a part of the nominal amount of the obligations. The amount of the foreign loans had risen to £ 28,307,000 in 1870, and in 1873 a new loan of £ 32,800,000 was raised to pay off £ 28,000,000 of floating debt. In 1875 the Khedive became embarrassed, and a decree was issued to consolidate the debts into one of £ 91,000,000. When he was unable to pay the interest on a part of the bonds in 1877 an arrangement was made with the English and French creditors for a preference loan of £ 17,000,000 paying 5 per cent. per annum and a unified loan of £ 59,000,000 paying 7 per cent. in lieu of the outstanding bonds. The separate loans secured on the Khedive's Daira estates were converted at the time into the Daira Sanieh debt of £ 28,815,430, paying 5 per cent. In 1878 bonds were entered for 5 per cent. into the khedivial estates as security, and a commission was appointed to administer the estates. In the following year the dual control of the public finances by France and Great Britain was instituted. The Comptroller General announced in 1850 that Egypt could not meet the obligations in full, after examination by a commission appointed by the great powers, and on the recommendation of that commission, a liquidation law was promulgated reducing the interest of the unified debt to 4 per cent., the amount of this debt being in preference debt to £ 22,743,800, and that of the Daira Sanieh debt, the interest of which was fixed at 4 per cent., to £ 29,512,800. In 1885 a new loan of £ 9,424,000 was contracted at 4 per cent. interest for irrigation works and the commutation of pensions. The Daira Sanieh debt was converted at this time into new bonds for £ 7,299,360, paying 4 per cent. In 1893 the domain bonds were converted into new ones for £ 28,500,000, paying 4 per cent. In the beginning of 1899 the guaranteed 3-per-cent. loan amounted to £ 5,588,100, the annual charge for interest and sinking fund being £ 2,557,473; privileged 3-per-cent. bonds, £ 29,305,580, with an annual charge of £ 1,023,775; unified 4-per-cent. bonds, £ 59,971,900, with an annual charge of £ 2,525,378; Daira Sanieh 4-per-cent. bonds, £ 29,971,900, with an annual charge of £ 2,529,378; tied loans, £ 599,412, with an annual charge of £ 149,124; total debt, £ 103,444,580, of which £ 7,048,000 was held by the commissioners of the debt; total annual charge, £ 3,330,250. On Dec. 31, 1899, the total amount of the debt was £ 103,049,000, including £ 7,394,000 held by the commissioners of the debt, leaving £ 29,555,000 in the hands of the bondholders. The interest charge was £ 3,862,000. Reserve funds were established in 1887 which amounted on Jan. 1, 1899, to £ 7,111,032, made up of a fund from economies made by conversions amounting to £ 3,617,000 and a general reserve fund of £ 3,893,134. A special reserve fund was depleted by extraordinary expenditure entailed by the reconquest of the Sudan, and at the beginning of 1899 showed a deficit of £ 92,439, but on Jan. 1, 1900, there was a credit balance of £ 2,243,000. The general fund on Jan. 1, 1900, stood at £ 3,523,000, but of this £ 2,182,000 were pledged to expenditure of various descriptions, leaving an unpledged balance of £ 1,341,000.

The Army.—The Egyptian army, trained and commanded by about 100 British officers, with Col. Sir Reginald Wingate in supreme command with the title of sirdar, has a total strength of 18,395 men, with 1,610 horses and mules, 1,700 camels,
and 150 field guns. The British army of occupation, which has remained in Egypt since 1882, has a present strength of 5,553 men.

**Commerce and Production.** The production of cotton in 1899 was 5,888,816 kantars of 99 pounds, compared with 6,343,128 kantars in 1898 and 5,879,750 kantars in 1897. The area under cotton in 1899 was 606,000 acres, under sugar cane, 67,139 acres; under wheat, 1,262,000 acres; under maize, 1,592,000 acres. The total value of merchandise imports in 1899 was £ E. 11,216,405, against £ E. 11,033,219 in 1898; value of exports, £ E. 15,351,908, against £ E. 11,803,179. The specie imports were £ E. 4,615,917 in 1899, against £ E. 2,730,116 in 1898; exports of specie, £ E. 1,502,507, against £ E. 1,891,513. The imports of animals and animal food products in 1899 were £ E. 389,243, against £ E. 389,011 in 1898; exports, £ E. 69,556, against £ E. 59,585; imports of skins and leather manufactures, £ E. 165,588, against £ E. 175,287; exports, £ E. 68,066, against £ E. 79,005; imports of other animal products, £ E. 64,953, against £ E. 66,763; exports, £ E. 40,065, against £ E. 38,797; imports of cereals and vegetables, £ E. 1,021,507, against £ E. 1,273,212; exports, £ E. 2,670,098, against £ E. 2,422,449; imports of provisions and drugs, £ E. 321,481, against £ E. 284,021; exports, £ E. 1,500,288, against £ E. 1,280,698; imports of drugs and oil, £ E. 626,864, against £ E. 649,699; exports, £ E. 15,397, against £ E. 21,104; imports of rags, paper, and books, £ E. 164,934, against £ E. 145,074; exports, £ E. 15,521, against £ E. 17,864; imports of coal, wood, and manufactures of wood, £ E. 1,771,750, against £ E. 1,178,933; exports, £ E. 1,371,751, against £ E. 2,215,399; imports of glass, stone, lime, etc., £ E. 331,018, against £ E. 240,031; exports, £ E. 1,388, against £ E. 1,250; imports of dyestuffs, etc., £ E. 240,039, against £ E. 254,247; exports, £ E. 18,443, against £ E. 16,533; imports of chemicals, £ E. 267,433, against £ E. 224,552; exports, £ E. 19,287, against £ E. 18,400; imports of textiles, mainly cotton, £ E. 3,332,213, against £ E. 3,320,974; exports, £ E. 11,669,377, against £ E. 8,512,967; imports of metals and metal manufactures, £ E. 1,607,014, against £ E. 1,423,760; exports, £ E. 18,159, against £ E. 13,975; imports of tobacco, £ E. 532,984, against £ E. 339,629; imports of miscellaneous manufactures, £ E. 396,355, against £ E. 392,839; exports, £ E. 15,213, against £ E. 24,824. Of the total imports in 1899 the value of £ E. 9,945,163 and of the exports £ E. 15,068,722, passed through the port of Alexandria.

The distribution of the commerce is shown in the table below.

![Table showing the distribution of commerce in Egypt](image)

A national bank that was established in 1898 made advances as an experitiment to fellahin of a number of villages at 10 per cent. per annum to enable them to pay money lenders who charge 40 per cent. or more. The result was satisfactory, and all the loans were repaid before the end of the year. The incidence of the land tax has been very unequal, but the Government decided to postpone, with the consent of the commercial, the question of an improvement in the arrangement of the land tax for 1899. British officials become familiar with local conditions. The first steps toward equalization were taken in 1895, and since then substantial progress has been made toward a reassessment. Progress has been made also in reforming the administration of the Wafks, or charitable and religious trusts, providing for a code of laws in no infringement of the law of Islam. In 1899 there was an unprecedentedly low Nile, and while this caused a shortage of crops it facilitated the construction of the Nile reservoirs, which were pushed on with great rapidity. Drainage works that have been carried out in lower Egypt have been successful. The great dam at Assouan, 130 feet high and 80 feet broad at bottom, for the storage of the superfluous water that comes down during the five winter months, is expected to raise the water level at the first cataract 50 feet above the present low-water level and to fill a reservoir extending 140 miles southward into Nubia. About 12,000 laborers were employed on the dam in 1899. The imports of iron and steel increased and has a length of 11 mile. The water will be drawn out of the reservoir through 100 steel sluice gates, each 22 feet high and 7 feet wide.

**Navigation.** The number of vessels entered at the port of Alexandria during 1898 was 2,454, of 2,555,396 tons; cleared, 2,428, of 2,559,876 tons. Of the total vessels be entered during 1899, 2,454, of 2,555,396 tons, and of those cleared 734, of 1,117,161 tons, were British; French vessels entered numbered 125, of 263,778 tons, and 126 French vessels, of 265,314 tons, were cleared; 153 Italian vessels, of 281,373 tons, were entered and 153, of 279,426 tons, cleared; 139 Austrian vessels, of 254,763 tons, were entered and 140, of 261,125 tons, cleared; 847 Turkish vessels, of 151,461 tons, were entered and 95, of 188,971 tons, cleared; of Greek vessels 163, of 66,781 tons, were entered and 155, of 63,755 tons, were cleared; of Swedish and Norwegian vessels 36, of 59,221 tons, were entered and 34, of 57,800 tons, were cleared; of German vessels 27, of 32,230 tons, were entered and 27, of 54,745 tons, cleared; of Egyptian vessels 82 of 83,981 tons, were entered and 79, of 82,566 tons, were cleared; belonging to other countries were 58 vessels, of 43,881 tons, entered and 58, of 41,508 tons, cleared. The number of steamers entered in 1898 was 1,522; in 1899 the number was 1,542. Since the completion of docks, wharves, and quays and the opening in 1894 of a new pass 300 feet wide and 30
feet deep, steamers and other vessels of deep draught that formerly were unable to enter the port in rough weather can run in at all times and can load and unload without lightering.

Railroads, Posts, and Telegraphs.—The railroads belonging to the state system that were completed and in operation on Jan. 1, 1899, were 1,166 miles long, belonging to ten companies, and lines belonging to companies, making a total length of 1,238 miles, of which 825 miles were in the delta and 413 miles in upper Egypt. The Government had in process of construction 290 miles, and companies had 64 miles. Besides these there were 390 miles of agricultural railroads in the Delta, 738 in the Beauce; besides the 75,000 military roads in the Soudan, included. Concessions had been granted for 230 miles of narrow-gauge railroads in the delta. During 1899 there were 209 miles of new standard-gauge railroads opened to traffic, making 430 miles constructed since 1897. The construction of agricultural railroads progresses steadily, and on Jan. 1, 1900, there were 1,445 miles open, 7,530 cars, bridge work, and other material have recently been obtained largely from the United States, where the manufacturers were able to furnish rolling stock made after their own standard designs in less time and at lower prices than British manufacturers could tender. The railroads in 1898 on 1,214 miles of Suez-Cana, 2,969 miles of standard-gauge and 2,786,780 tons of freight; gross receipts, £ E. 2,031,809; working expenses, £ E. 917,536; net receipts, £ E. 1,114,033, equal to 55 per cent. of the gross receipts.

The number of letters and postal cards carried in the mails during 1898 was 14,733,000, of which 11,152,000 were domestic and 3,581,000 foreign; there are 435 daily newspapers, 8,940,000, of which 7,100,000 were and 940,000 foreign; parcels, 563,800, of which 274,000 were domestic and 280,000 foreign; postal orders and remittances, 563,500, amounting to £ E. 16,437,000.

The telegraph lines are the property of the Government. On Jan. 1, 1899, they had a total length of 2,105 miles, with 9,346 miles of wire. The number of messages in 1898 was 2,743,788.

The Suez Canal.—The number of vessels that passed through the Suez Canal during 1898 was 3,503, of 12,962,632 tons, of which 2,295, of 8,601,403 tons, were British; 356, of 1,333,101 tons, German; 94, of 260,478 tons, Dutch; 85, of 300,251 tons, Austro-Hungarian; 46, of 261,602 tons, Japanese; 48, of 243,381 tons, Russian; 49, of 232,358 tons, Spanish; 74, of 208,418 tons, Italian; 47, of 109,709 tons, Norwegian; 54, of 83,541 tons, Turkish; 8, of 32,288 tons, Danish; 10, of 15,705 tons, Egyptian; 4, of 1,018 tons, Chinese; 4, of 3,102 tons, American; 2, of 1,941 tons, Greek; 2, of 7,703 tons, Romanian; 2, of 1,021 tons, Swedish; 3, of 606 tons, Portuguese; and 1, of 451 tons, Argentinean. The receipts for the year were £ E. 4,411,791. The number of passengers taken through was 219,671. The share and loan capital of the company amounts to 401,100,827 francs, including about 90,000,000 francs preference. There are, besides 100,000 founders' shares which receive dividends when the profits exceed a certain percentage. The net profits in 1898 were 48,589,818 francs, of which 46,615,028 francs were divided among shareholders. The amount that has been expended on improvements to the canal out of revenues was 15,174,000 francs unfunded. The receipts of 1899 exceeded those of 1898 by 6,500,000 francs. The dividend was 108 francs a share instead of 97 francs. The number of vessels that passed through in 1899 was 3,503, of which 2,310 were British, 387 German, 226 French, 206 Dutch, 101 Austrian, 69 Italian, 65 Japanese, 61 Norwegian and Swedish, 55 Russian, 39 Spanish, 26 American, 26 Turkish, 21 Danish, 5 Belgian, 4 Greek, 3 Portuguese, 2 Egyptian, and 1 Siamese. The passengers numbered 221,332, of whom about 88,000 were civilians and 24,000 pilgrims or emigrants.

Political Events.—The British project of abolishing the mixed tribunals and replacing them with an Egyptian court was abandoned when the other powers showed no disposition to relinquish their treaty rights. Lord Cromer lays down as the conditions on which these courts may continue to exercise their functions free from the apprehension that their existence is threatened, first, that the judges shall adhere strictly, not merely to the text, but to the spirit of the law which regulates their attributes and not encroach on functions of the Government; second, that everything that is possible shall be done to avoid political lawsuits. The attempt that was made in the direction of 146 Mohammedan law was abandoned, for the time on account of the resistance of the Mufti, who was removed, however, and another one appointed who may prove more amenable to British influence. The Mehemeh Sheriah, or courts which deal with questions of personal status, such as marriage, divorce, and succession, were considered to be in an unsatisfactory condition. The particular reform that was proposed was that two Mohammedan members of the native Court of Appeals should be added to the appellate court over which the Grand Cadi presides. The judges of the secular courts are lawyers by profession, and only exceptionally are cases with which law, and the matter being submitted to the Legislative Council the Mufti, whose special functions consist in interpreting the sacred law, declared himself strongly averse to the proposed change on the ground that it constituted an infraction of the immutable law of Islam. The Mufti having been dismissed, a commission was appointed under the presidency of the Minister of Justice to consider anew the whole question of the reform of the Mehemehs. The archives of the religious courts, in which deeds and titles dating back hundreds of years in many cases were in utter confusion, were set in order with the aid of the Ministry of Justice. The number of cases which the courts were unable to dispose of in the year 1898 increased over the number in 1898 by 20 per cent., while crime continued to diminish. The experiment of intrusting the decision of petty cases to the village authorities was successful. More slave dealers and kidnappers were prosecuted and convicted in 1899 than during the five previous years.

The Soudan.—The death of the Khalifa Abdullahi on Nov. 24, 1899, was followed by the opening to Europeans of the Soudan after an embargo that lasted sixteen years. Previously the White Nile country, south of Omdurman, was in a state of war. The Khalifa with his family and followers, numbering about 10,000, roamed on the left side of the river, out of the range of the patrolling gunboats which kept supplies from being brought across the White Nile or the Blue Nile. After the dervish camp was finally captured and the Khalifa killed, the relations of the Mahdi and the principal emirs who survived were sent down to Egypt and imprisoned at Aswán. The Khalifa's successor was freely enlisted in the Egyptian army. The Arabs were made to work in cultivating land or rebuilding Omdurman, or were taken on Major Peake's expedition to cut the Sudd and open the whole course of the White Nile to
navigation. A general disarmament was carried out as thoroughly as possible, and only the Egyptian army was at large in the Ghezireh between the Blue and White Niles and an emir with 3,000 warriors in the Bahr el Ghazal. When Lord Kitchener was summoned to South Africa Sir Reginald Wingate succeeded him as sirdar and as Governor General of the Soudan, the post which at present goes with the supreme command of the Anglo-Egyptian army. The Anglo-Egyptian rule was strictly and severely military. The arrest of decay and the restoration of productive activity in this country made little progress because the first aim of the new authorities was to impress the inhabitants with their power, and they had too little money for military purposes. The whole of the trade as well as the seat of government to the old capital. The Khalifa's city was healthier, because its site is higher and drier, but the prestige of England and Egyptian sentiment seemed to demand a return to the place in which Gordon died and from which Egypt ruled, and the destruction of the Mahdist city in retaliation for the destruction of the Egyptian city by the Mahdists. A consideration of great weight was also the fact that Khartoum could be better fortified. The city was laid out on a metropolitan scale, 3 miles long along the river front, and a mile and a half deep. The Gordon Memorial College was erected at the southeast end and the new palace of the Governor General in the center, on the exact site of Gordon's palace. Further north was the site of the Government offices and the supply and ordnance stores. A large hotel was built with British capital. Near the center was placed the bazaar, surrounded by shops, and a covered market was constructed on Indian models. A mosque and an English church were built at Government expense. The government revenue was increasing, reaching from the White to the Blue Nile, is a line of barracks and redoubts. The broad streets have tramways running through them and are illuminated by electric lights. In order to compel the inhabitants of Omdurman to remove to Khartoum a law was made requiring owners of lots to erect buildings one to two years, not within two years, of forfeit them of their land. Most of the land of the restored capital, which no person valued while it remained desert, was bought up by wealthy Greek speculators. Whether the people are to be forcibly removed if they eling to their present abodes and Omdurman razed to the ground, has not been decided. Almost all the land at present available for any purpose in the Soudan is the forced labor of soldiers, prisoners of war, and convicts employed by the Government.

The immense forest stretching from Gallabat to the Beni Shangul and from the Blue Nile to the Abyssinian hills is the home of vast herds of domestic animals. The lands are fine grounds for steers, buffaloes, antelopes, and many species of antelope. The Sobat region east of Fashoda and most of the country south of El Duem is also full of game, and is more accessible. Indeed, the whole region round the upper waters of the Blue Nile, as well as the White Nile and its tributaries beginning about 400 miles from the source, is the most productive part of Africa for hunters of big game. The Government has issued regulations forbidding the killing of zebras and ostriches, and allowing only a limited number of the elephants, buffaloes, hippopotamuses, rhinoceroses, and giraffes to be killed, no limiting being placed on the killing of warthogs or antelopes. The privilege of killing a giraffe must be paid and a separate fee for every animal killed, ranging from £24 for an elephant down. For a lower fee one may shoot warthogs and antelopes, and all animals on which no restrictions are placed. Natives require no license except for buffaloes, elephants, and the other big game. The Governor General has reserved the right to declare a game reserve and to grant leases of the sporting rights over the whole or any part of such reserve.

Immediately after the opening of the Soudan missionaries rushed up to Omdurman—English Church missionaries, American missionaries, a Catholic mission—and the missionary who formerly presided over the Austrian mission at Khartoum. Other Catholic and Protestant missionaries followed. The military authorities did not welcome them, and would not let them settle
except on the condition that they would confine their religious ministrations to persons of their own faith and to the conversion of pagans, and that they would not be armed. Gen. Kitchener proposed to send them on to Fashoda, where they could proselyze the pagan negroes of the equatorial provinces freely, but they declined to go. In Omdurman and Khar-toum they were allowed to establish schools and hospitals, and the Roman Catholics to minister to the native Christians who were left by the Mahdist conquest, and to found an establishment for missionary expeditions to the negro countries of the south.

El Obeid was occupied by an Anglo-Egyptian force under Col. Mahon on Dec. 17, 1899, the town having been deserted and left in ruins by the Mahdists. The residents and several hundred Baggaras were allowed to go, and the Egyptians gave general satisfaction to the people. The Government of the Soudan established friendly relations with the Sheikh Ali Dinar, grandson of the Sultan Hussein, who was left to rule Darfour. From the moment of the Khalifa's crushing defeat at Omdurman the desert and Kor-dofan were won by his troops, and the Baggaras, who still adhered to the cause of their chief, threw in their lot with the Government, though they rendered no assistance to the Government forces in the subsequent operations against the Khalifa. Omdurman and the Ghezireh were found to be full of Arabs belonging to Kor-dofan, and they were despatched and brought away from their homes by the Khalifa and were left without any regular means of subsistence. It was impossible in the existing state of insecurity for them to return to their homes, and their numbers were constantly augmented by the arrival of deserters from the Khalifa's army, who had nowhere to go and in districts where lands were far enough north to be safe returned gradually to their own districts, but their places were taken by inhabitants of the districts that were raided by the Khalifa's army. Thus the situation remained practically unchanged until the overthrow and death of the Khalifa. After that the main task of the Government was to send out from the new capital of the government-producing region and to rid the Ghezireh of its useless stranger population. Many thousands belonging to tribes of Kordofan and Darfour could not be got rid of until the road to Bara and El Obeid was thoroughly opened up and the water supply improved. The Nubas and other tribes of Ethiopia and of the desert and of the Sudanese were now to be rendered the Government active assistance in the final operations against the dervishes, but their efforts did not go beyond petty raids. After the death of the Khalifa they sent deputations to the Government and expressed their willingness to obey its commands. The Arabs had a large share in the defeat of any opposition to their possession after the final defeat of the Khalifa. Some of these firearms were issued by the Government to be used as a means of defense against the dervishes; others were procured from the dervishes themselves. After the overthrow of the Khalifa these arms were often employed in raids by one tribe upon another. The first step the Government took was to call in all the firearms, and from the Bayuda tribe and the riverain population south of Berber a large number was recovered. In those districts raiding quickly ceased, and wherever the Government was able to extend its direct administration the same results followed.

In the remote districts, in which the people still retained their arms, the intertribal raids went on without abatement. Much time must elapse before prosperity can return to the tribes of the Soudan. The population wasted away under der- vish rule. The important Kabbabish and Shukka tribes suffered much from raids by the Baggaras. When the Khalifa was overthrown the Government treated them as criminals, and from what of once they were. The Baggaras suffered almost as much. Instead of being possessors of large herds of cattle, many of them, even of their chief men, were obliged to pick up a precarious living in the Ghezireh or in Gadarif by working for hire or turning their hands to occupations that were new to them. The budget estimate of revenue from the Soudan for 1899 was £ E. 51,500, of which £ E. 38,500 came from the land tax and other taxes collected in the mudiriehs, £ E. 5,000 from the post office, £ E. 3,000 from telegraphs, and £ E. 5,000 from railroads. The expenses were estimated at £ E. 185,500, of which £ E. 129,000 was spent for public buildings, £ E. 3,000 for the post office, £ E. 4,500 for telegraphs, and £ E. 55,000 for railroads. The deficit was made good by the Egyptian Government. The problem of taxation in the Soudan is a serious one for the Government, which feels bound to apply rigorous methods of collection in the absence of any effective system of bookkeeping. If the dervishes, if they enacted heavy taxes in prosperous seasons, did not attempt to collect taxes when the crops failed. Slavery is another problem hard to deal with. The frontier between the Soudan and the Italian colony of Erythrea was delimited in 1899 from Ras Kasar, on the Red Sea, to Sabderat, on the Nile. In 1899 the new frontier was in a completely quiet state. After the death of the Khalifa, however, the question of determining the sudd. Osman Digna was captured near Tokar on Jan. 19 with the help of the local sheikhs. Darfour has not been reconquered, and there the influence of the Senussi Mahdi has succeeded that of the Khalifa. The Senussi sect flourishes within the French sphere and is strongest in Toumel and Darfour for new British arms. Ammunition from Europe by way of Benghzaz, in Tripoli, and their Mahdi threatened to declare a jihad against England and to invade Egypt, but from his oasis in the desert south of Krafa it was impossible for him to carry out his threat, the absence of roads and water forbidding the movement of his troops. It was only after the decimation of the black troops in the Soudan against their British commanders was planned after the departure of Gen. Kitchener by some of the junior Egyptian officers, whose disaffection was partly the result of grievances about pay. Without incitement from above or sympathy from their fellow-officers they failed of their purpose and were deserted by the troops whom they misled.

EXPLOSIVES. In the Annual Cyclopaedia for 1885 (page 342) the subject of explosives was treated quite fully, and descriptions of gunpowder, gun cotton, nitroglycerin, dynamite, explosive gelatin, potassium chlorate powders, picric acid compounds, and liquid explosives, with their many varieties, were given. Since that time experts of different nations, in their efforts to surpass one
EXPLOSIVES.

In 1873 Dr. Hermann Sprengel outlined a series of explosives, among which was a class consisting of two bodies—one a liquid, the other a solid—which were harmless by themselves, but when mixed formed a substance that was explosive if detonation was produced. The safety with which such preparations could be transported to the place of action was an important consideration. This announcement led to the patenting of similar compounds in France by Turpin, under the name of pnicudite, and in Germany by Hellhoff, under the name of hellhoffite. These attracted considerable attention. The history in connection with the controversy as to their discovery, priority for which was naturally claimed by Sprengel. The hellhoffite consists of 47 parts of meta-dinitrobenzene and 53 parts of nitric acid with a specific gravity of 1.50. It requires a powerful detonator to explode it, and its intensity is greater than nitroglycerin. The difficulties of using an explosive like this in liquid form for blasting have prevented its application in that direction to any great extent, but its employment by Gruson for use in shells has given it some importance.

Jorite is an important high explosive invented by J. E. Bomer in 1892, and sold at prices exceeding those of picric acid. The explosive consists of 8 to 10 per cent. of nitronaphthalenes, 16 to 30 per cent. of nitrophenol, and 76 to 84 per cent. of sodium nitrate. It can not be exploded by friction, shock, exposure, fire, lightning, or electric sparks, and it is only by using such detonators as are employed with dynamite that it can be exploded. It is not deliquescent, and can be used at all normal temperatures. When exploded it does not generate noxious gases, and therefore it can be satisfactorily used in underground work. It is not dangerous to make, and its properties seem to indicate that it is most valuable.

The explosive character of picric acid has long been known, and it has been used as an ingredient of several explosives, as was shown in the Annual Cyclopaedia for 1885, page 346; but in 1886 Eugène Turpin announced the possibility of detonating picric acid by itself. At first Turpin mixed the picric acid with cotton and dissolved the mixture in ether, which was allowed to dry. This explosive became the property of the French Government, and received the name melinite. Later Turpin showed that molten picric acid by itself explodes much more violently than when in combination. The ordinance departments of many European nations at once began experimenting with picric acid, and it has resulted in the production of melinite in France, lyddite in England, and ecrasite in Austria, each of which is slightly different from the others but represents the working out of an identical problem by three different individuals. The processes of manufacture are Government secrets, and therefore they can only be surmised. Of lyddite it is said that the explosive is "simply picric acid brought into a dense state by fusion," while in the case of melinite it is said that the picric acid is "melted at a carefully regulated temperature in an iron or earthenware vessel standing in an oil bath." In both cases picric acid is used as a filler, and is cast direct from the melting pot into the projectiles, although in lyddite the shells are said to be coated inside with "a special kind of varnish." For melinite a primer of gun cotton is used, whereas for lyddite the primer is said to be a mixture of 2 parts ammonium picrate and 3 parts sodium nitrate. It was found that picric salts of an unstable nature were formed in the projectile in consequence of the contact of the picric acid with the metal walls of the shell, and experiments were made for the purpose of finding more stable compounds of that acid. Picrie acid is chemically trinitrophenol, and is derived from phenol. It was found that the trinitrophenol, derived from cotton, possessed the desired qualities, and that compound has been used similarly to picrie acid for filling shells and torpedoes. In France, where it has been largely employed for that purpose, it is called cresplite.

In Austria the ammonium salt of trinitrocresol is used under the name of cerasite. It is unaffected by moisture or differences of temperature, and its effect is said to be about double that of dynamite. These explosives, which are necessarily described together, are remarkable for their stability, remaining permanent under the influence of both cold and heat, and therefore they can be safely transported. Powders tarry in exposure, but the effects of their influence is six or seven times as great as those of black powder on compact rock or masonry, and one and a half to two times as great in earth. A shell filled with one of these picrie compounds will rend the most solid and resisting plates of steel. The use of lyddite in South Africa caused some criticism in consequence of the demolition resulting from the decomposition of the picrie compound, which suffocated those who came in contact with them; but the latest announcements from England show that lyddite shells are to be supplied to the guns in the forts along the sea front of England, in place of shrapnel shells, which have been discontinued. The idea of the manufacture of smokeless explosive powder is the successful manufacture and employment of smokeless powders. The history of their development was given in Charles E. Munroe's presidential address before the Washington section of the American Chemical Society in 1896. He showed that the earliest experiments that were made with smokeless powders tarry in exposure, but the next discovered mercuric fulminate. Six years later Grindel carried on a series of experiments for the purpose of ascertaining the possibility of substituting ammonium nitrate for potassium nitrate as the oxidizing agent in gunpowder mixtures. Notwithstanding the deliquescent character of the ammonium nitrate, there have been on the market, as, for example, the amide powder patented by F. Gaens in 1885, which consisted of ammonium nitrate 80 parts, potassium nitrate 101 parts, and carcoal 40 parts. Subsequent to the discovery of gun cotton in 1845 experiments were made in Germany, France, and England, and also in Washington, with the new explosive; but the results were unsatisfactory; especially so as the powder was unstable and rapidly decomposed when stored. Capt. von Lenz, of the Austrian army, persisted in experimenting with it, and he has the credit of making the first attempt to use as a propelling agent an explosive that burns without developing smoke. This was in 1862, but an unfortunate fire in the gun-cotton factory at Hirtenberg led to the abandonment of its use in Austria. In England, Abel continued studying gun cotton, and was successful in obtaining pulped, purified gun cotton, which he compressed into such forms as were desirable, with which the charge was made. He then used the mixture with field guns in 1867 and 1868. The next advances were the inventions, in 1882, of the E. C. powder by Reid and Johnson, and of the J. B. powder by Judson and Borland, both of which contain gun cotton in an unaltered state. But it was
not until the invention of Pouder B, in France, by Vielle in 1886, and that of ballistite by Nobel two years later, that the present smokeless-powder industry began. According to Gutman, the smokeless powders at present known can be divided broadly into three classes:

1. Powders in which gun cotton, either the so-called insoluble or the soluble variety, alone, is used, which by the aid of a solvent has been converted into a hornlike substance and then is formed into flakes or cords.

2. Powders in which a mixture of nitroglycerin and either dinitro- or trinitrocellulose is transformed into a similar hornlike substance, either with or without the aid of a solvent, and then contains nitro derivatives of the aromatic hydrocarbons, either by themselves or in connection with nitrocellulose.

J. C. powder, patented in 1882 by Reid and Johnson, is a gunpowder made by revolving pulped nitrocellulose and nitrates (barium, sodium, and potassium) in barrels, drying the grains, moistening with a mixture of alcohol, a rubberlike substance, and durine to produce a reddish-brown color. It has the following composition: Nitro-cotton, 53.57; gun cotton, 1.86; barium nitrate, 34.26; potassium nitrate, 1.48; sodium nitrate, 3.67; volatile matters, 1.17; cellulose, 3.12; and anurine, 0.55. This powder is used in Great Britain and in the British colonial possessions.

The B. powder, invented by Judson and Borland in 1885, was prepared by mixing nitro-cotton with barium nitrate, with or without charcoal, and granulated in a revolving drum while water was admitted in a fine spray. The grains were dried and then moistened with a solution of one part of nitrocellulose and two parts of alcohol and acetone, which hardened them and made them more slowly inflammable. It had a silver-gray color, and was used as a sporting powder.

In the class of gun-cotton powders, including both the flake variety and the granulated powder, is the original smokeless powder invented by Vielle in 1886, which consisted of picric acid and gun cotton, but later the picric acid was omitted and Pouder B was made of gun cotton alone. The flake powders consist of gun cotton mixed with barium nitrate and potassium nitrate as oxidants, and sodium carbonate as a neutralizer. These ingredients are condensed and hardened to a celluloidlike mass by means of a solvent like ether, acetone, or nitrocellulose. The flakes are then cut by cutting machines. The exact composition of the more important flake powders is as follows: Pouder B, nitro-cotton 32.86, gun cotton 66, and volatile substances 1.14; Pouder B. N., nitro-cotton 31.38, gun cotton 49.89, barium nitrate 17.92, potassium nitrate 3.43, sodium carbonate 2.87; Pouder C. 44.58; Wende's powder nitro-cotton 48.15, gun cotton 30.73, volatile matter 8.22, charcoal 12.12, and humus 0.77. The Troisdorf and Van Förster powders are of analogous composition.

The foregoing are military powders, while for sporting a granulated powder is made in Wales-dorf, Hauy, by mixing the nitrocellulose and acetic ether and treating these ingredients in a kneading machine to effect complete solution. Water is then added and the kneading continued while steam is introduced, which results in the gelatin breaking up into fine grains, which are then freed from water by pressing, centrifugalizing, etc. The last result is a nitrocellulose powder invented by Liett, John B. Bernadou and used by the United States navy. It is made by steeping cellulose in nitric acid, and the resulting nitrocellulose is brought into the colloid condition by treating with ether-alcohol and acetone. The solvent varies according to the special powder desired, as those made with the ether-alcohol colloid show a tendency to produce some smoke and deposit soot, while on the other hand the acetone colloid develops irregular pressures. In some cases certain oxidizing agents, as nitrates of metallic bases, are added to increase the velocity of the explosive, and when the action of the explosive is too violent, a substance rich in carbon, called a deterrer, may be added.

The powders made from nitroglycerin and nitrocellulose include ballistite, cordite, and amonite. Ballistite was invented by Alfred Nobel in 1888, and as made in England consists of 40 per cent. of the cotton dissolved in 60 per cent. of nitroglycerin, with 1 or 2 per cent. of aniline added to the mixture as a neutralizing agent to insure stability. This mixture, when stirred up by compressed air in warm water, gelatinizes, and the solution may be completed by pressing out the water and working in a grinder. The resulting mixture is rubberlike in texture, like the nitrocellulose, and the ballistite, which may then be cut into flakes by machines. In Italy the sheets are forced through spaghetti machines, and the cord-shaped explosive is then called flite. According to analysis, ballistite consists of nitro-cotton 44.58, sodium carbonate 2.44, and nitroglycerin 32.99.

The Pouder, whitewashed in 1889 by Sir Frederick Abel and Prof. James Dewar, has the following composition: Nitroglycerin 58 parts, gun cotton 37 parts, with vaselin 5 parts (used as a restraints), dissolved in 19.2 parts of acetone. The nitroglycerin is mixed by hand with the gun cotton and then put into a kneading machine and kneaded with acetone. The latter mixes with the nitroglycerin and gun cotton and dissolves them both. When the mixture becomes uniform it is washed in cold water, and the paste is then dried to an elastic brown rubberlike mass, which is cut into suitable length for cartridges.

Amonite was patented by Curtis and André, and is said to consist of 44 parts of trinitrocotton, 12 parts dinitrocotton, and 40 parts nitroglycerin. This mixture is formed into grains, which are then treated with a solvent consisting of sulphuric ether with a little alcohol, which dissolves the dinitrocotton and forms a kind of lacquer, which makes the two cotton fibers together and hardens the surface.

The principal explosive powders that consist of nitrocellulose and nitro derivatives of aromatic hydrocarbons are the following:

**Iodmurete.** In 1889 Dr. Charles E. Munroe, chemist at the United States torpedo station in Newport, R. I., "determined to attempt to produce a powder that should consist of a single substance in a state of chemical purity." He began by purifying the dried pulped military gun cotton, which he accomplished by extracting it with hot methyl alcohol in a continuous extractor, after which the insoluble cellulose nitrate was again exposed in the drying room. The highly nitrated cellulose thus obtained was then mixed with a quantity of mononitrobenzene, which scarcely affected its appearance and did not alter its powdered form. The powder was then incorporated upon a grinder, by which it was colloidized and converted into a dark translucent mass resembling India rubber. The sheet was then dipped on the sides of drums or strips, 1 or 2 mm. thick, pressed through a spaghetti machine and formed into cords, either solid or perforated, of the desired dimensions, which were cut into grains. "Then the granulated explosive was immersed in water boiling under the
atmospheric pressure by which the nitrobenzene was carried off and the cellulose nitrate was indurated so that the mass became light yellow to gray and as dense and hard as ivory, and it was

Die and perforated cylinder of smokeless powder. (Hudson Maxim Patent.)

by this physical change in state, which could be varied within limits by the press, that I modified the material from a brisant rupturing explosive to a slow-burning powder. This explosive is also known as the naval smokeless powder, and in his report for 1892 Secretary of the Navy Tracy says: "It is a gratifying fact to be able to show that what we could not accomplish through the assistance of others we succeeded in accomplishing ourselves, and that the results are considerably in advance of those hitherto attained in foreign countries." Experiments made with indurite showed that in two successive rounds in the 6-inch rapid-firing gun, using 26 pounds of the powder and a 100-pound projectile, the pressures were 13,96 and 13,93 tons and the velocities 2,409 and 2,456 feet per second respectively.

Du Pont powder. In 1893 F. C. and P. S. Du Pont, of Wilmington, Del., patented a smokeless powder consisting of nitrocellulose and nitrobenzene or another suitable solvent, which they granulated by a special process. Into a convenient holder fitted with stirring paddles water (containing in some cases niter) is poured, and then a quantity of finely divided gun cotton is added. By means of the paddles the mixture is stirred until the gun cotton is evenly suspended in the liquid, when nitrobenzene is added. A plastic flocculent mass is formed by the action of the solvent on the suspended gun cotton, which by slow stirring gradually becomes granular. The stirring is continued and steam is added until the solvent is entirely removed and the powder made dense and solid.

Rifleite, S. S., S. R., S. K., S. V., and S. B. powder are varieties of smokeless powder made by the Smokeless Powder Company of Warwick, England, for sporting. They are not patented, and their composition is secret, but from analysis they are believed to be soluble wood nitrocellulose mixed with niter and nitrobenzene, granulated in a manner similar to the process used in the manufacture of the E. C. powder.

Plastometric, invented by Hermann Gittler, of Reichenstein, is made by melting dinitrotoluene over a water bath and gradually adding one fifth part of nitrocellulose. The resulting mass is formed into fine grains that are of different shades of brown. It finds its chief use for sporting.

In addition to the foregoing there are several smokeless powders that deserve mention, but do not readily fall into the classification above. Among them are:

Kalilinieten von Falkenstein powder, invented by J. K. von Falkenstein, is made by dissolving finely divided cellulose in a 10-per-cent. solution of potassium permanganate, and mixing the resulting amorphous cellulose with manganese dioxide, forming a brown mass. This product is then mixed with nitric acid, and after standing for twelve hours is heated over a water bath until all the manganese dioxide is converted into manganese nitrate, while the amorphous cellulose separates as a white precipitate and is pressed into a cake, which, after drying, is ground into powder. This powder is next nitrated with a mixture of nitric and sulphuric acids, and the nitrocellulose washed and placed in solution of potassium permanganate, to which nitric acid is added and the mixture heated. The resulting nitrocellulose is washed, ground, and made into a paste with gum tragacanth, which is finally pulverized, and the grains are sifted to be glazed in a drum.

Kolitis is a smokeless powder invented by Herbert Kolf, of Bonn, Germany, and is made by nitrating vegetable waste—such as malt grains and beet-root cuttings—and sulphonating the resulting cellulose with alkaline sulphates under a pressure of 5 atmospheres. The product is then mixed with niter and soaked in a solution of di-nitrobenzene.

Powdre pyroxylée. A smokeless powder with this name has been issued by the French Government for sporting. Its composition is as follows: Soluble gun cotton 28 parts, insoluble gun cotton 37 parts, barium nitrate 29 parts, and potassium nitrate 6 parts. The ingredients are first mixed by hand and then through powdering mills, with the addition of 40 per cent. of water. The mass is then pressed through a sieve with 

Powder J. This explosive was invented by M. Bruneanu, and is made by the French Government for sporting. It is brown, much harder than black powder, and is produced in four sizes. The process by which it is made has not been published, but its composition is said to be 83 parts of gun cotton and 17 of potassium bichromate.

Literature.—In addition to the Explosive Notes issued by Dr. Charles E. Munroe at irregular intervals from Columbian University, Washington, D. C., there is published from time to time Notes on the Construction of Ordnance, from the Ordnance Department of the United States Navy Department. A periodical entitled Armes and Explosives is issued regularly in London, and besides the foregoing the following works may be con-
sition: Explosives and their Composition, by Wolcott C. Foster (New York, 1888); A Dictionary of Explosives, by J. P. Cundill (London, 1889); A Handbook on Modern Explosives, by Manuel Eissler (New York, 1889); Index to the Literature of Explosives (American periodicals, by Charles E. Munroe, Baltimore, 1893); The Manufacture of Explosives, by Oscar Guttmann (2 vols., London, 1895); and Manual of Explosives, by Courtenay De Kalb (Toronto, 1900).

EXPOSITION, PARIS UNIVERSAL. In terms of Curnot’s Commerce, an issue that followed was to be said to have begun with that held in London in 1851. This was followed by those held in Dublin and New York in 1853, in Paris in 1855, in London in 1862, in Paris in 1867, in Vienna in 1873, in Philadelphia in 1876, in Paris in 1878, in Paris in 1889, and in Chicago in 1893. It had become an established custom to hold expositions in Paris every ten or twelve years, and accordingly, before the close of the fair in Chicago in 1893, preparations were begun for holding an exposition in Paris in 1900.

Origin.—By a decree of July 13, 1892, President Carnot charged the Minister of Commerce and Industry with the preparation of an universal exposition of the products of agriculture, the art and industrial arts, in order to increase the exportation of agricultural products, to be held in Paris during six months of 1900. On Sept. 9, 1893, a second decree was issued, placing the administration of the exposition under the authority of the Minister of Commerce, Industry, and the Colonies, to be directed by a commissioner general. It further established the list of works, the immediate direction of the expositions, which, on June 13, 1896, the Senate and the Chamber of Deputies enacted the complete law that provided for the exposition. In accordance with this law, the state contributed 20,000,000 francs toward the expenses of the exposition. The city of Paris agreed to raise a like amount, which was to represent one fifth of the total expenses, while the six departments of the province made a contribution of 1,000,000 francs, making a total of 140,000,000 (827,020,000) that was raised for the exposition fund.

Administration.—The general supervision of the exposition was under the direction of the Minister of Commerce, Industry, Posts, and Telegraphs, who was at first Paul Delambre and later M. Milliard. The immediate direction of the exposition was intrusted by the minister to the following staff: Commissioner General of the Exposition, Alfred Pecard, President of the Council of State; Director General of Exploitation, Delaunay-Belleville, Honorary President of the Chamber of Commerce of Paris; Adjunct Director General of Exploitation, Stephanie Derville, former President of the Tribunal of Commerce of the Seine; Director of Architecture, Parks, and Gardens, M. Bouvard, Director of the Department of Architecture and Landscape Gardening of the City of Paris; Director of Roads, M. Defrance, Administrative Director of the Department of Public Ways, Waters, Sewers, and Bridges; Director, Stephanie Derville, former President of Finances, M. Grison; Secretary General, Henry Chardon, Member of the Council of State; Chief of Department of Bridges of the Seine, Jean Resal, Engineer in Chief of Bridges and Roads; Chief of Department of Law, Edmond Moreau, former President of the Company of Administrators before the Tribunal of Commerce of the Seine; Delegate to the Section of Fine Art, M. Roujon, Director of Fine Arts; Delegate to the Section of Agriculture, M. Vassilière, Director of Agriculture; and Delegate to the Section of Colonies and Countries under Protectorate, M. Bislere, Counselor of State.

Location.—The site occupied by the exposition was similar to that of previous expositions in Paris. Beginning at the southwest angle of the Place de la Concorde, the grounds of the exposition extended along two narrow strips on the banks of the Seine for a mile and a half to the Avenue de Suffren, which forms the western boundary of the Champ-de-Mars. The Grand三角形 spaces were four, arranged in pairs—the park of the Art Palaces and the Explanade des Invalides at the east, the Champ-de-Mars and the Trocadéro on the west. On the south side of the river the Explanade des Invalides was united with the Champ-de-Mars by the Quai d’Orsay. On the north side the park of the Art Palaces was connected with the Trocadéro by the Quai de la Con- ference, the Cours-la-Reine, and the Quai Debilly. The total surface of the four areas and the connecting links along the Seine was 336 acres. In addition to the space just mentioned, an area was secured in the Bois de Vincennes on the eastern border of the city, as well as on the Seine for transportation and sports. Convenient access was had to the various parts of the exposition by means of an electric railway and a moving sidewalk.

Grounds and Buildings.—The grounds, which had long been park areas, were well provided with trees and shrubs, which had been carefully nur- thured, so that special gardening to an extent unnecessary to increase the beauty of the site. The main entrance to the exposition was at the southwest corner of the Place de la Concorde, where stood the Port Monumentale, designed by the architect Binet. This led to the new Avenue Nicholas II, which extended from the Champs-Élysées to the Pont Alexandre III. On the west side of this avenue, the Ecole des Beaux-Arts, while facing it on the east was the Petit Palais. These two buildings were permanent structures, and were erected to take the place of the old Palais de l’Industrie, which formed the principal building of the exposition in 1855. The Grand Palace had a façade 500 feet long, and in the per- forming of its function as a national exhibition its demonstration was intended to be the noblest exponent of contemporary French architecture and sculpture. The exterior was elaborately decorated with ornamental and sculptural designs, which added greatly to its imposing appearance and massive grandeur. A splendid colonnade of Corinthian columns was an attractive feature of the façade. Extending along the front were several groups of statuary depicting art in different eras of the world’s history, while on the wings and colon- nades were eight seated figures of similar representa- tive character. Along the main façade, under the grand colonnade, was a frieze 240 feet long by 10 high, divided into ten sections, five rep- resentative of modern art and five of ancient. In the building were exhibited examples of contem- porary art, both French and foreign. The Petit Palais was of similar character. A bas-relief above the entrance represented the city of Paris protecting art. On either side of the entrance were groups of stately statues of the Sirens, representing the genius of the four seasons, while that on the left represented the Seine and its tributary rivers. On top, to the right and left of the entrance, were groups representing the genius of sculpture and the genius of painting. The building contained the centennial
EXPOSITION, PARIS UNIVERSAL.

The Exposition which was illustrative of the history of French art. Connecting the Avenue Nicholas II with the Esplanade des Invalides was the Pont Alexandre III, which is likewise to remain as a permanent memorial of the exposition. The foundation stone of this bridge was laid in October, 1896, by the Czar Nicholas II and President Faure, who named it in honor of Alexander III, father of the present Czar, to whose efforts, it is said, the alliance of friendship between the two nations is mainly due. The total length of the bridge is 257 feet, and the width 130 feet. The roadway occupies a space 70 feet in width, and the sidewalk on either side is 30 feet wide. At both entrances are two pylons in white marble, each 70 feet high, surmounted by gilt-bronze statuary representing Pegasus with Fame about to take her flight. At the lower part of the pylons are four fine pieces of statuary representing France at various epochs. Two groups of massive lions guard the approach to the bridge. Broad flights of stone steps lead from the lower quays to the floor of the bridge at each abutment, and at the top of these steps are groups of statuary representing the Children of the Vases. The cost of the bridge was estimated at $400,000, and it is said to be the finest of its type in existence. Extending along the Cours-la-Reine were the pavilion of the city of Paris, which contained the special exhibits of the Paris municipality, the two buildings devoted to the horticultural exhibit, and the building in which the congresses were held. Still farther along the river was Old Paris, an archaeological restoration of medieval, seventeenth and eighteenth century quarters of the city, with inns and restaurants along the river side. On the Esplanade des Invalides were the buildings devoted to foreign industries and decorative arts. To the special structures occupied by Mining and Metallurgy, Textile Industries, Mechanical Appliances, Chemistry, Electricity, Agriculture and Food, Chemical Industries, Engineering and Means of Transport, Education, and Science and Art. These buildings were white, varied with colored ornamentation of yellow, terra cotta, and blue, while there were many imposing stained-glass windows, a great deal of gilding, and everywhere floral sculpture. On both sides were terraces, arches, and arcades, while on the left, looking from the Eiffel Tower, was a continuous line of restaurants. In the immediate vicinity of the Eiffel Tower were the buildings of Costume, Panorama, Great Telescope, Celestial Globe, and similar features, while on the banks of the Seine were the buildings devoted to the Mercantile Marine, Forestry, Hunting, and Fishing. The Trocadéro on the north bank of the Seine was devoted to French and foreign colonies, including the buildings erected by the United States for the exhibits of Porto Rico, the Philippines, the Hawaiian Islands, and Alaska, as well as Cuba.

Classification.—The systematic grouping of the objects to be exhibited was arranged along educational lines into 18 groups, with subdivisions into 121 classes. These were as follows:

Group I, Education and Instruction—Class 1,

Group II, Works of Art—Class 7, Paintings, Cartoons, Drawings; 8, Engraving and Lithography; 9, Sculpture and Engraving on Medals and Gems; 10, Architecture.

Group IV, Machinery—Class 19, Steam Engines; 20, Various Motors; 21, General Machinery; 22, Machines and Engines.

Group V, Electricity—Class 23, Machines for Generating and Using Electricity; 24, Electrochemistry; 25, Electric Lighting; 26, Telegraphy and Telephony; 27, Various Applications of Electricity.

Group VI, Civil Engineering, Transportation—Class 28, Materials, Equipment and Processes relating to Public Works; 29, Carriages and Wheelwright's Work, Automobiles and Cycles; 31, Saddlery and Harness; 32, Equipment for Railways and Street Railways; 33, Material and Equipment used in the Mercantile Marine; 34, Aerial Navigation.

Group VII, Agriculture—Class 35, Farm Equipment and the Methods of Improving Land; 36, Appliances and Methods of Viticulture; 37, Appliances and Methods used in Agricultural Industries; 38, Theory of Agriculture, Agricultural Statistics; 39, Vegetable Food Products; 40, Animal Food Products; 41, Inedible Agricultural Products; 42, Useful Insects and their Products, Injurious Insects and Plant Diseases.

Group IX, Forestry, Hunting, Fishing, Gathering Wild Crops—Class 49, Appliances and Processes used in Forestry; 50, Products of the Cultivation of Forests and of Forest Industries; 51, Hunting Equipment; 52, Products of Hunting; 53, Fishing Equipment and Products, Fish Culture; 54, Appliances for Gathering Wild Crops and producing them.

Group X, Foodstuffs—Class 55, Equipment and Methods employed in the Preparation of Foods; 56, Farinaceous Products and their Derivatives; 57, Bread and Pastry; 58, Preserved Meat, Fish, Vegetables, and Fruit; 59, Sugar and Confectionery, Condiments and Relishes; 60, Wines and Beverages; 61, Strump and Lingerie, Distilled Spirits, Commercial Alcohol; 62, Various Beverages.

Group XI, Mining and Metallurgy—Class 63, Working of Mines, Ore Beds, and Stone Quarries; 64, Metallurgy; 65, Metal Working.

Group XII, Decoration and Furniture of Public Buildings and Dwellings—Class 66, Permanent Decoration of Public Buildings; 67, Ornamental and Stained Glass; 68, Paper Hangings; 69, Household and Artistic Furniture; 70, Carpets, Tapestries, and Fabrics for Upholstery; 71, Upholsterers' Decorations; 72, Ceramics; 73, Glass and Crystal; 74, Apparatus and Processes for Heating and Ventilation; 75, Apparatus and Methods, not Electrical, for Lighting.

Group XIII, Threads and Yarns, Fabrics, Garments—Class 76, Materials and Processes for Spinning and Rope Making; 77, Equipment and Processes used in the Manufacture of Textile Fabrics; 78, Equipment and Processes used in Bleaching, Dyeing, Printing, and Finishing Textiles in Various Stages; 79, Equipment and Processes used in Sewing and making Wearing Apparel; 80, Threads and Fabrics of Cotton; 81, Threads and Fabrics of Flax, Hemp, etc.; Cordage; 82, Yarns and Fabrics of Wool; 83, Silk and Fabrics of Silk; 84, Leather and Hide Products; 85, Industries producing Wearing Apparel for Women, and Children; 86, Various Industries connected with Clothing.

Group XIV, Chemical Industries—Class 87, Chemical and Pharmaceutical Arts; 88, Manufacture of Paper; 89, Leather and Skins; 90, Perfumery; 91, Tobacco and Cigarettes; 92, Dyes, Dyes and Dyeing; 93, Dyestuff, Fibrografic Apparatus; 94, Tanning; 95, Chemical Industries producing Chemical Substances for Medicine, and in the Manufacture of Drugs; 96, Pharmaceuticals; 97, Dyes and Dyeing; 98, Finishing of Fabrics; 99, Chemical Industries producing Reagents for Agriculture; 100, Toxins.

Group XV, Social Economy, Hygiene, Public Charities—Class 101, Apprenticeship, Protection of Child Labor; 102, Wages, Industrial Remuneration, Profit Sharing; 103, Large or Small Industries, Co-operative Associations for Production or Distribution of Goods, Theatrical, Musical, and Literary Institutes on a Large or Small Scale, Agricultural Unions and Banks; 105, Protection of Workers in Factories, Regulation of Work; 106, Workmen's Dwellings; 107, Co-operative Stores; 108, Institutions for the Mental and Moral Improvement of Workingmen; 109, Provident Institutions; 110, Public or Private Movements for the Welfare of the People; 111, Hygiene; 112, Public Charities.

Group XVII, Colonialization—Class 113, Methods of Colonialization; 114, Colonial Resources; 115, Special Merchandise suitable for export to Colonies.

Group XVIII, Military and Naval—Class 116, Ordnance and Equipment for Artillery; 117, Military and Naval Engineering Engines.

Group XIX, Hydraulics, Iron, and Steel—Class 118, Construction of Dams, Bridges, and other Structures in Water, Iron and Steel Structures and Apparatus; 119, Cartography, Hydrography, Various Instruments; 120, Administrating Departments, and, 121, Hygienic and Sanitary Equipment.

Opening Exercises.—It was originally provided that the exhibition should open on May 5 and close on September 1, but the date was changed to April 15 and November 1. The official opening took place on April 14, on which occasion the members of the diplomatic corps, Senators and Deputies, and 14,000 other invited guests were present. The cold, cheerless, almost winter weather that had prevailed up to that time gave place to a bright, warm, and perfect day. At the Salle des Fêtes du Château de-Marsan, the inauguration ceremony took place. At 2.30 p.m. President Loubet arrived, escorted by M. Mille- rand, Minister of Commerce; M. Picard, the Commissioner General; and the chief officials of the exposition. As he entered the grounds a great chorus greeted him by singing the Marseillaise, as he entered the grounds a great chorus greeted him by singing the Marseillaise, as he entered the grounds a great chorus greeted him by singing the Marseillaise, as he entered the grounds a great chorus greeted him by singing the Marseillaise, as he entered the grounds a great chorus greeted him by singing the Marseillaise. The scene within the building was remarkably brilliant. Since the jubilee of Queen
Victoria or the coronation of the Czar, no such congress of strange and gorgeous costumes had been seen. President Loubet took his stand in front of the dais, and was briefly addressed by M. Milleraud, who said, "The persevering efforts and the patient energy of M. Picard and of his colleagues made possible the prodigious work which I present to you to-day." He spoke eloquently of the various races of mankind as of one brotherhood. He eulogized the marvels of the economic revolution that had produced steam and electricity, which was gradually relieving flesh and blood. "Machinery," he said, "was destined to become the queen of the world." In response, President Loubet said: "This work of harmony, peace, and progress, however ephemeral its outward show, will not have been in vain; the present meeting of the governments of the world will not remain sterile. I am convinced that, thanks to the persevering affirmation of certain geniuses, thoughts with which the expiring century has resounded, the twentieth century will witness a little more fraternity and less misery of all kinds, and that, if we, perhaps, shall have accomplished an important step in the slow evolution of the work toward happiness and of man toward humanity. Under these auspices, and with this hope, I declare the exposition of 1900 open." The chorus then sang a Hymn to Victor Hugo, by Saint-Saens, and the orchestra and bands played a Marche Heroique, by Theodore Dubois. This concluded the opening ceremony, and the official party proceeded to an adjoining room, where the diplomatic corps and the chief commissioners of the exposition were presented to the President. A tour of the grounds followed. As they passed the pavilion of the United States the Stars and Stripes were dipped from the flagstaff, and two American marines, stationed one on each side of the Washington statue, waved a tricolor, while a group of Americans gathered on the bank in front of the pavilion gave President Loubet a ringing cheer.

Among all the rulers and royalties that visited Paris during the exhibition the Shah of Persia alone was the object of a murderous anarchist assault. He took no precautions, having no fear of political enemies in Europe, and so offered an opportunity to a young French anarchist of disordered mind, who was prevented from shooting him only by the Shah's own quickness and that of his Grand Vizier.

International Jury.—Three classes of juries were organized to judge exhibits at the exposition: first, the class juries, whose function was to examine and report on entries; second, the group juries, who superintended and carried forward the work of the class juries; and, third, the superior juries, by whom alleged mistakes and injustices were considered and finally adjudged. As customary, the judges were selected from among the various nations exhibiting, and the number of jurors taken from the United States was 95, who were appointed by Commissioner-General Peck, and were distributed among the groups as follows: Education and Instruction, Miss A. T. Smith, J. N. Norton, H. L. Taylor, and S. P. Tuck; Art, F. D. Millet, Alexander Harrison, J. B. Caldwell, Augustus St. Gaudens, and Thomas Hastings; Letters, Sciences, and Arts, Claude M. Johnson, A. S. Capehart, Edgar Cameron, D. O. Haynes, J. K. Rees, C. H. Beard, S. P. Veit, Milward Adams, and W. R. Hoag; General Mechanics, Charles Le Blanc, Storm Bull, H. O. Berg, Francis E. Drake, W. D. Ball, G. R. Ostheimer,
THE STREET OF NATIONS, PARIS EXPOSITION.

Exhibits are according to the official catalogues, the number of the 78,172 entries, distributed among the 18 groups as follows: Group I, 7,142; Group II, 8,620; Group III, 4,779; Group IV, 1,317; Group V, 1,051; Group VI, 3,378; Group VII, 8,739; Group VIII, 1,361; Group IX, 2,315; Group X, 14,308; Group XI, 3,735; Group XII, 3,928; Group XIII, 5,256; Group XIV, 5,942; Group XV, 3,948; Group XVI, 3,539; Group XVII, 2,942; and Group XVIII, 637. Of these exhibits, 6,674 were from the United States. The number of exhibits from France was 31,946, which alone exceeded the United States. It is impossible to summarize the exhibits shown, but the number of awards received by exhibitors from the United States demonstrates the superiority and remarkable advances that have been made in this country since the Columbian Exposition, held in Chicago in 1893. The following extract from a series of articles by experts will serve to show something of the character of what was done for the United States by its exhibitors in Paris. The fine arts exhibit constituted perhaps the greatest exhibition of American artists that had ever been brought together." The mining exhibit was described as comprising representative specimens of all of the commercial mineral products of the United States, a general collection of systematic mineralogy, a reference library, and a collective exhibit of metallurgical processes and products. The army and navy exhibits of the United States were represented by a collection of exhibits sent by the War and Navy Departments, or the various bureaus thereof, by private individuals and by firms who contracted for the work under the Government, or to furnish the military and naval service with war materials, apparatus, and appliances.

The award of the Jury of Awards, notwithstanding the enormous number of exhibits to be examined and the intense heat in Paris, proceeded with remarkable celerity, and on Aug. 18 the announcement of the awards was made by President Loubet. According to the official bulletin, 42,790 awards were made, which were distributed as follows: Grand prizes, 2,887; gold medals, 8,166; silver medals, 12,244; bronze medals, 11,615; and honorable mentions, 7,398. In addition to the foregoing, about 50,000 commemorative diplomas will be issued to collaborators. Of the awards made, the United States received: Grand prizes, 240; gold medals, 597; silver medals, 776; bronze medals, 540; honorable mentions, 322; total, 2,476, or more awards than any other nation exhibiting except France. The official comment has been made that these figures "indisputably demonstrate that not only did the United States participate in the many more exhibitors at the exposition than any other foreign nation, but that the extent and quality also of the exhibits have been approved by the ablest international jury ever organized, which has granted the exhibitors of our nation the largest number of awards of all of the visiting nations." Germany received 1,826 awards; England, 1,727; and France, 406.

Congresses.—Preliminary announcements were issued showing the following list of proposed congresses to be held during the exposition:

I. Art, which was again subdivided into the following subjects, to each of which several days were devoted—Music, Photography, Dramatic Art, Architecture, Municipal Art, Teaching of Architecture, Applied Science, subdivided into Gold and Silver Assaying, Mines and Metallurgy, Automobiles, Testing of Materials, Steam Engines, etc., Applied Mechanics, Applied Chemistry, Fire Brigades, Thread Numbering, Gas, Tramways, Aeronautics, Railroads, Agriculture.

III. Mathematical, Physical, and Chemical Science, subdivided into Applied Mechanics, Applied Chemistry, Chemistry, Mathematics, Physics, Electricity, etc.

IV. Natural Science, subdivided into Ornithology, Alpinism, Geology, Meteorology, Botany.

V. Agriculture and Forestry, subdivided into Horticulture, Forestry, Agricultural Stations, Viticulture, Cattle Feeding, Agriculture, Agricultural Co-operation, Apiculture, Fruit Culture and Arboriculture, Aquiculture and Fisheries, Wine and Cider Making.

VI. Medicine, Hygiene, etc., subdivided into Homeopathy, Professional Medicine, Medical Press, Electrology and Medical Radiology, Pharmacy, Medicine, Dermatology, Dentistry, Hygiene, Hypnotism, Physical Education, Pharmacy Specialties.

VII. Anthropology, Archaeology, and History, subdivided into Numismatics, Comparative History, Anthropology, and Prehistoric Archaeology, Ethnography, Basque Studies, History of Religion, Folklore, Americanists.

XI. Geographical and Colonial Questions, subdivided into Colonies, Colonial Sociology, Economic and Social Geography.

XIII. Property and Finance, subdivided into House Property, Movable Property, Joint-Stock Companies, Landed Property, Insurance, Actu- aries, Copyright (Literary and Artistic), Indus-
trial Property and Copyright, Comparative Law, Inventors' Associations.

XVI. Women, subdivided into Women's Work and Institutions, Women's Rights.

XVII. Philanthropy, subdivided into Housing, Vegetarian, Discharged Prisoners' Aid, Life Saving and First Aid, Poor Relief, Blind, Deaf-Mutes, Antislavery, Red Cross, Abuse of Tobacco, Sunday Rest.

XVIII. Peace.

The Miners' International Congress chose Paris for its meeting near the end of June. From English miners came the proposal for a legal eight-hour day from bank to bank for workers underground and on the surface. The fact that the Northumberland miners, after having obtained a shorter day for the boys in their mines, had been compelled to give up this advantage in a period of depression, showed that if the miners could gain the eight-hour day without legislation it could not be preserved. The miners of South Wales, who were formerly divided on the question, were now unanimous in favor of eight hours established by law. From England also came a resolution that all nationalities should seek a minimum wage, which would vary in amount according to local circumstances, but should suffice always for decent existence, the education of the children, and a provision for old age. A minimum wage would further be useful, as a Belgian delegate explained, in preventing miners from competing against each other or mine owners from competing at the expense of their workmen. A Scotch delegate moved that employers should be held responsible for all accidents to workmen in their employment, and should be compelled to contribute to an accident fund, which is collected from the employers by the state, and carelessness is not recognized as a valid excuse for withholding compensation. A representative of the Yorkshire miners gave the view that all governments should provide pensions for the poor and aged and for those unfit to work from the age of fifty-five. All existing pension schemes were condemned as coming too late into operation and giving too little. The French delegate who seconded the motion explained that pensions were given in France from the age of fifty-five by the law of 1894, but the amount was not fixed, and varied from 1 franc to 2 francs. A Belgian delegate mentioned that the Belgian miner gets only 10 francs a month, and this only after the age of sixty-five, although a third of the miners of the Charleroi coal fields had need of pensions from the age of fifty. Compulsory insurance was praised by the German delegates as having saved German workmen from the beggary that too often prevails in other countries. The congress was attended by 32 delegates from Great Britain, representing 641,500 miners; 2 German delegates, representing 200,000 miners; 11 French delegates representing 160,000 miners; and the Belgians representing 132,000 miners; making a total of 73 delegates speaking on behalf of 1,133,500 miners.

The annual session of the Inter-Parliamentary Conference was held at the beginning of August. In addition to proposals for the more practical
adoption of the convention agreed to at the conference at The Hague several matters for international concord were submitted, notably the creation of a press union for the purpose of influencing public opinion in favor of the pacific settlement of international disputes. In Hungary newspaper groups were already organized for the promotion of peace and arbitration. The South African war could not be discussed because it had previously been so decided, and the English members threatened to withdraw if the subject were introduced. The congress expressed a hope that the just repression of the Chinese massacres would not lead to conquests entailing a general war or to enterprises contrary to the economical, social, and political interests of the world.

The nineteenth conference of the International Law Association met at Rouen on Aug. 21. A question raised at the Buffalo conference of 1899, that was referred for fuller consideration to committees in the United States and in England, was whether private property at sea should be free from contraband duties. It was decided by the three conventions that private property, except as the majority of the delegations of the powers held that it did not come within the scope of their instructions. The American committee of the International Law Association reported in favor of a resolution that there should be a modification of the present rules of naval warfare so far as the right to capture peaceful and non-military ships and their cargoes is concerned by making the strict condition of seaworthiness on the ascertained whether the policy be for the voyage or for a specified time, the committee recommended the general rule adopted by Continental nations that due care must be taken to have the ship seaworthy and fit at the beginning of every voyage under the policy. The group of rules in the laws of the various maritime states would have the effect of putting all policies, wherever made, on the same legal basis and would remove the obstacles now existing to insuring a ship or cargo by several policies in two or more countries or to reinsuring in other countries. The French members proposed the adoption of the American laws. The British committee, meeting in the eighteenth annual congress of the French Labor party, which met on Sept. 20. The clef between the factions was widened by a difference of opinion on the Dreyfus case, which led the Guesdistes to join the Anti-Semites. The International Socialist Congress was the successor of the congresses of London in 1896 and of Zurich in 1893, which followed the united French, English, and Swiss Socialist Congress of Brussels in 1891, in which the division that led to rival congresses at Paris in 1889 was healed, this division having been caused by the preponderance in the London congress of 1888 of English trade unionists, who made their views prevail over those of the Continental Socialists. The congress in the conference held at Paris in 1886 and organized the Paris congress of 1886. The congress of 1900 assembled in Paris on Sept. 23.
Jaures for its president the Guesdists left the hall, but returned and attempted to rescind the action at a moment when the temporary absence of many of their antagonists left them in the majority. The German Socialists told how they had healed such differences twenty-five years before and had become the strongest Socialist party in Europe; the English delegation appealed to the Frenchmen to unite for the purpose of combating colonial expansion, jingoism, and imperialism, just as the British Socialists were unanimous in condemning the Transvaal war; a member of the Italian Chamber of Deputies related how the Socialists of Italy had successfully resisted the reaction which led to the Milan massacre, and after using the weapon of parliamentary obstruction for a year returned to the Chamber twice as strong in numbers when the Government appealed to the electorate; an Austrian delegate told how united the party was in Austria in spite of racial and linguistic differences; and Belgian, Dutch, Danish, Swiss, Russian, Polish, and American spokesmen each in turn also appealed for union. When the congress got to work at last it passed a resolution in favor of eight hours as the maximum limit of a day’s work in all trades, and resolved that the first step to attain this end was to enforce the principle in all public works and contracts. The principle of a minimum wage was discussed as a corollary to this, and, after it was pointed out by the Germans that a fixed rate of wages would be useless unless the prices of the necessities of life could be regulated likewise, it was resolved at their suggestion that it was necessary to maintain minimum rates of wages, varying according to the cost and standard of living in each country, but always sufficient to procure the means of a decent and healthy existence; also that strong trade unions were the necessary agents for fixing and maintaining the minimum wage. The May day holiday as a demonstration in favor of eight hours, universal suffrage, and other reforms advocated by the party in all
countries was approved. Another resolution advocated the formation of a proletariat party which should employ all forms of organization, including trade union and political action, with the object of socializing all the means of production and exchange. Over the question of political alliances it was agreed that the class struggle forbids permanent alliances between the Socialists and other parties, but not temporary co-operation for specific objects or tactical advantages, as in Belgium to secure universal suffrage, in Italy for freedom, and in France over the Dreyfus affair. The entrance of an isolated Socialist into a capitalist government may be expedient as the beginning of a conquest of the public powers, but it should be with the sanction of the party, and such a minister should resign if the Government does not maintain strict neutrality in the struggles between capital and labor.

Closing and Results.—As the exposition drew to a close, special entertainments were provided in order to attract visitors. The night of Nov. 11 was devoted to a fireworks display. The Montmartre d'Eau blazed with light, with constantly changing colors, and in the distance the Trocadero and all the buildings were illuminated, while the gardens displayed their garlands of translucent fruits, and for the last time the assembled people gazed on the luminous waters. Suddenly the lights went out, and the end came; then the people moved toward the gates, and at 11 o'clock the booming of a cannon from the first story of the Eiffel Tower announced that the exposition was no more.

Official statistics show that more than 50,000,000 persons visited the exposition, which is about double the number that attended the exposition of 1853, when 25,121,975 passed the gates. In that year the British and the Belgians outnumbered other visitors, but on this occasion the Germans headed the list, with the Belgians second and the British far behind, while the Americans formed an important contingent. The greatest number of visitors on a single day exceeded 600,000, compared with the maximum of 335,377 in 1859. The greatest attendance at the exposition in Chicago in 1893 was on Oct. 9, when 716,581 persons passed through the gates. As regards expenses, M. Hanoiaux wrote: "France expended 200,000,000 or 200,000,000 francs to erect the exposition. She has recovered them easily in the increase of the treatment of the surplus of Paris, and the wages and duties, in the monuments remaining to the state or the city, and in the quays, bridges, and improved transportation facilities bequeathed by the exposition. Moreover, there has been a general cleaning up of the city, which has contributed to its brilliancy and beauty." The accounting officers made on Dec. 15 that the exposition balance sheet showed a deficit of 2,073,756 francs.

Relation of the United States to the Exposition.—In accordance with an act of Congress approved by the President on July 1, 1898, there was appointed a commissioner general to represent the United States, to make all needful rules and regulations in reference to the contributions from this country, and to control the expenditures incident to and necessary for the proper installation and exhibition thereof; an assistant commissioner general to assist and act under the direction of the commissioner general; a secretary to act as disbursing agent, to make all needful rules and regulations in reference to the accounting officers of the Treasury; also 12 commissioners and a number of experts having special attainments in regard to the subject of the groups in the exposition to which they should be assigned. The necessary expenses were limited to $850,000. On March 3, 1899, Congress appropriated an additional sum of $850,000, making a total appropriation of $1,210,000 for the participation of the United States at the Paris Exposition. At the end of the exposition the commissioner general is required, within four months after its close, to make a full report of the results, which, when printed, should not exceed six octavo volumes.

American Officials.—These were: Commissioner General, Ferdinand W. Peck, Chicago, Ill.; Assistant Commissioner General, Benjamin D. Woodward, New York city; Secretary, Frederick Brackett, Maryland; Commissioners, Bertha Horner Palmer, Illinois; Brutus J. Clay, Kentucky; Charles A. Collier, Georgia; Michael H. de Young, California; William L. Elkins, Pennsylvania; Ogden H. Fethers, Wisconsin; Peter Jansen, Nebraska; Calvin Manning, Iowa; Franklin Murphy, New Jersey; Henry A. Parr, Maryland; Henry M. Putney, New Hampshire; Alvin H. Sanders, Illinois; Louis Stern, New York; William G. Thompson, Michigan; William M. Thornton, Virginia; Arthur E. Valois, New York; Thomas F. Walsh, Colorado; James Allison, Kansas; also Mrs. Daniel Manning, New York, as a special commissioner to represent the United States and the Daughters of the American Revolution at the unveiling of the Lafayette statue, and at the Paris Exposition, in accordance with a joint resolution of Congress approved Feb. 23, 1900. Also the following experts, who were placed in charge of groups as designated: Paul Blackmar, of Affairs; assistant, James M. Allen. Frederick J. V. Skiff, of Mining and Metallurgy; assistant, William S. Ward. Francis E. Drake, of Machinery and Electricity; assistant, James S. Anthony. Charles R. Dodge, of Agriculture; assistant, James L. Farmer. Tarleton H. Bean, of Forestry and Fisheries. M. H. Hubert, of Varied Industries; assistant, William E. Crist. Willard A. Smith, of Civil Engineering and Transportation; assistant, A. C. Baker. Alexander S. Capehart, of Liberal Arts and Chemical Industries; assistant, Charles H. Simms. Howard J. Rogers, of Education and Social Economy. John B. Cauldwell, of Fine Arts; assistant, H. B. Snell. L. M. Howland, of Customs. J. H. McGibbons, of Exploitation and Acting Director of Textiles. In addition to the foregoing, there were about 40 honorary experts and special agents, who served without salaries.
The United States Building.—This stood on the Quai d'Orsay on the Seine, in the Street of Nations, between the Turkish and the Austrian pavilions. It had a frontage of 85 feet and a depth of 90 feet, and the top of the dome was 160 feet from the ground. One of its characteristic features was a classic porch, which opened on the Seine, in front of which was an equestrian statue of Washington, the joint production of the American sculptors Daniel C. French and Edward C. Potter, which was the gift of the women of the United States to France. Its total height was 22 feet, and it was the first bronze statue sent to Europe from the United States. On the vaulted roof of the pylon overhead was a quadriga representing Liberty on the Car of Progress, while a magnificent eagle, with wings extended, surmounted the dome. While the United States Building was regarded as an architectural success, still its unfortunate surroundings so dwarfed it that the effect expected was not realized. The building was formally turned over to the authorities on May 12, when Commissioner-General Peck, surrounded by the members of the United States Commission, welcomed the Commissioner General of the Exposition, M. Picard, while Sousa's band played the Marseillaise. M. Picard was then conducted by Mr. Peck to the center of the rotunda, where a brief formal address was made, after which he presented the Commissioner General of the exposition with a gold key and pendant, representing the pavilion, as a souvenir, and a suitable response was made by M. Picard.

Literature.—One of the conspicuous American features was the publication of the Paris Exposition edition of the New York Times, beginning on May 31 and ending on Oct. 31. It was under the supervision of Frank M. White, managing editor, assisted by Edward Insley and a staff of associate editors and reporters. The paper was printed on a Goss straight-line press, from type set on Merghenthaler linotype machines, in the American Publishers' Building on the grounds. It appeared every afternoon, at 4 o'clock. For those who desire information in detail, it would be well to consult the file of the daily edition of the New York Times. Special industries may be found described in the various trade journals, some of which, as the Scientific American, contained illustrations. Pictorially, the Paris Exposition has been treated in a volume entitled The Parisian Dream City (St. Louis, 1900). The reports of the commissioners from the United States will be published by the Government. The printed reports of the transactions of the various congresses will ultimately find their way into print, as they did in the case of the Columbian Exposition of 1893.

FARMERS' CONGRESS. The twentieth annual session of the Farmers' National Congress was opened at Colorado Springs, Col., Aug. 21. It completed its business in three days, holding three sessions each day. About 800 delegates were in attendance. The leading agricultural States were well represented, but the attendance from New England and the extreme South was not so large as was anticipated. At no other annual meeting has the congress attended so strictly to the business before it; all excursions and other diversions were postponed until the business of the meeting was completed. The meeting was notable for the earnestness of the delegates and the care with which they considered all proposed action.

The meeting was called to order by the Hon. R. G. F. Candilage, of Massachusetts, first vice-president and acting president. The president, Hon. William D. Hoard, of Wisconsin, having resigned. Prayer was offered by the Rev. M. H. Fish, of Colorado Springs. Addresses of welcome were made by Mr. Gilbert McClurg, secretary of the Chamber of Commerce of Colorado Springs; Hon. J. S. Robinson, Mayor of Colorado Springs; and Rev. S. Thomas, pastor of the First Presbyterian Church of Colorado. Responses were made by Mr. John M. Stahl, secretary of the congress; the Hon. Benjamin F. Clayton, chairman of the Executive Committee; and the Hon. J. H. Worst, president of North Dakota Agricultural College.

Mr. McClurg presented figures showing the contribution of Colorado to the wealth of the nation, especially from its mines, and to the work of the State was doing for the education of its people and for the advancement of its agriculture. Mayor Robinson said: "Three fourths of the youth in our higher schools of learning come from the farm. It is true also that the large majority of the men who lead in public affairs and in business in our large cities and in the larger areas of national affairs were born and reared in the country. It is undoubtedly true that country life and environment conduce to physical strength, intellectual power, and moral sanity, and upon these qualities rest the greatness and stability of national life. The farms stand for the inheritance of patriotism. The large cities of our country are our storm centers." Gov. Thomas said: "Did you ever stop to consider that the time has come in a few short years when the domain of agriculture has been extended even to the Western seaboard, and the waste places of the land have become the domain of the farmer? As far as industry is concerned, it is, it was the love of gold and the search for the brilliant metals that brought man out into this Western country, but it is the farmer who remained and developed the resources that have made most of our wealth. The farmers took a waste tract of land and have made of it an empire."

Secretary Stahl called attention to the fact that it was our large exports of farm products, so far exceeding the exports of all other products, that had made the balance of trade so largely in our favor that we had become a creditor nation; but he hoped farmers would not forget that true national wealth was in the character of the people rather than in those precious things which we purchase abroad. "History shows," he said, "and especially the history of this nation shows, that the source of true national wealth, as of all individual worth, is in the homely home, where God is honored, the Bible is read, and children are taught industry, economy, sobriety, and purity; the home directed by that best thing mortal that the Almighty God has placed on this earth—a pure and tender woman whose titles of love and honor are wife and mother." Mr. Clayton spoke very briefly, contending himself with pointing out how well Colorado Springs had fulfilled all its pledges to the congress and paying some well-deserved compliments to that city. President Worst deplored the rush of young people from the farm to
the big city, and the fact that boys and girls who might earn thousands of dollars and fill a truly dignified place in society by putting forth their efforts on the farm are willing to live in the cities of the land, many of them having received elaborate educations, and to work indefinitely at $800 to $1,000 a year.

In his annual address, Isaac Garber, of Ohio, said, "In importance, magnitude, and value the products of the soil represented by the members of this congress overshadow all other interests making for the comfort, happiness, and well-being of our country and its people. . . . I have been greatly impressed by the magnitude and value of our farming interests, and the importance of agriculture in the economic development of our country. . . ."

Transportation is of vital importance to the farmer and to the development of interior portions of the United States. The railroad is one of the many products of agriculture imported by foreign countries. . . .

Levi Whitmore, of Nebraska, said, "The congress decided to transact all its business before going on any excursions or accepting any entertainment."

A short address was made by Mr. F. A. Converse, of New York. He discussed the reasons why the efforts of the farmer should be directed toward an intelligent improvement of his industry. He thought the farmer is too conservative. He must change with changing conditions. He should exercise his brains more and his muscles less. With the same amount of industry, brains, and capital as much can be got out of farming as any other occupation. Make the product the best and cheapest produced. There are two methods. Run a cash system as far as possible.

Interest the boys in a financial way and they will stay on the farm.

The evening session Alexander R. Smith, of New York, read a paper on our shipping interests.

He said: "About 20,000,000 long tons of American agricultural products are imported from the United States. To-day the cost of carrying wheat from the Pacific coast to Europe is more than $10 a ton. A fair profit is possible at $6. Rates on grain from Gulf ports to Europe are $5 a ton—a good price. . . .

Foreign ships practically monopolize our trade carrying Western produce. On a dollar of the produce of a foreign ship every 5 cents in ocean rates the American people have paid $80,000,000 above the usual freight charges during the past year, of which our farmers have paid half. Legislation that will build up an American merchant marine will, by substantially reducing ocean freight rates, give our farmers larger markets and better profits. Unaided, American ships can not compete profitably with foreign ships possessing the triple advantages of less cost of construction, less cost of operation, and government aid. During the past sixty years Great Britain has paid out more than $2,000,000,000 in subsidies to British steamships. If we do not change our policy, the value of our shipper to the world in the next quarter of a century, pay out $5,000,000,000 to foreign shippers. If the United States will pay in twenty years to American ships in the foreign trade a sum of money no larger than the American people now pay to foreign shippers in one year, at the end of that period the larger part of our foreign carrying will be in the hands of our own people."

He was followed by Mr. Elwood Mead, of Wyoming, in a paper on irrigation investigations. He said: "In less than half a century irrigation has transformed the appearance and possibilities of the western third of the United States. The very essence of success in irrigation lies in the control and distribution of the water supply. The importance of this was not at first appreciated. The pioneers of irrigation paid no attention to their titles to streams or to the volume used. As a result, the water from streams is not used judiciously. Some ditches have too much water, others have not enough. Even better也许 where is water so valuable, there is no adequate record of rights or systematic division of streams among the multitude of users that depend on them. In only 3 of the 15 arid States is water divided under public supervision. It is the opin-
ion of those best informed that the present haphazard development ought not to continue. There are many million acres of irrigable lands yet to be reclaimed. In order to know how much of this can safely be offered to settlers we must know how much more each stream will supply and how many acres of land it will serve. Irrigation laws must be studied. And before development proceeds much further there should be some common agreement regarding the character of a water right.

At the morning session of Aug. 22 the Committee on Resolutions made a partial report, and a memorial on the death of the Hon. A. V. Stout, of Iowa, a member of the congress, was adopted. Col. J. B. Killebrew, of Tennessee, read a paper on the natural resources of the South. He said: "Considered in reference to its capabilities for supplying those products most coveted by civilized nations, this belt may be regarded as the fairest domain in Christendom. No other region of the globe has such a diversity of valuable farm products. It produces 75 field crops and about as many garden and orchard products. Among these are cotton, of which an average of nearly 5,000,000,000 pounds are produced annually. The annual growth of tobacco is increasing with satisfactory regularity. The tobacco interests of the South are in a most prosperous condition. A most favorable indication in the agricultural development of the South is seen in the larger number of forage crops that are now produced. Nothing else, however, in the development of Southern agriculture can strike as the rapid increase in the growing of fruits and vegetables for the Northern markets. In the 14 Southern States there are 53,279 square miles underlaid by coal seams. In 1899 the South produced 2,500,000 long tons of pig iron. It now makes more iron than the United Kingdom made in 1847, and more than the United States made in 1871. The phosphate beds of Tennessee are the greatest known to mankind."

The hall in which the congress met had not been decorated. Mr. Amos F. Moore, of Illinois, called attention to the fact that the American flag was not to be seen by the congress while in session. He said: "The flag is a national symbol, and spirit; and in an earnest and eloquent address, in which he called attention to the fact that our flag was being attacked in foreign lands, and that our brave soldiers and marines defending it were in danger, he moved that at least one large American flag be provided for the stage. The motion was greeted with prolonged cheers, and the flag was soon placed in position.

Mr. George M. Whitaker, dairy commissioner of Massachusetts, read a paper on dairying. He said: "The particular line of thought which I wish to develop is that the dairyman is a manufacturer, and that the ordinary laws of business apply to him as well as to the manufacturer of cloth or jackknives. The primary essentials of manufacturing are three: First, technical, the know-how in the matter of production; second, executive, the ability to produce at the lowest possible cost; third, commercial, the ability to sell at a profit. I desire to enter a protest against a tendency to industrialize the dairyman, and separate and to some extent competing. To my mind they are almost synonymous. If a theory is correct, the practice must be. Correct theory and intelligent practice always agree. Too much idle or unprofitable capital is frequently found in dairying. Cost of production is greatly enhanced in many cases because cows are kept that produce less than good cows are capable of producing. How shall we restrict the sale of oleomargarine? It seems to me that the most logical and defensible way is to attack the root of the evil—to forbid the introduction of that element which constitutes the fraud, to wit, the color assumed by oleomargarine as in yellow. It is extremely essential that we put all the push we can into enacting section 1 of the Grout bill. Cheese seems to be as near the bottom of the ladder as it can get, and an improvement must come as a consequence. And as the world advances fraud will be less rampant and aggressive."

At this point the Committee on the President's Address reported, strongly commending what President Campage had said on transportation on land, on opening direct mail communication and the establishment of direct ocean freight lines between the United States and South American countries, on an interoceanic canal, on the development of our merchant marine, on agricultural education, and on taxation. The report added to President Campage's discussion of these topics, and it was adopted unanimously.

At the afternoon session Mr. A. J. Locke, of Indiana, read a paper on the mission of the farmer. He said: "The mission of the farmer is to provide for the sustenance of man; one of the means of an optional character. It belongs, like the sober duties of the churchman, to the need of our common humanity. It is literally an everyday question of bread to the eater. The old wooden mold-board plow, sphe直销like on its perch in the museum, offers suggestive thoughts to the new, the洌ly one. The patriotic farmer, the honest farmer, must be the friend of the world, and quietly force the conviction of how hopelessly his ways would be handicapped in this swift-moving age. In voiceless but heedful emphasis it tells the spectators that the very best designs in machinery, electric energies, and the keenest insight into commercial labyrinths must surely prevail in the farm management if the farmer is successful in his effort to move the world of business. Such achievements will call unquestionably for their best efforts not only on the farm, but also at the student's desk. When the day is done the glorious task of a student awaits the energetic farmer of the evening lamp. Here he can diligently compare the experiments and observations of the day with the course pursued by expert agriculturists, coupled with his own discoveries, and draw beneficial conclusions therefrom. Such is the farmer's mission: To grasp right motives on the farm; to learn every detail of his business; to answer accurately the grave question why he should know that business to the end that he may follow his mission and make it both successfully and lucratively."

This was followed by an address by Mr. John P. Brown, of Indiana, upon Agriculture Dependent upon Forests. He said: "The intimate relationship existing between the agriculture of a nation and her forests is but little understood by a large class of citizens. The value of woodlands is greatly the less known among farmers who are largely dependent upon their influences. The rainfall upon which we depend for every farm crop has become irregular since the denudation of vast timber areas. Each summer we see protracted droughts with their many and diverse injuries to farmers. After a season the rains come in torrents and cease not, the soil is washed from
the hillsides, deep gullies are cut in the sloping fields. A moderate proportion of forest land, properly distributed, would remedy this great evil, or at least moderate it, by holding back in the summer and releasing in the winter, the moisture which would otherwise find its way to a time of need. Trees maintain an even temperature, modifying the cold of winter and the heat of summer. Evaporation is rapid where the wind blows strongly over a field. Often the crops are ruined by hot winds, which absorb their moisture more rapidly than their roots can draw it from the earth. Belts of timber, by guiding the air currents upward, overcome this rapid evaporation. Without the shade and shelter of forests the snow melts more quickly, flowing rapidly away in early spring, leaving little for the later and dryer season. The State which protects its forests and encourages tree culture, although the present outcry may seem burdensome, will be a commonwealth in the years to come. The farmers of America can in no way serve their country better than by perpetuating the noble trees of American forests, securing to posterity a country not devastated by avaricious spoilers, but adorned with the trees so necessary to the comfort and wealth of the soil.

Mr. J. G. Springer, of Colorado, president of the National Live Stock Breeders' Association, made a short address, in which he took the ground that the farmer did not know his power or did not care to exercise it, and that he spent too much time in idle grumbling when he should be correcting the injustices which he suffered. Mr. Springer made a strong argument in favor of giving the Interstate Commerce Commission greater powers. In his opinion the commission did not have enough powers at the beginning, and it had been shorn of what it had until it had become only a very expensive means of collecting the tax. Why not throw the respec- tive bills and turn the ground that neither State Legislatures nor Congress had the right to ruin an established industry by enacting effective anti-oil-margarine legislation? He asserted that such legislation would inflict on the stock growers of the country a loss much greater than any loss that oleomargarine would inflict on the butter-makers.

At the evening session a paper on agriculture as a branch of public education was read by Mr. Ethan Brooks, of Massachusetts, who said: "Boys are now taught, under public instruction, the use of mechanical tools. Since the object of public instruction is to enable the rising generation the better to earn a living and to become good citizens; since there is nothing better than home-holding to induce the average man to interest himself in good government; since the uncertainties as to constant employment and as to success in business undertakings are so great; since a permanent abiding place is all essential, and a portion of the soil of any country is economically in the country; and since we have the promise that 'while the earth remaineth, seedtime and harvest shall not cease,' is it not a great mistake to neglect instruction in agriculture? We have our agricultural colleges and experiment stations, all doing noble work. Has not the time come when it would be well to send the boy to the garden idea in these lines of instruction? Let us encourage an education that shall engender a desire for a home where the family may engage in tilling their own ground; beginning, if necessary, in a small way; growing largely their own food supply, including the luxury of a full line of fruits and vegetables known in perfection only by those who gather them from their own grounds and place them fresh upon their tables, and making year after year improvements which shall so increase the productiveness of the farm that as strength declines the labor of former years may bring its return."

Senior José Romero, of the Mexican legation, Washington, a duly accredited delegate from Mexico, was the first speaker of the morning session, Aug. 23. His subject was General Agriculture in Mexico. A motion for a vote of thanks for his able address was adopted unanimously.

Mr. W. W. Bates, formerly United States Commissioner of Navigation, read a paper on the policy and measures for shipping restoration. He advocated the policy of the early days of the republic toward our shipping and opposed subsidies. He said: "It will take only a few moments of time to prove, presumptively, the inexpediency and inefficiency of state aid largely to increase a marine. For this we need not go beyond our own trade. France has been aiding her marine with building and sailing bounties for nineteen years, and Italy has been employing this system for fifteen years. The vessels of both nations run freely in our foreign trade. I will put this question: If the present state of the European shipping is a remedy for shipping decay and as potential in causing growth and development of shipowning and shipbuilding as we are told that it is by the advocates of the pending subsidy bill, how happens it that the commerce of our principal ports has not, in the smallest degree, yet felt effects from the French and Italian aid?"

At the afternoon session was read a paper on Natural Irrigation, by Prof. H. W. Campbell, of Nebraska. "Natural irrigation is secured by a complete rearrangement and pulverizing of the top 6 or 7 inches of soil, and turning it as nearly bottom upward as possible each year. By plowing the soil pulverizing the top 4 inches. Then this finely fitted surface soil must be turned down into the bottom of a furrow 6 or 7 inches deep. Immediately after plowing, the lower 4 inches of the furrow slice must be packed as firmly as possible with the subsurface packer. The next important step is to cover the furrow finally. In this way the lumps, thus forming a mulch of loose, dry soil. Water can not pass up through loose, dry soil by capillary attraction. Therefore the soil mulch protects the moisture in the root bed from evaporation and saves all the natural rainfall for the use of the plant."

The rest of this day's session was occupied with the report of the Finance Committee, the Committee on Resolutions, and the Committee on New Constitution.

A long series of resolutions was adopted, to this effect: Favoring appropriations for river and harbor improvements; urging the establishment of a direct mail service, in American territories, between the United States and South America: favoring the construction and control by the United States of the Nicaragua Canal: favoring the Grout bill in regard to oleomargarine; favoring congressional action to restore the American merchant marine; commending the Secretary of Agriculture for his work in collecting and disseminating seed and the like; favoring free mail delivery in rural districts; disapproving the proposal to lease public lands for grazing; asking for legislation to reduce the rates charged for use of sleeping cars; declaring that the water of all streams should forever remain public property, and that the right to its use should inhere not in the individual but in the land reclaimed; pledging every effort to make the exposition at Buffalo in 1901
a success; and declaring that Congress should increase the power of the Interstate Commerce Commission.

The committee appointed at the annual meeting in 1899 submitted a new constitution, which after some discussion was adopted unanimously. The most important parts are as follows:

The membership of this congress shall consist of one delegate for each congressional district and two at large for each State and Territory, and one for each State agricultural college and experiment station, to be appointed by their respective Governors, and one to be chosen by each national or State society or organization created and maintained to foster any agricultural or rural interest in the United States. Provided, that delegates thus chosen shall, when required, produce proof of the standing of their organizations. The delegates thus appointed and chosen shall hold office for two years, and shall constitute the voting membership of this body.

The Governing Board of the several States and Territories may appoint such a number of associate delegates as to them may seem wise, who shall have all the powers and privileges of regular delegates except that of voting. In case Governors refuse or neglect to appoint delegates and associate delegates, then the State vice-presidents and secretaries of boards of agriculture; or either of them, shall appoint the necessary number of delegates, but no delegate shall be chosen to fill the place of a regular delegate for less than three months. Provided, that the Governor of any State, or the President or state society or organization, may, at any time, upon due reason, remove any delegate from office. The Governor of any State, or the President or state society or organization, may, at any time, upon due reason, remove any delegate from office.

The congress shall meet annually at such time and place as the executive committee shall determine, and may meet on special occasions, when deemed necessary, to advise, discuss, and perform such duties as may in its judgment advance the interests of agriculture in the United States; but partisan and questions involving party politics shall not be introduced nor debated.

The officers of this congress shall be a president, first and second vice-presidents, one vice-president for each State and Territory of the United States, a treasurer, a secretary and three assistant secretaries, and an executive committee of five, of whom the president and the secretary ex officio shall be two, to serve for two years.

The election of officers shall be in odd years, when the numerals representing the same are not divisible by two without a remainder.

No compensation shall be allowed by this congress to its members or officers for their expense of travel or for any time lost in the performance of their duties, except as member of the Executive Committee and other committees appointed with powers may be reimbursed for any expense incurred while in discharge of duties imposed by this body.

As officers were elected in 1899 there was no election of officers at the meeting at Colorado Springs. On the resignation of President Hoard, in May, 1900, First Vice-President R. G. F. Clinging, who was elected to that office in 1899, became acting president. Col. John S. Cunningsham, of North Carolina, is second vice-president. The secretary is Mr. John M. Stahl, of Chicago, who is serving for the eighth year in that capacity. His assistants are Mr. George A. Stockwell, of Rhode Island, who has held that office eight years, and Mr. D. C. Kolp, of Texas, and Mr. E. A. Callahan, of New York, both elected in 1899. The treasurer is Mr. Levi Morrison, of Pennsylvania, elected in 1899. The executive committee is the Hon. B. F. Clayton, of Iowa, chairman; Hon. W. G. Whittington of B. F. Wetstein, of Kentucky; Col. T. C. Slaughter, of Texas; and Mr. E. L. Furness, of Indiana.

FEDERATION OF CHURCHES.

The subject of federation among American churches has been informally discussed for several years, and federative agreements relating to local work have been arranged and madeoperative to a greater or less extent in a number of cities. In May, 1899, the Congregational Association of New York appointed a committee to endeavor to secure the formation of a federation or alliance of the evangelical churches of that State. A State Convention was held in October, 1899, likewise appointed a committee on church federation. A conference, attended by persons from different parts of the United States, was held in the city of New York, Feb. 1 and 2, and unanimously approved of a declaration that the time had come "for the institution of a national conference, or federation, of missionary workers in the United States." In pursuance of another resolution of this conference, a national executive committee of 18 members, composed equally of ministers and laymen, was appointed for the promotion of federation. The Baptist, Congregational, Disciples of Christ, Lutheran, Methodistic, Episcopal, and Reformed Churches are represented on this committee. Some of its functions will be to foster intercommunication between local church federations, with special reference to supplying information in regard to the work in all parts of the country; to provide counsel and promote the organization of city and State federations; to report a plan for the basis of membership in the conference of the next year; to arrange for the conference of the next year, fixing time, place, and programme; and to devise a plan for raising the money necessary to defray the expenses incurred in connection with the work. Other duties are advisory.

In connection with the movement for the federation of churches and about the time of the holding of the conference in February, a statement of Christian doctrine for the demonstration of the essential unity of their churches was signed and issued by a number of pastors in the Borough of the Bronx, New York. This statement set forth the fourfold Creed of the Apostles, the Sacraments of Baptism and the Lord's Supper as of Christ's ordaining; declared the Bible to be the inspired word of God; and defined the Church as being the holy society of believers in Christ Jesus which he founded, of which he is the only head, and in which he dwells by his spirit, so that, made up of many communicants of one body, being knit together by the power of one spirit, sharing all the affairs of each other throughout the world, it is yet one in him." A plan for federative work within the limits of the borough accompanied the declaration.

A preliminary meeting to consider the subject of federation in the State of New York was held at Albany in July, when it was decided to call a conference, to meet at Syracuse in the fall. This conference met in November, and was attended by accredited delegates of the Baptist, Congregational, Presbyterian, Reformed, and Methodist Episcopal Churches and ministers of other denominations. A constitution was adopted for an organization to be called "The Federation of Churches and Christian Workers of the State of New York." The object of this body was defined to be "the promotion of effective co-operation among the churches of the State of New York, in order that their essential unity may be manifested; that the evangelization of every community may be more systematically accomplished; that a means may be found of expressing the united Christian sentiment in the face of any matters, whether religious or secular, and to moral issues; that the various Christian churches and Christian workers and benevolent activities of the commonwealth may be more completely co-ordinated, and that other appropriate
The new-formed Free Church Girls' Guild, district nursing, and the miscellaneous work done by the several councils were noticed. Free Church services had been held during the preceding summer at five centers on the Continent of Europe. The circulating libraries had been in great demand, more than 300 boxes of books having been returned to the Rev. Mr. Carr, of Southsea. The publication department had been very active during the year. The treasurer reported that the receipts from all sources had been £7,947 and the expenditures £4,102; the liabilities amounted to £1,581. The resolution passed on the subject of education embodied a renewed protest "against the injustice, aggravated by recent legislation, by which, in over 6,000 parishes of England, the only available are schools which, though in all cases they are largely, and in many cases almost wholly, maintained by public funds, yet are controlled by the clergy of one denomination and worked in the exclusive interest of one sect; while the religious teaching in a vast number of them is such as to make the children of Free Church parents, as well as others, the victim of the penal enactments of Free Church children." The resolutions exhort members of Free Churches, especially those who are electors, not to rest content in their demands for remedial legislation till such provision shall be made as shall bring within the reach of every child in the kingdom a school under the control of duly ordained clergy of each denomination, in which the religious instruction shall be free from sectarian bias; and until teachers and pupil teachers in all state-aided schools and children in all state-aided training colleges shall be free from any theological test. Resolutions respecting secondary education set forth that "in any future denominational organization of the Church, to which the State may have given authority should be a public representative body, on which the school boards, where they exist, should be largely represented"; approved the method laid down in the report of the Secondary Education Commission for the constitution of the local authority in county boroughs—namely, that one-third of the members should be chosen by the borough council, one-third by the school board, and the remaining third, half by any university college contained in the borough, or by the central office (Board of Education), and half by co-optation; advised that the administrative authority in counties should be similarly constituted; urged the remuneration of teachers, and the effective representation of the public on the governing body of the schools in all cases where a grant of public money is made to a secondary school; that no formularies distinctive of any particular religious denomination or denominations should be used in such schools; that in case of denominational boarding schools and in case of public funds parents of other denominations be permitted to establish hostelts within their organization, subject to the governing body; that the constitution of the endowed grammar schools be revised, so as to secure their undenominational character and make laymen and Free Church ministers eligible to the head mastership; and declared the provision for the establishment and maintenance by school boards of unsectarian training colleges. A scheme was presented to the council and discussed for the institution of Free Church Girls' Guilds, on which, however, definite action was not taken. A resolution with reference to the Sunday closing of public houses had been expressed regret that nothing had been accomplished, notwithstanding an agitation extending over thirty years to give England this boon, which had been acquired by nearly every other part of the empire, and advis-
FICTION, AMERICAN.

The salient feature of American literature in 1900, as in the preceding year, was the phenomenal success of certain novels, all by American authors, of whom the majority are not known in the field. Poe showed the endless possibilities of the American reading world, and planned, before the middle of the century was reached, a popular magazine on the lines later adopted by our great monthly; but even he presumably had no conception of the more recent developments in cheap periodical literature, nor, with a few exceptions, of the hundreds of reprints of such novels as we have seen of late. Susan Warner's The Wide, Wide World, the first American novel that might have served as a guidepost to his discerning mind, was not published until a year after his death; Uncle Tom's Cabin two years later; and to others the success of neither of these books appears to have suggested possibilities. They were rather regarded as unapproachable exceptions, one of which was helped by extraneous circumstances—the conflict over slavery which was to end in war. Even Edward Bellamy's Looking Backward, and Lew Wallace's Ben Hur, with its record of nearly 700,000 copies sold, seem to have been classified as sporadic appearances in the field. The true artists of the present day, with the exception of Stanley J. Weyman and Anthony Hope Hawkins, do not stand any longer in the first rank so far as circulation is concerned. Mr. Howells, Henry James, Mrs. Wharton, Miss Wilkins—to name but a few, and to restrict ourselves to American fiction—are led to describe the matter of immediate popularity, if not of enduring fame.

Many theories have been advanced in explanation of this unprecedented growth of the American reading public; and the warnings of the croaker who sees in the vogue of the novel the doom of true literature are, of course, heard in these days. The single cause for such a condition can be assigned. It is the outcome of many developments in recent years, as diversified as the style, subjects, and methods of the fortunate authors themselves. Publishers and public have interacted upon each other in a complex and highly interesting fashion, the former perfecting their methods of reaching the multitudes of readers, fastening by legitimate means the spread of reputations which formerly dribbled but slowly through; the daily press, ever keenly aware of new interests in its readers, has paid ever increasing attention to things literary, no journal of any pretensions, and, it might be said, even a weekly, is without an arts editor and its "book page"; and the international copyright law has unquestionably been an influence in the fostering of the American author, by giving him a fair field and an adequate return for his labors. Moreover, the nation has produced a movement which, by its universal impulse, and the Spanish war having apparently done all that can be reasonably attempted in aid of the Edison invention, has been the result of the fact that the Spanish American public, has begun to cultivate their past, to take a new interest in the beginnings that have led to so much, and to look upon the American public school, has begun to yield the fruit once denied it—culture; for the American public buys not novels alone. The recent and evidently permanent success of the innumerable cheap but handsome reprints of the classics of English literature, the many new editions of the novels of the next-to-coming authors, home-reading series and popular scientific books, for the numerous works on music and art, so timely in their writing and launching, the interest manifested in such writers as Spencer, Darwin, Huxley, and Tyndall, far in excess of that shown in the country whose glory they are, testify to the healthy growth of culture in the United States.斯坦福和安纳波利斯的学报, as American fiction does not read for pleasure alone. The success of all such books is not sudden and phenomenal, comprised in the popularity of two or even three years—the life, with but few exceptions, of the present-day novel; it is gradual and cumulative, resulting in the end in figures fraught with meaning for him who knows how to interpret them.

In point of immediate numbers, however, fiction overshadows at present all branches of literature everywhere in the world; nor is this fact to be deplored. When its growing national significance is taken into consideration. In this country we have passed during the last fifteen years through a series of successive periods of foreign cults— Tolstoi and Turgeniev, Maupassant, Daudet, Bourget, and Zola, the Spanish writers and the Scandinavians, even the only notable child of the Dutch sensitive movement, Louis Couperus, with whom we have gradually forgotten them, as our own national school of fiction began to develop, and the national note of the schools of all these countries grew in volume. From England we still take, and probably shall always take, the best she has to give us, for our two literatures are one in essence: we shall read if for extraneous reasons chiefly, for comparison, social and critical, as a measure of growing or diminishing national divergence.

The growth of the national spirit in the world's fiction is remarkable because it is universal. It coincides with the awakening of national feeling and the preoccupation with national affairs. The
most finished of French novelists, the artist who has outlived Bougainville—M. Anatole France—is etching the actual life of his country in the present day that probably will endure as mines of information for the future student, and not merely as masterpieces of style and method; but to foreigners, especially to Americans, his books have but little significance, unless they know the country well. The German seems not to have Hansen, has not produced a genius to wear the mantle of Turgeneff or Dostoievsky or Tolstoi. There, too, the world has moved with rapid strides; national temperament from this state but has drawn him nearer, in its borders. Italy's latest genius, D'Annunzio, is entirely alien to our life and, happily, to our morals, as is also Matilda Serao; while, finally, Russia has not yet produced a genius to wear the mantle of the Scandinavian—Fru Hansen, Jonas Lie, and Selma Lagerlöf prominent among them—are pessimistical psychologists, to be sure, but deal strictly with a national temperament entirely at its best, and are less real ones in an empire conscious at last of its great future. The young Russian writers have felt the trend of public thought and aspiration, Tolstoi himself leading them, for his latest two books are devoted to what will be found, in the last analysis, to be local conditions and abuses, even though he draws his heroisms in an empire conscious. The emotion of doing and thinking. The Puritan heritage also appears in one of the year's minor successes, Mr. Edwin Asa Dix's Deacon Bradbury—a splendid character study, but a novel hampered by a weak plot.

The element of chance in the publishing of books was strikingly illustrated in 1900 by the fate of one of the closest studies of American character in its development during the past quarter century yet published, Judge Grant's Unleavened Bread. The book received from the reviewers the attention it deserved and continues to deserve, but its popularity, expressed in the editions sold, is a far short of what might well have been expected for it. Women form unquestionably the overwhelming majority of our novel readers, and many women resented this mercilessly true picture of a type of American woman, which has not yet entirely died out, even though Judge Grant placed her heroine in the early days of the country and came to regard foreign criticism with indifference, if not with contempt; we are as sensitive as ever to the domestic censor, though we no longer persecute him. Judge Grant's novel has many shortcomings, but these it shares, curiously enough, with nearly all the successes here under discussion. David Harum, American. Eben Holden, Unleavened Bread, and Deacon Bradbury are his manner studies pure and simple, and as such excusable for faulty method. Not so with When Knightwood was in Flower, that strange product of a pen lacking all the essentials that go to the making of a historical novel save one, a sense for the romantic. When Knightwood was in Flower is nothing but a successful little novel that the world thought a lover. This is, at least, the only theory by which its popularity can be explained. Two beings, young and supremely handsome, ardent lovers, beset by difficulties, amid romantic surroundings, will find sympathizers the world over, as they have done since the art of fiction began, and will have their heroines in the early days of fiction. What the world lacks not only every element of style, but is even disfigured by the slang of Cook County in the closing years of the nineteenth century? What of all absence of literary quality, of all distinction? The story's the thing here, and it is not historical, notwithstanding its guise. Its success do not made an end of time. We may say that Lane Allen's polished method is but wasted effort, and it is not a hopeful sign of the times. No explanation need be sought for the reception there is a strong affinity between the wholesome, common-sensel philosophy of being preached by Mr. Howells and David Harum's praise? Maybe the author of The Rise of Silas Lapham and A Hazard of New Fortunes has long been the foremost of our national novelists. The popularity of Mr. Irving Bacheller's Eben Holden is traceable, though to a smaller degree, to the same source. Here again the provincial element predominates: Eben Holden's poetry is but the type of one of the factors that entered into the ancestry which produced David Harum.

The Redemption of David Corson presents—crudely, perhaps, and sensationally, but with unmistakable vigor—the Puritan conscience dormant in most of us, a blessed and invaluable inheritance from the bleak casuistry, and however, character awakened, happily, because, after all, the life of the average American, like David Harum's, is free from trespasses that are really black sins. This type is not new to our fiction. The Scarlet Letter immortalized it, and Julian Gordon realized it dimly in her Puritan Pagan, modifying its sternness, but still it has been familiar as a mental image of doing and thinking. The Puritan heritage also appears in one of the year's minor successes, Mr. Edwin Asa Dix's Deacon Bradbury—a splendid character study, but a novel hampered by a weak plot.

The element of chance in the publishing of books was strikingly illustrated in 1900 by the fate of one of the closest studies of American character in its development during the past quarter century yet published, Judge Grant's Unleavened Bread. The book received from the reviewers the attention it deserved and continues to deserve, but its popularity, expressed in the editions sold, is a far short of what might well have been expected for it. Women form unquestionably the overwhelming majority of our novel readers, and many women resented this mercilessly true picture of a type of American woman, which has not yet entirely died out, even though Judge Grant placed her heroine in the early days of the country and came to regard foreign criticism with indifference, if not with contempt; we are as sensitive as ever to the domestic censor, though we no longer persecute him. Judge Grant's novel has many shortcomings, but these it shares, curiously enough, with nearly all the successes here under discussion. David Harum, American. Eben Holden, Unleavened Bread, and Deacon Bradbury are his manner studies pure and simple, and as such excusable for faulty method. Not so with When Knightwood was in Flower, that strange product of a pen lacking all the essentials that go to the making of a historical novel save one, a sense for the romantic. When Knightwood was in Flower is nothing but a successful little novel that the world thought a lover. This is, at least, the only theory by which its popularity can be explained. Two beings, young and supremely handsome, ardent lovers, beset by difficulties, amid romantic surroundings, will find sympathizers the world over, as they have done since the art of fiction began, and will have their heroines in the early days of fiction. What the world lacks not only every element of style, but is even disfigured by the slang of Cook County in the closing years of the nineteenth century? What of all absence of literary quality, of all distinction? The story's the thing here, and it is not historical, notwithstanding its guise. Its success do not made an end of time. We may say that Lane Allen's polished method is but wasted effort, and it is not a hopeful sign of the times. No explanation need be sought for the reception
of Miss Mary Johnston's Prisoners of Hope. Here we have good, sound work, interesting characters and situations set against interesting historical backgrounds, the human element in its relation to the making of a people—the right kinds of material used in a masterful manner. Miss Johnston's imaginative gift, however, has been too readily pointed out than those of the earlier Richard Carvel. The critics, at least, had regained their power. Planned since the entire period of the War for Independence, the book broke down signally as a novel of adventure. The tale of war and derring-do has its limits, beyond which nothing remains but repetitions of hairbreadth escapes already used. Mr. Ford was led into this fault by lack of funnier combinations. The charge, of course, that her taste for adventure led Miss Johnston into overdoing this kind of thing toward the end of Prisoners of Hope. As a human document, too, Janice Meredith falls far short of the highest standard. Its heroine's character does not develop in the days that tried men's souls, and women's too. Again and again in the beginning, so she is, the end of the tale: a shallow, frivolous coquette, with no suggestion of the makings of a noble woman, of the traditional American Revolutionary great-grandmother. But Paul Leicester Ford, the student of American history, redeems the shortcomings of Paul Leicester Ford the novelist. His book is, above all else, a study of the life of that epoch, the dilemmas of the loyalists, and "trimmers"—not so much of the leaders, though they, too, are not lacking, as of the country people and their transplanted squirearchy. Mr. Ford's novel is strongest in that one of its three interests—the historic, the human, and the adventurous—which at the present time is probably the most important to the American reading public, the historical one.

The Rev. Mr. Sheldon's In His Steps deserves mention merely because no book that finds an audience of a million readers can well be entirely overlooked. It is not literature; it is a tract in the simplest form of that kind of writing. A mere reference to its meteoric career must suffice. It stands beyond the confines of American letters, a sunflower among the weeds of "reading matter"—third-class, to adopt the post-office classification, the only practicable one in this case.

The popular books here discussed are about evenly divided between national history and national fiction. The former, for instance, is the subject of the study of the national history of the United States. When we proceed to give a glance at the recent minor successes we find that history carries the day. Our naval victories in the war with Spain were no doubt largely responsible for the sudden prominence given in fiction to the naval side of our wars. Mr. Cyrus Townsend Brady here stands alone, a popular novelist rather than a trained literary artist—a muscled Christian and an ardent patriot, the biographer, also, of Paul Jones, the hero of more than one of his stories. Less successful attempts to exploit the American Revolution have been made within the past two years in vast numbers. They all bear very much the same stamp, our latest fiction, but are remarkable only for their striking revelation of the comparative paucity of the fundamental situations upon which such tales are built—the love of a patriotic maiden for an English officer, a conflict of duty and inclination, and all the other stock ingredients of adventure and leadership. The outh of both sides are added according to the lore of the author. The very simplicity of the recipe makes its compounding difficult, and successes will grow fewer as the attempts become more frequent. Meanwhile we still await a really good tale of the campaign in the Carolinas, of the Cowpens, Morgan, and Tarleton.
The War of 1812 has thus far been but scantily treated in our novels. Mr. Alttsheler has dealt with the subject from the naval point of view, and Mr. Alttsheler with the war on land in A Herald of the West, one of the best books of that able novelist and student. This period, however, appears to be doomed to neglect for the present, since the civil war is plainly to be the next episode in our history to be romantically treated. The lack of a really great novel of the greatest of our crises has long been felt, but it was not until 1900 that Mr. Alttsheler produced his In Circling Camps, evidently the forerunner of a large class of books of its kind. The twentieth century, however young, already feels its distance from the happenings of the nineteenth; sufficient time has now elapsed for novelists, and final dealing with an episode that long was a tender subject on both sides of Mason and Dixon's line. Historians and novelists will not succeed each other here, but will proceed abreast, and perhaps we shall thus obtain a truer knowledge of the methods of the latter, and of their value.

No fear of wounding sensibilities still raw, of arousing prejudices hardly quieted, held back our novelists in the case of the war with Spain. It has inspired already one notable novel, but only one, Mr. John Fox, Jr.'s, Crittenden, a book breathing a fine and sturdy patriotism, celebrating, above all, the anonymous heroes of the war. The war with Spain was a lesson learned; and final dealing with an episode that long was a tender subject on both sides of Mason and Dixon's line, has left us as the last illustration of the evils of war, the last of the national efforts, the last of the national problems—these are to succeed the "problem" novels, "psychological" studies, and "sex" discussions of the immediate past. The improvement will be undoubtedly great, for it will aid us to "find" ourselves, and, having found, to know and understand. The modern novelist no longer wants to be an idle entertainer; and there be many who are willing to be informed while finding pleasure. The scientific historical method allures them not, theology undisguised does not attract them, and psychology and economics, likewise social studies, can not tempt them. To them the novelist may act as interpreter of the wisdom and the knowledge of the day, giving a new function to his art, but assuming also great responsibilities, and the novelists will have to have brought us—the lasting union of North and South, of the Blue and the Gray, the birth of the nation's confidence in its insoluble solidarity.

The novelist as teacher and interpreter—that seems to be the immediate future of our fiction. Not only to attract their readers, but to interpret the national problems—these are to succeed the "problem" novels, "psychological" studies, and "sex" discussions of the immediate past. The improvement will be undoubtedly great, for it will aid us to "find" ourselves, and, having found, to know and understand. The modern novelist no longer wants to be an idle entertainer; and there be many who are willing to be informed while finding pleasure. The scientific historical method allures them not, theology undisguised does not attract them, and psychology and economics, likewise social studies, can not tempt them. To them the novelist may act as interpreter of the wisdom and the knowledge of the day, giving a new function to his art, but assuming also great responsibilities, and the novelists will have to have brought us—the lasting union of North and South, of the Blue and the Gray, the birth of the nation's confidence in its insoluble solidarity.
at the instance of the United States would be adhered to, and that after this policy had been carried into execution guarantees for future protection of foreign residents in China and of native Christians and agreements providing for trade expansion would be obtained. Under the Treaty of 1894, to the development of the vast resources of the Chinese Empire. The necessity which seemed to exist for the maintenance of military and naval establishments by the powers for the purpose of enforcing the terms of the new treaties with China would, however, doubtless require the expenditure of moneys, for the present at least, considerable in excess of the revenues which would be obtainable from the empire, demanding appropriations by individual nations of more or less magnitude, some of which might involve the issue of new loans.

One of the most notable financial features of the year was the negotiation in this country through syndicates of New York bankers of foreign government loans. The first important event of this character was the placing by Russia early in the year of railroad securities to the amount of $25,000,000, which were guaranteed by the Russian Government, and it was understood that the proceeds of which would be devoted in the purchase of material for Russian railroads. The British war loan for $175,000,000, issued in March, was offered in part in this country, and $12,000,000 thereof was awarded to subscribers in the United States. In August a British Exchequer loan for $50,000,000 was issued, of which $25,000,000 was taken up in New York. In the following month the German Government placed with another New York syndicate $20,000,000 of treasury notes, and later a portion of a Swedish loan for $10,000,000 and securities issued by the free city of Hamburg and by other German municipalities were disposed of in this country. These negotiations amounted in the aggregate to nearly $100,000,000. The success which attended the efforts of European governments to borrow in the United States seemed to open a new field for the employment of American capital, and it was regarded at the end of the year as quite conceivable that whenever monetary conditions in New York were favorable to such operations there would continue to be opportunities afforded by foreign governments for investments by Americans in their loans which would be mutually advantageous. The establishment of a market in this city for dealings in international securities was advocated by representative bankers as likely to afford facilities for transactions in these issues, which operations might eventually become as important as those in the European capitals.

A financial event of the year of vast importance, and which contributed greatly to the prosperous conditions of the country, was the enactment by Congress, in March, of the measure having for its object the maintenance of the gold standard through the medium of an augmentation fund or depository, which was to be accompanied by provisions for the prompt and effective restoration of this fund whenever it should become impaired. Previous laws, while providing for a reserve, were not mandatory regarding the amount thereof; neither did they specifically provide for the restoration of the fund whenever it should become so reduced as to be generally accepted as the minimum limit of safety. The new law inspired confidence in the ability of the Secretary of the Treasury who was loyal to the gold standard under almost all conceivable conditions to maintain the parity between the gold and the silver obligations of the Government. Though some of the provisions of the law were acknowledged to be imperfect, and capable of being evaded by administrations who might be opposed to the principle embodied in the law, no doubt was entertained concerning its present efficacy. One marked effect of the law was observable in the concentration of new issues of gold certificates, much of which had been previously held by banks and institutions, but which, as was the case after the resumption of the issue of gold certificates in 1879, was exchanged therefor at the Treasury, thus making this department the repository of a very large portion of the supply of the metal in the country. These exchanges of gold for gold certificates, the absorption by the Treasury of bullion from the domestic mines and from the Yukon fields, importations of gold from Australia and imports in October from Europe, together with the receipts of gold at the customhouses in payment for duties, caused an addition to the Treasury holdings of gold during the calendar year of $81,317,224, of which gain $57,348,336 took place after the passage of the gold standard law. At the end of December the gross amount of gold in the Treasury was $470,349,251, a sum unprecedented in the history of the country.

The currency provisions of the gold standard law were of the utmost importance. An issue of 2-per-cent. thirty-year gold bonds was authorized for the purpose of refunding $39,057,250 securities, bearing interest at 3 to 5 per cent, and redeemable in coin between 1904 and 1908 inclusive. Provision was made for the organization of banks with a capital of $25,000, and also for the issue by national institutions of currency on the par value of the bonds deposited as security. Under the operation of the refunding provisions of the law the exchanges of old bonds for the new 2 per cent. progressed more or less rapidly until the end of the year, when refunding operations were suspended by order of the Secretary of the Treasury. At the close of the year the amount of new issues of gold bonds had been exchanged for new and $14,599-801 had been paid for premiums on the former. The banks established under the provisions of the law were 389 in number, with a combined capital of $20,127,000, and the smaller banks were distributed throughout the agricultural regions where they were most needed. Comparative few banks took advantage of the privilege to issue circulation to the par of their bonds. The increase in bank circulation during the year, however, amounted to $98,865,887. This gain in circulation, together with the distribution by the Treasury of the above noted amount for premiums on refunded bonds and the issuance of new bonds, amounted to an increase of nearly $100,000,000 of public funds on deposit with those national banks, numbering 240, who gave bonds as security for such funds, contributed to general monetary equilibrium throughout the greater part of the year.

Commercially the country was marvelously prosperous during the year. Each month recorded an important excess of exports over imports of merchandise, the smallest of such excess being $36,762,101, in July, and the greatest $92,549,206, in October, which sum was never before surpassed. The excess of merchandise exports over imports for the calendar year was likewise the largest on record, amounting to $648,965,758, and the total con-
merce of the country, which during the fiscal year ending June 30 for the first time in our history passed the two-billion-dollar mark, being $2,244,424,266, was $2,307,102,970 in the current calendar year. Moreover, the imports of manufacturers' material and the exports of manufactured goods were larger than ever before, and our exports were notably exceeded by American citizens residing abroad, the movement of which, during the fiscal year ending June 30 for the first time in our history passed the two-billion-dollar mark, being $2,244,424,266, was $2,307,102,970 in the current calendar year. Moreover, the imports of manufacturers' material and the exports of manufactured goods were larger than ever before, and our exports were notably exceeded by American citizens residing abroad, the movement of which, during the fiscal year ending June 30 for the first time in our history passed the two-billion-dollar mark, being $2,244,424,266, was $2,307,102,970 in the current calendar year. Moreover, the imports of manufacturers' material and the exports of manufactured goods were larger than ever before, and our exports were notably exceeded by American citizens residing abroad, the movement of which, during the fiscal year ending June 30 for the first time in our history passed the two-billion-dollar mark, being $2,244,424,266, was $2,307,102,970 in the current calendar year.

Moreover, the imports of manufacturers' material and exports of manufactured goods were larger than ever before, and our exports were not only greater, but they were more widely distributed throughout the world than in any preceding year. Exports of manufactured goods amounted to $432,284,366 during the calendar year, and our manufacturers are now successfully competing with those abroad in nearly all the markets of the world.

The enormous excess of merchandise exports over imports in the last four calendar years, amounting to $2,103,194,933, and the fact that after deducting the visible liquidations, through the movement of gold and silver, of this balance there remains a vast sum unaccounted for except through the return of an unknown amount of stocks and bonds, have led to renewed efforts to revise, on a more satisfactory basis than heretofore, estimates of the amount which is known as the "invisible" adverse balance of trade. This balance includes freight, insurance, undervaluations of imported goods, interest on securities held abroad, the amount expended by tourists less the sum which is brought into the country by immigrants, and other items which necessarily must, as well as the return movement of securities above noted, be estimated. The amount of such "invisible" adverse balance is admitted to be not less than $150,000,000 annually, and some bankers who have given the matter much study claim that it is more than double this amount, in order to arrive at an approximation of the actual balance of international indebtedness this invisible annual adverse balance must be deducted from the apparent balance—which is the sum of the excess of exports over imports of merchandise and gold and silver coin and bullion—and the result should show approximately the amount of unliquidated foreign indebtedness upon which to base economic estimates.

The following tabular survey of the economic conditions and results of 1900, contrasted with those of the preceding year, is from the Commercial and Financial Chronicle:

**Money.—** Influenced by the large customs receipts of the Government during the first four months of the year, which receipts consisted almost wholly of gold, and by accruements from domestic mines, the gross gold holdings of the Treasury gradually increased from $398,032,027 at the end of 1899 to $426,980,371 at the close of April. The withdrawals of gold for export in May were nearly counterbalanced by augmented receipts from the sources above noted, and after the middle of the year gold exports were more than offset by importations at San Francisco of gold from Australia, and in October from Europe, and by bullion from the Yukon, which passed through the Pacific coast assay offices, so that by the end of October these gross gold holdings were $458,266,143. The amount held at the end of the year was $479,349,251. The net gold in the Treasury at the close of 1899 was $236,909,230, while at the end of 1900 it was $215,719,872, this result being due to the net increase of $21,199,358 during the year from $161,122,797, Dec. 31, 1899, to $283,629,279 at the corresponding date in 1900. The circulation statement of the Treasury reported that on Jan. 1 the amount of gold was $817,977,530 and of gold certificates $161,122,797, while the total of all forms of metallic and paper money in circulation on that date was $93,629,279, making a circulation percentage of 25.73. The statement of Jan. 1, 1901, shows that the amount of gold in circulation was $260,192,578, of gold certificates $232,787,929, and of all forms of metallic and paper money $2,173,251,879, making a per capita circulation of $282.19.

The cash holdings of the New York associated banks at the close of the year were $188,906,000, of which $144,001,700 consisted of specie. These holdings were increased to $231,594,300 by Feb. 10, chiefly in consequence of a return flow of money from the interior, but they fell to $205,846,400 by March 24, more or less rapidly recovering thereafter to $252,030,200, the maximum amount of the year. The amount held at the end of the year was $252,030,200, influenced by the disbursements of premiums upon bonds refunded under the provisions of the act of March 14. Then came a reduction in the cash holdings to $212,379,000, Nov. 10, caused by the withdrawals of money for the crop movements, followed by a recovery, and the amount held at the end of the year, and indeed on record, was reached Sept. 25, when the loans were $823,830,600. The reduction of cash above noted caused a liquidation of loans, and they were reduced to $755,655,500, Nov. 10, after which there was a recovery to $796,457,200 by the end of the year. Deposits at the beginning of January were $73,933,100, the minimum of the year. There was a rise to $829,917,000, March 3, followed by a fall to $800,116,400, March 24. Then came a recovery to $907,344,000, Sept. 15, succeeded by a decline to $831,091,800, Nov. 10. At the end of the year the deposits were $854,189,200. The surplus reserve was at the maximum ($89,711,275) Feb. 3, and at the minimum ($2,660,425) March 17. While the cash, loans, and deposits were advancing during the spring and the summer the surplus reserve increased to $82,125,950 by Aug. 11. Then came a fall to $2,947,700 by Oct. 20, followed by a recovery, and the surplus at the end of the year was $11,352,900.

The conditions of the New York Clearing House banks, the rates of interest, exchange, and silver, and the prices of United States bonds on Jan. 2, 1901, compared with the same items for the preceding two years, are given in the following table:
Money on call loaned at the Stock Exchange during the year at 25 per cent. in November and as low as 1 per cent. from June to October inclusive. During the first few days in January loans were made at 12 per cent., but gradually the market grew easier, influenced by a return movement of currency from the interior, and by the end of the month the rate fell to 2 per cent. In February the former tone was carried to rates during March from 3 per cent. to 1$ per cent., but in March there was an advance to 7 per cent., pending the passage of the new currency law, influenced by the decrease in the surplus reserve of the banks. Thereafter during the month the market was easier, and loans were made at 2 per cent. at the close. In April, influenced by the improved condition of the banks, money was freely offered, and call-loan rates fell from an average of 32 per cent. to 21 per cent. The market then began to be favorably affected by the inerease in bank note circulation and by the refunding operations, and up to the end of April $260,783,000 of fundable bonds had been presented for exchange into the new 2 per cent., while the disbursements for premiums on the funded bonds were about $26,000,000. Notwithstanding exports of gold to Europe in May, the money market was easy, call loans ranging from 3 per cent. to 1$ per cent., and averaging 2 to 2$ per cent. The range in June was from 1 to 2 per cent., with the average 1$ to 1$ per cent., and in July the rate was the same. The average was 1$ to 1$ per cent., and in August, with an unchanged range, the average was 1$ to 1$ per cent. It may be noted that on Aug. 18 a call by the Treasury matured for the surrender for redemption of the 2-per-cent. bonds of 1891, which were extended at 2 per cent. and made redeemable at the pleasure of the Government. These bonds then outstanding amounted to $25,364,500, and they were largely held by banks as security for circulation and public deposits. The surrender of the bonds was slow, however, and at the end of the year there were $1,207,600 of these securities outstanding. In September, while the range for money on call was from 1$ to 2 per cent., averaging from 1$ to 1$ per cent., the feature was a perceptible hardening of the rates for time money due to the demands from borrowers who desired to make provision for periods beyond the election, and rates for five to six months collateral loans were 5 per cent. In October money on call was active, ranging from 1$ per cent. early in the month to 6 per cent. by the close, and the activity was almost wholly due to the pending presidential election and to the low bank reserves resulting from the drain to the interior for crop purposes. The average was from 2$ to 4$ per cent. The 21 loans as at the end of the year, were recorded for 4 months and 3 weeks periods. In November, immediately previous to the election, there was an urgent demand for money on call to tide over that period, and on the 21 loans were made as high as 20 per cent. and the borrowing was in many cases until the succeeding Wednesday. On the following Monday 25 per cent. of the high rate, the year, was recorded for loans over the election. On the day after that event, however, money was comparatively plentiful, and it so continued for the remainder of the month, ranging from 2 per cent. to 6 per cent. In December, money on call loaned at the New York Stock Exchange at 6$ per cent. and at 3 per cent., and the tone of the market, until toward the close of the month, was firm, influenced by the absorption of money by the Treasury and by a movement of currency to the interior, which reduced the supply, and by the active stock speculation which increased the demand. In the last week of the month liberal Treasury disbursements for interest and for pensions and free offerings on bounty commissioned bonds which were the same. The average was 1$ to 1$ per cent., and in August, with an unchanged range, the average was 1$ to 1$ per cent. It may be noted that on Aug. 18 a call by the Treasury matured for the surrender for redemption of the 2-per-cent. bonds of 1891, which were extended at 2 per cent. and made redeemable at the pleasure of the Government. These bonds then outstanding amounted to $25,364,500, and they were largely held by banks as security for circulation and public deposits. The surrender of the bonds was slow, however, and at the end of the year there were $1,207,600 of these securities outstanding. In September, while the range for money on call was from 1$ to 2 per cent., averaging from 1$ to 1$ per cent., the feature was a perceptible hardening of the rates for time money due to the demands from borrowers who desired to make provision for periods beyond the election, and rates for five to six months collateral loans were 5 per cent. In October money on call was active, ranging from 1$ per cent. early in the month to 6 per cent. by the close, and the activity was almost wholly due to the pending presidential election and to the low bank reserves resulting from the drain to the interior for crop purposes. The clearings of the New York associated banks in 1900 amounted to $52,634,201,865, against $60,761,791,901 in 1899. Clearings of all banks in the country amounted to $86,160,587,332, against $94,178,069,233 in the previous year. The clearings on Dec. 27, 1900, at New York were the largest on record, amounting to $94,013,290. The table at the foot of page 220 is the New York Clearing House statement of bank averages at the beginning of each quarter in 1900 and at the end of the year. Stocks.—The stock market, though irregular and comparatively inactive at the beginning of the year, had by the last days of 1900 and by the lead of New York Central, and the tendency was generally upward for the investment properties to the end of January, influenced by growing ease in money. The speculation seemed to be entirely unaffected by the unsettled London markets in the closing days of the month, caused by news of the duration of the war between England and Japan and by the retreat of the English forces across the Tugela river after the temporary occupation of Spion Kop. The announcement that the Third Avenue Railroad Company had an excessively large floating debt, and was thereby financially embarrassed, caused a sharp decline in the stock of that company. The continued hesitancy of the public during the month was manifest in the failures of sugar and the American Sugar Refining Company, together with unfavorable developments at the annual meeting of this company, made the stock exceptionally weak. The tone of the market was generally strong in February, influenced by declarations of first dividends by several leading railroad companies, notably the Union Pacific, the Silicon Valley, and the Southern Pacific. Speculation was also favorably affected by large purchases of the bituminous coal shares and of stocks of Southern roads, buying of the former being stimulated by the activity in iron and coal and of the latter by a rise in the price of cotton. After the middle of the month a further decline in the market was noted by foreign speculators of leading refiners of sugar, in United States rubber, and in People's Gas, together with unfavorable bank statements, had a depressing effect upon the general market, inducing speculative sales. There was, however, a partial recovery by the end of the month. Influenced by the passage of the gold standard bill, which fixed the gold values of the leading American railroad properties for the remainder of the month. The European purchases seemed to be directly influenced by the establishment of our currency upon a gold standard, and there were indications, which were observable in the foreign exchange market, that large amounts of the stocks bought were hypothecated with New York banking houses instead of being shipped abroad. The advancing tendency of the market was checked by realizing sales early in April, and the business was less active while the tone was irregular during the first half of the month. Then it was announced that the American Steel and Wire Company had close tenders were made for the direct purchase of accumulated stocks, together with the request made by the company that deliveries of large amounts of material by the Federal Steel Company be deferred, which request caused that company to close part of its mills, had a demoralizing effect upon the stocks of all iron and steel concerns. These stocks had been greatly advanced in price during the previous month, and the fall tended unfavorably to affect all the industrial properties, and the whole market was more or less unsettled. There was, however, a prompt recovery in the railroad stocks, influenced by easier rates for money and by an improved condition of the bank reserves, which encouraged the purchasing of leading stocks at the decline. Moreover, there was a feeling among speculators that the situation in the steel and iron trade had been exaggerated with a view unfavorably to influence the market. Disclosures in the following month, however, indicated that there really was good cause for the unsettlement, which was caused by the fall in the production of steel, and of iron had, under the influence of the extraordinarily high prices which had been ruling, been excessive and entirely unwarranted by the demand. Consequently, inquiry by consumers of these goods fell off, and it failed to be stimulated by the general reduction in prices. The result was that consumers were left to manage the situation in the market, to the advantage of the stocks. The unsettlement upon the speculation of the decline in the shares of the iron and steel properties resulting from these disclosures was in some measure counteracted by news of the adjustment of the differences between the local gas companies, by the rehabilitation of the Third Avenue Railroad Company through the issuance of new bonds, by prosperous developments of the Washington sugar market, between the sugar refiners, and the market irregularly recovered. The failure of an important commission house through an effort to corner cotton had somewhat of a disturbing effect toward the end of the month, and the market was irregular at the close of May. In June the tendency of the market was generally downward, although it remained greater part of the month. The opening of the presidential campaign was a partially disturbing factor owing to the prospect that the political lines would be closely drawn between the gold standard and free silver coinage, as was the case four years previously. The unsettled condition of industrial bank reserves, which encouraged increases in specie and in cotton goods had a depressing effect upon manufacturing interests. Unfavorable crop reports and damage to spring wheat in the Northwest more or less affected the status of the grain-carrying roads, and an export movement of gold contributed to speculative selling of stocks. The situation of the legations at Pekin, and the military operations by the allied forces, including those of the United States, for the relief of the legations, had a disturbing influence, and tended to repress speculative operations on the Stock Exchange. The market was quite inactive during July, and though there were recoveries in some of the specialties and a generally firm undertone, the volume of transactions on the Exchange was quite small. The action of the Democratic National Convention at St. Louis clearly defined the free coinage of silver as the paramount issue of the presidential campaign, and some confidence was felt in the conservation of the existing administration. The crop conditions grew more favorable owing to quite general rains in the Northwest, and the indications pointed to a better yield of
winter wheat than in the previous year. There was no marked improvement in the industrial situation, however, and prices of steel and iron continued to decline without stimulating any special inquiry from consumers. The reports from China regarding the foreign legations were sensational and more or less disturbing until the end of the month, when official announcements were made of an assuring character. Speculation was dormant during August, and the aggregate of transactions in stocks was but little more than 4,000,000 shares, against nearly 13,000,000 in the same month in 1899. The influences contributing to this inactive speculation were the prevailing general unfavorable industrial situation, and the uncertainty regarding the crops, though concerning the latter there were assurances of an average harvest of grain. The Chinese situation became less disturbing, the legations having been rescued and Pekin being occupied by the allied forces, but complications ensuing, threatened, to a partial extent, the independence of the Russian Government. The tone of the market was, however, generally firm, and there was a good demand for the leading railroad properties, including the trunk lines, the Grangers, the Southwesterns, and the Anthracite Coal shares. Early in September a strike of coal miners in the Pennsylvania regions had a depressing effect upon the value of the anthracite shares, as the latter was more or less favorably influenced by a large movement of currency hence to the South and to the Southwest due to the demand for money for the cotton crop, and later considerable sums were sent to Western points to facilitate the marketing of grain. The partial destruction of Galveston, Texas, and the accompanying loss of nearly 2,000 lives and of millions of dollars’ worth of property, was one of the notably unsettled events of the month, chiefly, however, affecting the cotton situation. The results of the State elections in Vermont and in Maine seemed to give some assurance of increased sound money majorities at the presidential election, which feeling was partially reflected in the stock speculation, but the volume of business was comparatively small and the trading was almost wholly professional. After the middle of the month large speculative sales of the Anthracite Coal shares, of the local traction stocks, of the industrials, and of the trunk line properties made the movement favorable towards the end of the month some progress in the movement for the settlement of the anthracite coal strike caused a covering of short contracts, and the tone was generally better thereafter to the close. The tendency was upward early in October, notwithstanding the efforts of labor agitators to prevent the settlement of the anthracite coal strike, and the operators. The prospect of dearer money resulting from the continued movement of currency to the interior seemed to have little effect, for there was a very confident feeling that higher money rates would cause such a fall in foreign exchange as to bring comparatively large amounts of gold from Europe. The notably strong stocks were Missouri Pacific, Union Pacific, Chicago, Burlington and Quincy, the trunk lines, and the local traction issues. After the middle of the month the market became active and buoyant, influenced by assurances of the re-election of President McKinley, by engagements of gold in Europe for purchases of anthracite coal, and by the expectations of leading railroad properties, including the principal trunk lines. Buying of railroad bonds was a notable feature of the movement, and the transactions in these were usually large. The buoyancy continued during the greater part of the fourth week of the month, encouraged by increasing confidence in the political situation, by a smaller movement of currency to the interior, and by receipts of gold from abroad. The daily transactions were quite large and the buying was especially noticeable in Metropolitan Railway and also in Brooklyn Rapid Transit, the latter on account of a prospective change in the management. Great Northern and Southern Pacific were exceptionally strong, and there was an increasing demand for railroad mortgages, indicating investment purchases. A sharp upward movement in Pacific Mail gave color to a report that Southern Pacific interests would be in the possession of the State of California in the last days of the month there was a natural downward reaction in the market, due to profit taking, and though there was a very confident feeling regarding the result of the presidential election, a disposition was manifested by nonprofessional speculators to await the event. A sharp well-sustained advance to be wholly due to the November settlements, tended somewhat to limit the volume of business, and about the only notable feature was a rise in Pennsylvania on the announcement of an extra dividend of 1 per cent. The activity in money on the Friday and on the Monday previous to the election checked operations in the stock markets, but the tone of the market was generally firm. The feature on the day after the election was a sharp advance in the whole list, with enormous transactions both for domestic and for European account. Some of the foreign arbitrage houses cabled purchasing orders to London on the previous night for execution on the "curb" advance in rates for money, which appeared to be unusually strong to the close of the month. In December there was very confident buying of stocks, influenced by the generally prosperous conditions prevailing, which were reflected in augmented railroad earnings promising increased dividends. On the 17th the week had a direct effect upon the speculation in the coal shares was the announcement of the purchase of the Pennsylvania Coal Company by capitalists largely interested in the anthracite coal properties. Another event was a conference of railroad presidents with the object of devising means for the maintenance of high rates. The combinations of important railroad interests in the West and Northwest also had a stimulating effect upon the market. Notwithstanding enormous sales of stocks, chiefly high-priced properties, by Europeans, the market appeared ready to
absorb these stocks, and the tendency was generally upward to the close of the month. On the 22d the transactions on the Exchange were unprecedentedly large for a half holiday, amounting to 1,003,519 shares, and the sales for the week ending that day were 7,775,640 shares, exceeding in amount any previously recorded. For the seven weeks ending Dec. 21, including the week ending Nov. 9, the transactions in stocks were 38,696,044 shares, and the tone of the market during this entire period was almost uninterrupted strong and at times remarkably buoyant. Total sales of stocks at the New York Stock Exchange in 1900 were 138,880,184 shares, against 176,421,153 shares in 1899, 112,689,037 in 1898, 77,624,175 in 1897, 54,490,643 in 1896, 66,583,232 in 1895, 49,075,032 in 1894, 80,977,839 in 1893, 85,875,092 in 1892, 69,031,689 in 1891, and 71,282,883 in 1890.

The following shows the highest prices of a few in the speculative stocks in 1899, and the highest and lowest prices in 1900:

The Crops.—The condition of the cereal crops was somewhat unfavorable early in the year, owing to the backward season, which delayed farm operations, and also to winter killing of fallow wheat. Conditions were, however, by no means uniform, wheat being at a low average in Ohio, Michigan, and Indiana, and high in the Southwest, on the Pacific coast, in Illinois, and in Kansas. Conditions improved later in the spring, so far as regards winter wheat, but spring-sown grain was unfavorably affected by drought. The harvest of fall-sown grain, which began in June, was excellent in Texas, Kansas, and Oklahoma, and the indications then pointed to a crop of winter wheat at least 50,000,000 bushels in excess of that in the previous season. The damage to spring wheat was greatest in the extreme Northwest, but the July report of the Department of Agriculture showed that the largely increased yield in Kansas and in other States in that section would, to a considerable extent, offset the loss in Minnesota and in the Dakotas. The condition of corn was then reported better than at the corresponding date in 1899, while the cotton crop at this point was good. Corn declined in condition during the last part of the summer, in consequence of the hot weather, but as the acreage was larger the yield was expected to be above the average. Official estimates of the results of the combined wheat crops were but little below the output of the previous year. At the end of the year the final estimates of the Department of Agriculture indicated a yield of 2,165,000,000 bushels of corn, of 522,229,000 of wheat, of 809,126,000 of oats, of 50,000,000 of barley, and of 24,000,000 of rye, and the striking feature of the estimates was that the grand total of these cereals was 5,319,879,770 bushels, against 3,518,885,756 in 1899. The yield of wheat was unexpectedly good, and the results were phenomenal in Kansas and in other States in that locality. The estimates of the yield of cotton were from 9,900,000 to 10,500,000 bales. The Department of Agriculture based its calculation of a crop of 9,030,270 bales of cotton upon an acreage of 25,038,000 and a yield of 190 pounds per acre. The harvest of wool was good in Texas, Georgia, Alabama, Mississippi, South Carolina, Arkansas, Louisiana, and North Carolina. The smallest crops were in Virginia, Missouri, and Florida. The table at the foot of this page shows the yield and the value of the crops for the years 1890 and 1900 on the basis of the price at New York at the beginning of 1900.

Foreign Exchange.—The exports of domestic and foreign merchandise for the year ending Dec. 31, 1900, were $202,582,883 above those of 1899, and the imports of merchandise were $30,084,706 greater. The excess of merchandise exports over imports for the year was $645,805,735, against $816,300,501 for 1899. The exports of silver and gold coin and bullion for 1900 were $662,856,506, against $493,162,816 in 1899. Gold imports were $12,603,402 in excess of exports in 1900, against $9,853,553 in 1899.

The foreign exchange market was influenced early in January by a fall in open market discount rates in London, reflecting easier conditions prevailing at that center, which caused a reduction in the Bank of England minimum rate on the 11th from 6 per cent. to 5 per cent. Concurrently there was a reduction by the Bank of France in its rate from 4½ per cent. to 4 per cent., and by the Bank of Germany from 7 per cent. to 6 per cent., and later to 5½ per cent. Still another influence affecting exchange was the withdrawal by
the Bank of England on the 9th of its offer to make advances at the rate of 3½ per cent. on gold while it was in transit from New York, which offer had stimulated the export of gold hence to London in the first, and again, a week subsequently, to 4 per cent., when the Bank of France lowered its rate to 3½ per cent. The supply of bankers' and also of commercial bills was limited, and there was a good demand to remit for stocks sold for European account and some inquiry for mercantile remittances, which kept the market firm. The last days of the month, influenced by the derangement in London caused by the news of the British disaster at Spion Kop, South Africa, rates for sight sterling advanced to the gold exporting port, though none of the metal was shipped. Rates for exchange at the opening of the month were $4.82¼ to $4.82½ for sixty-day and $4.84 for sight, while at the end of the month they were $4.84 to $4.84½ for the former and $4.873 to $4.87 for the latter, the difference in the quotations of sixty-day reflecting the reduced rates for discounts in London. The market was dull and the tone easier, especially for long sterling, in February, influenced by a better supply of deposits, and bills changes against the latter, which was then bought freely by English spinners who had deferred purchases earlier in the cotton season because of erroneous estimates of the volume of the crop. Short sterling, however, was generally firm until after the middle of the month, affected by a demand for remittance, but toward the close this class of bills yielded to free offerings of drafts against securities and the market was weak. Rates for exchange at the beginning of the month were $4.84 to $4.84½ for sixty-day and $4.87 to $4.87½ for sight, while at the end of the month they were $4.893 to $4.89 for the former and $4.89½ to $4.89 for the latter. The tone of the market continued easy in March and the third week was affected by the increasing supply of drafts against cotton, the exports of which were large. After the 22d, however, the market grew firmer, affected by a scarcity of bankers' bills, notwithstanding the fact that, stimulated by the enactment of the gold standard law, there were large purchases in our market of securities for European account. It appeared, however, that the stocks so bought by foreigners were not sent forward, but they were temporarily hypothesized with the New York banking houses in order to take advantage of the lower rates for money ruling in our market compared with the discount rates abroad. Had the stocks been promptly disposed of, as in previous such purchases are made, the resulting supply of drafts against the securities would have been abundant, and lower rates for exchange would have ruled. Concurrent with this scarcity of bills there was a demand for exchange to transfer bankers' balances to London for employment at the former more profitable rates of interest than could be obtained in New York, and hence exchange gradually advanced and the tone was strong to the end of the month. The opening rates were $4.88 to $4.88½ for sixty-day and $4.86½ to $4.86½ for sight. After failing by the 22d to $4.82½ to $4.82½ for the former and to $4.85¾ to $4.85 for the latter, there was a reaction by the close to $4.85½ to $4.85½ for sixty-day and $4.86 to $4.86½ for sight. The tendency of the market was almost continuously upward during April, influenced by the scarcity of bills resulting from the above-noted retention of securities during the foreign advance to Russia. The tone of this month was firmly against balances to London, and also by an investment inquiry for long sterling. Two consignments of gold of $500,000 each were shipped hence to Buenos Ayres on London account, and on the 26th $500,000 gold was sent to Paris in consequence of the inducement of an offer by the Bank of France of interest on the consignment while it was in transit. The rates for exchange at the opening of the month were $4.84½ to $4.84 for sixty-day and $4.84½ to $4.85 for sight, while the closing rates were $4.84½ to $4.84½ for the former and $4.88½ to $4.88½ for the latter. The influences operating during April continued to affect the exchange market in May, and for some time after the opening of the month were $4.8½ ruled very near to the gold exporting point, though no gold was shipped to London. The Bank of England early in the month raised its bid price for American eagles from 76s. 3½d. to 76s. 4d. per ounce, but this movement failed to attract gold to London. Shipments of the metal hence to Paris continued at a very slow rate, and the inducement of interest while in transit, and by the 24th $10,023,375 had been shipped. The receipt by the Bank of England of £1,000,000 gold from Russia with which to meet interest payments had the effect of so far relieving the monetary tension at London as to cause a reduction by the Bank of the rate of interest for four months to 4½ per cent. to 3½ per cent. On the following day the Bank of France reduced its rate of discount from 3½ per cent. to 3 per cent., and at the end of the month open market rates were easy at all the chief European centers, and the relaxation in the monetary tension abroad was reflected by lower rates in the foreign exchange market. Quotations on the opening of the month were $4.84½ to $4.84½ for sixty-day and $4.88½ to $4.88½ for sight. The former advanced to $4.84½ to $4.85 by the 14th, but at the end of the month rates were $4.84½ to $4.84½ for sixty-day, while those for sight were $4.87 to $4.87. The export movement of gold to Paris was resumed about the middle of the month, resumed by the consignment of the 25th, which was sent to Berlin, there being a good demand for gold from Continental centers, the Bank of France continuing to offer inducements to shippers and the Bank of Berlin likewise seeking to attract the metal. The shipments to these points amounted to $7,026,413. The rates for exchange at the opening of the month were $4.84½ to $4.84½ for sixty-day and $4.87 to $4.87½ for sight. There was a gradual advance in the former to $4.85 to $4.85½ in the latter to $4.87½ to $4.87½, but at the close of the month rates were $4.85½ to $4.85 for the former and $4.86¼ to $4.86 for the latter. Exports of gold were temporarily checked after the 33d, but the case was reversed by the 19th, when $2,029,543 was sent to Paris. The extremely low reserve of the Bank of England early in the month seemed to indicate a movement of the metal hence to London, but none was shipped. The bank on the 19th advanced its rate of discount from 3 per cent. to 4 per cent. in consequence of the new phase of the Chinese situation, which had then developed, and open market discounts in London were theretofore firm because of the announcement of the supplementary Treasury estimates of £1,500,000 due to the prolongation of the war in South Africa. Influenced by the monetary tension in London, and also to some extent by the Chinese situation, which tended to increase the supply of cunemid bills against imports of
cotton goods to the Orient, the foreign exchange market was strong in July and rates opened at $4.83\% to $4.83\% for sixty-day and $4.86\% to $4.86\% for sight. The former advanced to $4.84\% to $4.84\% and closed at $4.83\% to $4.84\%, while the latter rose to $4.87\% to $4.88 and closed at $4.87\% to $4.87\%.

On Aug. 7 subscriptions for a British Exchequer loan for £10,000,000 at 3 per cent. were simultaneously opened at the Bank of England, the government of which pointed out to the Chancellor of the Exchequer that this large award was an easy and a natural way of attracting gold to London; otherwise the bank might have to raise its rate of discount to 5 or 6 per cent., and to take extraordinary measures to bring gold to England. It was stipulated in making the award to American subscribers by the London bankers that the proceeds should be immediately remitted to the bank. This institution offered the inducement of interest on additional consignments of gold while in transit, and at the same time the bank advanced the bid price of American eagles to 76s. 5d. and of gold loans to 77s. 10d. per cent. Stimulated by these inducements the London during the month, and the Bank of France attracted $2,008,907 through the offer of interest on the consignments while in transit. The foreign exchange market was strong prior to the announcement of the award of the Exchequer loan. Then under the influence of offerings of bills against gold of American origin in London, the discount rates abroad, rates receded, but later the tone again became firm. Quotations opened at $4.83\% to $4.84 for sixty-day and at $4.87\% to $4.87\% for sight. There was an advance in the latter to $4.88\%, but the market closed with sixty-day at $4.84\% to $4.84\% and sight at $4.87\% to $4.87\%.

It may be noted that the shipment of gold to London were almost wholly covered with cable transfers, which at the beginning of the movement were $4.88\% to $4.89, later declining to $4.88 to $4.88\%.

In September the placing in this country, through the National City Bank and Kuhn, Loeb & Co., of an issue of 80,000,000 marks 4-per-cent. treasury notes of the German Empire and of a portion of $10,000,000 4\% to 3\%-per-cent. Swedish Government bonds had more or less influence upon the foreign exchange market early in the month, though no gold was remitted for these subscriptions, settlements being made with exchange drawn against credits at Berlin. After the announcement of the German loan exchange for American cotton and grain bills. The Galveston disaster on the 8th was followed by the report on the 10th by the Department of Agriculture, which showed a decline in the general average condition of the staple during August. As the result of this report and also of the hindrance to the movement of cotton in Texas, reported during the last week of August, the price of the staple sharply advanced from 93\% to 11 cents per pound, and in Liverpool a corner developed, but this corner was broken by an agreement with Manchester spinners to refrain from buying American cotton during the month. European purchases of the staple were, however, large, and by the 20th of the month the price had reached $4.87\% to $4.87\% for December and sight, and they closed at $4.82\% to $4.82\% for the former and at $4.85\% to $4.86 for the latter.

The liberal offering of cotton and grain drafts, together with activity in money at this period, case of withdrawals of funds for the handling of cotton at the South, resulted in a gradual decline in rates for exchange to the gold importing point toward the middle of October. The engagements of gold for import from Europe began on the 9th, and during the month the market for the large (up to $3,000,000) had been engaged from London, Paris, and Berlin, and it is noteworthy that one consignment of $2,500,000 in American gold loans, which had been shipped from India for the Bank of England, was intercepted at London and transhipped to New York. At the opening of the month the rates for exchange were $4.11\% to $4.02 for sixty-day and $4.85\% to $4.85\% for sight. The rates for the former were $4.80\% to $4.80\% and for the latter.

The lowest rates for the month were $4.80 to $4.80\% for sixty-day and $4.83\% to $4.83\% for sight. Active money and an indisposition on the part of foreign bankers to operate in view of the pendency of the presidential election made the market weak during the first few days of November, and on the 10th the sales of sixty-day bankers' bills were made at $4.79\% and of sight at $4.83, the lowest rates for the year. On the day following the election there was an urgent demand for exchange to remit for stocks which had been bought in London for New York account, and, influenced by the general inquiry for this purpose, the market was strong to the end of the month. It was then estimated that since the election about $50,000,000 of stocks which had been bought in London or sold in the New York market through arbitrage houses for European account had been remitted for, and almost equal amounts of European securities had been purchased in New York. The increasing tension in the monetary situation at London, foreshadowing an advance in the Bank of England rate of discount, induced a covering of short contracts in sterling toward the close of the month, when the tone was quite strong. Rates for sixty-day sterling opened at $4.81\% to $4.82, fell by the 17th to $4.81, and were held by the end of the month at $4.81\%. The rates for sight sterling opened at $4.83\% to $4.85\%, declined to $4.84\% to $4.84\% by the 17th, and recovered to the opening figures by the close of the month.

Railroads.—Earnings of the principal lines of railroad showed general gains throughout the year, and rates were advanced for freight and passenger services. One of the most important events early in the year, affecting the chief transportation lines, was the advance in freight rates, through changes in classification, which advance went into effect in January. Subsequently there was an agreement to abolish commissions on passenger business beginning in February. The Lake Shore and Michigan Southern acquired control of the Lake Erie and Western in January; the Great Northern announced an additional issue of stock; the Chesapeake and Ohio passed under the joint control of Pennsylvania and Vanderbilt interests; and the State of Massachusetts sold its holdings of 50,000 shares of Fitchburg and Berkshire Railroad for $15,000,000. The rates of the Boston and Maine Road in February the Cleveland, Cincinnati, Chicago and St. Louis resumed dividends on the common stock, the Cen-
central New Jersey increased its quarterly dividends, the Canadian Pacific enlarged its dividend, the Baltimore and Ohio, the Union Pacific, and the Reading first preferred began paying dividends, and Kansas City, Fort Scott and Memphis resumed such payments after suspension since 1893. In March the Pennsylvania acquired an interest in the stock of the Norfolk and Western in the Chicago and Alton bond and the northern and the Illinois Central the southern divisions of the St. Louis, Peoria and Northern, which was sold under foreclosure; the Fitchburg stockholders voted to lease the road to the Boston and Maine, and the Metropolitan Street Railway Company of New York bought control of the Third Avenue Railroad, and subsequently leased it. The Pennsylvania, which had early in the year issued $12,930,500 new stock at par, issued in April $9,464,500 more stock on the same terms; the Chicago and Alton Railroad Company was organized to take over the Chicago and Alton Railroad and its recent acquisition, the Peoria, Evansville and St. Louis, the Houston, East and West Texas, and the Carson and Colorado roads; the Seaboard Air Line was organized with $75,000,000 bonds, $25,000,000 common stock, and $37,500,000 preferred stock, and the Northern Pacific made arrangements to acquire the St. Paul and Duluth. In May the Chicago and North Western declared an extra dividend of 30 per cent. on its common and preferred stock, and the Chicago and Eastern Illinois and the Lehigh Coal and Navigation Company increased their regular dividends.

In the following month the Rutland and the Hocking Valley likewise increased dividends, and the Lake Erie and Western resumed dividends on its common. The Central and Reading, the Union Pacific, and in August Kansas City, Fort Scott and Memphis, declared additional dividends, these declarations and those above noted indicating prosperous railroad conditions. In October the trunk lines decided to advance grain rates between the Mississippi river and the seaboard. After the presidential election there were indications that plans which had long been in contemplation, looking to the improvement of the railroad interests of the country, had been awaiting this settlement of the political and the financial situation. The Northern Pacific voting trust was dissolved and the common stock was placed on a 4-per-cent. return; the Southern Pacific bought control of the Pacific Mail Steamship Company; the Pennsylvania and the Chicago and Eastern Illinois declared extra dividends, and the dividend of the Lehigh Coal and Navigation Company was again increased. The purchase in December of the Pennsylvania Coal Company in the interest of the Erie Railroad was one of the most important events, practically insuring the maintenance of harmonious relations between the anthracite coal railways and the principal individual operators. This movement gave color to rumors of far-reaching railroad combinations, which were partly confirmed on Jan. 5 by the announcement that the Central New Jersey had been bought by J. P. Morgan & Co., who had turned the property over to the Reading, which they already controlled. A report was then current that control of the St. Paul had been bought by Great Northern and Northern Pacific interests, who would lease the road, and lease of the Wabash was contemplated for the purpose of making a seaboard connection through the Erie.

Listings of railroad bonds on the New York Stock Exchange during the year amounted to $445,713,000, of which $147,678,597 were new issues. The stocks listed aggregated $620,935,000, of which $296,550,572 represented new issues. Compared with those in 1899, bond listings were $81,671,240 and those of stocks were $83,237,605 less this year, mainly because of fewer reorganizations and extensions. The industrial properties placed upon the "unlisted" department were 8 in number, having a total of $182,901,100 common and $31,335,000 preferred stock.

Manufacturing Industries. It is noteworthy that while in 1899 there was apparently a widespread tendency in the direction of consolidations of capital in manufacturing enterprises, there was in 1900 a marked change in the character of the movement. Previously old or more or less established corporations were consolidated, whereas in this year new competitive companies were formed. The change was doubtless largely due to the fact that in the previous year the capital creations were so enormous that they were not only unwieldy, but they caused apprehensions among the banking interests of the country that the companies projected would become a disturbing factor. Moreover, owing to the extremely conservative treatment of these properties by the bankers the digestion of the securities issued by the corporations was impeded, the market for them grew congested, and much difficulty was experienced in obtaining subscriptions for even the most promising. At the close of 1899 consolidation schemes were pending involving an aggregate capitalization of more than $600,000,000, while the capital of companies projected and later abandoned exceeded $1,000,000,000.

At the close of 1900 comparatively few of the above noted pending schemes had been consummated, and a very small number of the abandoned plans had been resold. Mergers and combinations which were perfected this year represent $948,875,000 in stocks and bonds against $5,215,795,000 in 1899, which latter sum includes concerns projected and abandoned and increases of capital proposed which were never consummated. Careful revision of the emissions of stocks and bonds of 1899 shows that the then organized companies representing a capitalization of $2,543,350.

In January a remarkably favorable statement, somewhat indicative of prosperous industrial conditions, accompanied the declaration of dividends on the common stock of the American Steel and Wire Company, which was formed in 1898, and the New Amsterdam Gas Company and the New British Gas Company, resulting in the reduction in the price of gas in New York City from $1.05 to 65 cents per thousand. In February, English cotton spinners who had refrained from buying the staple in the previous year because of misleading estimates of the yield of the American crop, became alarmed concerning the statistical position of the crop and bought freely, influencing a sharp rise in the price of the staple and consequently in the manufactured goods. In March, American Malting Company was unfavorably affected by the admission by the directors that the dividends predicted upon the results of 1898 had been based upon expected profits which were not realized. This announcement had a partially depressing influence upon other industrial properties, which depression was intensified in the following month by disclosures regarding the unfavorable condition, owing to overproduction, of the American Steel and Wire Company and other enterprises of a similar character, which had an unsettling effect upon the iron and steel trade. In May this industry and the metal trades generally became more or less demoralized not only in this country but in England and Germany,
and in nearly all lines of trade accumulating stocks of goods and falling values were the feature. Print cloths were reduced from 3½ to 3¾ cents in May and to 2½ cents in June, though the price of cotton, raising again, and named month steel billets fell to $25 per ton against $32 in May, and even at the decline consumers refrained from buying. In July the price dropped to $19 per ton in Pittsburg, and in that month the cotton manufacturing industry began to show signs of the characteristic of a year by the troubles in China. The industrial depression was more or less marked during the presidential campaign. In September the print cloth market was partially relieved by the purchase of 500,000 pieces of accumulated stocks at 2½ cents. The Amalgamated Association of Iron and Steel Workers and the manufacturers settled their differences, giving work to 60,000 men who had been idle since July, and the American Tin Plate Company likewise adjusted the troubles with their employees. A strike of anthracite coal operators, involving 140,000 men, began in September and ended in the following month, the operators acceding to the demands of the miners. After the provisions were improved, iron production increased, prices of manufactured articles generally rose, and prosperous conditions prevailed for the remainder of the year. The woolen and silk manufacturing industries were, however, notable exceptions. The woolen manufacturers early in the year suffered from overproduction of cotton, which led to liquidation of orders, and the trade was in a state of depression for the greater part of the remainder of the year, and without clear indication of improvement at the close. Silk manufacturers encountered a rising market for the raw material early in the year, and they bought freely at about the highest prices. With the cotton trade on the decline, entailing loss upon manufacturers. Then followed forced sales of goods, unmistakably indicating overproduction. Toward the close of the year, however, the industry showed improvement, owing chiefly to curtailment of output.

There was a steady gain in exports of manufactured goods during the first quarter of the year, those for March amounting to $44,767,139, against $35,586,940 in January. Then followed a gradual decline in the value of these exports to $32,251,487 in November. The total for the year was, however, unprecedentedly large, amounting to $432,843,366, against $389,787,801 in 1898 and $307,021,004 in 1897. Through the first half and after the middle of the year was largely due to the interruption to Chinese trade in cotton goods, and also to the waning movement in bicycle exports.

The commercial failures for the year were 10,774 in number, involving $138,405,673 of liabilities. Besides the strictly commercial defaults, however, there were 4,521 failures involving $15,000,000 in 1899. The above-noted failures compare with 9,437 in 1899, involving $90,879,889; 12,186 in 1898, with liabilities of $130,662,899; 13,351 in 1897, involving $154,352,071; and 15,088 in 1896, involving $226,996,134.

FINE ARTS IN 1900. Under this title are treated the principal art events of the year ending with December, 1900, including especially the great exhibitions in Europe and the United States, sales and acquisitions of works of art, and erection of public statues and monuments.

Paris.—In consequence of the transformation of the Galeries des Machines, where the exhibitions of the two salons were held in 1899, a Salle des Fetes for the Universal Exposition of 1900, the annual exhibition of the Societe des Artistes Francais was held in the Place de Breteuil. The Societe Nationale des Beaux Arts held no exhibition in 1900.

Paris: Salon of the Artistes Francais.—The Societe des Artistes Francais elected the following officers for the year: Honorary Presidents, Leon Bonnat, Edouard Detaille; President, Jean Paul Laurens; Vice-Presidents, Auguste Bartholdi, Tony Robert-Fleury; Secretaries, Georges Jehan Vibert, Georges Lemarié, Jean Louis Pascal, Augustin Maugain; Corresponding Secretary, Albert Maignan; Treasurer, Emile Andre Boisseau.

The annual exhibition, opened on April 7, comprised 2,572 numbers, classified as follows: Paintings, 1,379; cartoons, water colors, pastels, miniatures, enamels, porcelain pictures, etc., 426; sculptures, 380; engraving on medals and precious stones, 59; architecture, 99; engraving and lithography, 376; decorative art, 153.

The following are the honorary awards for 1900: Section of Painting; Medal of honor, Ferdinand Humbert, Portraits de Alex et Elsy Eyraud. No first-class medal awarded. Second-class medals: Charles Moulin, Achille Granchi-Taylor, Henry Deleros. Louis Robaut, Auguste Devambez, Adolphe Lalire, Paul Charles Choccarne-Moreau, Emile Troncy, J. Louis Verdier, Frédéric Lauth, Mme. Hortense Richard. Third-class medals: Henri Emilen Rousseau, Laurent Jacquot-Decharge, Charles Sims, Jacques Roger Simon, Joseph Marius Avy, Mlle. Lenigue, Edouard Zier, Ludovic Antique, Jacques Largue. The number of medals awarded was reduced because of the financial difficulties of the society. The salons of the Salon des Artistes Francais were opened on May 29, with a number of paintings of a historical character. The cardinals of the repertory of this year was no less than 4,572, divided into 29 classes.
Paris: Exposition Universelle.—The art exhibition constituted one of the principal features of the exposition of 1900, a special new building, called the Grand Palais des Beaux Arts, with large and spacious galleries, having been erected for it on the Avenue Nicolas II. This splendid building, which is not doomed to disappear, is one of the most important of the other exposition structures, but is destined to be permanent and the future home of the Salons, consists of two long lateral wings connected by two lines of galleries, the whole forming a structure nearly resembling in plan the letter H. It may be divided, as to its exhibits, into three distinct collections: First, a French centennial exhibition, comprising French paintings, sculptures, drawings, and prints from the beginning of the year down to the last international exposition, an effort having been made not to repeat the exhibits of 1889; second, a French decennial exhibition, composed of the works of French artists during the past ten years; and third, a foreign decennial exhibition, including the productions of foreign artists during the same period. Twenty-three of its galleries were devoted to French art, while not more than six galleries were allotted to any one foreign country.

The awards consisted of medals of honor, first-class medals (gold), second-class medals (silver), third-class medals (bronze), and honorable mention. They were so numerous, especially in the lower classes, that we can give only the first two classes in painting in full and the American second-class medals.

Medals of honor:
Austria—M. Klint.
Belgium—ALex Steven, Alexandre Struys.
Denmark—Peter Severin Kroyer.
Holland—Josef Israels.
Italy—Jean Boldini.
Norway—Fritz Thaulow.
Russia—M. Seroff.
Spain—Joaquin Sorolla y Bastida.
Switzerland—Jules Zorn.

Of the above artists MM. Hebert and Daguerre-Bouveret received the medal of honor the second time, both having been similarly honored at the exposition of 1889.

First-class medals were awarded as follows:
Austria—Heinrich de Angeli, Josef Mehoffer.
Belgium—Alfred Baertson, Emile Clous, Leon Frédéric, Th. Verstraete.
Bulgaria—M. Mrkvička.
Denmark—Vigo Johansen, Th. Philipsen.
Germany—E. von Gebhardt, Michel Hertrich, Max Koner, Gottard Kuechle, Andre Muller, Franz Stuck.
Great Britain—Stanhope Forbes, John Swan, E. J. Gregory, George Clausen, George Reid, J. H. Lorimer.
Greece—G. Jacobides.
Hungary—Jules Benedez, Stephen Csok, Philip Lazlo.
Italy—L. Balestieri, Pie Joris, F. P. Michetti, Ange Morbelli, Dominique Morelli, Hector Tito.
Japan—M. O-Hashi.
Russia—Philip Malaviine, Constantin Korovine, Axel Gallen, Ero Jaernefelt.
Spain—Jimenez Aranda, Ulpio Checa, Vierge.
Sweden—Carl Larsson, Nils Forsberg, Alfred Wahlberg.
United States—Ferdinand Hodler, Carlos Schwab, E. Burnaud, Mlle. Louise Breslau.

Second-class medals awarded to American artists: Barlow, Benson, Bising, Bohn, Bridgman, Breslau, Crockett, Crowther, Hassam, Johnson, Keller, Lockwood, MacEwen, Nourse, Reid, Story, Tanner, Vinton, Walden.

In the Section of Engraving and Lithography, Americans honored were: Whistler, medal of honor; Cole and Pennell, first-class medals. Second-class medals were awarded to Schladitz and Wolff.

In the Section of Sculpture, medals of honor were given to French, MacMonnies, and Saint-Gaudens, and first-class medals to the following: Barnard, Brooks, Granty, Second-class medals: Bitter, Borghum, Dallin, Flanigan, MacNeill.

In the Section of Architecture no medal of honor was given to an American. First-class medals: Borg, McKim. Second-class medals: Cope, Day, Flagg, Benson and Brockway, Hunt, Peabody and Stearns, Post, Shepley, Warren.

Paris: Miscellaneous.—An important art event of the year was the sale at the Georges Petit gallery, May 20 to June 7, of the paintings, drawings, and studio effects of Rosa Bonheur. The pictures, which were sold by the piece and not by the hour, were sold for considerably above and below par, and included paintings of wild beasts, horses, mules, asses, cattle, sheep, dogs, foxes, etc., and a large number of landscapes. Besides these there were nearly 1,000 water-color and pastel studies. The total amount realized at the sale was $1,180,850 francs, of which $355,121 francs was for paintings. Among the best prices obtained were: Lion Couché, 15,100; Tigre Royal dans le Jungle, 9,150; Tigre Royal, 5,300; Le Roi de Déseret, 7,000; Tête de Lion, 8,000; Lion Regardant le Soleil, 5,900; Les Lionceaux, 9,900; Tête de Lion, 11,300; Cheval Blanc au Vert, 8,200; Beuves Nivernais, 33,600; Beuves dans un Pâturage, 17,500; Beuves Écosais, 10,500; Cerf Écossais au Vert, 21,300; Dans la Forêt, le Matin, 20,200; Le Marché aux Chevaux de Paris, 9,300. The highest price paid for a drawing was 7,700 francs for a small water color of a tiger. A large number of the drawings, which were of the greatest interest, sold for more than 1,000 francs each.
faint, seated in an empire chair. He sent also a classical study in oils—two Greek girls at a fountain—and a water-color drawing of a scene beside the Lake of Orta.

E. Blair Leighton's picture, entitled God Speed, represents a lady standing on a stairway beside a castle gate, binding a scarf on the arm of her knight about to go forth, one may suppose, to combat for her sake. Through the gateway, under the raised portcullis, are seen the spears of his troop riding out of the castle.

Edwin Abbey was represented by two Shakespearean themes, one, entitled The Trial of Queen Katherine, depicting a poigniant moment in the history of Katherine of Aragon, the other The Commencement of the Dance of Gloucester. The latter, wrapped in only a white sheet and barefooted, is walking over rough stones carrying a lighted taper, followed by her conductor to the Isle of Man, Sir John Stanley.

A. S. Cope contributed a full-length portrait of Lord Kitchener of Khartoum, in khaki, standing beside a tent, and Prof. Herkomer sent a three-length life-size portrait, in uniform, of the Duke of Connaught.

Mr. Orchardson's picture, the largest in the exhibition, being some 14 feet long, a commission from the Royal Agricultural Society, commemorates the Prince of Wales's preshidency of the society. It represents the interior of Windsor Castle, with the Queen, the prince, and other members of the royal family carefully and successfully grouped.

Among many landscapes and sea views, noteworthy are Colin Hunter's London from the Tower Bridge, David Murray's In View of Windsor, Edward Stott's Saturday Night, J. McWhirter's Over the Sea from Skye, and C. E. Johnson's Autumn on the Wye.

English artists are disappointed at the decrease of the amount of sales of pictures at the Royal Academy, the total being £16,084, as against £21,670 received in 1890. The falling off is generally attributed to the war in Africa. Frank Dicksee's Two Cranes in the Great Temple of Amun, to be sold to raise Chantry fund trustees for £2,000. Miss Kemp-Welch's Horses Bathing brought £1,000. The highest price paid for a water color was £150 for a work by Alfred East.

**London: New Gallery.**—The winter exhibition was devoted to examples of early Flemish and mediaeval English art. Most of the famous masterpieces, these schools were represented either by well-known originals or by attributed pictures. Among the interesting examples was The Holy Women at the Sepulchre, attributed to Jan van Eyck, from the collection of Sir Francis Cook. Of many pictures attributed to Hans Memling, the Virgin and Child with Saints, was most admired. The north room was devoted almost entirely to Rubens, among the exhibits being his large Daniel in the Lion's Den and Diana and her Nymphs.

The fourteenth summer exhibition contained 498 numbers of about the average merit. Among the best pictures was Edward Stott's Little Apple Gatherer, a blue-eyed peasant girl standing full-faced, plucking with her left hand fruit from a limb above to put into her pinace gathered up with her other hand. The same artist sent also two other pictures—The Widow's Acre and Sundown.

Mr. Watts contributed portraits, as did also Sir George Reid and Mr. Sargent. Mr. Sargent's picture, the Hon. Victoria Stanley, represents a little girl of six years, standing with a whip in her hand.
London: Miscellaneous.—The sale of the collection of Sir Robert Peel, on May 10 and 11, including both paintings and sculptures, produced a total of £22,500. Of the former, two Van Dycks, portraits of a Genoese senator, said to be Bartolomeo Giustianni, and his wife, brought £2,200. Among the latter, says the London Art Journal, for a Van Dyck in the auction room, though the equestrian portrait of Charles I, now in the National Gallery, was bought in 1884 by the Government from the Duke of Marlborough for £17,500. Other sales were: Portrait of Marie Antoinette, doubtfully attributed to Guerre, £3,350; portrait of Gower (the author), 670 guineas; Nell Gwynne, 650 guineas; Countess of Kildare, 650 guineas. Thomas Philipps, portrait of Byron, 300 guineas. Sir Thomas Lawrence, portrait of Curran, 550 guineas. John Hoppner, portrait of himself, 1,500 guineas. Gainsborough, portrait of Sir William Blackstone, 1,170 guineas. Reynolds, portrait of Dr. Johnson, 420 guineas. William Collins, Winter Scene on the Thames, 2,000 guineas; Morning after a Storm, 1,500 guineas. Landseer, The Shepherd’s Prayer, 750 guineas. Mulready, The Cannon, 1,240 guineas. Charles Lucy, Lord Nelson on the Victory, 400 guineas. B. R. Haydon, Napoleon at St. Helena, £17,500. Of the latter, says Sir Francis Chantrey’s splendid bust of Sir Walter Scott sold for £2,250. Thorwaldsen’s Apollo as a Shepherd brought 600 guineas.

At the James Reiss sale, May 12, a good example of Hobbema, View of a Water Mill, brought 6,200 guineas, and a Rembrandt, Bridge over a Canal, 2,200 guineas.

Among other sales of the year were: Romney, portrait of Charlotte Peirse, 7,000 guineas; portrait of Sophia Lawrence, 2,900 guineas. Gainsborough, Woolley Lane with Peasant and Donkeys, 1,170 guineas. Sir John Everett Millais, Boyhood of Raleigh, 5,200 guineas; The Moon is up and yet it is not Night, 1,000 guineas. Lord Leighton, Helios and Rhodos, 2,750 guineas. Meissonier, The Standard Bearer, 2,500 guineas. Troyon, Landscape with Cattle, 2,550 guineas; The Plough, 1,900 guineas. J. F. Millet, The Sower, 500 guineas.

The sale of the collection of the late Mme. de F.—Mme. de F., died May 19, produced a total of £13,484. Among the pictures were: Gainsborough, portrait of Mrs. Hartley, 300 guineas; Opie, Fortune Teller, 1,200 guineas; Boucher, Marie Lezinska introduced to the Domestic Virtues (dated 1740), 970 guineas; Rubens, Repose of Holy Family, 500 guineas; Velasquez, portrait of Henry de Halmale, 405 guineas; Hobbema, Village Scene, 400 guineas.

The chief art event of the season was the opening of the magnificent Wallace collection, bequeathed by Lady Wallace to the Government, on June 25, at Hertford House, Manchester Square. The scope of the collection, made by the third and fourth Marquises of Hertford and by Sir Richard Waifs, is immense. It contains more than 20 Gruezes and 9 Watteaus, while almost all the great painters of all the schools are well represented. Of the Spanish school there are 6 examples by Velasquez and 8 by Murillo. The Italian school is represented by Titian’s Rape of Europa (replika, the original being in Mrs. Gardner’s Easton), 12 Crinodenas (from the Orleans gallery), and important examples by Luini, Andrea del Sarto, Domencichino, Canaletto, and Guardi. The collection has 11 Rubenses, including the famous Rainbow Landscape, and 7 Van Dycks. Rembrandt is represented by 11 canvases and Franz Hals by only 1, but an exceptionally fine one, The Laughing Cavalier. The examples of the other great Dutch painters are all superior. The English school and the modern French school are also superbly represented. It has been calculated that the entire collection, including arms, bric-a-brac, etc., is worth £1,000,000. The admission is free excepting on Saturday afternoons, when a fee of sixpence is charged.

New York: National Academy of Design.—The officers for 1900 are as follows: President, Frederick Diesman; Vice-President, J. G. Brown; Corresponding Secretary, H. W. Watrous; Register, John F. Morris; Treasurer, E. W. Dennis. The price of membership is one hundred dollars. The admission is free excepting on Saturday afternoons, when a fee of sixpence is charged.

New York: National Academy of Design.—The officers for 1900 are as follows: President, Frederick Diesman; Vice-President, J. G. Brown; Corresponding Secretary, H. W. Watrous; Register, John F. Morris; Treasurer, E. W. Dennis. The price of membership is one hundred dollars. The admission is free excepting on Saturday afternoons, when a fee of sixpence is charged.

The seventy-fifth annual exhibition was held, Jan. 1, 27, in the galleries of the Fine Arts Society building in Fifty-seventh Street, pending the removal of the Academy to its new home on Morningside Heights. It comprised 313 numbers, of which 298 were paintings. The prizes of the year were awarded as follows: The Thomas B. Clarke prize of $300, for the best American figure composition painted in the United States by an American sculptor, to Frederick W. MacMonnies, for his Spirit of America; $250, for landscape, to Frederick W. MacMonnies, for his portrait of a Senator; $200, for still life, to Samuel Colman, for his portrait of a Senator; $250, for portrait, to Frederick W. MacMonnies, for his portrait of a Senator; and $250, for sculpture, to Frederick W. MacMonnies, for his portrait of a Senator.

Among the exhibits besides those to which prizes were awarded were: Daniel Huntington, portraits of Carl Schurz, Morris K. Jesup, and Dr. J. W. McLane; John F. Weir, East Rock—New Haven, November Landscape, and Hollyhocks; George H. Smillie, At Cotuit—Cape Cod, Road to the Light-house—North-Cape Cod, landscape, $200; portraits of Whitelaw Reid, Gen. Thomas Davies, and Edward Lyman; Gilbert Gaul, War tomatoes, $250; Child Hassam, The Flower Shop; George Inness, Jr., Sheep in Pasture; Irving R. Wiles, A Long Island Road, A Summer Interior; Clara T. Mchesney, portrait of Moncere D. Conway; Charles Warren Eaton, September Moonrise, Valley at Sunset; Thomas Moran, The Teton Range—Idaho, The Cliff Dwellers—Arizona, The Pearl of Venice; J. Wells Champney, Fair Nineteen; F. A. Bridgman, In the Oasis; Henry Mosler, Day Dreams; Arthur Parton, An Old Orchard, Arkville Meadows; E. L. Henry, Home from the Philippines.

A new annual prize for each Academy exhibition has been established, founded by George Inness, Junior, in memory of his father, to be called the George Inness Medal. It consists of a gold medal of the value of $100, and is to be awarded to the best painting without regard to subject.

New York: Society of American Artists.—The twenty-sixth annual exhibition will be held in the Fine Arts Society building, from March 24 to April 28. The officers for 1900 are: President, John La Farge; Vice-President, Kenyon Cox; Secretary, Douglas Volk; Treasurer, Samuel Isham. These, together with Edwin H. Blashfield, constitute the Board of Control. Advisory Board—Herbert Adams, William Bailey Paxton, Kenneth...
FRAZIER, WILL H. LOW. The society has 113 members.

The Shaw fund of $1,500, awarded annually for the purchase of a figure composition in oil by an American artist, was given to Irving R. Wiley for his picture Port Royal: The Salt Mill, prize of $300, for the best landscape in the exhibition painted by an American artist under forty years of age, was awarded to W. Elmer Schofield for his picture entitled Autumn in Brittany.

The exhibition comprised 378 numbers. Among the principal exhibits were: Cecilia Beaux, portrait of Rev. William R. Huntington; William M. Chase, Rest by the Wayside, A Gray Day, and Spring; John La Farge The Divinity of Contemplation seated by the Stream of Life (Japanese subject); Eastman Johnson, Child and Rabbit, Boy with Violin; Carleton Wiggins, Late Afternoon—Long Island; R. Swain Gifford, Port Clare- ryant, in the Adiron- dacks; Kenyon Cox, A Pan, Hope and Memory; Leonard Ochtman, The Lane at Twilight; Thomas Moran, The Goose Pond; Arthur Parton, Close of Day; Edward Gay, The Wheat Field; Charles Warren Eaton, Evening in Maine; Anna Len Merritt, Merry Maids; Charles Hopkins, In the Harvard Yard.

Miscellaneous.—The principal art sale of the year was that of the William T. Evans collection, exhibited at the American Art Galleries and sold on three nights in February at Chickering Hall. The total sum realized for 270 lots was $135,340. On the first night the highest price obtained was for Homer, Martin’s Westchester Hill, exhibited by Mrs. Robert C. Minor, The Close of Day, $3,650. George Inness, Sunset on the Passaic, $2,500; Montclair by Moonlight, $1,000; Meadowland in June, $850. Benjamin Fitz, The Reflection, $2,450. F. S. Church, Pandora, $1,000; Una and the Lion, $720. Abbott H. Thayer, Young Woman, $2,050. Henry W. Ranger, Connecticut Woods, $1,400; Morning at High Bridge, $1,400; New Jersey Oaks, $1,100. H. Siddons Mowbray, Arcadia, $960.

On the second night the best sales were: George Inness, Georgia Pines—Afternoon, $5,900; Nine o’Clock, $5,550; The Valley on a Gloomy Day, $1,225. Winslow Homer, Weather Beaten, $4,000. Henry W. Ranger, A Veteran, $1,100; J. G. Brown, The Tempest, $1,000; C. G. Loring, St. Cecilia, $1,200; The End of Winter, $1,025. A. H. Wyant, Driving Mists, $2,550; Cloudy Day—Keene Valley, $2,100. George Fuller, Bringing Home the Cow, $1,550. Homer D. Martin, Normandy Trees, $2,850.

The best sales on the third night were: A. H. Wyant, Keene Valley, $6,300. George Fuller, Lorette, $3,600. Homer Martin, Old Church in Normandy, $3,200; A Normandy Farm, $1,600. George Inness, Winter Morning at Montclair, $2,500; A Summer Morning, $1,200; The Moon at Night, $1,050. Wyatt Eaton, Reverie, $1,200. J. F. Murphy, An Autumn Landscape, $1,025. W. J. Stillman, A Landscape, $1,000. Ben Fix, The House at Gedney Bunce, Sunset, San Giorgio, Venice, $1,000. H. W. Ranger, A Connecticut Pasture, $1,400; An East River Idyll, $1,350. F. S. Church, Madonna of the Sea, $1,125; Carleton Wiggins, After Wind, Rain, $900.

The sale of the collection of the late Judge Hilt- ler, Lion, Rembrandt Hall in February, brought $118,715 for 169 pictures. Melissonier’s L’Aumone brought the highest price, $18,300. It is said to have cost A. T. Stewart $24,000.

The Austin H. King collection of modern foreign paintings, sold in February, realized a total of $77,557 for 57 works. The highest price was $7,000 for a fine Schreyer, Bedouins on the March. Other sales were: Alma-Tadema, Tibullus in Delos, $5,850; Grison, After the Fête, $3,550; Diaz, In the Forest, $3,825; Van Marcke, In the Lane, $3,550.

Florence.—A new Botticelli has been added to the little room in the Pitti Palace where for the past four years has hung the Pallas of the Medici, found in a similar way, and, like the latest acquisition, attributed to the early years of the master. The new picture, resurrected from the rubbish of the attic, is a Madonna and Child with Angels, a circular painting on wood. It contains six figures—the Virgin with long, emaciated hands clasped, kneeling in front of the Child, who, held by two angels at the left, is raising his arms toward her, and behind, at the right, two more childlike angels. Behind, full-blown roses twine themselves into a decorative background. Though the Italian experts pronounce the authenticity of the picture undocumented, some critics of the first rank are inclined to question their judgment.

Haarlem.—In August Haarlem in the Netherlands was the scene of interest to all art lovers in the erection of a fine statue to its great portrait painter, Franz Hals, who died there in 1666. The city was en fête, a charming little drama illustrating the painter’s life in his own little club, and tableaux vivants of his works were given by resident artists and others interested in art. The drama depicted his career from his days of poverty to the culmination of his art life, when the burgomaster came to inform him that the town had voted him a pension with free house rent for the rest of his days.
consisting of bronze statues of Washington and Lafayette, on a granite pedestal. It is a reproduction of the monument lately erected in the Place du Carrousel, Paris, France, under the direction of the Metropolitan Museum, New York, during the year are: Camby-

ses's Punishment of an Unjust Judge, by Rubens, from the J. L. Monke collection, Antwerp, pre-
sented by William E. Dodge; and three pictures presented by J. Pierpont Morgan—portrait of Columbus, by Sebastien de Piombo; Lord Nelson on the Victory, by Charles Lucy; and Napoleon at St. Helena, by Benjamin Robert Haydon. The last two pictures were bought at the Sir Robert Peel sale in May at 400 guineas each.

Benjamin West's painting The Raising of Lazarus, which hung for many years in Winchester Cathedral, England, was presented by the purchaser, J. Pierpont Morgan, to the Wadsworth Atheneum, Hartford, Conn. The canvas, which is signed Benj. West, 1780, measures 10 feet 10 inches by 5 feet 5 inches.

The Botticelli Madonna, sold by Prince Chigi, of Rome, to a London firm of picture dealers, has been bought by Mr. B. W. Robinson, of Philadelphia, and is now hung in the art gallery of his country house at Elkins. This famous picture, called the Madonna of the Thorns, represents the Virgin with the infant Jesus in her lap at the right, and at the left a celestial youth offering a gift of wheat and grapes. Over the youth is a coronet which contains the word Madonna, the title of its name. The sale of this picture being in violation of the law prohibiting the exportation of works of the old masters from Italy, Prince Chigi is reported to have been condemned to pay a fine of $63,900, the amount paid for the picture by the London firm. The inference is that the picture cost more than this sum.

FLORIDA, a Southern State, admitted to the Union March 3, 1845; area, 58,680 square miles. The population, according to each decennial cen-
sus since admission, was 87,445 in 1850; 140,424 in 1860; 187,748 in 1870; 269,493 in 1880; 391,422 in 1890; and 528,542 in 1900. Capital, Tallahassee.

Government.—The following were the State officers during the year: Governor, William M. Bloxham; Secretary of State, John L. Crawford; Treasurer, James B. Whitfield; Comptroller, W. H. Reynolds; Attorney-General, William B. Lamar; Superintendent of Public Instruction, William N. Sheats; Adjutant General, Patrick Houstoun; Commissioner of Agriculture, Lucius B. Wombwell; State Chemist, W. A. Beans; State Attorney, John Nellson-
er, W. V. Knott; Railroad Commissioners, R. H. M. Davidson, H. E. Day, J. M. Bryan; State Health Officer and Secretary Board of Health, Dr. Joseph Y. Porter; Board of Health, W. B. Henderson, D. T. Gerow, H. L. Simpson; Chief Justice of the Supreme Court, R. F. Taylor; Associate Justices, Miles M. McChesney, Patrick J. Donnell, William E. 

Population.—The official figures of the national census for 1900 are compared in the table below with the figures of the census of 1890, and show the increase in percentages by counties.

The population of the largest ten cities in 1900 was as follows: The figures in parentheses being those for 1890: State Capital, 29,440; Pensacola, 17,747 (11,750); Key West, 17,114 (18,080); Tampa, 15,539 (5,532); St. Augustine, 4,272 (4,742); Lake City, 4,013 (2,920); Gainesville, 3,635 (2,720); Ocala, 3,330 (2,904); Palatka, 3,531 (3,039); Fernandina, 3,245 (2,803).

The following is the report of the Treasurer at the close of business, Nov. 30, 1900, showing the balance to the credit of the several State funds amounting to $406,041.78. During the past two years $200,000 of the public debt has been paid from the general revenue fund by taking up the notes for $200,000, which were issued by authority of the Legislature of 1889 and 1891. These notes were bearing interest at the rate of 5 per cent, and their payment and cancellation have saved the State $10,000 in interest, besides reducing the debt by $200,000. This has been done without an increase of taxation. The State tax levy was reduced below the levy authorized by the Legislature a half mill in 1898 and a half mill in 1900. The general revenue fund is now sufficient to meet the general expenses of the State and to pay the expenses of the next Legislature, in 1901. The 7 per-cent. bonds of 1871 remaining in the hands of individuals were to be taken up at maturity, Jan. 1, 1901. The amount thus held was about $30,000. The remainder of this issue is held in the sinking fund and the educational funds of the State.

The total tax levy in the State in 1899 was 51 mills; for 1900 the levy was fixed at 5 mills, and for 1901 districts 0.4 for school purposes, 0.3 for general purposes, 21 mills; pension tax, 1 mill; Board of Health tax, 4 mill; constitutional school tax, 1 mile. The total State taxes levied amounted to $518,030.12; State licenses, $144,058.48; county taxes, $1,126,503.80; school sub-
district taxes, $43,520.37.

Valuation.—The assessed valuation for 1900 was $69,518,953.73, an increase of $2,991,599.94 over the assessed valuation for 1899. (The valuations in two of the counties is estimated, the valuations of 1890 being taken as the basis.) The report of valuations for 1899 gives the following data: Number of horses, asses, and mules, 22,600; beef and shorthorn cattle, 475,177; sheep, 14,707; swine, 63,207; hogs and dogs, 207,523. Full cash value of all animals, $4,642,472. Value of all other personal
property, $10,695,883. Total value of real estate, $59,177,137; personal property, $15,338,355; railroads and rolling stock, $18,759,125.64; telegraph lines, $252,736.15; aggregate value of all property returned for taxation in 1899, $93,527,353.79.

Agriculture.—The Commissioner of Agriculture gives the following estimates for 1900: Number of acres under cultivation, 1,058,897. Value in sea island and upland cotton, $2,319,689; value of field crops, $3,555,015; value of vegetables, $645,936; value of citrus fruits, $744,896; value of melons, $307,944; value of all fruits but citrus, $628,352; value of stock and farm cattle, $6,075,409; value of poultry, $322,945; value of eggs, $938,783; value of dairy products, $811,671; value of honey produced, $21,883. Total value of agricultural and animal products, $18,175,227.

Land.—The Commissioner of Agriculture reports that on Dec. 31, 1900, the State held swamp lands to the extent of 404,667 acres. In 1899 and 1900, 21,714 acres of swamp lands were disposed of. On Dec. 31, 1900, 7,706 acres of internal improvement lands were held, 23,122 acres having been sold in 1899 and 1900. The State school lands, on Dec. 31, approximated 266,646 acres, 46,977 acres having been sold in 1899 and 1900. The State seminary lands on hand Dec. 31 were 28,383 acres; there was sold in 1899 and 1900, 2,034 acres.

The commissioner of the United States Land Office reported on July 1, 1900, that there were 1,596,411 acres of United States land unoccupied in the State.

Banks.—According to the statement of the Comptroller on June 30, 1900, 23 incorporated banks were doing business under the laws of the State. At the close of business, June 30, their assets amounted to $4,643,018.35, an increase over the assets on Jan. 1, 1900, reported as $3,862,541.21, of $781,477.14. Five of the State banks are savings banks or have savings departments. On Jan. 1, 1900, these reported assets of $1,739,555.71.

Insurance.—The last statement of the State Treasurer gives 87 insurance companies authorized to do business in the State in 1899. Of these, 58 were fire insurance companies, 11 life insurance, 18 miscellaneous (surety, accident, plate glass, marine, etc.). The aggregate risks carried by the companies during 1899 were $57,203,124, on which the premiums received were $1,511,645.87. The losses aggregated $764,202.78. The 58 fire insurance companies wrote risks aggregating $36,406,692, for which $710,271.83 in premiums was paid. The losses aggregated $312,834.39. The 11 life insurance companies carried risks for $6,452,133, for which $739,818.50 was paid in premiums. The total losses sustained were $432,457.68. The 18 miscellaneous companies wrote risks aggregating $14,314,339, for which $61,555.54 was paid in premiums. The losses in this class were $18,910.71.

Railroads and Telegraphs.—The railroad mileage in Florida in 1900, as assessed by the Comptroller, was 3,109.70 miles of main track, with 341.32 miles of branch, side, and switch track. The assessed valuation of the railroads in the State was $19,100,301.81. In 1899 the mileage of main track was 3,054.17, with 316.56 miles of branch, side, and switch track. The total assessed valuation in 1899 was $18,759,125.64. The valuation of rolling stock was $2,475,229.61.

There were 3,148.40 miles of telegraph lines assessed in 1900, ranging from 1 to 55 wires to each pole. The total assessed valuation for the telegraph lines of the State was $259,317.40. In 1899 there were assessed 30,877 miles of telegraph lines, at a valuation of $245,734.55.

Corporations.—The following figures are believed to be accurate: Between Dec. 31, 1899, and Dec. 15, 1900, 56 charters of incorporation were issued. These included 11 to manufacturing enterprises, 2 to building and loan associations, 6 to transportation and drainage companies, 4 to mutual profit associations, and 3 to agricultural purposes. The year was marked by a large increase in naval stores operations, and by the establishment of the first factory to transform cassava and sweet potatoes into starch.

Education.—The following statistics are from the latest report of the Superintendent of Public Instruction for the two years ending June 30, 1898; Children of school age in State (census of 1896), 152,598; white, 86,196; negro, 66,402. Children enrolled in public schools during the school year 1897-98 numbered 108,455, divided as follows: White males, 35,116; white females, 32,541; negro males, 18,632; negro females, 21,116. The percentage of school population enrolled in public schools was 71 per cent. for both races; whites, 78 per cent.; negroes, 61 per cent. Average length of school term, both races, 104 days; white, 106 days; negroes, 99 days. Illiterates between six and twenty-one years (school census of 1896), 6,502; white, 2,033; negro, 4,479. Per capita expenditure in 1899 for both races, 17 cents. Monthly wages paid: White male teachers, $33.66; white female teachers, $33.96; negro male teachers, $28.85; negro female teachers, $26.73.

The severe shrinkage in land values of the State, caused by the temporary destruction of the orange industry in the freeze of 1895, decreased the school revenues beyond the point of necessary expenditure. The Legislature of 1899 therefore passed an act permitting counties to divide themselves into subdivisions, which subdivists might decide by vote whether they would tax themselves (not exceeding 3 mills) in addition to the maximum county tax of 5 mills, authorized by law for schools. Several subdivisions had so taxed themselves when an injunction was served on the school board of Duval County, making a test case as to the constitutionality of the act. The Supreme Court decided in April, 1900, that the act was constitutional.

The State appropriates annually an average of $3500 in partial support of normal, military, and industrial schools.

The school census for the school year 1899-1900, as compiled by the State Superintendent of Public Instruction, is as follows: White males, 48,023; white females, 45,328; total white, 93,351. Negro males, 33,659; negro females, 34,388; total negro, 68,047.

WILLIAM J. JENNINGS, GOVERNOR OF FLORIDA.
FLORIDA.

68,077. Total males, 81,712; total females, 79,716. Grand total, 161,428.

Charities.—The school for the Deaf and Blind had an enrollment of 59 for the year ending July 1, 1900, divided as follows: White deaf girls, 17; white deaf boys, 12; white blind girls, 3; white blind boys, 6; negro deaf girls, 7; negro deaf boys, 10; negro blind boys, 4. Appropriation made by the State for the support of the school was $11,000.

The Hospital for the Insane had on Jan. 1, 1900, 555 inmates. During the eleven months ending Nov. 30, 203 patients—64 white males, 50 white females, 48 negro males, 41 negro females—were admitted, a total of 765 being under treatment during this period. On Nov. 1, 632 patients were in the hospital—200 white males, 184 white females, 131 negro males, 117 negro females. Of the patients admitted between Jan. 1, 1899, and Nov. 30, 1900, 237 were natives of the State, 157 of other States, and 36 of foreign birth. The inmates of the hospital have increased 120 per cent. during the past eight years, and 162 per cent. during the past ten years. This increase is probably due to the fact that the management of the hospital so greatly improved that patients are sent to it than in former years. The State in 1899 expended $71,716.33 in the maintenance of the Hospital for the Insane.

Penitentiary.—On Dec. 1 there were 778 State convicts, of whom 102 were white males and 2 white females, 651 were colored males and 23 colored females. Of these from Dec. 1, 1900, 18 convicts died, 6 were pardoned, and 14 escaped. The State has no prison, and the convicts are leased to contractors. On Dec. 1 the 778 convicts were in 7 phosphate mining camps and 6 naval stores camps. The office of Supervisor of State Convicts was created by act of Legislature in 1899, and the conditions of labor, the mining and housing of the convicts was regulated by law. A marked improvement in the condition of the convicts has resulted. A reform school for minors is situated at Marianna.

Health.—The annual report of the State Board of Health, issued March 15, 1900, gives the following statistics, based upon the population of 464,630 (State census of 1895):

In the year ending Dec. 31, 1899, there were in the State 8,180 births, 5,390 deaths, 6,112 marriages.

Yellow fever appeared in epidemic form at Key West and Miami, introduced from Cuba, in the summer and autumn of 1899. The disease was very mild, and the mortality was light. Stringent quarantine regulations prevented its spread, and the disease did not reappear in 1900.

In the spring of 1900 the Marine Hospital Service established a detention station for the Southern States, which Surgeon-General Wyman declares to be the best equipped of five or six similar stations kept up by the Marine Hospital Service. It is on the main line of the Savannah, Florida and Western Railroad, on the south side of St. Mary's River, where it divides Florida from Georgia. It will accommodate 2,000 persons, and can be ready at twenty-four hours' notice.

Political.—The Democratic State Convention met in Jacksonville, June 19, and nominated the following ticket: For Governor, William S. Jennings; Justice of the Supreme Court, Francis B. Carter; Secretary of State, John L. Crawford; Comptroller, W. H. Reynolds; Attorney-General, W. B. Lamar; Superintendent of Public Instruction, W. N. Sheets; State Treasurer, J. B. Whitfield; Commissioner of Agriculture, B. E. McLin; Railroad Commissioner, J. L. Morgan.

The platform approved the Chicago platform of 1896, and the stand taken by William J. Bryan on all great questions since that time; denounced the wastefulness of a large standing army, imperialism, and trusts; favored an income tax, reduction of tariff to a revenue basis; demanded repeal of war taxes, and a return to Democratic principles of economy.

On State issues the platform said: "We declare in favor of the most liberal support and development of the public school system and future of the educational institutions of the State. We favor the passing of such laws as will best tend to the improvement of our system of public roads.

"We favor municipal ownership of all public utilities, pledging the passage of such laws, and, if necessary, such constitutional amendments as will enable municipalities to acquire, own, and operate all such utilities, and if the necessary consent of the State legislature will, until such ownership, prohibit the granting of municipal franchises for more than a limited term of years, and without the consent of the municipal electors expressed at an election.

"We favor the nomination of all candidates for office, both State and county, and of United States Senators, by the Democratic party. We favor the primary elections, held under the provisions of law.

"We demand a radical reform of the State convict system.

The platform declared that the question of the removal of the State capital from Tallahassee and of the holding of a constitutional convention should be settled by the Democratic electors of the State, at a primary to be held at the time of holding the State election, Nov. 6.

On Sept. 12 the Prohibitionists met at Ocala and chose candidates for presidential electors. A. M. Morton was nominated for Governor, but no other State nominations were made. Resolutions were passed against the National Prohibition party at Chicago in 1900, condemning the liquor trade, and requesting voters to withhold support from all candidates who were not pledged to use their influence against liquor.

The Republican convention held two meetings, the first on Jan. 19, at St. Augustine, the second at Dea on July 21. The following officers were nominated: For Governor, Mathew B. Maerlan; Secretary of State, George W. Allen; Attorney-General, Frederick Cumberly; Treasurer, Walter G. Robinson; Comptroller, John W. Powell; Superintendent of Public Instruction, George W. Holmes; Commissioner of Agriculture, Otto C. Butterwick; Justice of Supreme Court, Henry Goodell; Railroad Commissioner, Lambert M. Ware.

The platform adopted a platform approving the administration of President McKinley and declaring for the gold standard. On State issues the platform declared:

"We demand legislative enactments providing that State convicts from the several counties be employed in the construction of good roads in their respective counties.
"We condemn the policy of the Democratic party, as declared in its platform of principles, relative to the question of capital removal, confining its settlement exclusively to white Democratic voters and Democratic primary alone, thus ignoring contemptuously the rights of all electors of Great Britain and France. Although we repudiate the proposition of our platform to participate in a general election, which should be provided for by general law relating to the same."

The People's party and the Social Democrats of the State nominated presidential electors, but put no State tickets in the field.

The State being overwhelmingly Democratic, all interest in the campaign centered on the question of the removal of the capital and on the four proposed amendments to the Constitution. Jacksonville, Ocala, St. Augustine, and Gainesville were candidates for the capital, in opposition to Tallahassee. Gainesville withdrew before the close of the campaign.

The official returns of the election in November gave: For President—Bryan (Democrat), 28,007; McKinley (Republican), 7,499; Populist, 1,090; Protectionist, 2,259; Social Democrat, 603. For Governor—Jennings (Democrat), 29,251; Macfarlane (Republican), 6,438; Morton (Populist), 651.

The vote on the constitutional amendments was as follows: Amendment for a change of State capital—2,239; Amendment for representation of townships in the Legislature—for, 4,511; against, 4,511. To prohibit special legislation in favor of corporations—for, 6,159; against, 4,458. To provide for election of county commissioners—for, 8,581; against, 3,706. To provide for new State seal and a State flag—for, 5,801; against, 4,121. The vote on the other amendments was: Tallahassee, 10,328; Jacksonville, 5,946; Ocala, 3,373; St. Augustine, 1,800. Seventeen Senators and 68 members of the House of Representatives were elected to the Legislature of 1901, all Democrats. The State government is solidly Democratic.

FRANCE, a republic in western Europe, proclaimed Sept. 4, 1870, when the Emperor Napoleon III was deposed. The Constitution of Feb. 24, 1875, vests the legislative power in the Chamber of Deputies and the Senate, forming together the National Assembly, and the executive power in the President of the republic and the Council of Ministers. The President of the republic is elected by the people for a term of seven years, and has authority to revise the Constitution when convened for that purpose by the resolve of both houses. The Constitution has been modified by the additional laws of Aug. 2 and Nov. 30, 1875, Dec. 9, 1884, June 16, 1885, and July 1, 1889. The Senate is composed of 300 members, elected in the departments for the term of nine years, one third retiring every third year. The electoral body consists of the Senators and Deputies of the department, the departmental and district councils, and delegates of the communal councils. Under the former law 75 of the Senators were elected originally by the National Assembly, afterward the Senate was elected for life by the Chamber of Deputies and the Senate. The number of these life Senators his place is filled by a Senator elected for the usual term by one of the departments, determined by lot. There were 16 life Senators still surviving in September, 1899. The Chamber of Deputies is composed of 584 members, each one to each arrondissement having less than 100,000 souls, and when the population is greater, the arrondissement being then divided into two electoral districts. Every male citizen twenty-one years of age can vote for the Deputy in his arrondissement if he has resided six months in one town or commune and is not serving in the army or otherwise disqualified. In 1899 there were 10,231,532 registered electors, of whom 7,657,429 voted. Officers and soldiers of the active army and the majority of public functionaries are not eligible to the Chamber. The ministers are responsible to the Chamber. In case of defeat on a Cabinet question the President selects a new President of Ministers, or department, or combination, who in consultation with the President selects his colleagues. The President can dissolve the Chamber with the consent of the Senate. He has authority to conclude treaties by the advice of his ministers, but cannot declare war without the assent of both Chambers. Every act of the President must be countersigned by the minister in whose department it falls. The President of the republic is Émile Loubet, elected Feb. 18, 1899. The ministry formed June 22, 1899, was composed as follows: President of the Council and Minister of the Interior and of Public Worship, M. Waldeck-Rousseau; Minister of Foreign Affairs, M. Delcassé; Minister of Finance, M. Caillaux; Minister of War, Major-Gen. de Gallifet; Minister of Marine, M. Lanesson; Minister of Public Instruction, Georges Leygues; Minister of Public Works, P. Baudin; Minister of Agriculture, Jean Dupuy; Minister of Commerce, Industry, and Posts and Telegraphs, M. Millerand; Minister of Colonies, M. Decrais; Minister of Justice, M. Monis.

Area and Population.—The area of France is 204,092 square miles. The population on March 29, 1896, was 38,517,975, nearly 189 to the square mile. The foreigners numbered 1,027,491, or 2.66 of the total population. The number of public officials and covered in the statistics of 1898, was 384,038, exclusive of the army and navy, but including 44,863 clergymen, 121,712 teachers, and 6,560 judges and magistrates, and their total annual pay amounted to 585,363,000 francs. The number of unpaid officials, such as mayors of communes and members of councils, was 402,500. The number of marriages in 1898 was 2,035,726,450 of births, 843,933; of deaths, 810,073; excess of births, 33,860. The number of divorces was 7,238. Paris, in 1896, had 2,536,834 inhabitants; Lyons, 460,028; Marseille, 452,239; Bordeaux, 256,906; Lille, 216,276; Toulouse, 149,963. There were 89,915 primary schools in 1898, with 1,33,506 teachers and 5,535,125 enrolled pupils; there were 143,890 public schools, with 483,900 pupils; 109 lyceums, with 52,372 pupils; 229 communal colleges, with 33,949 pupils; 202 lay private schools, with 9,727 pupils; and 438 clerical schools, with 67,643 pupils; 40 lyceums for girls, with 8,431 pupils; 28 colleges for girls, with 5,563 pupils; 51 secondary courses for girls, with 4,239 pupils; and in the universities there were 142 students of theology, 8,930 studying law, 3,435 students of science, 2,504 in the faculties of letters, 3,026 studying pharmacy, and 8,153 medical students in January, 1899, besides 909 students in outside medical schools and 786 university students in Algeria. Of the total number of 28,254 students, 1,399 were foreigners and 817 were women, including 258 foreigners.

Finances.—The budget estimate of revenue for 1899 was 3,477,575,553 francs, of which 3,423,609,469 francs constituted the general budget of France and 54,152,371 francs the Algerian budget. Of the revenue collected in France 472,181,557 francs were direct taxes, 292,900,660 francs taxes assimilated to direct contributions; 2,035,726,450 francs were indirect taxes, including 526,904,000 francs from registration, 179,219,400 francs from stamps, 5,526,000 francs from the tax on bourse transactions, 72,078,100 francs from the tax on income from personal property, 441,492,050 francs from customs duties, 624,012,000 francs.
from indirect contributions, and 186,494,900 francs from the sugar duty; 691,007,100 francs came from state monopolies, including 385,319,000 francs from tobacco, 137,200,000 francs from excise and stamp duties, 235,390,400 francs from the post office and telegraphs and telephones, and 16,083,700 francs from the mint, railroads, and various other monopolies; 62,219,410 francs came from domains and forests, 56,621,694 francs were miscellaneous receipts, and 67,498,731 francs for recettes d'ordre. The total budget of expenditure was 3,477,575,326 francs, including 73,012,516 francs for Algeria. Of 3,404,563,019 francs expended in France 1,249,896,915 francs were for the public debt, 13,302,560 francs for the President, Chamber of Deputies, and Senate, 20,034,610 francs for the Ministry of Finance, 53,112,933 francs for the Ministry of Justice, 67,676,329 francs for the Ministry of Foreign Affairs, 70,644,327 francs for the Ministry of the Interior, 43,024,533 francs for the Ministry of Worship, 649,465,036 francs for the Ministry of War, 303,600,510 francs for the Ministry of Marine, 217,432,896 francs for the Ministry of Education and the Fine Arts, 35,653,153 francs for the Ministry of Industry, railroads, and telegraphs, 90,794,762 francs for the Ministry of the Colonies, 30,701,433 francs for the Ministry of Agriculture, 187,619,864 francs for the Ministry of Public Works, 218,111,881 francs for régie, collection of taxes, etc., 176,800,824 francs for the post office and telegraphs, and 40,259,162 francs for revenue. The total value of the debt of France on Jan. 1, 1899, was 29,948,331,297 francs, consisting of 22,002,683,638 francs of perpetual rentes, 6,930,154,925 francs of redeemable debt, including the Morgan loan of 199,514,454 francs, 1,902,515,260 francs of annuities to railroads, and 4,828,125,211 francs of other obli-gations, and the floating debt, reported to amount to 1,015,492,734 francs. The annual amount of rentes is 2,000,000,000 francs; interest and amortization of the redeemable debt, 314,109,110 francs; interest on floating debt, 241,518,402 francs; total annual charge, 1,247,785,362 francs, as set down in the budget for 1900. The debt is about $150 per head of population. The annual income of the nation has been estimated at 75,000,000,000 francs, of which 75,000,000,000 francs represent land, 30,000,000,000 francs buildings, 5,000,000,000 francs specie, 70,000,000,000 francs securities, 10,000,000,000 francs farm implements and live for the Ministry of Foreign Affairs, 17,000,000,000 francs other personal property. By the conversion of 5 per cent. into 4½ per cent. in 1883 an annual saving of 34,000,000 francs was effected, a further saving of 5,000,000 francs by the conversion of old 4½ to 4 per cent., into 3 per cent. in 1887; and one of 63,000,000 francs by the conversion of the 4½ per cent. rentes; making a total reduction of 107,000,000 francs in the annual charge of the national debt. The refunding of 3½ and 3 per cent., at 2½ per cent. was contemplated when the 3 per cent. stood above par, but has been delayed owing to the fall in rentes.

The Army. The period of military duty is from the age of twenty to that of forty-five. Every Frenchman fit for service is liable to serve three years in the active army, ten years in the reserve, six years in the territorial army, and six years in the territorial reserve. Students and semina-rists are only required to perform one year of active service, provided that they complete their studies. The number of officers as fixed in the budget is 540,405 of all ranks in France, 60,102 in Algeria, and 15,968 in Tunis. The number of officers is 26,847 in France, 2,309 in Algeria, and 584 in Tunis. The general staff in France numbered 3,036 officers, with 702 men; in Algeria, 294 officers, with 95 men; in Tunisia there were 21 administrative officers, 3,617 cavalry, including 3,490 officers; 77,769 artillery, including 3,891 officers; 12,299 engineers, including 484 officers; and 8,519 train, including 360 officers; a total of 505,842 men, including 20,377 officers. The gendarmerie numbered 21,571 men, including 624 officers; the Republican Guards, 3,650 men, of 20 brigades or 41 regiments. In Algeria numbered 41,001 men, including 934 officers; the administrative troops, 3,512 men; the cavalry, 7,507 men, including 365 officers; the artillery, 2,716 men, including 53 officers; the engineers, 892 men, including 13 officers; the train, 2,114 men, including 39 officers; total, 57,742 men, including 1,959 officers. Of the rentes on the 1,919,2 men, of whom 31 were officers. In Tunis there were 11,292 infantry, including 280 officers; 534 administrative troops; 1,853 cavalry, including 86 officers; 993 artillery, including 21 officers; 325 engineers, including 4 officers; and 714 train, including 13 officers; total, 15,621 men, including 404 officers, besides 143 gendarmes, including 4 officers. The active army is not organized on a territorial basis. In every regiment are commingled recruits from every part of France, and the same system is continued in the reserves. There are 145 regiments of infantry of the line in France of 4 battalions each. 19 regional regiments of 4 battalions for garrison duty in the four classes, 18 battalions are composed of 12 battalions of mountain chasseurs, making in all 658 battalions. In Algeria and Tunis there are 4 regiments of zouaves of 5 battalions, 4 regiments of Algerian rifles, called Turcos, of 6 battalions, 2 regiments of the foreign legion of 5 battalions, 1 company of Saharan rifles, and 5 battalions of Indian light infantry. The infantry is armed with the Lebel rifle of the model of 1886, having 5 cartridges in the magazine and a caliber of 8 millimeters. Two of the army corps have attached to them a company of velocipeds. Each of the army corps of France has a brigade of cavalry, and there are 7 separate divisions, composed of 20 brigades or 41 regiments, comprising 4 brigades, comprising 10 regi-
The cavalry is composed of 13 regiments of cuirassiers, 31 regiments of dragoons, 21 regiments of mounted rifles, 14 regiments of hussars, 6 regiments of African chasseurs, and 4 regiments of spahis, comprising altogether 447 squadrons of 5 officers and 140 men, to be raised to 155 men in time of war. The dragoons, hussars, and chasseurs are armed with carbines of the model of 1886, the cuirassiers with revolvers. A squadron of Saharan and one of Soudanese spahis belong also to the cavalry. The field artillery consists of 19 brigades and 3 commands, comprising 40 regiments with 430 mounted batteries of 4 or 6 pieces, 52 batteries of horse artillery, 14 mountain batteries, and 150 sub-batteries, of which the 4-inch, 40-chasseurs to ductors, guns are rapid firing, having a caliber of 75 millimeters. There are 18 battalions of fortress artillery, with 105 batteries, besides 7 batteries in Algeria and Tunis. The guns have 95, 200, and 270 millimeters caliber, the mortars a caliber of 15 centimeters, and rapid-firing guns have been introduced, with a caliber of 12 centimeters. The engineers comprise 1 regiment of sappers and miners of 4 battalions and 1 company of sapper conductors, 5 regiments of sappers and miners of 3 battalions and 1 company of sapper conductors, 1 regiment of railroad sappers, and 7 companies of sapper conductors. There are 20 squadrons of trains, and 4 lumber companies, 12 of the companies being in Algeria.

There are 145 regiments of infantry reserves of 3 battalions in time of peace formed of the complementary cadres of the regiments of the line, and besides these there are 30 battalions of reserve chasseurs; 40 regiments of reserve cavalry are, like the others, reserved to the reserve, while the regiments of the line, and the 41 regiments of the independent cavalry divisions have each its adjunct reserve regiment, and for each brigade of artillery there are 12 batteries of reserves.

The Navy.—By the law of 1898 the authority of the chief of staff, a vice-admiral who assists the Minister of Marine in directing the affairs of the navy, was conferred on 4 admiral officers, subject to the approval of the minister, full charge of the construction, maintenance, putting into commission, and mobilization of the ships. The expenditure on the navy has increased, with fluctuations, from 201,000,000 francs in 1890 to 304,000,000 francs in 1899. The personnel of the navy in 1898 comprised 39,060 officers and men, 4,254 sailors, 226 lieutenants, 496 sub-lieutenants, and 170 midshipmen, making a total of 1,733 commissioned officers and 40,580 men, including warrant officers. The navy is manned partly by conscription among the seafaring population and partly by voluntary enlistment. The sailors inscribed in the naval reserve number 40,589, and 125,000, having a capacity of 150,000 men. The minister of marine proposed the construction of 6 new battle ships, of 14,865 tons, with 12 inches of armor over vital parts, to have a speed of 18 knots and carry 4 12-inch and 18 6.4-inch guns; 5 armored cruisers, of 12,600 tons, able to steam 22 knots, and equal in armament and protection to the new Drake class in England; also 28 destroyers, 112 new torpedo boats, and 10,000 tons of submarine craft. If this programme were carried out the navy in 1907 would consist of 28 battle ships, 24 armored cruisers, 52 destroyers, 203 torpedo boats, and 38 submarine torpedo craft. The cost of the new constructions was put at 800,000,000 francs, which was believed by the opponents of the new programme, who objected especially to the building of more large battle ships, to be too low an estimate. The Government decided to build the cruisers, 3 to be completed in 1901 and the others 3 before 1905, and to postpone the construction of battle ships, except one that was to be ready in three years.

Commerces.—The area cultivated as farm and garden land and pasture in France is 36,977,098 hectares out of a total area of 52,921,578 hectares, of which 8,397,131 hectares are covered with forest. The production of wheat on 6,963,711 hectares in 1898 was 128,096,140 hec-
France.

Of the total value of imports in 1898 the value that came by land was 1,540,000,000 francs, and by sea 4,106,000,000 francs; of these 2,463,000,000 francs came in French ships and 2,680,000,000 francs in foreign ships. Of the exports 1,607,000,000 francs went by land carriages and 3,066,000,000 francs in ships, of which 1,596,000,000 francs were borne in France and 1,470,000,000 francs in foreign ships. The transit trade in 1898 amounted to 790,000,000 francs. The share of the principal ports in the total general import and export trade in 1898 was as follows: Marseilles, 1,951,000,000 francs; Havre, 1,693,000,000 francs; Paris, 733,000,000 francs; Bordeaux, 676,000,000 francs; Dunkerque, 663,000,000 francs; Boulogne, 473,000,000 francs; Rouen, 287,000,000 francs; Dieppe, 259,000,000 francs; Calais, 215,000,000 francs; Toulon, 124,000,000 francs; Toulon, 119,000,000 francs; Marseilles, 109,000,000 francs; and Toulon, 98,000,000 francs.

The imports of gold coin and bullion in 1898 were 196,407,834 francs, and exports 313,207,577 francs; imports of silver coin and bullion 191,372,520 francs, and exports 188,591,251 francs; total specie imports, 390,790,345 francs; total exports of specie, 501,788,970 francs.

navigation.—The total number of vessels entered at French ports in 1898 was 103,059, of which 23,857,951 tons, of which 82,094, of 11,907,268 tons, were French and 20,965, of 11,950,683 tons, were foreign; the total number cleared was 103,876, of 24,207,315 tons, and of these 82,385, of 12,220,972 tons, were French and 21,291, of 12,076,343 tons.
FRANCE.

The French vessels entered comprised 8,533, of 4,611,561 tons, engaged in the foreign trade and 73,561, of 7,295,707 tons, in the coasting trade; of those cleared 9,024, of 4,925,265 tons, were in the foreign and 73,561, of 7,295,707 tons, in the coasting trade. Included in the French marine in the foreign trade are the vessels of the colonies and those in the sea fisheries. The merchant marine on Jan. 1, 1899, consisted of 14,406 sailing vessels, of 414,673 tons, with 67,583 men in their crews, and 1,209 steamers, of 485,017 tons, with crews numbering 20,627. The sailing vessels plying European waters numbered 150, of 14,824 tons, and 271, of 173,307 tons, navigated the colonies; all the rest were included in the coasting trade or the fisheries or in port service. The Government gives 16,000,000 francs a year in premiums for building and navigating vessels and 4,550,000 francs to encourage the cod fisheries.

Railroads, Posts, and Telegraphs.—The length of railroads in operation in 1898 was 23,524 miles, besides 2,404 miles for local traffic. In 1890 the railroads of general interest had a length of 23,576 miles. The length of tramways at the end of 1899 was 2,319 miles. The main lines of railroad were built by companies under the supervision and partly with the assistance of the state. They belong to six companies, and will revert to the state in 1921. The French Government guarantee of interest expires in 1914 for four of the companies, in 1934 for another, and in 1935 for the last. The Government built and is the owner of 1,700 miles of railroad. The cost of the railroads up to 1897, when they had a length of 23,152 miles, was 15,898,000,000 francs. There were 103,807,528 passengers, 108,399,000 tons of freight. The expenses in 1897 were 696,775,000 francs; receipts, 1,333,350,000 francs.

The number of letters sent through the post office in France and Algeria in 1897 was 952,644,000, of which 735,745,000 were internal and 156,899,000 international; registered letters and parcels, 46,550,000, of which 44,002,000 were internal and 2,488,000 international; of postal cards, 58,767,000, of which 51,681,000 were internal and 7,086,000 international; of newspapers, circulars, samples, etc., 1,305,764,000, of which 1,153,757,000 were internal and 132,196,000 international.

The telegraph system on Jan. 1, 1899, consisted of 62,952 miles of line and 14,346 miles of wire. The number of dispatches in 1897 was 44,515,175, of which 36,799,740 were internal, 5,158,911 international, 1,116,142 transit, and 1,440,382 official. There is in Paris a pneumatic tube system with 237 miles of tubes. The telephone systems of France had 10,510 miles of line and 96,590 miles of wire. In the towns, where there were 1,057,528 conversations in 1897. The long-distance circuits, of which there were 800, had 12,892 miles of line and 34,510 miles of wire, and there were 1,916,996 conversations in 1897.

Dependencies.—The colonies and protectorates of France have an estimated total area of 4,307,000 square miles and a population of 60,000,000. Algeria is regarded as a part of France, and has no separate Legislature. The Governor General communicates with the ministers of the different departments in regard to the administration, and is advised by a council of 15 members, which discusses and votes the annual budget, while the departmental governors are responsible to the Superior Council for their action, public works, and native affairs have local officials to direct them. Tunis is under the protectorate of France, and is practically ruled by a ministry selected and directed by the Minister of Foreign Affairs. The colonies proper have elective councils to assist the Governor besides representation in the French Chambers in the case of the older colonies and delegates in the Superior Colonial Council in the case of the others. The Senators and Deputies of the colonies have seats in this council, and officials and private individuals who are appointed on account of their local or expert knowledge. Most of the colonies receive assistance from the French Government in the form of grants of money voted by the Chambers, which amounted in 1900 to 89,768,262 francs, while the receipts of the French treasury from colonial services were 4,730,540 francs. Naval and military expenditures incurred in the colonies are not as a rule voted in the budgets of the Ministries of War and Marine.

Andorra is a semi-independent republic in the Pyrenees, partly under the suzerainty of France, which is exercised through the prefect of the department of Pyrénées Orientales. The heads of families elect the Legislative Council of 24 members, which elects the syndic who presides over the executive. The judicial magistrates are appointed alternately by the French Government and the Spanish Bishop of Urgel. The area of the republic is 175 square miles and the population about 6,000.

Algeria is divided into the three departments of Algiers, Oran, and Constantine, each of which elects a Senator and two Deputies to the National Assembly. The Governor General is M. Jonmart, who in November, 1899, succeeded M. Laferrière, appointed in 1898. The area is 184,474 square miles, with a population in 1896 of 4,429,421, of whom 5,873,278 were found in the civil area and 659,453 in the territories of the Government. The native population in 1896 numbered 318,137; foreign population, 446,343. Of the native population about 75 per cent. consists of Kabyles or Berbers, 15 per cent. of Arabs, and 10 per cent. of Moors, Turks, negroes, etc. Outside of the boundaries of Algeria is the Algerian Sahara, having an area of 125,500 square miles and about 50,000 inhabitants. The city of Algiers in 1899 had 96,784 inhabitants; Oran, 85,081; Constantine, 51,997. The natives are all Mohammedans, the Jews now having the status of French citizens. In the primary schools, of which there were 1,161 in 1897, with 62,873 boy and 41,354 girl pupils, instruction is given in French or Arabic. The number of pupils was 10,302 Mohammedans, 14,791 Jewish, and 37,839 foreign pupils taught in 1896. The infant schools were attended by 26,075 children. The university students in Algiers in 1896 numbered 622; in the lycées maintained in the capitals of the three departments there were about 2,000, and in communal colleges 3,863. The expenditure for education in 1900 was estimated at 55,398,711 francs from local sources, of which 12,135,331 came from direct taxes, which are paid by natives only, 8,394,400 francs from registration and stamps, 13,425,000 francs from customs, 5,583,600 francs from monopolies, 4,385,000 francs from domains and forests, 8,069,770 francs from miscellaneous sources, and 3,405,610 francs were recettes d'ordre. The budget of expenditure amounted to 72,144,494 francs, which does not include 55,901,310 francs for military purposes and 2,500,000 francs for the public debt. The expenditures of the different departments of the administration were for the Ministry of War, 21,031,000 francs for public works, 8,136,448 francs for finance, 6,528,824 francs for instruction and fine arts, 6,326,999 francs for commerce, posts, etc., 3,108,590 francs for agriculture, and 2,622,250 francs for justice. The military forces in 1900 con-
sisted of 58,910 men, inclusive of 2,278 officers, with 13,470 horses. The territorial army consists of 10 battalions of zouaves, 3 squadrons of cavalry, and 10 batteries of artillery. A new force organized for operations south of Algeria consists of the Sfaxes and special gendarmerie.

There were 3,644,614 persons dependent on agriculture, 207,310 of them Europeans, in 1896. The extent of land cultivated was about 20,000,000 hectares. The production of hard wheat in 1898 was 5,789,719 quintals; of soft wheat, 1,598,598 quintals; of barley, 9,028,420 quintals; of oats, 87,424,192 quintals. Most of the soft wheat and of the oats is grown by Europeans, but less than 20 per cent. of the hard wheat for which Algeria is famed. There were 141,180 hectares under vines, producing 4,554,354 hectolitres of wine. More than half the vineyard proprietors are Europeans. The Government owns the cork forests, covering 281,400 hectares, which produced 5,270 tons of cut cork in 1898. The production of tobacco on 7,015 hectares was 5,324,525 kilogrammes. The cultivated olive trees number 6,500,000. The number of horses and mules in 1898 was 345,139; of asses, 255,570; of camels, 265,587; of cattle, 1,004,175; of sheep, 7,926,290; of goats, 3,526,508. Natives of the country are the keepers of the forest and hunt the wild animals, such as the 3,247,692 hectares. Of those that are accessible and utilized only 468,305 hectares are owned by private individuals. There are 14 paying iron, zinc, lead, copper, and anthimony mines. The iron ore raised in 1897 was 447,000 tons, valued at 3,316,000 francs; of zinc and lead ore, 32,445 tons, valued at 1,524,200 francs; of silver ore, 7,473 quintals; of copper ore, 1,000 quintals; the ores of the English and other companies, and new ones are being discovered frequently. The principal production is at Tebessa. The total export in 1897 was 223,141 tons, valued at 4,562,820 francs. Pottery, leather manufacture, weaving, and working esparto are considerable industries. The general imports in 1898 had a total value of 302,225,039 francs, of which 227,533,399 francs were imports from France. The value of the general exports was 285,768,637 francs, of which 232,136,851 francs were exported to France. The special imports were valued at 290,059,706 francs; special exports, 263,543,209 francs. The values in francs of imports from and exports to different countries in the special trade of 1898 are given in the following table:

The values of the chief imports in 1898 were 16,755,725 francs for cattle, 11,945,199 francs for cereals, 5,881,435 francs for coffee, 3,366,774 francs for timber, 3,166,454 francs for coal, 1,644,953 francs for hides, 1,488,553 francs for machinery, 1,408,719 francs for tobacco, and 1,251,894 francs for lead. The values of the principal exports were 6,581,304 francs for alfalfa, 5,830,732 francs for tobacco, 3,597,016 francs for iron ore, 2,610,191 francs for hides, 2,060,828 francs for cork, 1,065,412 francs for cereals, and 976,755 francs for cattle.

The number of vessels entered at Algerian ports during 1898 was 1,839, of 1,101,058 tons; cleared, 1,786, of 1,117,408 tons. Of the vessels entered 472, of 279,722 tons, and of those cleared 304, of 189,634 tons, were French. The number entered in the coasting trade was 8,627, of 1,621,623 tons. The merchant marine of Algiers on Jan. 1, 1899, comprised 657 sail vessels, of 7,420 tons, and 64 steamers, of 10,958 tons.

The railroads in occupation in 1899 had a total length of 2,146 miles, including 325 miles in Tunisia. The length of telegraph lines was 5,903 miles, with 12,915 miles of wire. The number of dispatches sent during 1897 was 1,882,938, of which 1,671,217 were internal, 54,250 international, and 157,471 official.

The southern part of each of the Algerian departments is a military territory governed by martial law, comprising 556,143 square miles of the officially occupied area of Algeria. This is the region constantly disturbed by the nomad Kabyles, who are in chronic revolt and who occupy the attention of the large military force that France has been compelled to send to the south of the Soudan. Aside from military reasons, the fact that Morocco lays claim to the principal oases has hitherto deterred the French from occupying them, although this has been the ambition of successive governors general of Algeria, and an extension of the French occupation has been achieved from time to time. The French troops are the fount and head of the Sultan of Morocco. The Saharan rifles and spahis were organized for the purpose of establishing French rule in this region and gradually extending it over the desert tribes until the way shall be clear for military and commercial communications between Algeria and the French sphere on the upper Niger and Lake Chad. Two columns of troops set out late in 1897 to take possession of the oases south of Oran, near the frontier of Morocco. The Algerian troops occupied Insalâh, the chief place in the district of Tidikelt, on Dec. 28, 1899. This is 300 miles south of the military station of El Golea, northeast of Gourara and Tunt, the other groups of oases and desert villages that the French must occupy before they can bring the tribesmen in favor of the French in the Sahara, not only on the part of the rebellious Kabyles but of the Tuaregs, who contest French supremacy in the Soudan. The chief center of anti-French intrigues has been Insalâh, but in all these cases the ruling races are bitterly opposed to the French, although among the lower classes there has grown up a feeling for the French rule as preferable to the tyranny of Arabs and the exactations of Tuaregs. The Sultans of Morocco have clung to their shadowy sovereignty because the original seat of their family was in the oasis of Tafilet, adjoining this region, and when the French first turned their attention to this country about the year 1880, the Sultan seems to have done nothing to Morocco offering tribute and appealing to the Sultan to protect them against the infidels. Their hostility to the French has become intensified since the missionaries of the Sheikh of Senoussi appeared among them, though the aristocracy have material reasons for opposing French civilization, controlling as they do not only the
resources and labor of the country but the trade routes between the Soudan and the Mediterranean coast and between Morocco and Tripoli. The occupation of Insalath was followed on March 19, 1900, by the conquest of Imhar, the chief place in the oasis of Gurara, after hard fighting by a force commanded by Col. D'Eul, which killed over 600 of the inhabitants. This movement to the westward led to a concentration of Moorish forces at Figuig, which was also threatened, as it lies near the route of the railroad that has been built from Oran southward and has had its terminus at Ain Senfa, on the northern slope of the Atlas range, 70 miles northwest of Figuig. The continuation south of this road was definitely planned for 1899. In February, 1900, it was opened to Jenien-bu-Kezg, and preparations were made to extend it to the French military post of Duveyrier, near Figuig, and thence to Tuat and Tidikelt, by way of Igl, as soon as the occupation of the oases could be completed. On March 25 Col. Bertrand marched with a strong force to Zaghara, in the region, welcomed the rifles, African mounted rifles, spahis, artillery, and engineers, with a train of 2,500 camels, against Igl, which surrendered without fighting on April 5. This place, lying south of Figuig, was claimed as Moorish territory, and its occupation was suspected to be preliminary to an attack on the Moorish capital of Tiouig. As a result, the French Government denied such intention; then the French tribes gathered to retake Igl. The Sultan dispatched an envoy to Tangiers to protest to the representatives of the powers against what was alleged to be an invasion of Moorish territory. Igl lies south of Morocco, not of Algeria, and in the boundary treaty of 1845 France recognized as Moorish territory a large area east of the boundary line of Morocco extended. Great Britain was precluded from interfering in the dispute by the agreement of 1890, which practically recognized the oases of Tuat, Tidikelt, and Gurara as lying within the French sphere. The occupation of Gurara was completed on May 26 by Col. Meunier, who found a large force of Danakils near the French, who as far as they pushed their occupation gave employment to the poverty-stricken laboring population and paid much higher wages than they had ever received. The district of Timimun was annexed later, and instructions were then given to the French posts already established to extend their influence and make it necessary for their security. In a reconnaissance at the beginning of September a French force was attacked by Berbers near Salah Metfar, in the Del dul region, and came away with the loss of 26 killed and wounded.

The regency of Tunis is under the nominal rule of the Bey Sidi Ali, born Oct. 5, 1817, and is nominally a vassal of Turkey. The French protectorate was established in 1882. The French Resident General, R. P. Miulet, is Minister of Foreign Affairs, and of the 8 other ministers only 2 are Arabs. The French army of occupation is kept at a strength of about 600 officers and 16,000 men, and the gendarmerie of 150 men is French, while the rural police is composed of 400 natives. In an area of about 51,000 square miles and a population estimated at 1,500,000, mainly composed of Kabyles and Bedouin Arabs. The ordinary revenue for 1898 was estimated at 24,001,100 francs, for 1899 at 24,733,100 francs, for 1900 at 26,089,500 francs, and for 1901 at 28,533,500 francs. The revenue for 1899 at 24,731,053 francs, for 1900 at 25,988,215 francs. Of the revenue for 1900 direct taxes produced 7,941,400 francs according to the estimates, customs and other duties 8,791,700 francs, monopolies 7,185,300 francs, domains 1,273,400 francs, and various sources 897,500 francs. Of the expenditures 11,789,445 francs were for finance and the expenses of the debt, 4,541,900 francs for public works, 3,015,110 francs for administration, 1,680,000 francs for the civil list, 1,346,515 francs for posts and telegraphs, 1,022,270 francs for agriculture and forestry, 1,011,500 francs for instruction, and 900,475 francs for army and various other expenses. Arrears of revenue and of expenditure estimated at 1,992,500 francs are not included in the ordinary budget, nor 8,334,213 francs of exceptional expenditure raised by loan. The public debt of Tunis, consolidated in 1884 into a perpetual 3-per-cent. rente of 6,307,520 francs a year, was converted against the issue of a 3½-per-cent. loan in 1888. Agriculture is the main business of the country. Cereals are the chief product. There were 435,337 hectares of wheat in 1895, 433,978 hectares of barley, 8,060 hectares of vineyard, 12,000,000 olive trees producing 20,000,000 killograms of oil, 15,000,000 francs, and 1,350,000 date trees in 1896. In that year the export of dates being 1,900,000 francs a year. The movement of horses in 1896 was of ass and mules, 128,580; of cattle, 252,220; of sheep, 907,642; of goats, 612,621; of camels, 112,265. The fisheries, which are mainly followed by Italians, yielded 208,430 killograms of sardines, 19,800 killograms of anchovies, and 180,000 killograms of sponges and sepia, in 1895. The total value of imports in 1896 was 681,988 francs against 53,820,670 francs in 1897; exports, 52,214,651 francs, against 36,730,871 francs. The values of the principal imports in 1898 were 6,900,000 francs for cotton goods, 5,500,000 francs for groats, 5,900,000 francs for grain, 2,000,000 francs for flour, 1,700,000 francs for sugar, 1,700,000 francs for goods for railway, 1,000,000 francs for machines, 1,500,000 francs for woolen and silk goods, and 9,223,500 francs for precious metals. The values of the principal exports were 13,500,000 francs for wheat, 3,000,000 francs for olive oil, 3,000,000 francs for zine ore, 2,000,000 francs for alumina, 1,500,000 francs for wine, and 1,500,000 francs for tan bark. The imports of precious metals were 9,223,500 francs, and exports 8,018,000 francs. The length of railroads is 883 miles, of which the Government owns 866 miles. There are 2,060 miles of telegraphs, with 3,670 miles of wire. The postal traffic in 1897 consisted of 3,084,530 internal and 9,372,873 foreign letters. The number of telegraph messages was 1,192,242. The number of passengers was estimated at 425,308 at Tunisian ports in 1898. For 1887, 1898, 1900, and 1901 the following were returned: Imports of 1887 were 6,307,520 francs; of 1898 were 3,015,110 francs; of 1899 were 2,500,000 francs; of 1900 were 2,000,000 francs. The imports amount to 3,500,000 francs a year, and exports, chiefly coffee, wax, and ivory, to 1,300,000 francs. The inhabitants of this region are Danakils and Gallas. The local revenue in 1890 was estimated at 630,000 francs. The supplemen-
tary expenditure of France for 1900 was fixed at 337,500 francs. The coast line is 125 miles and the inland boundary is undetermined. The population of the French colony is 22,370. In the north France claims the Bay of Adulis by virtue of a cession to Napoleon III by the King of Tigre.

Off the east coast of Africa numerous islands are settled by French, some of which have been colonized for centuries. The claim to Madagascar itself was based on the exercise or assertion of sovereignty as early as 1642, but the country was not effectively occupied till 1895 (see MADAGASCAR). The island of Réunion, 420 miles east of Madagascar, has been a French possession since 1649, and is represented in France by a Senator and two Deputies. The area is 965 square miles. The population in 1897 was 173,192. St. Denis, the capital, had 32,850 inhabitants in 1899. There are plantations of sugar cane, coffee, cacao, vanilla, and spices, on which cooie and native labor is employed. There were 15,210 British Indians in 1898, 4,451 French, 1,868 Africans, and 536 Chinese in 1897. A railroad, 83 miles long, now belonging to the Government, connects the port of Pointe-des-Galets with the interior towns. The local revenue in 1899 was estimated at 5,979,077 francs. The expenditure of France for 1900 was 4,460,203 francs. The value of imports in 1898 was 15,765,208 francs, and of exports 6,883,775 francs in value. The island of Mayotte, which has been French since 1843, and the Comoro Islands, first occupied in 1866, are administered from Réunion. Mayotte has an area of 140 square miles and 11,540 inhabitants. Sugar and rum are the chief products. Vanilla is becoming an important culture, and recently coffee has been planted extensively. The imports are about 440,000 francs and exports 960,000 francs. The local revenue in 1899 was 245,000 francs, to which France added 13,000 francs, and to repair the damages of a hurricane in February, 1898, a loan of 500,000 francs to be repaid in 1902 was granted, and in 1900 1,875,452 francs. In addition to the native population, 9,948 French, 47,001 Africans, and 32,850 Chinese in 1897. In 1900, 19,222,285 francs.

Cochin China has an area of about 23,100 square miles, with a population estimated in 1899 at 2,233,499, comprising 4,451 Europeans, 2,054,831 Annamites, 183,650 Cambodians, 6,374 Moi, 2,650 Chamis, 65,501 Chinese, 4,130 Malays, 1,477 Indians, 46 Tagals, and 46 other foreigners. A regiment of French marines is stationed in Cochin China and one in Tonquin and one in Annam. Besides imports, the native trade is chiefly French; the annuities, numbering in Cochin China 2,405. The main crop is rice, of which 11,277,770 piculs were exported in 1898 to China, Japan, and Europe. Other articles of export are cotton, silk, hides, fish, silk, rubber, pepper, cardamoms, and copra. The merchantable imports in 1898 were valued at 54,964,222 francs; exports, 108,010,322 francs. The French have been in possession of the following protectorates since:

- The protectorate of Cochinchina, 1861, over Cambodia since 1862, though their origin goes back to an earlier colonial period when France was a dominant power in India and intervened in Annam in 1787. The protectorate over Annam was proclaimed in 1884 and established in 1886, and the conquest of Tonquin, which was annexed by proclamation as a dependency of Annam in 1884, was not accomplished without several years of fighting and two hard campaigns, in the last of which China became involved by the informal intervention of Chinese troops.

- In 1893, after an armed conflict with Siamese, the protectorate was extended over Laos. French Indo-China is under the authority of a single governor general and forms a customs union, but the provinces have different forms of government and separate local authorities. The total area is about 363,000 square miles and the aggregate population is estimated at 2,900,000. The exports in 1899, valued at 102,444,346 francs, of which 44,415,786 francs came from France. The exports of native produce were 125,553,528 francs in value, of which 29,198,786 francs went to France. The foreign exports were 1,957,665 francs in value, making the total exports 127,510,979 francs. The territory of Kwang-Chi-Wan, on the coast of China, acquired the native slave trade, by French Government, has been placed under the authority of the Governor General of Indo-China. The Superior Council of Indo-China, created in 1887 and reorganized in 1897, is consulted by the Governor General and assists in controlling the budgets of Cochinchina, Annam, Tonquin, Cambodia, and Cochin China. Since 1893 the French have annexed the protectorate of Indo-China, numbering 9,050 men, recruited in Europe and paid by the French Government. The present Governor General is Paul Doumer. The revenue for 1899 was estimated at 317,620,000; the contribution of France in 1900 was 19,222,285 francs.

Annam has a King, Thanh Thai, who was set up by France in 1889, and the administration is carried on under French control by native officials. The area of the protectorate is 58,780 square miles; the population is estimated at 6,000,000. The products of the country are rice, silk, corn, areca nuts, sugar, coconuts, copra, pepper, cardamoms, saffron, rubber, dyes, medicinal plants, and timber. The natives work iron, copper, zinc, and gold, and make pottery and silk fabrics. The value of imports in 1898 was 3,775,000 francs; exports, 3,075,000 francs. The revenue in 1899 was estimated at $1,845,835. The Protectorate is ruled by King Norodom under French direction. The area is 40,530 square miles; the population is estimated at 1,500,000, including besides the various native races 250,000 Chinese and Annamites and 40,000 Malays. Phum Pemb.
the capital, has about 50,000 inhabitants. The revenue for 1899 was estimated at $1,997,600, out of which the King receives $415,200 to maintain his court. The products of the country are rice, cotton, betel, tobacco, indigo, sugar, silk, pepper, corn, cinnamon, and coffee. Fish are exported, as well as cotton and cotton seed, rice, and tobacco.

Tonquin is governed by the French Resident, the Annonatine Vicerey having been removed in 1897. The area is 119,060 square miles. The population is estimated at 12,000,000. Hanoi, the capital, has about 150,000 inhabitants. The force of native troops, officered by Frenchmen, is 14,016. The import duties of 1898 were valued at 45,675,000 francs, of which 20,425,000 were from France, 16,425,000 francs. The foreign goods sent through to Yunnan were valued at 5,000,000 francs and the return traffic at 3,200,000 francs for shipment abroad. Tonquin is an important producer of rice, and the bulk of the crop is shipped to Hong-Kong for the Chinese market. Other products are sugar, silk, pepper, cotton, cotton seeds, fruits of teak, tobacco, and coffee, which has been planted by Europeans.

French companies operate the coal mines, the product of which is about 200,000 tons a year. The tonnage of 1,407 vessels entered in 1896 was 461,454. The railroad from Phu-lang to Langson, 64 miles, is to be extended to Nacham, and thence inland, which will have great influence when the antiforeign disturbances in China caused a temporary interruption. The local revenue in 1890 was estimated at $3,903,638; the contribution of 1900 from the French treasury was 390,000 francs.

Laos has an estimated area of 91,000 square miles and 1,500,000 population. The country produces rice, cotton, and tobacco, and contains large forests of teak. French companies have concessions to work gold, tin, and lead mines and to dig precious stones. The budget for 1900, defrayed by the other provinces of Indo-China, was 862,431.

The French possessions in the Pacific comprise New Caledonia and its dependencies and the Society Islands, the latter consisting of Tahiti, Raiatea, Tabon, and Boré Bora; the Tuamotu and Gambier groups, the Marquesas Islands, the island of Pata, and the Gambier group, which is composed of 450 square miles with a population of 6,520 natives, who gather copra for export.

In America, all that remains of the once great colonial dominions of France are the petty islands of St. Pierre and Miquelon, retained as a fishing station near the coast of Labrador. The area is 46,850 square miles, not including the territory disputed with the republic of Brazil. The population is estimated at 30,300, not including 1,500 aborigines but including 3,900 convicts and 1,800 on ticket of leave. The capital and seaport, Cayenne, has 12,300 inhabitants.

French Guiana had a Governor, L. Mouttet, in 1900, who was assisted by a Council of 16 members. The colony sends a Deputy to the French Chamber. The area is 25,700,000 square miles, that is, including the territory disputed with the republic of Brazil. The population is estimated at 30,300, not including 1,500 aborigines but including 3,900 convicts and 1,800 on ticket of leave. The capital and seaport, Cayenne, has 12,300 inhabitants. Rice, corn, manioc, cacao, coffee, sugar, indigo, and tobacco are raised, but not in considerable quantity, the area under cultivation not being above 8,000 acres. Gold mining is now the chief industry. The export of gold in 1897 was 7,646 ounces; in 1898, 48,600 ounces; in 1899, 81,715 ounces. Silver, iron, and phosphates are also obtained. Other exports are rum, coffee, cacao, and canvas goods. The number of vessels that visited Cayenne in 1897 was 9,334,000 francs; of exports, 7,160,000 francs. The number of vessels that visited Cayenne in 1900 was 40, of 17,200 tons. The revenue in 1899 was estimated at 3,027,750 francs, exclusive of the contribution from France, which in 1900 was 6,809,061.
francs, of which 5,450,550 francs were for the support of the penal colony of Cayenne. This was started in 1853, and is composed of habitual criminals and convicts sentenced for more than three years. The treaty between the Araguay and the Oyapuk rivers, containing rich gold fields discovered in recent years, was in dispute between Brazil and France, which claimed that the river Vincent Pinzon, defined as the boundary in the original treaty, was identical with the Araguay. In the beginning France laid claims to the whole region between the Amazon, the Rio Branco, and the Atlantic Ocean. After negotiations lasting fourteen years, during which various arrangements were made that failed to receive the ratification of one party or the other, a treaty was made in 1897 leaving the whole dispute to be arbitrated by the President of the Swiss Confederation, who rendered his decision on Dec. 1, 1900. The award gives to Brazil 147,000 square miles of the disputed territory and only 3,000 square miles to France, consisting of a strip north of the Tumuc Humac mountains. The boundary follows the Thalweg of the Oyapuk river from its mouth up to its source and from there to the boundary of Dutch Guiana, the water parting in the Tumuc Humac range.

Political Events.—The session of the Chambers began on Jan. 9. Paul Dérouleude, André Buffet, M. Guérin, and Comte de Lur-Saluces, the chiefs of the Nationalist, Anti-Semitic, and royalist plotters of revolt, having been banished and the leases of the ridge of the Gard, which was given to the Government, were auctioned to efface all traces of the discord and bitterness engendered by the Dreyfus affair by a general amnesty. This was not acceptable to Émile Zola nor to ex-Col. Piequart, the champions of Dreyfus, who were still under indictment, nor would it stop the suit for slander brought by Mme. Henry against Jules Reinach, a social democrat of the Dreyfus party. In the triennial elections for the renewal of one third of the Senate the Nationalist candidates were not successful except in the old strongholds of Clerical and royalist opinion. Gen. Mercier was elected in one of these, the department of the Loire Inférieure. His success was due to a newspaper article by a religious congratulation from the Assumptionist Fathers, assailed the Government with extravagant abuse. The Government suppressed this confraternity by judicial process as an unauthorized association. The Paris newspaper published by these ecclesiastical politicians, who were in receipt of enormous pecuniary contributions for the support of their agitation against the existing form of government, was called La Croix, and its daily circulation was 250,000, while its articles were reprinted in 50 provincial sheets published for that purpose by the same society. The recrudescence of clerical agitation for the overthrow of the republic provoked the Republicans to fresh anti-clerical legislation. The Government brought in in March a bill requiring three years' preliminary study in a state school as a condition of appointment to any public office or of admission to any one of the special schools of the state. The bill was intended to extinguish the remaining Catholic higher schools, and another measure was proposed forbidding religious organizations to teach in primary or secondary schools. The supporters of these measures justified them by asserting that Catholic schools encouraged and propagated a reactionary spirit hostile to the republic.

Many of the clergy attacked the Government bill in consequence of the condemnation of the Assumptionist Fathers. Archbishop de Gois, bishop of Aix, assailed the Premier in terms which it was impossible to ignore, and yet it was inexpedient to apply the too rigorous remedy of the penal code, which punishes offenses of an anti-Catholic nature with more than thirty years in prison. A amendment to M. Waldeck-Rousseau an amendment to the code, substituting the milder and more practicable penalty of imprisonment for terms ranging from three months to two years for criticism of Government measures introduced into pastoral letters, and for criticism of acts of the supreme authority contained in an article or sermon or published in the press the term of from two weeks to six months. The minister took the familiar ground that ecclesiastics who are functionaries and stipendiaries of the state are bound to observe an attitude of respect toward the Government. Cardinal Richaud, Archbishop of Paris, published letters in La Croix condemning the Government's decree as a violation of the constitution. The Government, out of regard for his great age, took no action in his case, but suspended the stipends of other bishops who joined in the attacks, refraining, however, from the application of the press law, which the bishops sought to provoke the ministry to put in force and which would be more incontestably legal than the suspension of bishops though the latter though the suspension of precedents going back for a long period. M. Mélone failed in an attempt to upset the Cabinet based on its Radical measures against Clericalism and the presence of a Socialist, M. Millerand. The fickle Parisian populace, which of late years has given Socialists majority, now turned against the Government supporting in a representative of the Socialists, which the departments had indorsed in the senatorial elections and which held together its majority in the Chamber. In the municipal elections, which took place in May, Paris elected 32 Nationalists and 8 Monarchists to the municipal council. Algiers elected 55 Socialists and 49 Social Democrats, the radicals were elected Republicans, and the ministers asserted that they were generally in harmony with the Government, and a large proportion of the Opposition majority in the Paris council were Republicans, though opposed to the Government. The Chamber by 280 votes to 237 approved the ministerial declaration and the constitution, the new financial terms and defense of the secular state. The universal exposition necessitated political quiet and a truce to party rancor. The ministerial programme, besides the education bill, included a bill on associations, an income tax, and a revision of the death duties. M. Waldeck-Rousseau proposed a new libel law. The Socialist party was generally hostile to the presence of a Socialist in a bourgeoise ministry, and its general committee drew up a protest against the action of the Socialists when these supported the Cabinet against an interpellation of the Nationalists reflecting on the violent repression of strikers at Chalon-sur-Saône. On May 29 Gen. Gallifet, who was in poor health, resigned his portfolio as Minister of War, and Gen. Andréd was appointed to succeed him. His retirement was not due to differences with his colleagues, but to the attacks of the Nationalists, who charged the ministers with trying to reopen the Dreyfus case, and who were joined by M. McIvor and his section of the Republicans, who favored M. Bourgeois with his band of Radicals came to the rescue of the ministry with a motion expressing confidence in the Government and in the devotion of the army to the republic. Gen. Andréd's entrance into the Cabinet was followed by the resignation of the commander in chief of the army, Gen. Pataye, who was succeeded by the chief of the general staff. Gen. Brugère succeeded
him as generalissimo and Gen. Pendeze was appointed head of the general staff. The difficulty arose from the opposition of Gen. Delanne, the head of the staff, who was removed, to Gen. Andre's act in changing some of the heads of bureaus. The amnesty bill of the Government was violently opposed by the Dreyfusards as well as by the Anti-Semites. It proposed to extinguish all pending prosecutions, including the impeachment of Gen. Mercier, ex-Minister of War, but not to restore Dreyfus to his civil rights. The vote on the bill was postponed till the winter session. The navy bill and projects for colonial defense compelled the Government to devise ways and means for increasing the revenue. Not even the Nationalists would agree with the Government to do away with the taxes for such purposes. A credit of 61,000,000 francs was voted for gunboats and other means of colonial defense, and the organization of a colonial army was approved. The parties applauded with one mind the operations in the Sahara and the course of M. Pichon, the French minister at Pekin, in the difficult negotiations. The Government was 55,000,000 francs more than in the last budget, 20,000,000 francs of this being for coast defense. An increased yield of the existing taxes was expected to amount to 35,000,000 francs, and the readjusted death duties and new taxes were counted on to produce the remainder. A noted item in the financial law was to the extent of 37,000,000 francs accruing from the sale of war loans was a feature of the budget of M. Caillaux. The naval programme involved the expenditure of between 150,000,000 and 200,000,000 francs a year, including the cost of coast defenses. The abolition of the octroi duties by the towns is a fiscal reform that has been contemplated for a long time, and the Government had to pay out 150,000,000 francs a year to the owners of the gates of the large towns. It is a tax unsuited to modern methods of living, costly to collect, inconvenient, and obstructive to trade, causing a loss to the community much greater than the net receipts of the towns from this source. The Chamber agreed to pay 100,000,000 francs a year in order to facilitate visits to the exhibition, but did not carry the resolution into effect because the authorities insisted that a special law would be necessary. The new direct taxes proposed in the budget were carried through by a great majority. The session was closed on July 10.

The Chambers met again on Nov. 6. A deficit instead of the contemplated surplus for the year was the forecast of the Budget Committee. The legislation proposed by the Premier included the remodeling of the duties on strong drink in connection with the prospective reduction at the behest of the Premier on July 21 of duties on hygienic beverages, such as wine and cider; a bill on associations, by which the Government hoped to put an end to an increasing peril and prevent the creation of an influence that no state could tolerate; the creation of workmen's pensions, and measures to the education of state officials, courts-martial, trade unions, and the income of minors. In regard to strikes, the bill of 1892 provided for optional arbitration, compulsory arbitration having been objected to as an infringement of the right to strike and also as an unwarranted extension of the powers of the state, even though the enforced arbitration it sought was more reasonable than one that the masters and men might make among themselves. The results of the law of 1892 had been considerable, and recent prolonged strikes had been settled by arbitration, though not by justices of the peace, the official arbitrators. The Government did not consider the state entitled to dictate to private individuals, which should regulate their factories or settle their disputes. But it was desirable that the free working of arrangements between employers and employed should lead to something better than the present situation; to this end it was proposed to introduce a clause into labor contracts which would make arbitration obligatory upon the parties after they had freely entered into such contracts.

A bill was introduced into the Senate by M. Piot imposing a tax on unmarried men and women above thirty years of age and on couples married for five years and having no offspring, while rewarding families of more than 4 children out of an annual credit of 20,000,000 francs. The religious associations, which have been compelled to place under stricter regulations because by ingenious evasion of the existing law or owing to its lax administration they had reached a position in which a serious peril to the state was discerned, hold in mortmain property valued at 1,000,000,000 francs and personal property estimated at a higher figure. This great estate is political as well as religious, and the religious orders are subservive of the republican state. M. Waldeck-Rousseau declared that the religious orders, dispersed but not suppressed, have covered France with their operations, usurping the functions of the secular clergy of the state, and becoming practical strangers to the other half, and in clerical institutions become involved with ideas fundamentally hostile to the republic. A debate on its general policy resulted in a majority for the Government of 330 to 238, a greater one than it commanded in the previous session. The bill on strikes, presented by M. Milleville and, provides that in every factory employing 50 or more men a printed notice shall state whether or not arbitration is one of the conditions of employment. All state contracts will require it to be. If it is a condition in private employment, the men are to elect delegates, who will submit any complaints or demands to the employer, and, failing an agreement, both sides may nominate arbitrators. In case the employer refuses to do so, the men may resolve to strike by secret ballot, but the majority must comprise at least one third of the persons employed, and there must also be a weekly vote to decide on the continuance of the strike. Any complaints or demands made to labor councils formed in September provided for the creation of labor councils composed equally of employers and workmen nominated by their trade unions or syndicates. These bodies will inform the Government
of the conditions of labor, influence the relations between labor and capital, and appoint conciliators or arbitrators in the case of strikes. The amnesty bill was passed without the inclusion of M. Dérouélé and his fellow-exiles or of the Assumptionist monks.

FRIENDS. Friends in America.—Besides the regular sessions of the yearly meetings, conferences of American Friends to consider special questions were held in Philadelphia in 1829 and in Baltimore in 1849. The first general conference of the yearly meetings was held in Richmond, Ind., in 1857, and was attended by delegations from the New England, Baltimore, and Philadelphia yearly meetings, and from all the yearly meetings on the American continent except that of Philadelphia, which was unofficially represented. It was afterward decided to hold similar conferences of the American yearly meetings once in five years. Such conferences have been held at Indianapolis, Ind., in 1892 and 1897.

At the conference of 1897 it was felt that a closer union of the yearly meetings and a uniform discipline would be desirable. A committee was appointed in furtherance of this purpose, which prepared a draft of a constitution and discipline and published them in May, 1900, for the information and consideration of the yearly meetings. No conference was held in the new constitution, and the organization or principles of government of the society, or in methods of transacting business. The democratic principle was sought to be maintained by continuing the chief legislative, judicial, and executive authority in the yearly and monthly meetings, in the proceedings of which every member has a right to participate. The article on belief was intended as a general statement, and was thought to be all that was now necessary, since the "Richmond declaration" had been so recently prepared and had met with general acceptance. The preparative meeting was discontinued, its business being referred to the monthly meeting.

The five years' meeting, adopting the idea of the quinquennial conference into the Quaker system, was designed to be a practical working body, without legislative authority. In it the smaller yearly meetings were given a larger representation than in actual proportion to their numerical strength. The article on belief declares that "the word of God, and the Christian conscience, are the standard by which man's salvation and higher life are personal matters between the individual soul and God. Salvation is deliverance from sin and the possession of the spiritual life. This comes through a personal faith in Jesus Christ as the Saviour, who, through his love and sacrifice, draws us to him. Conviction for sin is awakened by the operation of the Holy Spirit causing the soul to feel its need of reconciliation with God. When Christ is seen as the only hope of salvation, and a man yields to him, he is brought into newness of life, and realizes that his sonship to God has become an actual reality. This transformation is wrought without the necessity of any human priest or ordinance or ceremony whatever. A changed nature and life bear witness to this new relation to him."

"The whole spiritual life grows out of the soul's relation to God and its co-operation with him, not from any outward or traditional observance. Conscience realizes the saving work of the Holy Spirit, enduing it with power, bestowing gifts for service. This is an efficient baptism, a direct incoming of divine power for the transformation and control of the whole man. Christ himself is the spiritual bread which nourishes the soul, and he thus enters into and becomes a part of the being of those who partake of him. This participation of Christ and apprehension of him become the goal of life for the Christian. Those who thus enter into oneness with him become also joined in living union with each other as members of one body. Both worship and Christian fellowship spring out of this immediate relation of believing souls with their Lord."

"The Holy Scriptures were given by inspiration of God and are the divinely authorized record of the doctrines which Christians are bound to accept, and of the moral principles which are to regulate their lives and actions. In them, as interpreted and confirmed by the Holy Spirit, is an ever fresh and unfailing source of spiritual truth for the proper guidance of life and practice."

"The doctrines of the apostolic days are held by the Friends as essentials of Christianity. The Fatherhood of God, the Deity and humanity of the Son, the gift of the Holy Spirit, the atonement through Jesus Christ by which men are reconciled to God, the resurrection, the high priesthood of Christ, and the individual priesthood of believers, are most precious truths to be held, not as traditional dogmas, but as vital, life-giving realities. The sinful condition of man and his proneness to yield to temptation, the world's absolute need of a Saviour, and the only sin which the constitution of the Church, by its rejection of the blood of Jesus Christ, is unceasing incentives to all who believe to become laborers together with God in extending his kingdom. By this high calling the Friends are pledged to the proclamation of the truth wherever the Spirit leads, both in home and in foreign fields."

"The indwelling Spirit guides and controls the surrendered life, and the Christian's constant and supreme business is obedience to him. But, while the importance of individual guidance and obedience is thus emphasized, this fact gives no ground for license; the sanctified conclusions of the Church are above the judgment of a single individual."

"The Friends find no scriptural evidence or authority for any form or degree of sacerdotalism in the Christian Church, or for the establishment of any ordinance or ceremonial rite for perpetual observance. The teachings of Jesus Christ concerning the spiritual nature of religion, the impossibility of any human priest or adhering to the Church by any human priest or ordi- nance or ceremony whatever. A changed nature and life bear witness to this new relation to him."

"With faith in the wisdom of Almighty God, the Father, the Son, and the Holy Spirit, and believing that it is his purpose to make his Church on earth a power for righteousness and truth, the Friends labor for the alleviation of human suffering; for the intellectual, moral, and spiritual elevation of mankind; and for purified and exalted citizenship. The Friend believes war to be incompatible with Christianity, and seek to promote peaceful methods for the settlement of all differences between nations and between men."

"It is an essential part of the faith that a man should be in truth what he professes in word, and the underlying principle of life and action for individuals, and also for society, is transformation through the power of God and implicit obedience to his revealed will."

"For more explicit and extended statements of belief, reference is made to those officially put forth at various times, especially to the letter of George Fox to the Governor of Barbadoes in 1671,
and to the Declaration of Faith, issued by the Richmond Conference of 1887."

The constitution is to become operative upon those adopting it when it shall have been approved and confirmed by the majority of the members. The missionaries of the American Friends are supported by yearly meetings or by associations severally interested in the care of one or more districts. Sixty missionaries are thus sustained in stations at Ramleh, Syria, Nanking (China), Tokio (Japan), Newgong (Bundecund, India), Jamaica, Victoria, Matamoras, Metabula, Central, and Estacion de Catorce, Mexico; Douglas, Kotzebue, and Kake Island, Alaska.

The American Friends' Board of Foreign Missions at its meeting in February, 1900, made arrangements for securing an incorporation under the laws of the State of Indiana, and completed its organization for work in the field. At the same time it decided to open a mission in Cuba, and appointed an agent or superintendent to go out as early as possible and start the work.

The Friends' African Industrial Mission was organized early in the year to found an industrial mission settlement on the eastern shore of the Victoria River, 750 miles from the mouth of the river. It was directed to purchase land from the British Government and purchase from the natives a tract of land on the high and therefore healthy plateau, where the most profitable crops of the region may be cultivated and other industries pursued for the products of which good markets are not far distant; and it is the purpose to sell the product and to be self-supporting as soon as possible. The several hundred native workmen needed to do the manual labor of the settlement will be required to live on the station, where they will be withdrawn from heathen surroundings and kept continuously under Christian influence. Boys in school will be taught various handicrafts, such as blacksmithing, carpenter work, and the like, and the girls household duties. Daily gospel services will be one of the features of the life of the settlement. The board controlling the mission is to be composed of two Friends from each yearly meeting.

Several yearly meetings have already engaged heartily in the work, and a large number of qualified women have been consulted for service without any appeal having been made.

British Friends.—The summary of numbers for the year 1899 supplied to the London Yearly Meeting shows a membership in Great Britain of 17,153, being an increase of 121 on the number reported in the previous year; these were comprised in 376 associations and 3,532 meetings. Other numbers were 8,000 habitual attenders at the congregational meetings, 380 persons admitted to the society during the year "on convincement," and 145 retired, 145 births, and 256 deaths. The disparity in the number of births and of deaths is explained partly by reference to the relatively large proportion of young people in the society, mature life, causing additions to the death rate not balanced by corresponding additions to the birth rate, and partly by failure to enter the names of children of mixed marriages or marriages between Friends and non-Friends.

A chief subject of discussion at the meeting on ministry and oversight of the American Friends was the eldership. The meeting had in 1898 adopted a minute on worship and ministry in which what were regarded as the true conditions of living worship and of enlightened and effective ministry were set forth. Now it discussed and adopted a minute to be sent down to the monthly meetings, pointing out the nature of the duties involved in eldership and the qualifications which should be regarded in appointing persons to that office. In the Yearly Meeting at Large a committee was appointed to prepare a statement of the real position of the Church in regard to the Lord's Supper. The committee was directed to make to the Government asking that, in deciding upon a settlement of the conflict in South Africa, the Christian sentiment of the country and the desire for justice and magnanimity should have due weight. The minute prepared by this committee and adopted by the meeting took the following form: "This meeting has felt profound sorrow on account of the war in South Africa, with its mournful sacrifice of brave lives, its many stricken and darkened homes, and its manifold sequel of misery and bitterness. It can not but also grieve over the discredit brought upon the religion of Jesus Christ by warfare between those who name his name and seek him as their Saviour and example. It respectfully appeals to the Government of these realms to do all that can be done to allay mistrust and to remove misunderstandings, which ever inflame and embitter strife, and are among the most fruitful causes of war and of its continuance. It earnestly desires that the British Government establish the conditions of a just and durable peace in South Africa, which shall enable all elements of the population, including the native races, to grow together side by side under free institutions, and shall rest not upon the Government of the sword or the humiliation of the vanquished, but upon the lasting foundations of justice and brotherhood, and that the responsibility of the States to the British public and to the world shall be that of a policy of peace and justice, in which British influence and the Christian spirit shall be the guiding light, and in which the British nation and the whole community shall have a heritage of peace and prosperity." The meeting expressed its hope that the report of the committee, if completed, would be presented as soon as possible and that the report of the committee, if completed, would be presented to the next meeting.

Suggestions and resolutions in connection with the report of the committee were received from various sections of the church and from various parties. The committee was requested to consider all that they had received and to report to the meeting at their next meeting."
GEORGIA, a Southern State, one of the original thirteen, ratified the Constitution Jan. 2, 1788; area, 59,475 square miles. The population, according to each decennial census, was 82,548 in 1790; 162,636 in 1800; 252,433 in 1810; 340,955 in 1820; 516,823 in 1830; 691,392 in 1840; 906,183 in 1850; 1,057,286 in 1860; 1,184,109 in 1870; 1,319,187,625 in 1880; and 2,210,331 in 1890. Capital, Atlanta.

Government.—The following were the State officers in 1899: Governor, Allen D. Candler; Secretary of State, Philip Cook; Treasurer, W. J. Speer; Comptroller, William A. Wright; Attorney-General, Joseph M. Terrell; State School Commissioner, J. M. Kell; Commissioner of Agriculture, O. B. Stevens; Geologist, W. S. Yeates; Chemist, J. M. McCandless; Librarian, James E. Brown; Railroad Commissioners, L. N. Traumell, S. R. Atkinson, T. C. Crenshaw; Prison Commissioners, J. S. Turner, C. A. Evans, T. Eason; Chief Justice of the Supreme Court, Judge J. Simmons; Associate Justices, Samuel Lumpkin, Henry T. Lewis, Andrew J. Cobb, William A. Little, and William H. Fish; Clerk, Z. D. Harrison—all Democrats.

Finances.—The Treasurer's report for the year ending Sept. 30, 1900, contains these items: Balance in the treasury, Oct. 1, 1899, $485,776.60; receipts, the same date, $5,025,483.65; total, $5,030,480.25. The disbursements for the same period, Oct. 1 to Sept. 30, 1900, were $3,564,700.05; leaving a balance in the treasury, Oct. 1, of $1,416,146.30. This balance was composed of advances on civic establishment coupons paid, etc., amounting to $36,217.01, and $977,920.29 belonging to the reserved fund. The gain in values in 1900 over 1890, including every form of property, was $18,788,333. Of this amount $3,480,206 is in the railroads of the State and $15,299,127 is in county property. The taxable property was valued at $436,000,000.

Appropriations.—The appropriations for the year with the special appropriations, $9,734,41: State University, 1900, $8,000; State Normal School—1899, $4,000; 1900, $12,000; trustees Sanitarium—1899, $1,197.90; 1900, $642.16; trustees State University, $545.86; temporary loan, $100,000; widows' pensions—1899, $420; 1900, $233,300; Western and Atlantic Railroad change bills, $3, total, $5,354,700.05.

Education.—The Superintendent of Education says, in his report for 1900: "All the States in the Union except a small group of Southern States now have a nine months' absolutely free term for all the children of school age. Georgia has only a five months' term. Massachusetts spends $39.10 every year for each child enrolled. Rhode Island spends $36.26. New York $34.55, while Georgia spends $6.31. As a matter of fact, Georgia spends on her country children each year less than $4 for each child enrolled. Georgia provides for each child of school age $2.16, while Massachusetts provides $22.16, Rhode Island $14.62, New York $16.95. Nearly all the Middle and Western States spend ten times as much per child of school age as Georgia spends. The teachers in these systems receive salaries from two to four times as high as their Georgia sisters, and feel that our teachers receive . . . If you have taken the trouble to ascertain the present value of the courthouse and jail in your county and the present value of all the schoolhouses in your county, you have learned, perhaps, that your courthouse and jail have cost the county three or four times as much as the Georgia teachers have cost. The average pay of the county school-teacher in Georgia for the last school year was $128 per annum.

"In 1898, the date of the last school census, the school population was 600,870. This report shows an enrollment for the last year of 423,407, with a total average attendance of only 253,193. This enrollment and attendance show a percentage of increase over former years, and yet less than 40 per cent, of our children of school age attended school for the entire school term. "Fulton County [Atlanta] is in this county] is spending this year on her prisoners $82,050.45. In 1893 the county spent $13,747.71; the county is no longer buying for the schools. The State gives the county $13,747.71, and 2,000 prisoners in prisons or in the chain gang at a cost of $82,050.45."

Mr. E. C. Branson, president of the State Normal School, says in an article on Education and Crime: "One sixth of our whites and nearly seven tenths of the negroes are illiterate, according to the census of 1890; and we find that 44 per cent, of our penitentiary convicts were committed for crimes of passion and violence, while 35 per cent, were committed for burglary alone. Georgia is near the bottom in the column of illiteracy, only four States having a lower rate, and person and property are exposed accordingly.

"Taking the illiteracy returns for Georgia in 1893 and the figures in our penitentiary report nearest that date, we find that an illiterate negro population of 27 per cent, furnished 54 per cent, of the negro convicts; while a literate negro population of 73 per cent, furnished 46 per cent, of the negro convicts. Thus the illiterate negro population of the State averaged 3 convicts per 1,000, while the literate negro population of the State averaged 1."

The school fund for 1900 was $1,440,612. The Governor, in his annual message, said: "The
schools for the higher education of the negroes, supported by churches and other organizations, are richer in those for the higher education of whites. The value of the property of the negro schools of Atlanta alone, it is said, is greater than all the endowments of all the schools and colleges in the State for the education of the whites."

Prisons.—The State Prison Commission has abolished the county camp of Coffee County, where inhuman treatment was shown to have been exercised. With this removal, the last camp under the old convict lease system disappears.

Banks.—The annual report of the State banks shows that there has been no failure among them, while there has been an increase of $2,305,000 in loans and $1,824,000 in deposits. The report has the following:

Products.—The official statement, Sept. 1, 1900, gives 1,309,000 bales as Georgia's cotton crop for the year. It was late in maturing, and fell somewhat below that figure.

In 1899 an effort was made to diversify the industries of the State, with some success. The following is the estimate made in May, 1900, of the fruit industry in and near Floyd County: Peach trees, 600,000; apple trees, 100,000; pear trees, 25,000. These trees will produce in a good year 1,000,000 crates of peaches, 300,000 crates of apples, 25,000 crates of pears, which will load 2,000 cars of peaches, 150 cars of apples, 15 cars of pears. This list does not include Japanese plums and grapes. There are magnificent vineyards, and it is probable that 10,000 gallons of wine are made yearly. One grape grower experimented last year on producing claret, and had wonderful success.

The La Grange creamery received a medal for butter exhibited at the Paris Exposition. The company is four years old, and is doing a profitable business. The sugar-cane crop of the State was the largest ever raised, and the Williams Manufacturing Company report a good demand for sirup.

Within a year or two there have been established in Georgia a broum factory, a cigar factory, an electric-light plant, a flouring mill, ice factories, and a cheese-making plant; but the cotton-mill industry has made the greatest progress of any. At Tifton, Quitman, Cochran, Hampton, Pelham, Moultrie, Dublin, Cordele, and Columbus mills are either newly erected or in process of construction, while there are three new ones in Atlanta. These are being fitted with machinery for doing all kinds of work, from the weaving of cotton fabric to the manufacture of oil from cotton seed.

The railroads have been active in assisting colonies to settle in districts especially favorable to manufactures or farm industry.

Political.—The Democratic State Convention was held June 14, in Atlanta. The platform approved the State administration, and commended the chief executive and each of the State officials; congratulated the people of Georgia on the present system of public schools; favored an amendment to the Constitution limiting the power of the General Assembly to levy and assess taxes exceeding a specified percentage; favored an amendment to the Federal Constitution providing for election of United States Senators by direct vote of the people; favored immediate construction and control of the Nicaraguan Canal by the United States; renewed their belief in the Constitution and the principles of Democracy as contained and enumerated in the national Democratic platform of 1896; denounced trusts; adhered to the doctrine of a tariff for revenue only; and demanded repeal of the tax on State bank issues.

The following ticket was nominated: For Governor, A. D. Prior; Secretary of State, Philip Cook; Comptroller General, William A. Wright; State Treasurer, Robert E. Park; Attorney-General, James M. Terrell; State School Commissioner, G. R. Glenn; Commissioner of Agriculture, O. B. Stevens; Prison Commissioner (full term), Clement A. Evans; Prison Commissioner (unexpired term), Thomas Eason; Auditor, Joseph S. Scott; Supreme Court, Henry T. Lewis, William A. Little; United States Senator, A. O. Bacon.

The Republicans met in State convention in Atlanta in March, and nominated a full ticket.

The Populists held a State convention in Atlanta in April, and named a full State ticket. The platform declared it the business of the union men to keep the people's party and our own gallant chieftain, Thomas E. Watson, and thereby demoralized our hitherto impregnable band of patriots, have themselves been shaken off and our ranks cleared and purified by their expulsion from our party, so have our once broken ranks been reformed, re-energized by the spirit of loyal hope and faith.

"The People's party yields nothing in its opposition to licensed saloons as a public nuisance. The gospel of Christ is the solution of every human problem and the correction of every evil. We appeal to the Christians of Georgia to unite with us in our efforts to suppress this monster evil, so long fostered and nourished by the Democratic party as a means to acquire office at the expense of the people's party and our own gallant chieftain, Thomas E. Watson, and thereby demoralized our hitherto impregnable band of patriots, have themselves been shaken off and our ranks cleared and purified by their expulsion from our party, so have our once broken ranks been reformed, re-energized by the spirit of loyal hope and faith.

"We favor an amendment to the Constitution of this State providing for an initiative and referendum and the imperative mandate in legislation, submitting to the people for ratification or rejection all important legislative enactments."

"We emphasize wholly the convict law passed by the Legislature of 1897 as being the enactment of a system more iniquitous than the old lease act.

"We denounce the present tax system and demand that all public officials, where practicable, be placed upon salaries proportionate to the depressed financial condition from which the laborers of the country suffer.

"We denounce the Democratic party for its extravagant administration, increasing the burden of taxation upon the people from year to year, until the people groan under the oppression of high taxes."

At the State election, in October, Allen D. Candler, Democratic candidate for Governor, received 93,445 votes; George W. Traylor, the Populist candidate, 23,235. A constitutional amend-
ment giving pensions to the widows of Confederate soldiers was carried by a small majority. In many places no vote concerning it was cast.

At the presidential election, in November, the State gave 46,665 plurality for William J. Bryan. The vote was the lightest ever cast in Georgia. There was no opposition to the Democratic candidates for Congress.

**GERMANY,** an empire in central Europe, composed of the federated German states. The King of Prussia is German Emperor, and in this capacity has supreme charge of political and military affairs, with power to make war and declare peace, except when offense is committed by the German states. The German states must have the consent of the federated states and princes. There are two legislative bodies with concurrent powers—the Bundesrath, representing the federated states, and the Reichstag, representing the German people. The acts upon which they agree become law on receiving the Emperor’s assent and being signed by the Chancellor.

The Bundestag has 58 members, appointed by the governments of the federated states. The Reichstag has 397 members, 1 to 124,500 of population, elected by universal manhood suffrage and by secret ballot for the term of five years. Alsace-Lorraine, the imperial province, is represented by 4 deputies in the Reichstag with 15,000 having votes. Out of 10,628,992 registered electors, 7,702,293 voted in the election of 1893. The Emperor has power to dissolve the Reichstag with the consent of the Bundesrath, in which event elections must take place within sixty days and the Reichstag be convoked within ninety days. The imperial ministers act in judicial war, with each one under the supervision of the Chancellor. The Chancellor of the Empire at the beginning of 1900 was Prince Hohenlohe-Schillingsfürst, appointed Oct. 29, 1894. The following ministers had charge of the several departments of state: Minister of Foreign Affairs, Graf von Bülow; Minister of the Interior and Representative of the Chancellor in the Reichstag, Graf von Posadowsky-Wehren; Head of the Admiralty and Admiral Commanding in Chief, Rear-Admiral Tirpitz; Minister of Justice, A. Nieherding; Imperial Treasurer, Freiherr von Thielmann. The heads of the various imperial bureaus were: Post Office, Lieut. Gen. D. von Podbielsky; Imperial Railroads, Dr. Schultz; Imperial Emigrants, General von Hohenlohe-Schillingsfürst; Imperial Savings Fund, Dr. Rössing; Imperial Bank, Dr. Koch; Imperial Debt Commission, Herr von Hoffmann.

**Area and Population.**—The total area of the German Empire is 208,830 square miles. The population on Dec. 2, 1895, was 82,279,901, having increased at an average annual rate of 1.12 per cent. since 1890. The number of households was 11,256,150. The number of marriages in 1897 was 447,770; of births, 1,991,126; of deaths, 1,206,492; excess of births, 784,634. The number of emigrants in 1898 was 21,899, of whom 17,272 were destined for the United States, 785 for Brazil, 1,302 for other parts of America, 1,692 for Africa, 223 for Asia, and 103 for Australia. The destination of 1,062 who sailed from French ports was not reported. The emigrants who sailed from German ports and from Antwerp, Rotterdam, and Amsterdam, consisted of 11,667 males and 9,170 females. There were 2,283 families, comprising 7,277 persons. The total number of emigrants from China, Japan, and Corea to Brazil in 1891 was 2,435, or 13 per cent. of the total, or 90 per cent. went to the United States. Of the emigrants of 1898 Prussia furnished 12,161, Bavaria 2,124, Württemberg 1,151, Saxony 1,128, Hamburgh 1,479, Baden 713, Hesse 316, Bremen 427, Oldenburg 286, Mecklenburg-Schwerin 153, and Alssace-Lorraine 155. The number of emigrants from countries outside of Germany who embarked at German ports in 1898 was 83,805.

Education is compulsory throughout Germany, and every commune is compelled to support one or more elementary schools. In the towns are sometimes central schools for the lower grades, from which the working classes continuation and night schools. The number of Gymnasium, which fit students to enter the universities by a course of nine years in the classics and other studies, was 439 in 1897; the number of Progymnasium, which have not the higher grades of the Gymnasium, was 92; the number of Oberrealschulen, which are used as intermediate subjects and replace Greek, was 128; Realprogymnasien, 93; Oberrealschulen, in which modern languages are taught instead of Latin and Greek, 40; Real-schulen, 198; commercial colleges, 2; other public secondary schools, 32; private schools, 56; teachers’ seminaries, 181; special schools, 32; polytechnics, 9; agricultural schools, 31; schools of mining, 15; schools of architecture and building, 15; schools of forestry, 9; schools of art and art industry, 23; schools of navigation, 47; schools of music, 7. There are 21 universities, namely, Berlin, with 418 professors and teachers and 4,397 students; in 1899; Munich, with 194 professors and teachers and 4,257 students; Leipsic, with 220 professors and teachers and 4,257 students; Heidelberg, with 210 professors and teachers and 2,140 students; Freiburg, with 119 professors and teachers and 1,670 students; Breslau, with 169 professors and teachers and 1,621 students; Halle, with 148 professors and teachers and 1,613 students; Tübingen, with 104 professors and teachers and 1,255 students; Heidelberg, with 93 professors and teachers and 1,222 students; Würzburg, with 88 professors and teachers and 1,214 students; Strasburg, with 129 professors and teachers and 1,079 students; Erlangen, with 69 professors and teachers and 1,042 students; Kiel, with 48 professors and teachers and 934 students; Greifswald, with 95 professors and teachers and 834 students; Giessen, with 82 professors and teachers and 814 students; Königsberg, with 119 professors and teachers and 794 students; Jena, with 97 professors and teachers and 732 students; Münster, with 48 professors and teachers and 594 students; Kiel, with 52 professors and teachers and 475 students. There is a naval academy and school at Kiel, and at Berlin and Munich are military academies, and there are 9 cadet schools and 9 military schools.

**Finances.**—The revenue of the Imperial Government for 1901 was estimated at 1,783,042,000 marks from ordinary and 275,291,900 marks from extraordinary sources; total, 2,058,334,000 marks. The total estimated expenditure was 1,979,153,000 marks. The revenue from customs and excise duties in 1900 was estimated at 742,261,000 marks; from stamps, 61,648,000 marks; from posts and telegraphs, 47,965,300 marks; interest of the Imperial Debt Fund, 1,189,300 marks; interest of railroads, 26,563,600 marks; from the Imperial Bank, 9,789,600 marks; from the printing office, 1,873,900 marks; various receipts, 1,013,300 marks; federal contributions, 489,953,500 marks; other contributions, 14,006,900 marks; extraordinary receipts, 88,388,600 marks; total estimated revenue, 1,526,500,000 marks. The total estimated deficits for 1899 was 2,504,000 marks. The annual budget for 1901, including supplementary estimates, amounted to 1,551,709,400 marks, of which 1,300,309,500 marks were ordinary recurring expenditures and 251,399,000 marks nonrecurring and extraordinary expenditures. Of the recurring expenditures 519,824,500 marks were for the army, 481,908,400 marks for the public debt, 241,945,300 marks for the civil service, 94,309,900 marks for education, and 67,542,700 marks for various purposes.
marks for the imperial treasury, 75,613,300 marks for the imperial debt, 69,103,100 marks for the Reichstag, 54,438,000 marks for the Ministry of the Interior, 27,988,500 marks for the Invalid fund, 11,999,900 marks for the Ministry of Foreign Affairs, 2,117,900 marks for the Ministry of Justice, 633,300 marks for the Reichstag, 340,100 marks for the audit bureau, 390,600 marks for railroads, and 236,600 marks for the imperial chancellery. Of the federal contributions in 1900 Prussia paid 298,040,500 marks, Bavaria 54,733,000 marks, Saxony 35,465,300 marks, Württemberg 19,603,200 marks, Baden 16,265,100 marks, Alsace-Lorraine 15,394,800 marks, Hesse 9,716,100 marks, Mecklenburg-Schwerin 5,287,400, Mecklenburg-Strelitz 590,100 marks, Schleswig-Holstein 328,927,500 marks, Württemberg 593,500 marks, Schaumburg-Lippe 385,600 marks.

The funded debt of the empire on March 31, 1898, consisted of 1,240,000,000 marks of 3½ cent. and 942,340,800 marks of 3½ cent. bonds; total, 2,182,340,800 marks. Of the old debt of the North German Confederation 17,000,000 marks were defaulted, and the unfunded debts were 70,000,000 marks of treasury bonds and 120,000,000 marks of paper money, making the total liabilities 2,372,240,500 marks, the 3½ cent. bonds having been increased by 40,000,000 marks during the year and the treasury bonds by 10,000,000 marks. The funded debt of the Invalid fund was 405,741,710 marks. The war fund of 120,000,000 marks was preserved in specie.

The budgets and debts of the individual states, in the case of the most of them for 1900, in that of the others for 1899, are given in marks in the following table:

In Alsace-Lorraine there was also an extraordinary revenue of 4,387,908 marks and an expenditure of 4,347,240 marks provided for. Anhalt has 7,199,201 marks' worth of public property. The debt of Baden is secured on the railroads, which produced a net revenue of 23,229,488 marks in 1897 and have cost the state 459,000,000 marks to build. Nearly half of Bavaria's revenue is derived from railroads, posts, telegraphs, and telephones, and of the debts, 1,125,000 marks is also raised for building railroads, which yielded above expenses and interest 13,882,944 marks in 1897. The debt of Bremen, incurred for railroads and harbor works, requires a great part of the revenue to pay the interest. Brunswick devotes a separate revenue of 2,634,000 marks to education and art, and the duke's civil list of 1,125,000 marks is also outside of the budget. Besides the revenue from domains and forests and from an invested fund of 41,300,000 marks, the state receives an annuity of 2,025,000 marks on account of the railroads transferred to Prussia, while it has to pay an annuity of 1,125,000 marks to extinguish a premium on that is separable from the Ministry per cent. of the latter having been spent on railroads. The debt of Hamburg, incurred for public improvements, absorbs 13,714,500 marks of the revenue, one third of which is raised, as in Bremen also, by direct taxation, which in Hamburg is as much as 30 marks per capita. In Hesse the debt consists mainly of the extraordinary revenue of 4,021,385 marks and extraordinary expenditure of 3,224,900 marks. Lübeck possesses domains and forests and invested funds from which two fifths of the revenue is obtained, and direct taxes give most of the remainder, while of the expenditure one fourth goes for interest on the domains, forests, and railroads, in value far exceeding the debt. In Mecklenburg-Strelitz the grand duke makes the whole of the highest administration, and publishes no accounts of his revenue and expenditure; there is a debt of about 6,000,000 marks. Of the revenue of Prussia 92,622,804 marks come from domains and forests, 183,131,800 marks from direct taxes, 78,885,000 marks from indirect taxes, 82,475,900 marks from the lottery, 2,357,900 marks from the mint, 1,070,000 marks from specie, 1,285,028,319 marks from railroads, 334,080,560 from the finance administration and dotations, 71,117,200 marks from the Ministry of Interior, 8,038,000 marks from the Ministry of War, 2,507,281 marks from the Ministry of State, 4,063,350 marks from the Ministry of Agriculture, 4,448,350 marks from the Ministry of Instruction and Worship, 4,446,381 marks from the Ministry of Industry and Commerce, 2,146,480 marks from the Ministry of State, 4,900 marks from the Ministry of Foreign Affairs, and 300 marks from the Ministry of Reichswehr. The Prussian Government 1,050,953,998 marks are working expenditure, of which 45,306,150 marks are required for the domains and forests, 122,049,240 marks for financial administration, 127,035,047 marks for the operation of mines, furnaces, and salt works, 754,353,111 marks for the operation of railroads; 649,085,662 marks are the charges on the public debt, of which 272,083,246 marks are interest on the public debt, including railroad debts, 30,033,903 marks the annual sinking fund, 298,068,026 marks the annual contribution to imperial funds, 70,970,991 marks appanages, annuities, and indemnities, 8,000,000 marks the addition to the King's crown domain, 1,672,915 marks the expense of the Chamber of Deputies, and 210,440 marks that of the Chamber
of Lords; 488,135,875 marks are the cost of the state administration, of which 105,737,000 marks are assigned to the Ministry of Justice, 137,758,158 marks to the Ministry of Instruction and Worship, 64,061,338 marks to the Ministry of the Interior, 30,440,060 marks to the Ministry of Public Works, 21,053,785 marks to the Ministry of Agriculture, Domains, and Forests, 10,858,288 marks to the Ministry of Commerce and Industry, 108,094,209 marks to the Ministry of Finance, 551,300 marks to the Ministry of Foreign Affairs, 138,975 marks to the Ministry of War, and 8,118,543 marks to the Ministry of State. The total ordinary expenditure of Prussia amounts to 2,187,175,538 marks; supplementary expenses for the year ending March 31, 1901, the revenue is estimated at 2,472,206,033 marks, including 166,409,282 marks to be expended for extraordinary purposes. The national debt of Prussia bears 3% per cent. interest, except 563,000,000 marks of 3-per cent. bonds, and the annual charge in 1900 for interest, sinking fund, and reimbursement amounted to 237,056,411 marks. The expenditure of the Prussian Government amounts to 73 marks per capita; the direct taxes are 5.70 marks, including only the income tax, the supplementary tax on investments, and the tax on commercial travelers, as in 1893 the land and house taxes and the trade levies were transferred to the local governments. The annual average income in Prussia per capita is estimated at 342 marks; the total national income at 10,000,000,000 marks. The revenue of the Saxon duchies is derived in great part from domains, and direct taxes provide the rest. Saxe-Altenburg's small debt can be extinguished by funds accumulated in the treasury six times the amount of the current debt. Saxe-Coburg and Gotha is covered by property and cash assets. The Kingdom of Saxony receives a net revenue from railroads more than covering the expenses of the debt, which are 31,575,000 marks a year, and from the railroads and the domains, forests, and mines it gets more than half its total revenue and taxes only 9% of the taxable population, estimated at a total of 2,000,000,000 marks a year. The debt of Württemberg, the bulk of which pays 3% per cent. interest, was contracted mainly for railroads.

The Army.—The German army is organized territorially, and the army corps are distributed as follows: First, East Prussia; Second, Pomerania; Third, Brandenburg; Fourth, Prussian Saxony; Fifth, Posen; Sixth, Silesia; Seventh, Westphalia; Eighth, Rhenish Prussia; Ninth, Schleswig-Holstein; Tenth, Hanover; Eleventh, Hesse-Nassau; Twelfth, Saxony; Thirteenth, Württemberg; Fourteenth, Baden; Fifteenth, Alsace; Sixteenth, Lorraine; Seventeenth, West Prussia; Eighteenth and Nineteenth, Bavaria. The Prussian Guards form the Twentieth Corps, and in time of war the separate Hessian division "will be strengthened to form the Twenty-first Army Corps. Each army corps can be mobilized independently and take the field as a complete fighting unit, composed of troops of all arms and having its separate stores and equipments. A corps is composed of 2 divisions of infantry, each of 2 brigades, each brigade of 2 regiments of 3 battalions each, with 4 squadrons of cavalry and 4 field batteries of 6 guns, and either a rifle battalion or a battalion of pioneers attached to every infantry division; and besides the general cavalry and artillery, every corps contains a cavalry division of 4 regiments, with 2 batteries of horse artillery attached, an artillery reserve of 6 field batteries and 1 mounted battery, a battalion of pioneers, and a battalion of train. The battalion of infantry on

the peace footing is 544 men, to be raised in war to 1,002 by calling in part of the reserve. The troops stationed in Alsace-Lorraine and the guard corps are kept at the strength of 686 men in peace time. The total number of field batteries, including 47 mounted batteries, is 494, usually of 4 guns in time of peace and 6 guns in war. The total number of men trained in the German army is available for war is estimated at 3,000,000. The effective strength of the army on the peace footing in 1899 was 23,230 officers and 302,206 men, with 98,038 horses. There are 215 regiments of infantry, numbering 12,028 officers and 302,469 men; 19 battalions of rifles, 410 officers and 11,974 men; 19 battalions of artillery, 390 officers and 5,548 men; and 2,572 men in the administrative service, schools, etc., making a total of 13,257 officers and 382,563 men in the infantry. The cavalry numbers 93 regiments, containing 2,385 officers and 65,710 men, besides 515 on special duty. In the 43 regiments of field artillery there were 2,319 officers for 37,849 men, besides 515 on special duty. The foot artillery consists of 17 regiments and 1 battalion, containing 873 officers and 22,702 men, besides 134 on special duty. The engineers consisted of 23 battalions of pioneers, 3 railroad regiments, 2 balloon detachments, 1 railroad battalion, and 3 railroad companies, containing 925 officers and 11,064 men, besides 134 on special duty. Of train there are 21 battalions, containing 310 officers and 7,745 men, besides 69 on special duty. There were 529 officers and 4,453 men in the special formations, and the number of general officers and officers not attached to regiments was 2,467, with 283 men. Every German is liable to military service, and it is also the young man's duty to obey the German Emperor, to whom they swear an oath of fidelity, except the Bavarians, who are not required to take the oath in time of peace. Bavaria, Saxony, and Württemberg have war ministries of their own, and the kings reserve the right to appoint the officers; but the Emperor's appointment affecting the superior direction of the troops of any state can be done without his consent. The period of service in the active army and its reserve is six years for the infantry and seven for the cavalry and field artillery, and service with the colors is two years for infantry and three years for the cavalry. After the end of these periods, those who have not expired the soldier is inscribed in the Landwehr for five years, or in the case of the cavalry and artillery soldiers, who have to serve one year longer, in the standing army and reserve. At the age of twenty the young men are summoned for service; out of about 369,000 who are liable the annual contingent is obtained by lot, and all who are not drawn are inscribed in the Ersatz reserve, in which they should receive twenty weeks of training in three different periods, although many of them are never called out for drill, and in time of war they may be drafted into the army to fill depleted ranks, otherwise they pass at the end of twelve years into the Landsturm, the final army of the defense of the fatherland, to which every able-bodied man between seventeen and forty-five years of age belongs unless he is in the active army or its reserve or in the Landwehr. Scattered among the active troops are educated young men, about 8,000 each year, serving in their two-year divisional artillery, and the number of the Landwehr officers are selected. Among the improvements introduced most recently in the German army is the formation of machine-gun detachments, to be attached to rifle or infantry regiments in all the army corps. Experiments
have been made with motor wagons for the transport of food and ammunition and with balloons filled with hydrogen gas for use in fortresses. The increase of the army on a peace footing for 1901 is 295 officers, 25 surgeons, 3,125 rank and file, and 1,536 horses.

The naval programme sanctioned by the Reichstag in 1898 provided for a fleet of 17 battle ships, besides 2 in reserve; 8 smaller battle ships, already existing; 9 large and 26 small cruisers, besides 3 large and 4 small ones as a reserve. This was exclusive of the 8 torpedo gunboats, 19 gunboats, 35 first-class torpedo boats, 103 smaller torpedo boats, 142 destroyers, 150 coast defense vessels, and vessels for special service that were in existence. To complete the programme it was necessary to build 7 new battle ships and 2 large and 7 small cruisers before 1906, and the total cost was estimated at 1,000,000,000 marks. There were afloat at the beginning of 1900, of second-class cruisers, 133 smaller torpedo boats, and various training and small quick firers. Of this type are Kaiser Wilhelm II, launched in 1897; Kaiser Wilhelm der Grosse, launched in 1899; and the Kaiser and Deutschland, yet to be built. A new ship has been built on the plan of the Fürst Bismarck, launched in 1897, of 10,650 tons, with 8-inch armor, 14,000 horse engines, a speed of 19 knots, and a battery of 12 quick-firing, and 18 machine guns. Three new ships of the larger class will have a displacement of 12,000 tons, 12 inches of armor, the same steaming capacity as the Deutschland, and the same armament. A new type of cruiser is the Hertha class, comprising also the Freya, Victoria Luise, Victoria, Gneisenau, and Gneisenau, which have a displacement of 5,050 tons, 4 inches of deck armor, and an armament of quick-firing guns—2 8.2-inch, 8 6-inch, and 10 3.4-inch—protected by armor, with water-tube boilers, 10,000 horse power, giving a speed of 18½ knots. The German cruisers have no woodwork, and guns are mounted in every available part of the superstructure, giving a remarkably heavy total energy of fire. The small deck-protected cruisers Gazzelle, Niobe, and Nympe, of 2,850 tons, with engines of 6,000 horse power making 19½ knots, are armed with 10 4-inch quick-firers.

A new naval programme practically doubling the strength of the navy previously fixed was the chief subject of debate in the Reichstag session of 1900. It proposed to increase the number of battle ships from 19 to 38, the number of large cruisers from 12 to 20, and the number of small cruisers from 30 to 45. In the next sixteen years 3 large and 3 small ships are to be annually placed on the stocks. This increase, besides the ships intended for active service up to its full strength as soon as possible the new vessels intended for two new squadrons will be completed before the ships in the reserve fleet are replaced by new constructions. Each of the new squadrons will consist of a flagship, 8 battle ships, 2 large and 8 small cruisers for scouting purposes with the fleet when stationed in home waters, and 5 large and 5 small cruisers for service on foreign stations. The reserve will be increased by 2 battle ships, 1 large and 2 small cruisers. The monitors of the Siegfried class will be replaced by battle ships. The fleet of two squadrons which will form the fleet on active service and the third and fourth squadrons will form the reserve fleet, half of which, as well as the entire active fleet, is to be kept in constant use.

The personnel of the German fleet for 1900 consisted of 1,118 executive officers, 1,119 warrant officers, 19,062 petty officers, 18,075 seamen, and 1,000 boys. An increase of 33,746 men is calculated for the navy as it will be in 1920. The increase provided for in the budget of 1901 is 91 officers, 11 surgeons, and 2,753 men. The vessels to be placed on the stocks during the year are 2 battle ships, 1 large cruiser, and 2 small cruisers. The naval estimates show an increase of 40,000,000 marks over the estimates of the preceding year.

**Commerce and Production.**—The production of wheat in 1899 was 3,292,945 metric tons of 2,200 pounds; of rye, 7,532,700 tons; of barley, 2,514,024 tons; of oats, 5,780,699 tons; of buckwheat, 99,487 tons; of potatoes, 31,791,633 tons; of sugar-beet, 21,072,000 tons; of fodder beets and turnips, 10,562,608 tons; of hops, 21,867 tons; of wine, 1,406,818 hectolitres. The output of coal in 1898, according to the provisional report, was 96,280,000 tons; of lignite, 31,648,500 tons; of iron ore, 15,893,290 tons; of zinc ore, 641,700 tons; of lead ore, 1,516,600 tons; of fluorspar, 1,072,500 tons; of potash salt, 2,205,000 tons; of other mining products, 30,200 tons. The value of all the mineral products was 939,000,000 marks. The quantity of pig iron produced in 1897 was 6,881,466 tons; of zinc, 150,759 tons; of lead, 118,881 tons; of copper, 29,408 tons; of silver, 448 tons; of tin, 929 tons; of sulphur and sulphuric acid, 625,447 tons; of gold, 2,781 kilogrammes; of nickel, bismuth, vitriol, and other products, 34,776 tons. The total value of foundry products was 531,824,814 tons. The quantity of manufactured iron made was 7,697,683 tons, valued at 1,009,899,942 marks. The exports of fresh fish in 1898 were valued at 6,600,000 marks, while imports of fish were valued at 23,600,000 marks. The imports of herrings, 7,697,683 tons, and those of other cured fish 5,100,000 marks in value. There were 402 sugar factories in 1898, which out of 13,697,892 tons of beets produced 1,755,229 tons of raw sugar and 344,480 tons of molasses. The production of refined sugar was 1,267,350 tons. From starch were obtained 7,327 tons of sugar, 35,413 tons of sirup, and 4,207 tons of coloring matter. The quantity of beer brewed in 1898 was 66,423,000 hectolitres, of which 16,982,000 hectolitres were brewed in Bavaria, which has its own excise laws and forbids the use of any material but malt, hops, and water. The quantity of alcohol produced in 60,779 distilleries was 3,288,000 hectolitres.

The total value of the special imports in 1898 was 5,439,676,000 marks; of the special exports, 4,010,565,000 marks. The imports of live animals were 182,169,000 marks in value; including 91,712,000 marks for horses and 5,901,000 marks for hogs; exports of live animals, 20,572,000 marks; imports of animal products were valued at 150,508,000 marks; imports of articles of consumption were valued at 1,636,867,000 marks, and exports 483,227,000 marks; imports of seeds and plants were 56,034,000 marks, and exports 34,080,000 marks; imports of fuel were 137,025,000 marks, and exports 208,528,000 marks; imports of fats and oils were 271,140,000 marks, including
80,173,000 marks for petroleum, exports of fats and oils, 31,272,000 marks; imports of chemicals, drugs, and colors were 281,180,000 marks, and exports 377,542,000 marks; imports of 25,368,000, and exports of 154,825,000 marks; imports of metals, raw and manufactured, were 654,966,000 marks, and exports 739,391,000 marks; imports of timber and wood manufactures were 396,349,000 marks, and exports 133,112,000 marks; imports of paper and paper manufactures were 26,330,000 marks, and exports 103,443,000 marks; imports of hides and leather were 248,901,000 marks, and exports 236,685,000 marks; imports of textile materials and manufactures were 1,602,542,000 marks, and exports 890,682,000 marks; imports of rubber and rubber goods were 68,014,000 marks, and exports 54,781,000 marks; imports of machinery were 101,493,000 marks, and exports 264,653,000 marks; imports of hardware and cutlery were 21,510,000 marks, and exports 106,483,000 marks; imports of books and art objects were 42,117,000 marks, and exports 136,191,000 marks; miscellaneous exports, 826,000 marks. The value of wheat imported was 231,447,000 marks; of rye, 101,535,000 marks; of barley, 132,776,000 marks. The value of coffee was 137,072,000 marks in value. The value of raw hides imported was 141,479,000 marks. The main textile materials imported were raw cotton for 250,792,000 marks, wool for 241,406,000 marks, and raw silk for 105,155,000 marks, and 92,250,000 marks were paid for imports of silk and cotton manufactures, the value of cotton manufactures was 133,647,000 marks, mixed silk and cotton cloth for 103,192,000 marks, coarse cottons for 67,272,000 marks, and hosiery for 80,709,000 marks, and trimmings and haberdashery were exported to the amount of 96,961,000 marks. The exports of flax goods were valued at 74,005,000 marks; paper, 59,260,000 marks; of wooden wares, 66,715,000 marks. The value of aniline dyes exported was 71,950,000 marks. Coal exports amounted to 200,493,000 marks. The exports of sugar reached 212,357,000 marks; hop exports, 27,135,000 marks. Home manufactures and agricultural products are encouraged by protective duties, bounties, and checks on tobacco. The duties and excise on tobacco internal taxes are levied. The total imports in 1898 the value of 2,583,988,000 marks paid duties amounting to 515,326,000 marks, an average of 18.1 per cent. of the values of dutiable goods; and the value of 2,585,688,000 marks were free of duty. The imports of gold and silver in 1898, included under metals were 397,372,000 marks; exports, 233,511,000 marks.

The year 1899 was one of extraordinary business activity in Germany, and was marked by a general advance of prices, especially in coal and iron, the increasing want of which was felt more than at any time in the previous five years, and was considered as an actual prospective rapid increase of the German navy. The enhancement of prices was in part brought about by the operation of combinations and rings among producers, the number of which had increased in three years from 350 to about 550. The imports of iron and iron manufactures were 539,879 tons, and exports of iron and steel manufactures since 1897 of 575,000 tons and an increase in value of 32,060,000 marks. The imports of machinery and implements were 150,439 tons, an increase of 67,982 tons in quantity and 26,855,000 marks in value. The exports of iron and iron manufactures amounted to 1,509,887 tons in 1899, an increase of 116,934 tons in quantity and 82,001,300 marks in value: exports of machinery and implements were 283,245 tons, an increase of 72,727 tons and in value of 50,800,000 marks. The rapid growth of manufactures in Germany has produced a dearth of both labor and capital for the expansion. The constant rise of industrial wages has not only depleted the agricultural districts of their laborers and diminished emigration, but attracts laborers from Slavic countries and Italy. The lack of capital has several times caused a stringency in the money market, which may be cured only when the Imperial Government provides for loans to build the new navy and the Prussian Government for the money to dig the Midland Canal.

The distribution of the special commerce of 1898 is shown in the following table, giving in marks the value of imports from and exports to each country:

**Navigation.**—The German merchant navy, on Jan. 1, 1899, comprised 2,490 sailing vessels, of 601,161 tons, and 1,223 steamers, of 1,083,391 tons; total, 3,713 vessels, of 1,639,532 tons, counting all seagoing craft of more than 17.65 tons, but not vessels engaged in coasting and inland navigation, of which, on Jan. 1, 1898, were 22,564, of 3,771,247 tons. Of the sailing vessels there were 157,041, of 1,100,740 tons, and of the steamers 427, of 170,877 tons, belonging in the Baltic, 2,059 sailing vessels, of 552,300 tons, and 796 steamers, of 867,534 tons, belonged to North Sea ports. The crews of the merchant vessels numbered 43,146 men. Of the sailing vessels 578, and of the steamers 1,214, were of iron or steel. There were 46 sailing vessels and 303 steamers over 2,000 tons, 211 sailing vessels and 193 steamers between that and 1,000 tons, 107 sailing vessels and 236 steamers from 500 to 1,000 tons, 339 sailing vessels and 343 steamers between 100 and 500 tons, and 1,787 sailing vessels and 146 steamers under 100 tons. The length of navigable rivers in Germany is very considerable, although in some parts very small, and the amount of canalized rivers; the length of canals, 1,452 miles. The Kaiser Wilhelm Ship Canal, connecting the naval ports of Kiel and Wilhelmshaven, 61 miles long, with a breadth of 213 feet at the surface and 72 feet at bottom and a depth of 291 feet, was built at a cost of 150,000,000 marks, an expense of 4,500,000,000 marks, and serving as a safe and easy passage for the naval forces between the North Sea and the Baltic. In aggregate tonnage the German commercial marine stands second in the world, and its proportion to that of the whole world has risen in twenty-five years from 5 to 9 per cent., the German steam tonnage having increased 6-fold.

**Railroads, Posts, and Telegraphs.**—The mileage of completed railroads in Germany in—
increased from 27,851 miles in 1893 to 30,093 in 1898. In the beginning of 1899 there were 31,150 miles in operation, of which 2,945 miles belonged to companies, and of these 120 miles were operated with the Government system. The narrow-gauge railroads were only 861 miles in length, of which 411 miles belonged to the State. The expenditure up to 1898 was 11,925,490,000 marks; gross receipts, 1,684,730,000 marks; expenses, 937,674,000 marks; net earnings, 690 per cent.; number of passengers, 692,354,000, paying 454,979,000 marks; metric tons of freight, 255,586,000, paying 1,092,227,000 marks.

The area of the German Empire as far as the borders forwarded by the imperial post office during 1898 was 1,306,425,560, by the Bavarian 144,323,680, by the Württemberger 59,337,330; total, 1,510,504,507. The number of postal cards was 612,729,814 in the imperial postal district, 40,240,320 in Bavaria, and 26,606,406 in Württemberg; total, 76,960,514. The number of miles, with 2,945 miles of radii, of the Bavarian district, 61,799,603 in Bavaria, and 32,222,997 in Württemberg; total, 752,241,606. The number of samples in the imperial district was 45,556,782, in Bavaria 3,819,820, in Württemberg 1,326,208; total, 50,702,810. The number of newspapers was 1,029,841,514 in the imperial district, 214,574,063 in Bavaria, and 37,538,714 in the Württemberg; total, 1,37,775,274. The value of money remitted was 22,371,555,016 marks in the imperial postal district, 2,164,069,745 marks in Bavaria, and 995,200,700 marks in Württemberg; total, 25,530,806,411 marks.

The receipts of the imperial post office from postal, telegraph, and telephone services were 340,150,754 marks, and the expenses about 262,000, leaving a surplus of 37,759,192 marks; receipts of the Bavarian services were 31,837,149 marks, and expenses 27,133,608 marks, leaving 4,763,541 marks; receipts in Württemberg were 14,571,653 marks, and expenses 12,078,434 marks, leaving 2,493,219 marks. The telegraph lines of the imperial post office had a length in 1898 of 64,130 miles, about 33,533 miles of radii; the Bavarian can lines a length of 9,557 miles, with 25,948 miles of wire; the Württemberg lines a length of 2,735 miles, with 6,935 miles of wire; total length of lines, 76,418, and length of wire, 278,411 miles.

The number of internal telegrams sent in the imperial district was 27,242,604, in Bavaria 2,383,023, and in Württemberg 2,079,968; foreign telegrams in the imperial district 10,441,372 were sent, 619,062 in Bavaria, and in Württemberg 213,947; total foreign telegrams, 11,274,918. There were 212,121 telephone connections in 900 towns of the German Empire in 1898, with 15,521 miles of line and 220,104 miles of wire, and the number of conversations was 490,788,547; of long-distance circuits there were 1,251, with 13,400 miles of line and 80,004 miles of wire, and the number of conversations during 1898 was 72,339,260.

Dependencies.—The German possessions over sea have all been acquired since 1884. In Africa the German protectorates have an estimated total area of 930,750 square miles and about 14,804,900 inhabitants (see EAST AFRICA, WEST AFRICA, and German Southwest Africa under Cape Colony). In Asia, Germany holds under a lease from the Chinese Government the naval station of Kiaochow, on the Shantung peninsula. The leased area is about 200 square miles, with 60,000 inlets and channels. The British German Imperial Governor has control is 30 miles broad, having an area of 2,500 square miles and a population of 1,200,000. The cost of the administration for 1901 is 9,780,000 marks. A garrison of 1,500 marines is stationed in the fort. The town will be a free port. The Government offers inducements to German colonists to settle in the protectorate on land it has purchased from the Chinese owners, who are not at liberty to sell to individual Europeans. The coal fields of Wieshien and Pushan, within 100 miles of Kiaochow, will be worked by German capitalists, who have an option on all the coal raised, and railroads will be undertaken in the Shantung province.

The first section of 25 miles of a railroad from Kiaochow was completed early in 1900 after interruptions caused by the opposition of the inhabitants, who attacked the Germans near Kaum.

The German possessions in the Pacific were increased in 1899 by the acquisition of the last of the German islands, which raises the number of the islands of the German Archipelago to the largest of the Samoan islands, Great Britain and the United States withdrawing from the tripartite control and relinquishing their rights in respect to these islands; and by the acquisition from Spain of the Caroline and P seal groups and of the Marianne Islands with the exception of Guam, previously ceded to the United States.

The Imperial Government, on the other hand, of Choiseul, Isabel, and other islands of the Solomon Archipelago to Great Britain diminished the total land area, which after these changes amounts to about 96,160 square miles, with a population of 427,000. The northeastern part of New Guinea was declared a German protectorate in 1892, and in 1899 the name of Wilhelm's Land. The area is about 70,000 square miles, i.e., population 110,000. There were 58 Europeans in 1899, of whom 53 were Germans. There are over 36,000 coconut palms, which are taken care of for the production of copra. Cotton, tobacco, and coffee have been cultivated experimentally. Beside copra, the natives deal in trepang and mother-of-pearl for trade goods. The avocados, sago palms, bamboos, and ebony and other woods are found in the forests, and recently gold has been discovered in the Bismarck mountains. The administration was formerly in the hands of the New Guinea Company, but on April 1, 1899, it was assumed, together with that of the Bismarck and Solomon Islands, by the Imperial Government which appointed as Governor R. von Bennigsen. The local revenue for 1899 was estimated at 75,000 marks, and expenditure at 732,000 marks; imperial subvention, 65,000 marks.

The Bismarck Archipelago includes Neu Pommern (formerly New Britain), Neu Mecklenburg (formerly New Ireland), Neu Lauenburg (formerly the Duke of York Islands), Neu Hanover, the Admiralty, the Anchorite, the Hermit, and other islands. The aggregate area is estimated at 20,000 square miles, the population at 188,000. There were 200 Europeans in 1899, of whom 96 were Germans, and there were 64 Chinamen and 68 Samoans and Fijians. The imports for 1899 were valued at 1,060,000 marks; exports, 939,110 marks, of which 726,400 marks represent copra and 120,800 marks trepang.

The Solomon Islands are divided between Germany and Great Britain. The northern part of the group is the German portion, the area of which was decreased from 9,000 square miles, with 80,000 inhabitants, to 4,200 square miles, with 45,000 inhabitants, by the transfer to Great Britain on Nov. 14, 1899, of islands south and east of Bougainville. The products are tortoise shell and sandalwood.

The Marshall Islands have an area of 150 square miles and 15,000 inhabitants, besides 79 Europeans, of whom 50 are Germans engaged in the copra trade. There are plantations of coconut trees that produced 2,720 tons of copra in 1899. The total imports were valued at 465,700 marks.

Savaii and Upolu, of the Samoan group, became German by virtue of the Anglo-German agreement
of Nov. 14, 1899, which the United States accepted and ratified in January, 1900 (see SAMOA).

The Caroline, Pelew, and Marianne, or Ladrone, Islands passed into German possession on Oct. 1, 1899, for a treaty sum of 405,000 marks. On Feb. 12, 1899, for the price of 16,750,000 marks. Until a separate administration shall be organized they are under the authority of the Governor of New Guinea. The estimated annual expenditure is 220,000 marks. In 1899 the sum granted was 465,000 marks, of which 355,000 marks were required for permanent improvements. For 1901 the grant was 370,000 marks. The Caroline Islands are of coral formation. There are about 500 isles, of which Ponape, Yap, and Kusai are the chief, containing about 5,400 inhabitants of Malay blood, with Japanese and Chinese intermixture. The Pellew Islands, 26 in number, produced $2,192,800 in 1900. The German Marianne Islands are small and the population is scanty. The total area of the three groups is about 500 square miles, with 40,000 population.

The colonial expenditures of the Imperial Government have mounted in a progressive ratio. The Reichstag, ever since its first session, has continued the railroad in East Africa from Tanga toward Karogwe, but would not consent to begin a central railroad between Dar-es-Salaam and Mrogoro. The employment of the regular marine infantry in Kiaochau is objectionable to the representatives of the people, although the constitutional right of the Emperor to employ those whom he wishes cannot be disputed. A resolution was passed by the Reichstag requesting the Government to organize the troops in Kiaochau as far as possible on the basis of voluntary enlistment, and to take measures for the creation of a body of Chinese soldiers. The subsidies granted to the colonies for 1901 exceed those of the preceding budget by a sum of about 5,000,000 marks. The subsidy for Southwest Africa is calculated at 9,378,000 marks; for East Africa, 9,117,000 marks; for the Cameroons, 2,192,800 marks; for Togoland, 884,000 marks; for German New Guinea, 709,700 marks; for the Caroline, Pelew, and Marianne Islands, 286,500 marks; for Samoa, 146,000 marks. This list is extended by several articles, which mark the deficit in former estimates. A sum is demanded for the construction of the central railroad in East Africa in spite of the previous rejection of the project by the Reichstag, and money is wanted to be used in settling agricultural colonists from India, who will receive, in addition to a grant of land, 500 marks each as a bonus to enable them to begin the cultivation of rice and cotton.

The Reichstag.—One of the longest and busiest sessions in the history of the German Reichstag came to an end on June 13, 1899. The first sitting was on Dec. 6, 1898, and when the members separated in June, 1899, the session was not closed, but passed on to a treaty with a treaty that certain bills that had not been finally disposed of might be resumed when the house met again on Nov. 14, 1899. One of the more important of these was the penal servitude bill, intended to afford protection to workingmen who refused to go on strike. This measure the Emperor had suggested and announced, but while it was being discussed a strong agitation was conducted against it in the country, and it was denounced as tending to interfere with the right of coalition. When it was brought up as soon as the Reichstag resumed its sitting the Center, the National Liberals, the Radicals, and the Social Democrats were found arrayed against the Government, and it was rejected on the second reading almost without discussion. The Government acknowledged the defeat, and to make peace with the majority Prince Hohenlohe, who in 1896 had promised the Reichstag to secure the repeal throughout the empire of the law forbidding the formation of political societies one with another, accepted a resolution passed by the house, and shortly afterward promulgated a decree by which the union of political societies was permitted in all parts of the empire, notwithstanding provisions to the contrary in the laws of some of the states.

The most important bill was another of the measures that engaged the attention of the Reichstag at different periods and underwent various vicissitudes. When originally introduced by the Government it was contended against that without any further measures to safeguard the public health by preventing the sale of diseased or unwholesome meat. The government its ostensible and primary purpose was to safeguard the public health by preventing the sale of diseased or unwholesome meat. The Government declared that it was impossible to make sure that meat imported from abroad had been properly inspected in the country of its origin. The Government declined to accept the bill as it passed the second reading. The Government needed the votes of the Agrarians, whose strongest element is the old Junker party in Prussia, joined by the Agrarians of the whole empire of Germany. Their support was necessary to carry through the naval bill, but the protests against the transformation of the meat inspection bill that came from the Hanseatic towns and from the trading and working population of the manufacturing centers could not be ignored. To enhance the price of a prime necessary of life was a serious matter, and the probable loss of trade and the possible danger of reprisals from the United States, with which an eighth part of the whole foreign commerce of Germany was conducted in 1898. The Agrarian amendments not only placed restrictions of a prohibitive character on foreign meat imports, but also decreed the prohibition of all cuts of meat and the slaughtering in Germany. All salted meats except ham and baco, all meat preserved in tin cans or other vessels, and all sausages or mixtures of minced meat were forbidden to be imported at all; whole carcasses or half carcasses of beef and pork, unskinned and with heart, lungs, and kidneys unaltered, could be imported up to Dec. 31, 1903, and cooked meat prepared in a way excluding any danger to health, and after that date the importation of all meat or meat products would be unlawful with the exception of lard, bacon, marmalade, and sausage skins. The date is that of the expiration of the commercial treaties, by which France makes it impossible to the Germans to supply all the meat required for domestic consumption. The agitation started by the industrial and commercial classes subsided when it was made known that the Government and the Federal Council would not accept the bill as reported by the committee and approved by the Agrarian majority, while it was the wish of the ministry made with the Agrarians surprised the country, leaving as it did some of the strongest protectionist features untouched. The concessions obtained from the Agrarians were the excision of the clause practically excluding all foreign meat after the end of 1903 and the permission for pickled meat to enter the country when its origin and the manner in which it had been preserved was known by expe-
rience to exclude all danger to health and when it is possible to bring satisfactory proof of its innocuous nature on its introduction into the country. It was further provided that the meat must be imported in pieces not less than 4 kilograms in weight. The prohibition of the import of canned meat and of sausages was retained, and the restrictions on the importation of fresh meat were not removed. The bill was passed on the third reading on May 23 by 163 votes to 123. As the bill affects the stock-raising and meat-exporting interests of the United States and Australia, the American and British governments made inquiries. Meat extracts were not included in the prohibition, the Government hoping to extend the application of the bill to them. The bill became law on Oct. 1. The discriminations which attended the enforcement of former statutes had gone so far toward extinguishing the American trade in meat products with Germany that it was hoped that simpler methods of inspection under the general sanitary opinion of the country would help to revive trade in the meats not prohibited.

A bill known as the Heinz bill, intended to regulate certain phases of public morality revealed in recent criminal trials, gave occasion to scenes of obstruction such as have not been witnessed in the Reichstag since the days of the Kulturkampf. The Clericals introduced amendments making the bill a means of exposing and selling books and works of art of an objectionable character and the censorship and supervision of theatrical and other public amusements. The Conservatives supported the bill, the National Liberals also in principle, making a large majority in favor of the most puritanical restrictions. The Socialists, however, the Clericals, declared an uncompromising opposition to the measure as placing restrictions on the freedom of art and of literature. Nearly the whole intellectual world of Germany, the leading representatives of letters, art, learning, and culture in Berlin, Munich, Leipsic, and other cities, and the general public opinion of the country sustained the Socialists in their resistance. Indignation meetings and signed remonstrances showed that the measure was regarded as an invasion of the most highly valued of German liberties. The majority was not deterred, however, from the determination to force it through, and the bill was compromised by a formal adjournment, whose impartiality till then had won good opinions of all parties, strained the rules to aid its passage and thereby alienated the National Liberal supporters of the bill, enabling the Socialists to block it completely. As it was an amendment of the penal code, the calling of the roll could be demanded by 50 members. The Socialists called for the guillotine clause, which could be enforced by leaving the hall with the Radicals left the house without a quorum unless the majority parties were present in their full strength. When later the National Liberals joined them in these tactics they were able to prevent action at all times. The result was that the bill was withdrawn and another substituted, identical with the old one in the paragraphs dealing with immorality, but not containing the paragraphs affecting art and literature. This was passed rapidly through the house without opposition. A motion passed the Reichstag for the abolition of the dictatorship in Alsace-Lorraine, the execution of which rested, however, with the Government.

The new navy bill was presented in the beginning of February, 1900. The nonrecurring expenditure for construction and armament of new vessels was estimated at 1,600,000,000 marks and for docks and harbors at 261,000,000 marks. Of the total sum it was proposed to raise 750,000,000 marks by loans spread over the sixteen years required for the completion of the new navy, while 1,092,000,000 marks will be met from the revenue. The recurring expenditure is expected to increase 5,400,000 marks each year during the period, rising from 140,500,000 marks in 1891 to 300,270,000 marks in 1916. The bill provides that supplies must be settled every year by the estimates, fixes a maximum which the naval expenditure of each year may not exceed, and retains the paragraph of the old naval bill which lays down the principle that expenditure on the navy shall not be met by increasing indirect taxes on articles consumed by the masses. The bill provides that the price of meat shall be fixed by the Conservatives, though without enthusiasm, and by the National Liberals. The Clericals withheld their approval until they could learn how the financial means could be provided, as with disappearing surpluses and a cutting down of the amortization of debt the country was staggering under the debt, and the demand for the permanent renewal of the navy law, the Kriegsmarine act of 1899. The Socialists were unanimous in their opposition to the bill. Enthusiasm for a navy in Germany has never been developed except among the manufacturing class, the shipowners, and exporters of the Hanse towns, and the colonial enthusiasts. The efforts of a navy league organized for the purpose of awakening interest in the sea power of the country failed to influence the agricultural classes or to stir the vast bulk of the population living remote from the seashore. The Clericals and the Conservatives of Agrarian tendencies thought that the trading and industrial classes ought to bear the whole cost of national expenditure, while the Socialists, by an opinion that, no matter how the cost might be met, it would cause an increase in the price of bread and other articles of popular consumption. The financial aspect of the question was the first and the principal subject of discussion, and on its solution depended the extent of the increase. The vote of the Clericals was not obtained until the amount of the proposed expenditure was cut down 390,000,000 marks by reducing the number of ships for foreign service. The Government insisted that two double squadrons were necessary, as the German fleet would have to maintain its superiority both in the Baltic and the North Sea. The Socialists accepted the bill, superseding the seazenne act of 1898, provides that the future strength of the navy shall be two double squadrons, each consisting of a flagship and 16 battle ships, 8 great and 24 small cruisers for service with the fleets, 3 great and 15 small cruisers for service on foreign stations, and a reserve of 4 battle ships and 4 great and 6 small cruisers. It is expected that the fleet will be brought up to the stipulated strength by the end of 1920. The Budget Committee reported in favor of fresh and increased taxation, although the Government had taken the ground that none would be necessary. A resolution from the Center restriction the amount to be raised by loans and the import duty on foreign champagne was increased 50 per cent., that on foreign spirits 33 1/3 per cent., and the protectionist principle was carried further by increasing the duty on foreign beer 50 per cent., affecting the Pilsen beer of Bohemia, which
is consumed enormously in northern Germany, and to a less extent English ale and porter. A stamp duty of 10 pfennigs was levied on bills of lading, trade between German ports being exempted. The navy bill passed the final reading as the last act of the session. The Reichstag was adjourned for the year by the political adjustment of the Chinese question since German activity in Shantung had precipitated the troubles and the German minister to China had paid for it with his life, and as Germany was willing to send out a powerful expedition the other powers accepted as commander in chief of the allied forces in the Chinese imperial province of Chih-Li, the German Field-Marshall Graf Waldersee. The strength of the expedition was 582 officers, 188 officials, 120 surgeons, and 18,712 men, with 5,579 horses, and the cost was estimated at 152,770,000 marks up to March 31, 1901. The Reichstag was not summoned to vote supplies as they were required, the German Government assuming that the country approved the expedition and being unable to present preliminary estimates of sufficient accuracy. When the first soldiers departed the Emperor enjoined them to take no prisoners and give no quarter, and to make the name of German a terror in China that would be remembered that of Hun for many a thousand years. Such vindictive utterances jarred on the ears of the public, and when soldiers wrote home about unmilitary barbarities appropriate to Huns, saying they were obeying the Emperor’s orders, satirical strictures in the newspapers directed against the Emperor were plainer and sharper than they ever were before. The prosecutions for lese-majesté multiplied at an alarming rate, and noted journalists were among the persons convicted. When the Reichstag met, the utterances and acts of the Emperor were openly discussed for the first time without the ministers or the president intervening to stop the discussion. There was asserted in the press and accepted in the Reichstag that when the Emperor acts as his own chancellor and takes the direction of affairs into his own hands the immunity of his acts from public or legislative discussion which custom hitherto prescribed must cease forthwith. Prince von Hohenlohe was absent and apparently had no part in shaping the Chinese policy of the Government, and before the autumn session of the Reichstag began he offered his resignation. The Emperor accepted it on Oct. 17, and appointed Graf Bilow to succeed him as German Imperial Chancellor, Prussian Minister President, and Minister of Foreign Affairs.

The new session was opened on Nov. 14. Among measures forecasted were one to regulate the legal status of sailors, a reform in the system of state insurance against accidents, fresh taxation of the wine trade, and a bill dealing with insurance companies. The long-pending difference between the German and United States governments regarding the right of American insurance companies to underwrite risks in Prussia and elsewhere was settled. The companies that formerly had their agencies in that country were expelled because they were foreign corporations which invested the money received for premiums elsewhere beyond German jurisdiction and supervision. Under the new arrangement they are required to keep a certain reserve in Germany, and the opportunity arose when the German Government required advances in September for the Chinese expedition for an advantageous investment in imperial treasury bonds which, owing to the tightness of the Medini tax, the Government duties were offered in Germany because the best rates obtainable would compare unfavorably with the high showing for German public credit made when the last loan was emitted, and would furnish a bad precedent for future credit operations. Nevertheless there were bitter criticisms from Agrarians, clericals, radicals, and Social Democrats when the Government offered of treasury bonds was placed in the United States, thus demonstrating the financial difficulties of Germany at the very moment when a new development of German world politics was boastingly proclaimed.

Increased estimates for the Workmen’s Insurance fund and for the defenses of the country were hinted at in the speech from the throne. The treasury statement made the estimate of expenditure for 1902 2,240,947,301 marks, 174,303,280 marks increase upon the estimate for the previous year. The estimated revenue is 2,137,192,606 marks, 163,754,955 marks less than the estimated income, the deficit to be met by a loan. The principal requisites of the Government for 1902 was the new autonomous tariff, or general tariff, which is the scale of maximum duties to be levied on imports coming from countries that do not enjoy the most-favored-nation treatment, and is to be taken as the basis on which the new commercial treaties will be negotiated. In framing the new tariff the view of all the industrial, commercial, and political interests have been carefully ascertained and considered, and the Minister of the Interior has been in constant consultation with experts. The provisional tariff agreement with England was continued by vote of the Reichstag for one year longer.

The Prussian Diet.—Although the ministry, in spite of the personal efforts of the Emperor-King, failed to obtain the assent of the Diet to the construction of a ship canal from the Rhine to the Elbe in 1899, the project was brought before the Diet again in 1900 and urged as a necessary measure for the relief of the state railroads and the development of inland commerce. The bill was eventually passed so as to provide for ship canals and the improvement of natural water ways in the interests of traffic and of the amelioration of land, notably a ship canal between Berlin and Stettin, the provision of a sufficient quantity of water in the Oder Bruch, the improvement of the state of the lower Oder, the Spree, and the Havel, the development of the water ways between the Oder and the Vistula, and a Masurian lake canal; also the deepening of the harbor of Emden for the accommodation of transatlantic steamers, so as to provide a German port for Westphalia. The Diet was asked further to vote considerable sums to extend and complete the railroad system. A special bill had been passed on great department store which was proposed, with the object of strengthening the position of the middle classes in commerce and industry. A store may deal in groceries, provisions, tobacco, and drugs; in dry goods and clothing; in household utensils, crockery, glass, and furniture; or in jewelry, fancy articles, art goods, stationery, and prints; and it had been used for the store business is confined to one of these departments: it pays no tax except the existing trade tax. Any firm or corporation doing a retail business combining two or more of these departments must pay an extra tax, varying in proportion to the extent of its turnover from 1½ per cent on sales
Barnard, Erastus A., Chicago, gift to the city for a public park, land valued at $200,000.

Bartlett, A. C., Chicago, gift to Chicago University, for a physical culture hall, $125,000.

Bates, Elizabeth H., Port Chester, N. Y., bequest to the University of Michigan, as allowed by surrogate, $86,088. See her name in the record of 1899.

Belmont, August, New York, gift to the Cathedral of St. John the Divine, funds for a chapel to cost between $150,000 and $200,000.

Beloit College, Beloit, Wis., gifts from friends for permanent endowment, $550,000.

Bennett, Joseph M., Philadelphia, bequests to the University of Pennsylvania and the Methodist Orphanage, nearly all of an estate estimated at $2,000,000.

Bennett, Mrs. Margaret J., Baltimore, bequests to the Mount Vernon Place Methodist Church, $30,000; Woman's College, Maryland Hospital for Women, Home for the Aged of the Methodist Episcopal Church, and the Patterson Memorial Association, $85,000; other institutions, $22,000; Boys' Home Society, $10,000; and to trustees for the founding of a Bennett Home for Deserving Women, $150,000.

Billings, L. F., gift to Harvard University, $5,000.

Blackstone, Timothy B., Chicago, bequests to the James Blackstone Memorial Library Association, Frampton, Conn., $100,000; and the Art Institute, Passavant Memorial Hospital, Chicago Relief and Aid Society, Chicago Orphan Asylum, Chicago Home for the Friendless, and St. Luke's Hospital, each $25,000.

Boardman, Mrs. Lucy, New Haven, gift to Trinity Episcopal Church, property valued at $65,000.

Bowen, Charles C., Detroit, bequest to Kalamazoo College for a Greek professorship, $50,000.

Boyd, Edward, Cincinnati, bequest to St. Paul's Protestant Episcopal Church, $10,000.

Boyston, Mrs. Josephine E., Newton, Mass., bequests to religious and charitable institutions, chiefly Congregational, an aggregate of $9,000.

Bradford, George R., Gloucester, Mass., gift to the local Young Men's Christian Association, real estate valued at $18,000.

Bradford, Prof. Vincent L., Philadelphia (died 1884), bequest to Washington and Lee University, may be available by the death of his wife, his law library, collection of paintings, and half of his estate, estimated at over $200,000.

Brenz, John D., Brooklyn, N. Y., bequests to institutions in New York and Italy, $5,000; and to his executors the residue of his estate, valued at $500,000, on the death of his sister, the income to be used to promote "charity or religion by the Protestant faith only."

Brigham, Robert Breck, Boston, bequests to nearly every charitable institution in Boston, an annuity of $1,000, and to trustees the residue of his estate, estimated at $5,000,000 to $5,500,000, for the erection of a Hospital for Incurables.

Brohead, Josephine, Washington, D. C., bequest to the town of South Newmarket, N. H., for a public library, $10,000.

Bromley, Mrs. Isaac H., Norwich, Conn., gift to Yale University for a lectureship on public affairs, $5,000.

Brookings, Robert S., and Samuel S. Cup- ples, St. Louis, Mo., joint gift to Washington University, the building and property known as Cupples Station, paying nearly 10 per cent. on a stock capital of $5,000,000.

Brooklyn (N. Y.), Children's Aid Society of, gift from two woman friends, names with-
held, an infants' hospital and beach pavilion, $10,000.

Brooklyn (N. Y.) Institute, gift from friend, name withheld, $5,000.

Brown, Harold, Newport, R. I. (died May 10, 1900), bequests to the Domestic and Foreign Missions of the United States of America, $10,000; to St. Columbus's Church, Middletown, R. I., $50,000; and to the Rhode Island Hospital, Newport Hospital, Brown University, and Emmanuel Church, Newport, each $25,000.

Brown, John Nicholas, Newport, R. I. (died May 1, 1900), brother of Harold, bequest to the Brown University Hospital, $50,000; Rhode Island Hospital, $34,400; Brown University, $25,000 and his pledge of $25,000; widows and orphans of Rhode Island Episcopal clergy, $50,000; Newport Hospital, $8,000; Young Men's Christian Association of Providence, $5,000; Episcopal Domestic and Foreign Missions, $25,000; St. John's Church, Providence, $10,000; Redwood Library, Newport, $5,000, and $150,000 for ground and building and $300,000 for endowment of the Providence Public Library.

Brush, Miss Helen C., New York, bequest to the First Church of Christ, Scientist, $62,000; will contested.

Bryson, Mrs. Eliza Tileston, New York, bequest to the Bryson Day Nursery and the New York Infirmary for Women and Children, each $5,000; Teachers' College, New York, and St. Christina Home, Saratoga, each $2,500.

Bucknell University, Lewisburg, Pa., gifts from friends, an aggregate of $90,000, which secured gift of $15,000 from John D. Rockefeller.

Brown, H. Putnam, Conn., bequest to the Danielson Free Library Association, his private library and $15,000 for a library building.

Burt, Horace G., New York, gift to the University of Wyoming, a tract of 20 acres of land adjoining the university grounds.

Calderwood, Thomas, Clinton, Iowa, bequests for missionary work in Armenia and India, $6,000; for libraries, $10,000; in Clinton, Council Bluffs, and Lyons, $8,000.

Carleton, George H., Georgetown, Mass., bequests for a home for aged men and women, $35,000; Perley Free School, $5,000; other benevolent purposes, $12,000.

Carnegie, Andrew, New York, gift to the Carnegie Institute in Pittsburgh, Pa., an addition of $1,850,000 to the $1,750,000 given in 1899 for the enlargement of the building; for the erection and endowment of a polytechnic institute in Pittsburgh, $3,000,000; for public libraries in East Orange, N. J., York, Pa., and Hawick, Scotland, each $50,000; for a library in Fort Dodge, Iowa, $50,000; for libraries in Lebanon, Kan., and Chillicothe, Mo., each $25,000; to the Tuskegee Normal and Industrial Institute, $20,000; and to Stevens Institute of Technology, $15,000, supplementing a previous gift of $50,000 for a new building.

Carr, A. Whitney, Jordan, N. Y., gift to the State of Iowa for free scholarships in the State University for deserving but poor boys, $50,000.

Carruth, John G., Philadelphia, gift to the Dormitory fund of the University of Pennsylvania, $20,000.

Casey, Margaret De Koven, New York, bequests to three institutions in Middletown, Conn., and to Yale University, $7,000.

Cathedral of St. John the Divine, New York, gift from a friend, name withheld, for the choir fund, $100,000.

Chenery, Mrs. Mary Robinson, gift to Yale University, to promote post-graduate work, $5,000.

Chrisman, Mrs. Eliza, Topeka, Kan., bequests to the Ohio Wesleyan University, $35,000; First Methodist Church, Topeka, $5,000; Women's Missionary Society, Topeka, $5,000; and nearly all the remainder of her estate of $250,000 for the founding of a university of Topeka, contingent on the location of the Methodist churches raising a like amount within ten years.

Christian, Harry L., Brooklyn, N. Y., bequests to the Hans Christian Kindergarten, $10,000; Norwegian Hospital, $5,000.

Chute, Isaac S., Exeter, N. H., bequests to the Exeter Hospital, his valuable residence property; Congregational Institute, £10,000; Berea College, Hampton Normal Institute, Tuskegee Normal Institute, and the Methodist Episcopal Church, Exeter, each $2,000; and the American Sunday School Union, American Missionary Association, American Baptist Missionary Union, and the American Board, the residue of his estate.

Clark, Jonas G., Worcester, Mass., bequests to Clark University, which he founded, for the library and a department of art, each $100,000; also $1,000,000 and the residue of his estate, providing the people of Worcester raise a fund of $500,000 within three years. If a smaller sum only is raised his estate is to double it.

Cobb, Silas B., Chicago, bequests to Chicago Hospital for Friendless, $5,000; and University of Chicago, $25,000; Old People's Home and Young Men's Christian Association, each $5,000; and American Sunday School Union, $2,500.

Colorado College, Colorado Springs, gifts from friends, securing a promised gift of $50,000 from Dr. D. K. Pearsons, $150,000.

Colburn University, Roscommon, Mich., New York, gift from a friend, for the library fund, $10,000.

Cone, Albert G., Chicago, bequests to the Presbyterian Hospital, $135,000; Chicago Hospital for incurables, $50,000; and Homeopathic Hospital, $10,000.

Converse, E. S., and wife, Boston, gift to the Woman's Charity Club Hospital there, $15,000.

Convill, Eli L., Oxford, N. Y., children of the late, gift to the village, a public library.

Crane, George F., and wife, New York, gift to St. Andrew's Episcopal Society at Washington, Md., a house, chapel, and $10,000 in bonds.

Crane, Mrs. Rachel B., Peckskill, N. Y., gift to the Boards of Home and Foreign Missions of the Presbyterian Church, each $50,000.

Crapo, Philip M., Burlington, Iowa, gift to the new public library there, $20,000.

Cudahy, Michael, Chicago, gift to the Catholic University of America, Washington, D. C., $50,000.

Cupples, Samuel S. See BROOKINGS, ROBERT S.

Cutler, Isaac, Boston, gift to the town of Farmington, Me., for a public library, $10,000.

Da Costa, Jacob M., M. D., Philadelphia, bequests to Pennsylvania Hospital, Children's Hospital, College of Physicians, and University of Pennsylvania, each $5,000; St. Mary Breakfast Association, $1,000; Jefferson Medical College, his medical museum; and the College of Physicians, his medical library.

Davis, Moses M., Rome, N. Y., gift to the Christian Science church there, all his property, estimated at $50,000.

De Koven, John, bequest to Yale University, $681,132.

Denison University, Granville, Ohio, gifts from friends, about $200,000, thus securing gift of John D. Rockefeller of $100,000.
DICKSON, Walter Scott, Salem, Mass., bequests to the city for the care of the chapel and conservatory in Greenlawn Cemetery presented by him, $33,000; the Young Men's Christian Association, Salem Public Library, and Peabody Academy of Salem, $5,000 for each institution; Tufts College, $25,000 direct and $20,000 in reversion; Salem Hospital, the reversion of $30,000; Associated Charities of Salem, the reversion of $50,000; and to other institutions, the reversion of $100,000.

DICKINSON HOSPITAL, Northampton, Mass., gift to the Cambridge Hospital and the Avon Home, each $5,000; Boston Latin School Association, $1,000.

DODGE, William Earl, New York, gift to Columbia University for the erection of a students' hall, to be under the control of the Young Men's Christian Association of New York city, $100,000; to the Army Branch of the Young Men's Christian Association, on Governor's Island, a building, cost $5,000; to Yale University, for the promotion of Christian missions, $20,000.

DRAKE, Ex-Gov. Francis Marion, Centerville, Iowa, gift to Drake University, Des Moines, named after him, $50,000. He also made the university a joint heir with his five children to his property, valued at $3,000,000.

DUN, Robert Graham, New York, bequests to the Metropolitan Museum of Art, 25 paintings, valued at $200,000; the Presbyterian, St. Luke's, and Mount Sinai Hospitals, and the New York Institution for the Instruction of the Deaf and Dumb, $12,000.

DUNCAN, William, M.D., Savannah, Ga., bequests to the Savannah Hospital, $1,500 at once, and the reversion of half of his estate, valued at $80,000.

DUNLAP, Juliana, Philadelphia, bequest to the Society of St. John the Evangelist (England) for the religious work of its branch in the United States, the reversion of $22,000.

DURAND, Henry C., Lake Forest, Ill., gift to Lake Forest University, $20,000.

DUTTON, Mrs. Everell F., Sycamore, Ill., gift to the Sycamore Public Library, for a new building, $25,000.

Dwight, Edmund, Boston, bequests to the Art Museum, two paintings by William M. Hunt and one by Washington Allston, and to Harvard University the reversion of $125,000.

Dwight, John, New York, gift to Mount Holyoke College, for a memorial art building, $80,000.

Eastman, George, Rochester, N. Y., gift to the Rochester Genesee Library Association, $10,000; and to other associations, $10,000.

Eichler, Mrs. Marie, New York, bequests to seven institutions in New York, $11,000, and two in Germany, $5,250.

Ellwanger, George, Rochester, N. Y., gift to the German Protestant Church, for a home for the aged, real estate valued at $15,000.

Emanu-El Sisterhood, New York, gifts from friends for a new building, $75,000.

Ethical Culture, Society for, New York, gifts from three friends, names withheld, for new building fund, $150,000.

Evans, Mrs. Mattie K., Philadelphia, bequests to charitable and religious institutions, $20,000.

Fahnestock, Harris C., New York, gift to the New York Post-Graduate Medical School and Hospital, for a training school for nurses, real estate valued at $65,000.

Flower, Ex-Gov. Roswell P., New York, widow and daughter (Mrs. Emma F. Taylor) of, joint gift to the Flower Hospital, $200,000.

Ford, Jarvis, St. Joseph, Mo., bequests to trustees for a free library, $20,000; and to the Municipal Hospital, $10,000.

French, John, Brooklyn, N. Y., gifts to four local Methodist Episcopal institutions, each $5,000; the Methodist Episcopal Hospital, the Brooklyn Church Society, and the Hanson Place Church, each the reversion of $10,000; and six other institutions, the reversion of $20,000.

French, John D. W., Boston, bequests to the Episcopal City Mission, Young Men's Christian Association, Church Home for Orphans, St. Luke's Home for Convalescents, Chapel of the Good Shepherd, and trustees, of donations for the Protestant Episcopal Church, each $10,000; Harvard University, Diocesan Board of Missions, Massachusetts Horticultural Society, and American Forestry Association, each $5,000; and the Diocesan Board of Missions of Massachusetts, the residue of his estate.

Frick, Henry C., Pittsburgh, gift to Wooster (Ohio) University, a building, $50,000.

Furman, Mrs. Mary J., Nashville, Tenn., bequest to Vanderbilt University, her estate valued at $200,000 to $250,000.

GALLUP, Mrs. Delia, Chicago, gift to the University of Chicago, to endow the history library, $80,000.

Gammell, Robert Ives and William, Providence, R. I., gifts to Brown University, each $10,000.

Garcelon, Mrs. Caroline M., Oakland, Cal. (died in 1891), bequests to the city of Oakland, for a hospital, $600,000, and to Bowdoin College, $400,000, made available in 1900 by a decision of the United States Supreme Court.

Gardner, Mrs. John L., Boston, gift to the city, for a free museum, her new Italian palace in the Fens, with all its art contents, comprising costly paintings, sculptures, bronzes, metal work, tapestries, etc.

Gardner, Sarah E., Newport, R. I., bequest to the Rhode Island Society for the Prevention of Cruelty to Animals, $50,000.

Garr, Mrs. John H., Hannibal, Mo., gift to the city, for a public library, $25,000.

Gayley, James, class of '76, gift to Lafayette College, a chemical laboratory, cost $30,000.

General Theological Seminary, New York, gift from alumni and others, Hoffman Memorial Hall, cost $100,000.

Gibbs, Edward N., New York, bequest to Amherst College, $10,000.

Gibbs, Miss Zela, New York, gift to the Cathedral of St. John the Divine, $5,000.

Giovino, Mrs. Louisa Cecelia, New York, bequests to St. Joseph's Theological Seminary, Yonkers, $10,000; Institution of Mercy, $4,000; Little Sisters of the Poor, $2,000; other religious bodies, $5,000.

Goddard, Chancellor William, Providence, R. I., gift to Brown University, $25,000.

Goldstone, N. L., Des Moines, Iowa, bequests to local institutions, $14,000.
GOLDTHORPE, William, Jo Daviess County, Ill., bequest to the Board of Education of the Methodist Episcopal Church, $30,000.

Gould, Helen M., New York, gifts to the New York University for a Hall of Fame for Great Americans, $100,000; to the Naval Branch of the Young Men's Christian Association for a building near the navy yard, Brooklyn, $50,000; Berea (Ky.) College, $5,000; and Hall of the Christ building fund, Chautauqua, $5,000.

Greenwich (Conn.) Library, gift from friend, name withheld, $10,000.

Brigson, Robert B., Boston, bequests to local charities and for the founding of a hospital for incurables, the reversion of an estate estimated at $2,250,000.

Guggenheim, Meyer, and his sons, Isaac, Daniel, Murray, Simon, Solomon R., and William, New York, joint gift to Mount Sinai Hospital, $200,000.

Gurley, W. F. E., Danville, Ill., gift to the University of Chicago, a paleontological collection of 700,000 specimens, personally gathered in the Mississippi Valley, valued at more than $125,000.

Hahnmann Association, New England, gift to Boston University School of Medicine, $10,000.

Hall, Seth B., Lowell, Mass., gift to the Fifth Street Baptist Church, $3,000.

Halstead, John, New York, bequests to ten benevolent institutions a total of $23,500, and to Cooper Union his residuary estate estimated at $300,000.

Haring, Mrs. Julia A., Cambridge, Mass., bequests to Cambridge Hospital and Avon Place Home for Children, each $30,000; Cambridge Associated Charities and Society for the Prevention of Cruelty to Children, each $10,000; and the Congregational Church, Winooski Falls, Vt., Cambridge Home for Aged People, and Stearns Chapel, Cambridge, each $5,000.

James, Charles C., Philadelphia, New Year's gift to the University of Pennsylvania, $250,000.

Harvard University, gift from a friend, for the Architectural Building fund, $20,000.

Havemeyer, Henry O., New York, gift to the town of Greenwich, Conn., a public school building, estimated cost, $300,000.

Haverford College, Haverford, Pa., gifts from friends, to extend its religious instruction, $65,000.

Hearn, George A., New York, gift to Ascension Memorial Church, five paintings, estimated value, $50,000.

Hendrie, John W., Sound Beach, Conn., gifts to Yale University, $5,000; Manhattan Home, Wallingford, $5,000; Episcopal Church, Riverside, $2,000; and Congregational Church, Sound Beach, $1,000.

Hennessy, Right Rev. John, Archbishop of Dubuque, Iowa, bequests to the fund for erecting a theological seminary in that city, $50,000; to the Sisters of the Visitation a release from all encumbrances on their buildings held by him; and to the Sisters of the Holy Child at the University of America (Washington, D. C.), and the Dubuque Theological Seminary, an equal share in a residue aggregating $800,000.

Young Men's Christian Association, Hyde Park, Mass., gift from a friend, for building fund, $25,000.

Young Men's Christian Association, New Haven, Conn., gifts from friends for auditorium, $35,000.

GOLD NUGGETS. The important discoveries of gold in the past century began in 1848, in California. Three years later those in Australia followed, a few years afterward those in British Columbia, and those of Colorado in 1858-59. Those of the Transvaal were made principally in 1886. Gold was discovered at various places in Alabama, in 1847, and in the Klondike was located in August, 1896.

Australia.—Australia has been found richer than any other part of the world in gold nuggets. The colony of Victoria has yielded the greatest number, and New South Wales the largest one recorded. This monster nugget, found at Hill End, was 4 feet 9 inches by 3 feet 3 inches, averaging 4 inches in thickness, and $148,000 was paid for it to the finders, Messrs. Byer and Halm. Just previously they had so exhausted their resources as to be obliged to live on charity, and this rich find is said to have unfitted one of them for work for a long time thereafter.

At Bakery Hill, Ballarat, Victoria, June 15, 1838, a party of 24 found the Welcome nugget, and sold it for $52,000 in Ballarat. It was exhibited in Melbourne, and was sold again for $46,625. The Welcome was found at a depth of 180 feet, was water worn, and contained 10 pounds of quartz, clay, and oxide of iron. It measured 9 feet 11 inches by 7 feet 2 inches by 7 inches, and was melted in London, in November, 1839, it yielded 99.20 per cent. of pure gold. Three years before the finding of the Welcome a nugget of 480 ounces and one of 571 ounces were discovered very near the same spot. Canadian Gully has an interesting record. In it two new miners, working with two others, found a nugget of 76 ounces, and immediately after, digging to a depth of 60 feet, they took out a nugget weighing 1,610 ounces, which they took to England and sold for $24,600. The Lady Ithaca, weighing 1,177 ounces, was also found at a depth of 60 feet, where the earth about it had been yielding one ounce of gold to the ton. Also a beautiful pyramidal nugget came to light not ten feet from the point where the 1,619 ounce nugget had been discovered. In the year 1853 a nugget of 371 ounces 2 pennyweights, worth $1,327, one 1,777 ounces, and pennyweights, of which 100 ounces was taken from the same gully. Near this gully a nugget of 1,177 ounces 17 pennyweights was discovered in 1854, and smaller ones to the amount of 220 pounds, so that the claim yielded $65,000. In the Indicator vein in the Ballarat group was found, about 1870, a remarkable pendant of pure gold. It consisted of a golden wire about 4 feet long, hung at intervals with lumps of gold about as large as an egg. It was found at a depth of 250 feet, and was worth $7,500.

Other nuggets found at Ballarat are: At Eu- reka, in an abandoned hole, one of 625 ounces, and in 1857, near Native Youth, at a depth of 9 feet, the Nill Esperandum, 540 ounces. Also there was found at Ballarat, in 1860, at a depth of 400 feet, a solid lump of gold weighing 834 ounces, and in 1889 a 48-ounce nugget is recorded, taken from the Pinegut Gully.

The Welcome Stranger is a famous Australian nugget. It was discovered in the rut made by a peddler's cart, for it had been but barely covered with loose loam. The nugget measured 10 by 21 inches, weighed 2,250 ounces, and contained 98.60 per cent. of gold. The value was $47,670. It was found Feb. 15, 1860, at Moliagul, near Dunolly, where prospecting had but just begun. Heavy gold and many large nuggets were found in that region. Among these were the Schlemm, 478 ounces, the Spitalulis, 390 ounces, of 106 ounces, and many weights, which was found in 1854, and two nuggets, unearthed soon after the Welcome Stranger and the near the same spot, of 114 ounces and 36 ounces respectively.

Kingower yielded the Blanche Barkley, a nugget of 1,743 ounces 13 pennyweights, which lay buried at a depth of 15 feet. It was taken to Melbourne and exposed at the Crystal Palace, London, where it proved very interesting to the public and netted the owners $250 a week. It contained 95.58 per cent. pure gold and was valued at $34,525. Also at Kingower was found a nugget of 805 ounces, one of 782 ounces, one of 282 ounces 2 pennyweights in 1854, one of 260 ounces in 1856, and one of 230 ounces in 1860. In the last-named year a moss-covered nugget was picked up by a party of prospectors. A nugget of 120 ounces, lying but a few inches below the surface, was dug up by a boy in the same locality in 1858. Nuggets of 106 ounces 16 pennyweights and 1001 ounces were found at Kingower in 1861. At Mount Morgan, the highest diggings, a nugget weighing 810 ounces was discovered in 1857, a nugget of 452 ounces in 1870, and in the year 1858 one weighing 300 ounces was taken from under six feet of soil.

Besides the large nuggets already mentioned, Australia has produced several others weighing more than 1,000 ounces, one of 1,060 ounces, another of 1,050 ounces, one of 1,121 ounces, the Viscount Canterbury, 1,105 ounces; the Heron, 1,108 ounces; one from Berlin weighing 1,121 ounces; and one from Laskin's lead of 1,034 ounces 5 pennyweights. The Precious was found Jan. 5, 1871, a year in which Berlin generously yielded nuggets, two others being
the Kum Tow, 718 ounces, and the Neeldful, 247 ounces. The following year one of 477 ounces was found there. The Viscount and Viscountess Canterbury also came from Berlin. The latter weighed 884 ounces. They were found in 1869. In the same year, one of 893 ounces was discovered at Berlin; and in 1870 one of 806 ounces, and in 1872 was found the Crescent, 179 ounces.

The Heron, a solid lump of gold, weighing 1,008 ounces, worth $20,400, was found near Old Golden Point, Fryer's Creek, Mount Alexander, where also nuggets of 264 ounces, 22 ounces, and 84 ounces had been found. The Victorian nugget was found in 1852 in White Horse Gully, Sandhurst; it weighed 340 ounces. Parliament bought it for $8,250 and presented it to the Queen. In the same hole also, in 1852, was found a nugget of 573 ounces, valued at $10,500, and near by, imbedded a foot deep in gravel, the Dascombe nugget was found in the same year. Robinson Crusoe Gully, Sandhurst, yielded a nugget of 377 ounces 6 pennyweights. Also at Sandhurst, in 1852, one of 288 ounces was found. Another Australian nugget was presented to the Queen in 1858. It weighed 146 pounds.

In West Australia, in 1889, a singular nugget of 100 pounds was found as the result of a vision. A priest was told by a poor, devout parishioner that he had miraculously learned of the whereabouts of the nugget. He followed the directions and dug up a lump of gold which from its shape he named the "Sacred and Golden Sickie."

Other Australian nuggets, with the place where found and the year (when recorded), are the following:

Daisy Hill (1855), at a depth of 3 1/2 feet, 715 ounces.

McIvor (1858), 638 ounces.

Blue Creek, Taradale, at a depth of 12 feet, 648 ounces.

McIvor (1855), 645 ounces.

Midas mine, Cheswick (1887), the Lady Loch, 617 ounces.

Yandoit, Castlemain (1860), value $10,000, 600 ounces.

Irniback (1889), 461 ounces.

Twisted Gum Tree, 408 ounces.

Yandoit, Castlemain (1860), at a depth of 16 feet, 384 ounces.

McIvor (1857), 328 ounces.

McCallum's Creek, 326 ounces 10 pennyweights.

Jones's Creek (1856), 281 ounces.

Daisy Hill (1856), 275 ounces 3 pennyweights 18 grains.

Brown's Diggings (1856), 263 ounces 8 pennyweights.

Mount Blackwood (1855), found on the surface of the ground, 240 ounces.

Yandoit (1860), about 20 feet deep, 240 ounces.

Mount Korong (1856), at a depth of 18 inches, value 5,250 dollars, 13 pennyweights.

Mount Korong (1854), 192 ounces.

Bryant's Ranges (1854), 183 ounces 8 pennyweights 12 grains.

Tarrangower (1855), 180 ounces.

Evans's Gully (1861), 1331 ounces.

Jones's Creek, Mount Moliagul (1855), 145 ounces 5 pennyweights.

Cheswick Creek (1860), 144 ounces.

Blackwood (1889), 142 ounces.

Jones's Creek, Mount Moliagul (1855), 140 ounces.

Rokewood, Break-Of-Day claim (1898), 138 ounces.

Jim Crow (1858), 130 ounces.

Mount Korong, at a depth of 41 feet, 132 ounces 9 pennyweights.

Blue Gully (1898), 127 ounces.

Mount Moliagul (1857), value $2,000, 104 ounces 8 pennyweights.

Bokewood, 54 ounces.

Five others were taken from Yandoit, the Lady Brassey from the Midas mine, Cheswick, and small nuggets to the amount of 80 ounces from Back Creek, Taradale, and many others have been found on various Australian gold fields, from 20 ounces to 200.

Eldorado County was the scene of the first gold discovery in California. A little nugget was found by James W. Marshall and Peter Winner in 1848. It was about the size of a Lima bean, but it excited the whole country, and began that great stream of emigration which flowed westward for several years thereafter. In the beginning, nuggets were found, and occasionally some twice that size. The largest nugget California ever yielded weighed 80 pounds. Two drunken fellows were crouching on a bank in the Grizzly mountains to Camp Corona in 1854, when, on the night of Nov. 17, a heavy rain fell. They sought shelter in a deserted hut, but before morning it carried them away, and one was drowned. On the following morning, the other, Oliver Martin, was beginning to dig a grave for his companion when he unearthed the nugget. He secured help, and carried it to Camp Corona, exhibited it in various parts of the country, from which he realized $10,000, and sold it for $22,700. Never after that did Martin touch liquor, for the fortunate escape and the fortunate find seemed to him an act of Providence. With his providential capital he began businesslike mining, and when he died, in New Orleans, he left more than a million dollars. Eldorado County yielded not only the first California nugget, but the first large one. The nugget weighed 121 ounces, and was dug from the bank of American river in 1850. Also in 1850 was found, in French Ravine, Calaveras County, a nugget of 203 ounces, worth $4,893. The same ravine, in the year following, yielded one worth $8,000. From the Sailor Diggings, Downieville, Eldorado County, also in 1851, a party of English sailors found a 31-pound nugget, and several others from 5 to 15 pounds, which they exhibited in England.

In 1852 a nugget of 45 pounds was found in Tuolumne County. A consumptive friend of the finder brought it East to exhibit it, and gave lectures on mining in California. For a time the miner failed to hear from him, when one day news came of his death, and that the nugget was deposited in a bank for the owner. It yielded $8,000 worth of gold.

In 1853 a nugget of 330 ounces, worth $5,625, was found at Columbus, Tuolumne County.

In 1854, on Sullivan's Creek, Eldorado County, one of 28 pounds, worth $7,168, was found.

In 1855, French Ravine yielded one worth $10,000.

In 1856, at Remington Hill, Nevada County, half of a worn bowlder of gold quartz was found, worth $4,672.50. Two years later a hired man engaged at the mine suddenly told his employers he was going to leave. One of them suspected that the other half of the bowlder had come to light, so he mounted his horse and went in pursuit, to find his surmise correct and return $4,430.75 the richer for his ride.

In 1838, a boy named Perkins, playing with a toy water wheel in a worked-over mountain stream in Calaveras County, came upon a nugget that yielded $1,300.

In 1859, near Butcher's Ranch, Placer County, a nugget of 20 pounds brought the finder $3,264. The same man in the same mine found, years later, one of 147 ounces, worth $2,832.
In 1861 California's second largest nugget was found (65 pounds). A half-breed Indian discovered it in Nevada County, lying in the bed of a stream in which he was washing his overalls. The mine owners sold it for $17,400, but it was later represented to them with $800 extra to the finder. In 1864, near Michigan Bluff, Placer County, a lump of pure gold of 226 ounces was found, of the value of $4,204.

In 1867, near Gibsonville, Calaveras County, a nugget of over 100 ounces, worth $1,700, was found. In 1868, on Table mountain, Tuolumne County, on his way to prospect a certain place, a colored man saw the corner of a nugget. He dug it up and buried it in another spot, which he marked. Then he proceeded to his destination, where he found such good diggings that he remained several weeks. When he returned for his nugget he found a company of Italian miners working on it. He explained the situation, and was permitted to take away his treasure, which weighed 35 pounds and brought him $7,000.

In 1869, in Sierra County, a nugget was found in the Monumental claim, and was widely exhibited. It weighed 132 pounds, and realized $9,800.

In 1870, in Shasta County, a Frenchman picked up a nugget worth $6,200.

In 1874, in Alpine County, a solid lump of gold was discovered. Henry E. Ellis went there to live in the mountains. Mrs. Ellis was driving home their cow, and picked up a stone to throw for the amusement of her dog. It was heavy, and she sold her find for $2,520. It was exhibited at the Nevada Fair.

In 1876, in Placer County, a white quartz boulder yielding $5,700 worth of gold was found.

In 1880, on Flat Creek, Shasta County, a nugget worth $520 was found.

Other California nuggets recorded, but without a date, are: From Calaveras County, one of 266 ounces, worth $3,700; at Eldorado, one away $2,600; at Mohawk valley, one of 420 ounces, worth $6,700; and at Ruby Belle camp, one worth $9,000. From Nevada County, near Dutch Flats, a nugget worth $12,300. From Eldorado County, at Gold Hill, one of 380 ounces, worth $6,500; near Knapp Ranch, one of 50 pounds, worth $5,500. At Sonora, the largest nugget ever found, was a nugget found by a Frenchman, whose lucky find made him insane the following day. The value of the nugget ($5,000) was sent across the ocean to his family.

Colorado's largest nugget, "Tom's Baby," was found in the Gold Flake mine, Summit County, July 23, 1877. It weighed 13 pounds. The only other nugget recorded was found in the crop of a turkey in Denver, in January, 1900, and was worth about a dollar.

North Carolina boasts the mining claim that has produced more nuggets than any other single claim in the world—the Reed mine, Cabarrus County. Two of these are 52, 9 pounds; 22, 17 pounds, 16 pounds, 13 pounds, 9 pounds, 9 pounds, two 8 pounds, 5 pounds, 3 pounds, two 2 pounds, and 1 pound ($600,000 worth in all), and a peck of golden beans and peas. A slave made the first discovery on this claim, and a slave also found the 17-pound and the 16-pound nuggets. A claim near Albemarle, Stanley County, is the next richest; nuggets of 101 pounds, 81 pounds, 15 pounds, 3 pounds, a dozen of 1 pound, and 2 quarts of smaller pieces are among the finds. A 4-pound and a 2-pound nugget were found at the Sam Christian mine, Montgomery County. A 10-pound nugget was found at the Crawford mine, Stanley County, in 1895, and also in the same year at the same mine one of 5 pounds and 5 ounces.

Nebraska has not been very rich in large nuggets; the largest was taken from the Osceola mine about 1850. Its weight was 24 pounds, its value $4,000. It was stolen, but the thief repented and returned the nugget, worth $2,000—all that was left. The same mine in 1899 yielded a nugget worth $2,100.

Montana sent to the Paris Exposition a collection of nuggets worth $12,000; the largest weighs 5 pounds, and is worth $1,050. Nearly 100 specimens were exhibited, including a beautiful one of 23 ounces, worth $2,250. Montana's largest nugget came from Snowshoe Gulch, Little Blackfoot river. It was found at a depth of 12 feet, and realized $3,356. Confederate Gulch, near Diamond, in 1859 was yielding nuggets worth $15 an ounce, and at the end of two years of free labor in mining, Arizona has not produced but few nuggets. In 1899 Papago Indians found one worth $900 in Horse-shoe Basin, Quijoroa mountains, 50 miles south of Tucson, and many smaller nuggets have been found.

New Mexico produced, several years ago, a nugget worth $1,300, and the old Spanish prospectors found large nuggets.

Mexico has been exhibiting in New York city the largest nugget of pure gold found in the past fifteen years. It was discovered in the San Mateo mountains of Chihuahua, weighs 468 ounces, and is worth $8,430. A poor peon found it in a mining company's property, and received $1,000 as a reward. A singular nugget, bought from an Indian, was presumably from Mexico. It was 1½ inch long by ¾ inch wide, 19 carats fine, of a beautiful color, and in shape a perfect miniature corn husk.

Though South America has undoubtedly produced a great quantity of nuggets in the past three hundred years, reliable information about them is very hard to obtain, except in a single instance. A nugget of 60 pounds was found at La Paz, Peru, in 1730.

The Klondike has produced no large nugget; the most important weighed but 34 ounces. This was found on Eldorado Creek, and was worth $583. The Yukon's largest nugget was found in 1889 on Eldorado Creek, and weighed 72 ounces; its value was $1,158.

The important British America nuggets are: One of 84 ounces, found on Spruce Creek in July, 1899, value $1,000; one of 52 ounces, found on Gilbert river, Quebec, in 1860; also on the same river one of 45 ounces; one of 29 ounces 12 pennyweights over an ounce. A nugget of 55, thick and flat, was found at Dext. Creek, worth $61. The 52-ounce nugget found on Gilbert river was discovered by a little girl, Cotilde Gilbert. Her father sent her to the field for a horse one Sunday morning to go to mass, and when she was crossing the ford in the stream she saw this nugget in the sand.

Of the South African nuggets we have the following records. At Pilgrim's Rest were found several 4-pound nuggets, and one of more than 7 pounds, which was an exact model of the human hand. It was exhibited at the Philadelphia Centennial Exposition. On Frazier's Hill nuggets from 2 to 5 pounds were found. Upper Pilgrim's Creek yielded nuggets from 4 to 5 pounds, which weighed $8,500 and $7,000. Siberia's largest nugget was the "Ural," found in the mountains of that name, worth $24,000. Three convicts found a still more valuable one ($30,000), and the Czar gave them their liberty, though he kept all the gold for himself. The "Tzar" was found in 1882 in the Tzar Alexander mine. Its value was $11,000. And it is recorded
that recently a nugget was found at Orsk, weighing 1,150 ounces, and another of similar size in the gold fields of Japan, no particulars are officially given.

We find information of two French nuggets found near the Ardèche. A shepherd picked up one to throw at some goats, and next day his brother found it, took it to a jeweler, and received 1,200 francs for it. One of 543 grams was turned up by a farmer's hoe about the year 1870. Smaller nuggets are said by the village priest to have been found frequently in the vicinity during the past sixty years.

See Famous Gold Nuggets of the World, by Thomas Jefferson Hurley, of the American Institute of Mining Engineers (New York, printed privately. Hint, hint! Don't we need information for this in the article.

**GREAT BRITAIN AND IRELAND,** a monarchy in western Europe, formed by the union of the Kingdom of England and the Principality of Wales with the Kingdom of Scotland, constituting together the Kingdom of Great Britain, and afterwards with the whole forming the United Kingdom of Great Britain and Ireland, which holds supreme dominion over the Empire of India and colonies and dependencies of various kinds—self-governing colonies, colonies governed and administered partly or wholly by the Crown, and protectorates under nominal dependence. On the death of the last sovereign, the United Kingdom, the British Empire. The reigning sovereign in 1900 was the Queen-Empress Victoria, born May 24, 1819, died Jan. 22, 1901, the daughter of Edward, Duke of Kent, the fourth son of George III. The successor to the throne is Albert Edward, Prince of Wales, born Nov. 9, 1841, eldest son of Queen Victoria and his consort Albert, Duke of Saxe-Coberg-Gotha, George, Duke of York, born June 3, 1861, the only living son of the Prince of Wales and Princess Alexandra of Denmark, is next in succession, and after him his eldest son, Albert Edward, born June 23, 1894, issue of his marriage with Victória May, daughter of the Duke of Teck.

The representative for the United Kingdom and for all parts of the British Empire, except so far as it is delegated to local legislative authorities, is vested in the British Parliament, consisting of a House of Lords and a House of Commons. Members of the House of Lords are princes of the blood royal; spiritual lords, which are the murdered bishops of ancient English sees; hereditary peers of England, of Great Britain, and of the United Kingdom; representative peers of Scotland, elected by their fellows for the duration of Parliament, and of Ireland, elected for life; and life peers and law lords, created by the sovereign by advice of the Cabinet. The number of peers is 564. The House of Commons contains 670 members, of whom 253 represent the county constituencies, 237 the boroughs, and 5 the universities of England; 39 the county constituencies, 31 the boroughs, and 2 the universities of Scotland; and 85 the county constituencies, 16 the boroughs, and 2 the universities of Ireland. The franchise is possessed by all male householders and lodgers of full age, about 1 in 6 of the population; the number of electors registered in 1890 was 6,600,253, of whom 5,208,137 were in England, 671,128 in Scotland, and 721,018 in Ireland. The duration of Parliament, unless it is previously dissolved, is five years. Upon the death of the sovereign the Cabinet, representing the majority for the time being in the House of Commons, exercises in fact the executive authority in the United Kingdom and the British Empire that is nominally vested in the Crown. The Prime Minister exercises his emoluments and dispenses the powers of the Crown; he initiates the policy of the Government or approves the measures suggested by the other ministers in their several departments, and when his policy or his acts encounter the displeasure of Parliament, manifested by an adverse vote on a Cabinet question or by a direct vote of censure, he either resigns forthwith, in company with the rest of the Cabinet, or appeals to the country by dissolving Parliament and ordering new elections. When a Cabinet resigns the retiring Prime Minister advises the Queen as to the selection of the statesman most competent to form a new Government, usually the leader of the Opposition. If the Queen accepts his advice, he forms a new Cabinet;

Cabinet formed on June 25, 1895, by Lord Salisbury, consisted in the beginning of 1900 of the following ministers: Prime Minister and Secretary of State for Foreign Affairs, the Marquis of Salisbury; Lord President of the Council, the Duke of Devonshire; Lord High Chancellor, the Earl of Eldon; Lord Privy Seal, Visecount Cross, formerly Sir Richard Cross; Chancellor of the Duchy of Lancaster, Lord James of Hereford, formerly Sir Henry James; First Lord of the Treasury, Arthur J. Balfour; Secretary of State for the Home Department, Sir M. White Ridley; Chancellor of the Exchequer, Sir Michael Woodforde; Secretary of State for the Colonies, Joseph Chamberlain; Secretary of State for War, the Marquis of Lansdowne; Secretary of State for India, Lord George Hamilton; First Lord of the Admiralty, G. J. Goschen; President of the Local Government Board, Henry Chaplin; President of the Board of Trade, C. T. Ritchie; Secretary of State for Ireland, Earl Cadogan; Lord Chancellor of Ireland, Lord Milner, formerly Edward Gibson; Secretary for Scotland, Lord Balfour of Burleigh; First Commissioner of Works, A. Akers-Douglas; President of the Board of Agriculture, W. H. Long.

**Area and Population.**—The area of the United Kingdom is 120,979 square miles, England having an area of 57,292, Wales 8,373, Scotland 32,583, the Isle of Man 227, and the Channel Islands 75 square miles. The estimated population of England and Wales on June 30, 1899, was 31,742,588; of Scotland, 4,281,850; of Ireland, 4,535,516; total United Kingdom, 40,559,954. The metropolis of London in 1899 was computed to have 6,528,334, of whom 4,546,732 lived in the limits, by registration London and 1,981,082 in the outer ring. Of the large towns of England and Wales Liverpool contained an estimated population of 634,212 in the middle of 1899; Manchester, 543,902; Birmingham, 514,935; Leeds, 423,859; Sheffield, 361,169; Bristol, 320,911; Nottingham, 239,319; Liverpool, 238,861; Newcastle, 228,625; Salford, 218,214; Leicester, 213,831; Portsmouth, 190,741; Cardiff, 185,826; Bolton, 162,221; Oldham, 150,772. Glasgow in Scotland, had an estimated population of 733,903; Edinburgh, 298,927; Dundee, 166,072. In Ireland the population of Dublin within the metropolitan police district was 361,891 at the census of 1891; of Belfast, 255,050. The number of marriages in England in 1899 was 254,819; of births, 912,873; of deaths, 552,040; excess of births, 370,833. The number of marriages in Scotland was 32,996; of births, 130,879; of deaths, 78,406; excess of births, 52,473. The number of marriages in Ireland was 12,649; of births, 34,260; of deaths, 4,657; excess of births, 29,603. The number of emigrants, natives and foreigners, that sailed from British ports in 1899 was 241,105, of whom 159,201 went to the
States, 33,277 to British North America, and 12,239 to Australasia. Of the total for 1898 of 203,171 emigrants, 119,739 were males and 83,432 females. The number of British and Irish emigrants in 1899 was 146,772, an increase of 61,435 over the preceding year. Of the total, 87,703 were English, a decrease of 2,976; 10,132 were Scotch, an increase of 582; and 42,923 were Irish, an increase of 8,557.

The number of immigrants, natives and foreigners, in 1898, was 139,346, reducing the total net emigration to 63,825; the immigrants of British and Irish origin therefore numbered 91,248, reducing the emigration of the native population to 49,996. The number of Irish who emigrated from Ireland in 1898 was 32,241, making a total of 3,754,899 since 1831. The total emigration of natives of Great Britain and Ireland from 1815 to 1898 was 14,920,263. From 1853 to 1898 the emigration of the native population was 8,549,260, of whom 5,690,172 settled in the United States, 885,739 in British North America, 1,410,068 in Australia and New Zealand, and 563,590 in other countries. The number of elementary day schools in England and Wales, both voluntary and board schools, was 19,937, with 5,576,866 children registered and 4,554,165 in average attendance. Of these schools, an average attendance of 2,087,519 pupils; 11,815 National Society schools, with 1,883,263 pupils; 457 Wesleyan schools, with 124,971 pupils; 1,033 Roman Catholic schools, with 246,128 pupils; and 1,122 British, undenominational, and other schools, with 230,355 pupils. The total number of clerical subscribers of income in Scotland was 71,155; and there were 3,067 elementary schools inspected in 1898, with 717,747 children on the registers and 605,776 in average attendance. The total number of schools was 3,113, of which 2,757 were public schools, with an average attendance of 553,636. The number of training colleges in England was 8, with 1,055 students. The number of training colleges in Ireland was 2, with 209 students. From the north of Ireland there were 8,651, with 984,467 children on the rolls and 518,799 in average attendance. There were 8,604 schools altogether, of which 3,925 were Roman Catholic and 1,401 Protestant, and 3,275 mixed Roman Catholic and Protestant. The elementary schools of the United Kingdom are supported by school fees, local rates, voluntary subscriptions, income in Scotland, and parliamentary grants. The parliamentary grants in England in 1899 amounted to £8,021,391 and in Scotland to £1,177,727, besides £590,464 for various British schools; in Ireland grants and rates together were £1,321,777. The universities and colleges of England, Scotland, and Ireland in 1899 had 12,928 college teachers, and the number of junior instructors and 25,891 students. The University of Oxford, consisting of 23 colleges, had 95 teachers and 3,446 students; Cambridge University, with 19 colleges, 116 teachers, and 3,016 students; Durham University, a single college, 20 teachers and 170 students; the University of Edinburgh, 103 theological students; the University of Glasgow, 102 teachers and 2,010 students; the University of Aberdeen, 58 teachers and 765 students; the University of St. Andrews, 59 teachers and 261 students; Dublin University, 54 teachers and 1,100 students; University College, London, 73 teachers and 1,100 students; King’s College, London, 130 teachers and 1,455 students; Queen’s College, Belfast, 26 teachers and 311 students; Queen’s College, Cork, 23 teachers and 188 students; Queen’s College, Galway, 23 teachers and 91 students. Other colleges are at Aberystwyth, Bangor, Manchester, Newcastle, Nottingham, Sheffield, Birmingham, Leeds, Bristol, Cardiff, Lampeter, and Liverpool.

Finances.—The revenue for the year ending March 31, 1899, was estimated in the budget at £107,110,000, and the expenditure, including supplementary estimates, at £108,813,036. The actual revenue was £118,833,300, and the actual expenditure £118,150,236, leaving a surplus of £151,557. Taxation by customs, excise, and estate duties, stamps, the land tax, the house duty, and the income and property tax produced £90,455,553, while the nontax revenue, derived from the postal and telegraph services, Crown lands, interest on Suez Canal shares, and miscellaneous sources, was £19,114,950, making the total net receipts £109,000,532. The net revenue from customs was £21,558,227, of which £10,993,727 were collected on tobacco imports, £4,023,504 on tea, £2,124,728 on rum, £1,530,000 on brandy, £761,426 on other spirits, £1,399,099 on wine, £173,590 on coffee, £196,989 on raisins, £120,695 on dried currants, and £114,715 on other currants. The number of such receipts were £220,510,093, namely, £17,109,274 from spirits, £11,038,201 from beer, £246,915 from license duties, £308,975 from railroads, and £7,574 from other sources. From death duties, etc., the net receipts were £11,480,818 in amount, £7,179,945 coming from the estate duty, £49,308 from the duty for that year on property of persons dying before Aug. 2, 1894, £57,617 from the probate duty on similar property, £2,873,001 from the legacy duty, £751,227 from the succession duty, and £41,432 from the corporation duty. The yield of the land tax was £506,460 net; of the house duty, £576,578. Stamps produced a net revenue of £7,704,921, of which £6,498 came from deeds, £1,381,835 from receipts, £691,211 from bills of exchange, £266,404 from patent medicines, £109,277 from licenses, etc., £230,492 from the duty on companies’ capital, £230,718 from insurance, £180,789 from bonds to bearer, and £363,717 from other sources. The income and property tax collected amounted to £185,042,311. Of the net revenue yielded £12,841,399, the telegraph service £3,204,396, Crown lands £49,735, interest on Suez Canal shares purchased from the Khedive £713,554, and the mint, the Bank of England, fee stamps, etc., £1,903,896. The national expenditure is divided into the consolidated fund charges, amounting for the year ending March 31, 1595, to £27,044,236; the army and navy supply services, amounting to £44,068,000; and the civil and miscellaneous services, amounting to £37,038,000, including the expense of collecting the revenue. Of the consolidated fund charges £23,000,000 were for the national debt, £405,773 for the civil list, £3,508 for the officers of revenue, and £74,910 for salaries, £517,000 for courts of justice, £432,382 for payments to local taxation accounts, and £305,330 for miscellaneous payments. The cost of the army was £20,000,000, including £300 for ordnance factories; cost of the navy, £22,925,000; civil services, £22,925,000; customs and inland revenue expenses, £62,100,000; post office expenses, £8,030,000; expense of telegraph service, £3,347,000; packet service, £820,000; total supply services, £81,106,000.

Parliament summoned to a special session in October, 1899, authorized the issue of £10,000,000 of treasury bills toward the expenses of the war in South Africa. Before the close of the financial

AND IRELAND.

271

year £13,000,000 more were voted. In the budget for 1901 the Chancellor of the Exchequer estimated at £38,000,000 the necessary expenses of the war for the year. The revenue for 1900 was estimated in the budget at £111,157,000, being £2,821,000 more than the revenue for the previous year. In presenting the budget for the following year early in March, 1900, Sir Michael Hicks-Beach estimated it at £116,040,000. The budget estimate of expenditures for 1900 was £110,927,000, to which £745,000 of supplementary estimates were added and from which £1,132,000 were deducted on account of savings, making the exchequer expenditure for the year to be £109,152,000, and allowing a small surplus of £5,500,000 if the cost of the war were excluded; but, adding £23,000,000 of supplementary army estimates for the war, and £270,000 for interest on the treasury bills authorized in the autumn session, the total exchequer expenditure was expected to be £133,810,000, showing a deficit of £1,770,000, which was temporarily provided for by the issue of treasury bills. The receipts from beer, spirits, and tea in 1899 showed a large increase over the preceding year, partly owing to withdrawals from bond towards the close of the financial year in anticipation of higher duties. Receipts from tobacco fell off, and from wine the receipts were decreased, though the increase was considerable, owing to the increase in the duties. The death duties produced £13,300,000, not counting £4,171,000 allotted to the local tax- tion fund. From the estates of millionaires £2,271,000 were received, and of this £900,000 came from the estate of an American living mod- erna fund. The post office receipts, principally from activity on the stock exchange, produced £350,000 more than the estimate. The post office receipts and other nontax revenue showed an increase of £573,000 over the previous year. Adding to the expenditure for 1900 as provisionally estimated in the early budget the sum of £6,500,000 paid to the local taxation account, being £75,000 more than in 1899, and further the expenditure on capital account of £4,817,000, of which £1,861,000 came from the surplus of previous years, this expenditure being for barracks, telephones, the Uganda Railroad, naval and military works, and the acquisition of the territory of the River Congo, the government expenditure for the year ending March 31, 1900, was expected to reach £148,257,000, compared with £121,224,000 in the foregoing year.

The amount of the funded debt on March 31, 1899, was £583,186,305, the estimated capital value of terminable annuities was £36,244,380, and the unfunded debt was £5,153,000, making a total of £57,584,380. The annuities, being chiefly from consols, were £312,441 borrowed under the Russian Dutch loan act of 1891, £187,893 under the imperial defense act of 1888, £2,839,029 under the barracks act of 1890, £1,222,276 under the telegraph act of 1892, £1,000,722 under the Uganda Railway act of 1896, £453,351 under the act of 1893 for the acquisition of sites for public offices, £501,638 under the Whitehall public office act of 1897, these items making a sum of £7,478,380, which increases the gross liabilities to £63,340,965, against which may be offset the sale of the Suez Canal shares, £27,457,100 at the market rate, £703,901 of other assets, and £8,910,175 of exchequer balances in books of account. On March 31, 1900, the funded debt was reduced by £35,075,000 and the capital value of the terminable annuities was increased by £21,242,000 as the result of the operation of provisions in the finance act of 1899 authorizing the cancellation of £28,000,000 of consols by the issue of terminable annuities. By the new sinking fund of 1899 the sum of £1,339,000 was redeemed, but the issue of £5,000,000 of treasury bills increased the debt by £1,027,000, without taking account of the deficit of £9,770,000 unprovided for at the end of the year.

The expenditure for 1901 was estimated at £26,000,000 for debt charges, £27,523,000 for the navy, £61,499,000 for the army, £22,339,000 for the civil services, and £16,221,000 for the revenue departments, total, £154,082,000. On the basis of the existing taxation the revenue was estimated at £312,900,000, or £3,000,000 from excise, £13,000,000 from death duties, £8,400,000 from stamps, £500,000 from the land tax, £1,650,000 from the house duty, £18,800,000 from the income tax, £13,500,000 from the post office, £5,500,000 from telegraphs, £450,000 from Crown lands, £850,000 from Suez Canal shares, etc., and £1,500,000 from miscellaneous sources, total, £116,000,000. This left an estimated deficit of £37,182,000 for the year. The war estimates, including £250,000 interest on the war debt, amounted to £38,047,000, to which the sum of £5,000,000 was added as a provision for military and naval contingencies, making with the deficit of £17,000,000 for 1899 due to the war the total sum of £29,000,000 as the estimated cost of the war. To reduce the deficit Sir Michael Hicks-Beach proposed to raise £12,317,000 by increased taxation, of which £6,500,000 are from an increase of the income tax from 6d. to ls. in the pound, £150,000 from a stamp duty of 1s. on contract notes in all the produce exchanges, the same as is increased on 1s. on mail order abroad, an increase of 2d. on the stock exchange, £1,732,000 from an increase in the beer duty of 1s. a barrel of 36 gal- lions, £1,915,000 from an increase in the duty on spirits of 6d. a gallon, £1,100,000 from an addition of 4d. a pound to the tobacco duty and 6d. a pound to the duty on foreign cigars, and £1,500,000 from an increase in the tea duty from 4d. to 6d. a pound. This reduces the deficit anticipated for 1901 to £24,868,000, and a suspension of the sinking fund reduces it by £4,410,000 more to £20,225,000. Adding the deficit of £17,770,000 for 1900 and £5,000,000 for military and naval contingencies, the total final deficit would be £24,925,000. To meet this the Chancellor of the Exchequer proposed to issue £13,000,000 more in new bills issued in October, 1899, and issue £5,000,000 more, and to issue a new loan for about £30,000,000, not consols but bonds issued for a term not exceeding ten years, to be repaid as far as possible with what can be extracted from the Transvaal. The plan of taxing produce contracts was given up. Besides the increase in the beer duty from 5s. to 5s. 6d. a pound, and in the duty on cut plug from 3s. 10d. to 4s. 4d., which was finally voted, the general duty on manufactured tobacco was raised from 3s. 5d. to 3s. 10d. a pound.

When the financial year came to an end the actual deficit for 1900 was found to be £13,882. The revised estimate calculated the deficit for 1901 at £22,541,000, but at the end of July it was calculated at £35,850,000. The Chancellor obtained authority from Parliament to raise £35,000,000 by the creation of bonds redeemable in ten years, or by the issue of treasury bills at his option. He was authorized to borrow £20,000,000 more, and obtained sanction in August for a fresh loan of £13,000,000, giving a margin of £5,818,000 over the total deficit of £49,732,000 as estimated at that time. The total estimated cost of the South African war then stood at £30,325,000, in-

army

manry, and 264,833 volunteers.

The

original estimate for the year ending March
1900, provided for 184,853 men of all ranks
on the British establishment. In consequence of
the war in South Africa the whole of the army
reserve was called out, discharges and transfers
to the reserve were suspended, a number of troops
were temporarily transferred from the Indian to
the British establishment, and various colonial and
other forces were raised for service in South Africa
and the augmentation of the army at home. The
supplementary estimate of Oct. 17, 1899, provided
for 35,000 men, and the supplementary estimate
presented on Feb. 9, 1900, for 120,000 more, making
the total number 339,853 officers and men.
On
Jan. 1, 1900, the number of men of all ranks serving with the colors at home and abroad was 301,544, compared with 232,330 on Jan. 1, 1899. the
31,

Household cavalry having been increased from
1,298 to 1,327, the cavalry of the line from 12,10!)
to 18,890, the horse and field artillery from 10, 19(5
to 18,803, the mounted and garrison artillery from
15,722 to 18,119, the Royal Engineers from 7,637
to 10,210, the foot guards from 7.249 to 12,008.
the infantry from 87,095 to 133,743, the colonial
corps from 7,242 to 8,778, and the army service
corps from 9,266 to 13,085, making a total at home
and in the colonies 234,963, against 157,863 at the
beginning of 1899, while the British army in India
was reduced in number from 74,467 to 66,581.
The decrease of the Indian army was due to the
fact that 4 cavalry regiments, 2 batteries of horse
and 3 of field artillery, 4 infantry battalions, and 3
companies of mounted infantry had been withdrawn for the war in Africa. These numbers do
not include the militia, about 100.000 men, all
of whom had been or were to be embodied, or
imperial yeomanry, about 100,000 men, or the enlisted British volunteers, numbering about 9.000
exclusive of the waiting companies, or the large
force of colonial volunteer troops, estimated at
The estimates for the year ending
35,000 men.
March 31, 1901, provided for 430,000 men in the
British army.
Pay and subsistence had to be
provided for as many as 500,000 troops, and the
estimates reached the unprecedented total of
This was based on the assumption
61,499,400.
that the full field force would have to be maintained in South Africa only till Sept. 30, 1900.
and would then be cut down to a garrison of
about 30,000 men. A regiment of Irish guards
was raised after the Queen's visit to Ireland in
the summer of 1900. A permanent addition has
been made to the army of 7 batteries of horse
artillery and 36 batteries of field artillery, so as
to provide the artillery for 2 more army corps;
also of 3 howitzer batteries for each of the 12 army
In time of -peace the new horse and field
corps.
batteries are to be retained on a reduced establishment. The formation of new depots for the field
artillery enables reservists of that arm to rejoin
and be equipped like infantry reservists. Additions of 2,038 men of all ranks were made to the
Royal Engineers. This makes the number of bat-

home equal to the number stationed
abroad, and to meet the need for an increased
force to be maintained abroad 12 new line battalions will be raised and attached as third and
fourth battalions to existing regiments. An endeavor has Been made to add to the number of
men engaged for three years' service with the
colors in the battalions serving at home. An addition of 29 companies, numbering 2.220 men of
all ranks, has been made to the army service corps.
one of 8 companies, numbering 4.~>0 men of all
ranks, to the ordnance corps, and one of 260 men
of all ranks to the medical corps.
Regimental
transport has been provided for the militia, yeotalions at


maury, and volunteers, and the whole of the volunteer artillery will be rearmed with 4.7-inch siege guns or with 15-pounder field guns, these latter to be obtained from the Royal Artillery as fast as it can be supplied with modern quick-firing models. 12,000 were serving abroad in 1890. The regular army of 92,000 men remaining at home was useless for the field, consisting in great part of young men under the age of twenty, not fit to send out of the country until they have attained the necessary maturity, vigor, training, and discipline. The effective strength of the British garrisons on the coast of Africa, 153 in Cyprus, 77 in St. Helena, and 4,363 in Barbados, besides the colonial corps, viz., 725 royal Malta artillery, 309 native artillery for Sierra Leone and the West Indies, 130 submarine miners in the East Indies and 141 in the West Indies, 3,334 men in the West Indian regiments, 1,014 in the Hong-Kong regiment, 1,083 in the Chinese regiment, 1,976 in the West African regiment, and 1,100 in the British Central African regiment; total, 9,034 native and colonial troops.

The Navy.—The effective strength of the British navy in the beginning of 1900, excluding obsolete vessels and such as are only suitable for coast defense, was 20 first-class, 24 second-class, and 11 third-class battle ships, 9 second-class armed cruisers, 21 first-class, 25 second-class, and 34 third-class protected cruisers, 33 torpedo gunboats, 80 destroyers, 2 torpedo ships, and 11 first-class and 71 second-class torpedo boats. There were 10 first-class battle ships launched and being fitted for service and 6 more building or projected, 2 first-class armored cruisers already launched and 2 more to be launched, 1 second-class armored cruiser launched and 8 more in hand, and 16 destroyers being fitted and 12 under way. The obsolete and coast-defense armor clads numbered 21, obsolete and small cruisers 28, third-class torpedo boats 95, and of vessels for miscellaneous services there were 89, besides 2 not yet completed and 4 built but not authorized. The unfinished vessels and vessels awaiting armament were 12 battle boats, 16 first-class, 6 second-class, and 10 third-class cruisers, 6 sloop and 4 twin-screw gunboats, 41 destroyers, and 1 royal yacht. The number of vessels in commission on Jan. 1, 1900, was 174, exclusive of coast guards, vessels in port service, depot ships, guntubas, and all small craft, and of these vessels these were stationed as follows: Mediterranean and Red Sea, 43; China, 30; Cape of Good Hope and West Africa, 10; North America and West Indies, 15; Channel squadron, 14; Australia, 12; East Indies, 10; Pacific, 8; southeast coast of America, 4; training squadron, 4; surveying, 7; or in reserve, 5.

The type of battle ship which was adopted in connection with the naval defense act of 1889 was that of the Royal Sovereign, launched in 1891, which was followed in the Empress of India, Ramillies, Repulse, Resolution, Revenge, Royal Oak, and Hood, all sister ships, having a displacement of 14,150 tons, 18 inches of armor over the vitals, 13,000 horse power, 174 knots speed, and an armament of 4 13.5-inch guns in barbettes and 10 6-inch, 16 6-pounder, and 12 3-pounder quick-firing. The Hood is an exception, having her heavy guns mounted in turrets. The Centurion and Barfleur, of 10,500 tons, with 12 inches of armor, 13,000 horse power, a 4 13.5-inch armament and an armament of 4 29-ton guns in barbettes and 10 4.7-inch, 8 6-pounder, and 12 3-pounder quick-firing, are lighter ships of the same type, which was an improvement on the Admiral class, with better protection, heavier freeboard, and greater weight of fire. The building of 9 first-class, 29 second-class, and 4 third-class warships and 18 torpedo gunboats completed the programme of 1889. The Majestic type of battle ship was adopted in the programme of 1892, and on the model of the Majestic, launched in 1895, were constructed the Magnificent, Victory, Prince George, Mars, Jupiter, Illustrious, Hannibal, and Caesar, of 14,900 tons, 14-inch armor, 12,000 horse power, a speed of 175 knots, and an armament of 4 12-inch guns that can be loaded by hand and are protected by armored shields revolving with the turntables, the guns being mounted in pairs in armored barbettes, 12 6-inch quick-firing guns well protected, 16 12-pounder quick-firing guns, and 12 4-inch guns and 4 submerged torpedo tubes and 1 above water, a length of 390 feet, 78 feet extreme breadth, and a mean draught of 28 feet. The Renown, of 12,350 tons, is an improved Centurion, having a better protected and more powerful quick-firing armament, consisting of 10 6-inch, 14 12-pounder, and 12 3-pounder guns; and 18 knots with engines of 10,000 horse power. The Canopus, launched in 1897 and followed by the Ocean, Goliath, and Albion, is a type designed for speed and quick maneuvering, having a displacement of 12,900 tons, with 12 inches of extreme armor and a belt of 6 inches, instead of 9 inches in the Majestic, engines of 18,000 horse power, making 18 knots, and having a more powerful secondary armament, consisting of 12 6-inch Vickers guns and 16 3-inch and 6 6-pounder quick-firing. Of this type are the London, Implacable, Bulwark, and Venerable, launched in 1899, having 18 3-inch guns and 8 3-pounders in their quick-firing battery and a 9-inch Krupp steel belt extending to within a few feet of the bow. The Duncan and Cornwallis have an improved armament. The Russell, Exmouth, Montagu, and Albemarle, of 14,000 tons, are a development of the London class, in which a lighter belt is used, one of 7 inches, not merely for greater speed but for less draught as they sail through the Suez Canal. Their extreme armor is 11 inches; their armament consists of 2 pairs of 12-inch guns in barbettes, 12 6-inch quick-firing, and 12 of the 3-inch or 12-pounders and 6 3-pounders; their engines, of 18,000 horse power, are expected to give a speed of 19 knots. All the later battle ships, such as the Canopus on, have 6-inch armor fitted with Belleville water-tube boilers. The protected cruisers Powerful and Venerable, of 14,200 tons, armed with 2 9.2-inch, 12 6-inch quick-firing, 18 12-pounders, and 12 3-pounders, have engines of 25,000 horse power and can easily steam 22 knots with forced draught. The Dido, Doris, and Isis, launched in 1896, displacing 5,600 tons, carry
5 6-inch and 4 4.7-inch quick fireers, besides smaller ones, and with 9,600 horse power can steam 191 knots. The Furious, Gladiator, Vindictive, and Arrogant, of 5,750 tons, carry 24 6.1-inch, 4 8-inch, 9-pounder, and 8 small quick-firing guns, and have engines of 10,000 horse power giving the same speed. The Hermes, Hyaenica, and Highflyer, of 5,600 tons, are armed with 11 6-inch and 15 small quick fireers, and can make 194 knots with engines of 9,600 horse power. The Diadem, launched in 1898 and followed by the Andromeda, the Ariadne, Spartiate, Argonaut, Amphitrite, and Ariadne, is the latest development of the protected cruiser, displacing 11,000 tons, carrying 16 6-inch quick fireers, 14 12-pounders, and 20 small ones, and steaming 204 knots, with Belleville engines of 16,500 horse power. All these later vessels have a 4-inch armor plating over the main armament, the pivot, and bridge parts. Their strong armament is well protected, their freeboard is high, the bow and stern guns are placed well above water, and the numerous water-tight compartments make it impossible to sink them. The armored cruisers of the new programme of 1897 were the Cressy, Hogue, Aboukir, Sattara, and Benbecula, all 12,000 tons, carrying 2 9.2-inch, 12 6-inch quick-firing, and 14 12-pounder quick-firing guns, and having engines of 21,000 horse power capable of making 21 knots with natural draught, their length being 440 feet, beam 694 feet, and draught of water 26 feet 3 inches. Their armor-piercing guns of a muzzle velocity capable of striking in a direct line 140,000 yards, consist of a pivot and belt, and a belt and steam turbine driving parts. The supplementary programme of 1898 called for 4 armored cruisers of 9,800 tons—the Kent, Monmouth, Bedford, and Essex—carrying 14 6-inch quick fireers and a large number of small ones, and having engines of 22,000 horse power, capable of making 21 knots with natural draught. The latest type of armored cruiser in the service is represented by the Drake, King Alfred, Lavia- than, and Good Hope, of 14,100 tons, armed with 9.2-inch bow and stern chasers of the new kind and 16 6-inch and 14 12-pounder quick fireers, and fitted with engines of 30,000 horse power to produce a speed of 25 knots without forced draught. Of the latest destroyers 3 have made 32 or 33 knots with 24-knot range. The turbine driving of the cruiser and the steam turbine wheel has been tried with 1 in order to attain a higher speed.

The navy estimates for 1901 amounted to £277,322,600, an increase of £29,810, over those of the preceding year, the growth in five years having been nearly 50 per cent. They do not include £2,000,000 expended under the new work act. Subsequently a supplementary estimate of £1,260,300 increased the expenditure for the year to £22,791,000. The supplementary estimate was to provide additional reserves of guns, gun mountings, ammunition, and torpedoes, to replace old machine guns with Maximus, to purchase 5 destroyers, to construct a naval shipyard, and to build a 400-ton cruiser. Commerce and Production.—The area sown to grain in Great Britain in 1890 was 7,406,857 and in Ireland 1,371,719 acres, to green crops in Great Britain 3,149,103 and in Ireland 1,101,991 acres, to flax in Great Britain 476 and in Ireland 24,856 acres, to hops in Great Britain 51,843 acres, small fruits in Great Britain 71,526 acres, clover and hay in Great Britain 4,807,951 and in Ireland 1,251,262, bare fallow in Great Britain 338,574 and in Ireland 13,018 acres, pasture in Great Britain 16,630,747 and in Ireland 11,442,318 acres. There were in Great Britain 2,000,981 acres in various stages of permanent Herrings was 1,892,108, barley, 2,209,157, oats, 240,656 in beans, 162,751 in peas, 34,682 in turnips, 1,740,983 in turnips. In Ireland 51,859 acres were in wheat, 169,600 in barley, 1,135,675 in oats, 1,988 in beans, 426 in peas, 602,898 in potatoes, and 301,455 in turnips. The crops of grain obtained in Great Britain were 65,329,000 bushels of wheat, 6,052,000 of barley, 118,912,000 of oats, 7,200,000 of beans, 4,549,000 of peas, 2,833,000 of potatoes, and 21,307,000 of turnips; in Ireland, 1,636,000 bushels of wheat, 6,079,000 of barley, 53,957,000 of oats, 6,371,000 of beans, 9,000 of peas, 2,942,000 of potatoes, and 5,163,000 of turnips. The yield of wheat was 34.74 bushels an acre in Great Britain and 35.16 bushels in Ireland; of barley, 35.75 bushels in Great Britain and 42.23 bushels in Ireland; of oats, 40.76 bushels in Great Britain and 46.94 bushels in Ireland. In 1890 only 32.75 bushels an acre of wheat was grown in Great Britain. The live stock of Great Britain in 1899 consisted of 1,516,630 horses, 6,795,720 cattle, 72,287,574 sheep, and 2,632,813 pigs; in Ireland there were 501,982 horses, 4,507,275 cattle, 4,364,076 sheep, and 1,383,311 pigs. Of 56,401,514 acres, the total area of Great Britain, 31,625,623 acres were under farm crops in 1900, and of the rest 4,473,000 acres were permanent meadow and 12,355,936 acres permanent pasture land, so that 28,910,944 acres, little over half the area of the island, were utilized to provide food for the population. The acreage under wheat declined to 1,545,042 acres; that under barley increased to 1,900,295 acres; that under peas, 3,926,089 acres; that under potatoes to 561,301 acres. Clover and rotation grasses occupied 2,557,377 acres. The number of cattle in 1900 was 6,805,170; of sheep, 26,592,226; of pigs, 2,381,032. The quantity of fish landed on the coasts of the British Islands during 1899 was 730,315 tons, valued at £23,545,570, besides £21,320,802 worth of shellfishes. The value of 61,922 tons of wool by railroad in 1898 was £486,784 tons. The imports of fish were 129,309 tons, valued at £23,913,764. The value of £2,586,732 was exported, including herrings worth £1,896,340. The quantity of iron ore raised in 1898 was 14,176,938, valued at £5,406,028, containing 4,539,598 tons of iron, worth £17,740,057. The value of copper ore was £2,944,043, valued at 21,108,650. The value of lead ore was 32,983, valued at £267,492, containing 25,355 tons of metal, of the value of £332,995, the quantity of copper ore was 0,001 tons, valued at £25,840, containing 640 tons of copper, of the value of £35,259; the quantity of copper precipitated was 150 tons, valued at £23,105, the quantity of zinc ore was 2,552,550, valued at £11,718,754, containing 8,574 tons of zinc, valued at £179,482, the quantity of bog iron ore was 5,418 tons, value £1,354; the quantity of aluminum clay and shale was 26,610 tons, worth £4,600, containing 310 tons of metal, worth £43,580; the quantity of sodium obtained was 55 tons, of the value £512; the quantity of silver extracted was 211,403 ounces, worth £283,728; the quantity of gold ore was 705 tons, valued at £1,158, containing 395 ounces worth £1,290 worth of gold; total value of ores, £4,119,204; of metals, £13,717,312. The production of coal was 202,645,916 tons, worth £264,197,382; of clays, 14,738,547 tons, worth £1,616,559; of sandstone, 5,242,115 tons, worth £1,652,786; of slate, 668,859 tons, worth £1,000,223; of limestone, 19,320,578 tons, worth £2,256,154; of salt, 1,878,665 tons, worth £200,115; of oil shale, 2,137,993 tons, worth £334,498; of granite, 1,575,871 tons, worth £376,457; of basalt, 2,962,491 tons, worth £46,543; of chalk, 4,101,816 tons, worth £254,315; and sand, 1,625,600 tons, worth £135,538; of gypsum, 196,628 tons, worth £7,316; of arsenic and iron...
arsenic pyrites, 15,318 tons, worth £61,931; of barytes, 22,225 tons, worth £23,253; of other, 19,827 tons, worth £13,603; of other nonmetalliferous minerals, 98,100 tons, worth £38,446; total value, £73,295,859, or including ores £77,415,063. There was a total quantity of 4,935,700 tons of steel, or 7.29 per cent. of the total value of the United Kingdom in 1898 was £67,500,000; of woolen goods, £21,500,000; of linen goods, £5,600,000; total, £94,600,000.

The total value of imports into the United Kingdom in 1898 was £485,075,514; exports of British produce, £264,600,347; exports of foreign and colonial produce, £56,019,549; total imports and exports, £514,557,760. The per capita value of the commerce passed £19, which was less than in 1889, 1890, and 1891, but more considerably than in the intervening years. The share of England and Wales in the total trade of 1898 was 87 per cent. of the total, 7.5 per cent. of Scotland, 1.5 per cent. The total value of imports in 1898 was £470,378,583; of exports of British produce, £233,359,240; of exports of colonial and foreign produce, £60,654,748; total trade, £764,329,571. The imports from British possessions and the exports to them of British produce and manufactures in 1898 are given in the following table:

The imports of live animals for food were £10,358,566 in value in 1898 and £9,511,012 in 1899; articles of food and drink free of duty, £166,013,341 in 1898 and £100,149,054 in 1899;
GREAT BRITAIN AND IRELAND.

articles of food and drink paying duty, £20,817,470 in 1898 and £26,375,134 in 1899; tobacco, £3,887,010 in 1898 and £5,616,458 in 1899; metals, £21,852,381 in 1898 and £28,263,843 in 1899; chemicals, colors, and tan, £15,627,900 in 1898 and £19,954,163 in 1899; refined sugar, 12,170,100 hundredweight; of tea, 4,289,711 hundredweight; of fish, 2,482,093 hundredweight; of refined wool, 17,808,100 hundredweight; of raw wool, 13,121,760 hundredweight; of leather, 242,500,814 pounds; of butter, 3,359,531 hundredweight; of margarine, 935,175 hundredweight; of cheese, 2,389,313 hundredweight; of beef, 3,980,905 hundredweight; of preserved meat, 632,424 hundredweight; the number of sheep and lambs, 670,755; the number of cattle, 503,941; imports of eggs, 16,174,700; great dregs; of spirits, for consumption, 8,643,601 proof gallons; of wine, for consumption, 16,661,795 gallons. The value of the grain and flour imported was £62,909,284 in 1898 and £58,083,361 in 1899; dried fruit, and raw estate, £5,150,932 in 1898 and £5,125,570 in 1899; of wool, £22,437,188 in 1898 and £223,579,769 in 1899; of sugar, raw and refined, £17,222,001 in 1898 and £18,038,928 in 1899; of butter and margarine, £18,346,167 in 1898 and £21,762,982 in 1899; of timber and wood, £231,283,947 in 1898 and £228,880,645 in 1899; of silk manufactures, £92,277,511 in 1899; of flax, hemp, and jute, £9,042,711 in 1898 and £9,248,421 in 1899; of tea, £10,335,643 in 1898 and £12,733,292 in 1899; of seeds, £6,012,692 in 1898 and £6,277,100 in 1899; of fruits and hops, £8,060,942 in 1898 and £7,619,919 in 1899; of tea, £1,963,522 in 1898 and £2,130,800 in 1899; of leather and dressed hides and skins, £7,775,261 in 1898 and £8,581,310 in 1899; of wine, £6,357,691 in 1898 and £5,632,047 in 1899; of cheese, £4,970,242 in 1898 and £5,515,091 in 1899; of copper ore and regulus, £2,614,188 in 1898 and £3,514,736 in 1899; of copper, partly wrought, £5,371,579 in 1898 and £4,314,439 in 1899; of iron, £24,892,448 in 1898 and £3,375,038 in 1899; of iron bars, £536,540 in 1898 and £577,385 in 1899; of iron manufactures, £7,321,577 in 1898 and £7,905,415 in 1899; of lead, £2,521,356 in 1898 and £2,888,837 in 1899; of tin, £1,389,601 in 1898 and £2,298,182 in 1899; of zinc and zinc manufactures, £24,990,293 in 1898 and £49,477,239 in 1899; of eggs, £4,457,117 in 1898 and £5,044,302 in 1899; of coffee, £3,590,871 in 1898 and £3,470,796 in 1899. The value of cotton manufactures exported in 1898 was £53,977,505 and of cotton yarn £8,923,272, making a total of £64,900,077, whereas in 1899 the export of cotton fabrics was £5,957,357, and of rayon and artificial silk £5,56,621. The exports of woolen manufactures were £13,609,435 in 1898 and of woolen yarn £6,413,739, a total of £20,143,174, and in 1899 the figure for woolen manufactures was £14,784,537 and for yarn £6,723,023, a total of £21,507,560. The exports of linen manufactures were £4,982,635 in 1898 and £4,844,364 in 1899; of linen yarn, £885,330 in 1898 and £909,012 in 1899; of jute manufactures, £1,854,567 in 1898 and £1,902,860 in 1899; of jute yarn, £469,165 in 1898 and £460,800 in 1899; of apparel and haberdashery, £6,200,179 in 1898 and £6,170,083 in 1899. The value of the exports of pig iron was £2,793,093 in 1898 and £4,784,910 in 1899; of bar, angle, bolt, and rod iron, £993,973 in 1898 and £1,227,336 in 1899; of railroad iron of all sorts, £3,011,045 in 1898 and £3,130,512 in 1899; of wire, £772,604 in 1898 and £888,201 in 1899; of tin plates, £2,744,077 in 1898 and £3,167,083 in 1899; of hoops, sheets, and plates, £3,311,557 in 1898 and £4,053,790 in 1899; of cast and wrought iron, £3,139,922 in 1898 and £3,182,098 in 1899; of zinc, £5,232,098 in 1899; of old iron, £238,561 in 1898 and £300,324 in 1899; of steel and manufactures part of iron, £4,036,093 in 1898 and £5,218,270 in 1899. The value of hardware and cutlery exported in 1898 was £1,986,092, and £2,140,236 in 1899; of copper, £2,756,793 in 1898 and £3,748,766 in 1899; of machinery, £2,389,743 in 1898 and £19,650,819 in 1899; of coal, pressed fuel, etc., £18,135,502 in 1898 and £23,105,691 in 1899. The value of goods transhipped in transit in 1899 was £7,922,645, against £10,752,108 in 1897, and £10,206,579 in 1896. The value of gold imports in 1899 was £32,533,407, and of gold exports £21,536,032; of silver...
exports £12,727,899 and of silver exports £13,953,132. In 1898 the gold imports were £243,722,900 and exports £36,390,030, the silver imports £14,077,799 and exports £15,625,651. In 1897 the gold imports were £30,808,858 and exports £30,808,571, the silver imports £18,032,090 and exports £18,780,988. In 1896 the gold imports were £24,482,837 and exports £30,120,253, the silver imports £14,032,116 and exports £15,048,134.

**Navigation.**—The total number of vessels that entered the ports of the United Kingdom during 1898 was 535,030, of 100,347,373 tons; the total number cleared, 353,107, of 100,300,883 tons. This includes 263,283, of 55,422,029 tons, entered coastwise and 299,688 coasting vessels, of 54,402,061 tons, cleared. The total number of vessels engaged in foreign commerce entered at British and Irish ports during 1898 was 64,745, of 45,125,000 tons, of which 38,722, of 31,857,000 tons, were British and 26,023, of 13,268,000 tons, were foreign. The number cleared was 64,410, of 45,539,000 tons, of which 38,360, of 32,360,000 tons, were British and 26,050, of 13,179,000 tons, foreign. The tonnage of vessels entered with cargoes was 34,516,000, of which 25,172,000 tons were British and 9,344,000 tons were foreign. The tonnage cleared with cargoes was 39,463,000, of which 27,959,000 tons were British and 11,503,000 tons foreign. The total tonnage entered and cleared was 73,079,000, and the total number of Irish vessels in foreign tonnage entered and cleared with cargoes amounted to 20,847,000 tons. With cargoes and in ballast the total foreign tonnage entered and cleared was 26,747,238, and of this Norway had 6,604,693 tons, Germany 4,339,912 tons, Denmark 2,828,918 tons, Sweden 2,728,100 tons, the Netherlands 2,396,720 tons, Spain 3,177,069 tons, Belgium 1,404,940 tons, Russia 790,397 tons, Italy 645,256 tons, the United States 314,445 tons, and Austria-Hungary 247,790 tons. The tonnage entered and cleared at the port of London was 15,033,187 tons; at Liverpool, 11,373,277 tons; at Cardiff, 7,887,007 tons; at Newcastle, 5,216,879 tons; at Hull, 4,207,355 tons; at Grimsby, 2,572,277 tons, of which 813,046 tons were ballast, 2,843,406 tons; at North and South Shields, 2,372,041 tons; at Leith, 1,835,444 tons; at Sunderland, 1,806,262 tons; at Middlesex, 1,708,011 tons; at Swansea, 1,659,696 tons; at Grimsby, 1,654,980 tons; at Kirkcaldy, 1,515,467 tons; at Newport, 1,497,192 tons; at Grangemouth, 1,345,120 tons; at Bristol, 1,220,093 tons; at Liverpool, 1,185,448 tons; at Hartlepool, 696,416 tons; at Belfast, 513,509 tons; at Dundee, 260,321 tons.

The number of vessels registered as belonging to the United Kingdom on Jan. 1, 1899, was 20,404, of 9,001,860 tons, of which 67,556, of 3,287,943 tons, were sailing vessels and 8,536, of 6,619,917 tons, coasters. The total number of vessels engaged in the home and foreign trade in 1898 was 15,207, of 9,080,728 tons. The number of seamen employed was 242,553, of whom 35,308 were foreign. The total number of vessels belonging to the British Empire was 35,000, of 10,460,643 tons. The number of vessels built and first registered during 1898 was 1,370, of 695,097 tons, of which 665, of 41,190 tons, were sailing vessels and 705, of 654,158 tons, were steamers. Besides these 179 merchant vessels, of 167,879 tons, were built by foreigners, comprising 31 sailing vessels, of 3,051 tons, and 148 steamers, of 164,828 tons. Of the total number of vessels belonging to the United Kingdom, 26,144 tons, were employed partly in the home and partly in the foreign trade; and 1,388 sailing vessels, of 1,578,896 tons, and 3,677 steamers, of 6,061,506 tons, were employed in the foreign trade altogether. The crews of the sailing vessels in the home trade numbered 26,090 men, in those partly in the foreign trade 1,115 men, of those in the foreign trade alone 31,063, of the steamers in the home trade, 35,685 men, of those partly in the foreign trade 6,722 men, of those in the foreign trade alone, 149,082 men.

**Railroads, Posts, and Telegraphs.**—The total length of railroads open to traffic in the United Kingdom on Jan. 1, 1899, was 21,653 miles, of which 15,007 miles were in England and Wales, 5,474 miles in Scotland, and 1,172 miles in Ireland. The paid-up share and loan capital amounted to £1,134,468,462. The number of passengers carried during 1898 was 1,062,911,116, exclusive of holders of season tickets. The receipts from all sources were £290,525,501, of which £41,847,074 came from passengers and £49,218,004 from freight. The working expenses, amounting to £167,054,281, being 56 per cent. of the gross receipts. There were on June 30, 1898, 1,064 miles of tramways, the receipts of which for the year were £4,560,126 and expenses £3,507,803; number of passengers carried, 538,845,542; paid-up capital, £15,392,404; net receipts, £1,062,231.

Of the number of letters that passed through the British post office during the year ending March 31, 1899, was 2,186,800,000, of which 1,850,700,000 were delivered in England and Wales, 190,600,000 in Scotland, and 136,500,000 in Ireland, being 54 letters per head of population for the whole United Kingdom, 59 letters per head in England and Wales, 43 per head in Scotland, and 51 per head in Ireland. The number of telegrams originated by the post office in 1899 was 392,200,000; book packets, 701,500,000; newspapers, 154,100,000; parcels, 71,900,000; money orders, 11,475,201; for the total amount of £33,278,517, of which 10,271,641, for £28,604,078, were inland orders; of postal orders, 76,757,217, for the gross amount of £27,217,436. The total receipts of the telegraph offices were £13,049,317 and the expenses £9,194,437, leaving a net revenue of £3,854,880. The telegraph receipts were £9,260,145 and expenses £3,477,949, leaving a deficit of £227,804, not including £2,989,885 interest on the debt created for the purchase of the telegraph lines in 1876. The telegraph lines were in March 1899, 7,714,834 miles, with 309,629 miles of wire. The number of messages sent during the year was 87,043,652, of which 73,249,702 were sent in England and Wales, 9,064,629 in Scotland, and 4,729,321 in Ireland.

**Dependencies.**—The total area of the British Empire was estimated in 1899 at 11,726,217 square miles and the total population at 385,782,203. The area and population of British colonies is given in the table on page 278. The area of the colonies added to that of the United Kingdom and India makes 9,445,017 square miles, with a total population of 349,552,993. The British protectorates in Africa have an estimated area of 2,160,000 square miles, with 35,000,000 population; protectorates in the Pacific, 800 square miles, with 30,000 population; protectorates in Asia, 120,400 square miles, with 1,200,000 population; total area of protectorates, 2,281,200 square miles, with 36,200,000 population. The colonies and dependencies not elsewhere treated of (see AUSTRALASIA, BRITISH COLUMBIA, CANADA, CAPE COLONY, EAST AFRICA, INDIA, NEWFOUNDLAND, WEST AFRICA, WEST INDIES) are described below.

Aden, a volcanic peninsula on the Arabian coast near the Strait of Bab el Mandeb, is a strongly fortified coaling station on the Suez Canal route.

Malta is a naval and refteting station in the Mediterranean and an important port of call.

Owing to its malarial climate and the smallness of the harbor it has been partly superseded as a naval base by Gibraltar, where enormous docks have been made. Lieut.-Gen. Sir Francis Wallace (G.B.E.) was Governor of Malta in 1895. The population in 1898 was 26,092; expenditure, £80,787; population, 9,263.

Aboriginals of the island are the Moors, who are a brown people, and the Arabs, who have a reputation for being a fine race of people.

The government consists of a governor, a council of state, and a parliament. The governor is appointed by the British government, and the council consists of the governor, the chief justice, and two other members. The parliament consists of a House of Representatives and a House of Assembly.

The revenue of the island is derived from customs duties, land revenue, and local taxes.

The military establishment consists of a garrison of British troops, and the police force is under the control of the British government.

The civil administration is carried on by an executive council, consisting of the governor, the chief secretary, and the chief treasurer.

The education of the island is provided for by the British government, and is conducted by British missionaries. The rate of infant school attendance is high, and the educational standard is considered to be good.

Malaya is a peninsula of South Asia, consisting of three main regions: the Malay Peninsula, the Borneo Islands, and the Moluccas. It is bounded on the north by the Sunda Strait, on the east by the Celebes Sea, on the south by the Java Sea, and on the west by the Andaman Sea.

The population of Malaya is estimated at over 13 million, of whom about 80% are Malay, 15% Chinese, and 5% Indian. The official language is Malay, but English is widely spoken.

The economy of Malaya is based on agriculture, and the main crops are rubber, palm oil, and rice. The export of rubber is the most important, and the country is the world's leading producer of this commodity.

The political system of Malaya is a federal constitution, with a separate government for each of the three regions. The federal government is headed by a governor-general, appointed by the British government, and the regional governments are headed by elected councils.

The country is divided into 13 states, each with its own legislature. The federal government has the power to make laws for the whole of the country, but the states have their own autonomy in matters of local concern.

The military presence in Malaya is minimal, with only a small number of British military personnel stationed in the region. The country is largely dependent on foreign aid and assistance to maintain its security.

Malaysia is a group of more than 3,000 islands located in the South China Sea and the Indian Ocean. It is made up of 13 states and three territories, and has a total land area of over 329,715 square kilometers.

The Malayan Peninsula is the largest and most populated part of the country, with over 80% of the population living there. The states of Sabah and Sarawak are located further north, on the island of Borneo, and have a more diverse population, with significant Chinese, Indian, and Malay communities.

The economy of Malaysia is based on agriculture, and the main crops are rubber, palm oil, and rice. The export of rubber is the most important, and the country is the world's leading producer of this commodity.

The political system of Malaya is a federal constitution, with a separate government for the Malayan Peninsula and the Borneo states. The federal government is headed by a governor-general, appointed by the British government, and the regional governments are headed by elected councils.

The country is divided into 13 states, each with its own legislature. The federal government has the power to make laws for the whole of the country, but the states have their own autonomy in matters of local concern.

The military presence in Malaysia is minimal, with only a small number of British military personnel stationed in the region. The country is largely dependent on foreign aid and assistance to maintain its security.

Malaysia is a member of the Commonwealth of Nations and is a founding member of the Association of Southeast Asian Nations (ASEAN).

The current government of Malaysia is a coalition of several political parties, including the United Malays National Organization (UMNO), Parti Keadilan Rakyat (PKR), and Gerakan. The prime minister of Malaysia is Tun Dr. Mahathir Mohamad, who has been in office since 1981.
The revenue was £638,188; expenditure, £543,506. The military force is 250 men. Import duties are levied on kerosene, spirits, tobacco, salt, and sugar, and on gambier, sago, jungle products, and dried fish.

Ceylon has a representative system of government, and in the Legislative Council of 17 members are 8 representatives of different races and classes of the population. The Governor in 1900 was Sir Joseph West Ridgeway. The area is 25,359 square miles, and the population was estimated in 1898 at 3,448,752, consisting of 6,577 Europeans, 24,071 burghers descended from Europeans, 2,195,947 Singhalese, 993,856 Tamils, including recent immigrants from southern India, 11,119 Malays, 207,425 Moors or Mohammedans other than Malays, 510 Veddahs, the remnant of the aborigines, and 8,947 others, and the tax assessed was £2,392,650 pounds in 26.2 per mille. The once flourishing coffee plantations have disappeared; now the tea culture is flourishing, and the English planters have developed the most advanced and scientific mechanical processes for treating the leaf. Tamils are brought over from India to work on the plantations for a fixed term, and the government pays for them the cost of the military garrison. Of the total area of 16,233,000 acres, 2,231,948 acres are cultivated and 826,427 acres are pasture land, feeding 4,127 horses, 1,310,447 cattle, 83,620 sheep, and 163,987 goats. The tea plantations occupy 424,856 acres; rice and other grains, 753,872 acres; cocoon plantations, 8,769 acres; rice and tea, 11,160 acres; cinchona plantations, 46,117 acres; cacao plantations, 33,260 acres; tobacco plantations, 11,127 acres. There are 1,692 plumago mines and 412 mines for precious stones. The total value of imports in 1898 was 97,893,069 rupees, and of exports 53,097,692 rupees. Rice and grain, cochineal, madder, salt fish, and spirits are the leading imports. The export of tea was valued at 47,734,252 rupees; cocoanut products, 16,904,955 rupees; plumago, 7,174,770 rupees; areca nuts, 1,160,838 rupees; coffee, 878,693 rupees. The imports of coffee, owing to the ravages of disease among the plants, fell from 824,509 hundredweight in 1870 to 12,682 hundredweight in 1888, while those of tea increased from 18,238,669 pounds in 1884 to 122,395,518 pounds in 1898. The export of cacao has increased from 7,466 hundredweight in 1885 to 38,000 hundredweight in 1898. In 1899 a revenue of £5,013,141 rupees was collected, giving a surplus of 908,202 rupees over expenditure. In 1899, still greater increase of revenue was obtained, and for 1901 it was estimated at 26,302,000 rupees.

Hong-Kong, a Crown colony, was acquired from China in 1841. The Governor in 1900 was Sir Henry A. Blake. The peninsula of Kaulung, opposite the island of Hong-Kong, was ceded to Great Britain in 1861, and in 1898 an extension inland consisting of 32,748 acres with 10,189 inhabitants, was leased for ninety-nine years. The new territory was occupied in August, 1899. The estimated population of the old settlement was 254,400 in 1898, of whom 15,190 were whites, including about 7,000 of Portuguese origin. There were about 5,000 British, and the rest were Goans, Americans, French, Spanish, Italians, Turks, etc. The police and military are largely composed of East Indians. The male whites outnumber the females more than three to one, and the discrepancy is nearly as great among the Chinese. There is a constant immigration from China and an emigration of Chinese to various parts of the world. The arrivals of Chinese in 1898 numbered 60,432; departures, 105,441. The ordinary revenue in 1898 was £2,672,107; premiums from land and water account, £346,050; ordinary expenditure, £2,907,424; expenditure for defensive works and water account, £294,381. The receipts from land tax, licenses, and the opium monopoly exceed the expenses of administration, but the maintenance of a strong body of police requires a heavy expenditure. The public debt of £341,500 was incurred for water works, fortifications, and sanitary works. The military contribution of the colony in 1898 was £319,275. Hong-Kong is the center of the Indian opium trade with China, and to a great extent of the Chinese tea and silk export trade and of the import trade in cotton goods, kerosene, flour, and all kinds of Western products and manufactures; also of the trade in salt, earthenware, amber, sandalwood, ivory, betel, sugar, and many other articles. It is a free port and keeps no record of imports and exports. The total value of imports in 1898 was £21,224,158 worth of cotton goods and yarns were imported in 1898, £210,618 worth of woolen goods, £208,534 worth of iron, £777,038 worth of machinery, and £225,684 worth of copper. The exports to Great Britain of tea were valued at £50,821; of silk, £134,047; of hemp, £270,990; of rice, £22,843,852; and of all goods, £1,299,417. The aggregate of goods exported in 1898 was £2,672,107, and a large part of this, worth £1,421,487, was sent to the Chinese islands. The exports of Hong-Kong, of course, are due to the fact that much of the population of the colony on Jan. 1, 1899, consisted of 23 sailing vessels, of 6,928 tons, and 37 steamers, of 19,555 tons. The number of vessels entered during 1898 was 5,339, of 6,590,702 tons, not counting 29,466 junkes, of 1,814,281 tons. There are about 52,000 native vessels in Hong-Kong, of 42,000 tons. The British population of the colony in 1899 was 878,693, and the Chinese were estimated at 250,412, of which only £421,487 in silver dollars and half dollars have been coined. The total coin in circulation—Mexican, Chinese, and British—is about £250,000,000, and the bank notes amount to £10,000,000. Hong-Kong is the headquarters of the British fleet on the China station. The dockyard is being expanded.

Wri-Hoi-Wei, a naval harbor on the peninsula of Shantung, was leased to Great Britain on July 1, 1898, for a period to be determined by the termination of Russia's occupation of Port Arthur. The lease includes the port and bay, with the islands in the bay, and a strip of 10 miles inland from the shore. The old defenses were destroyed by the Japanese. New fortifications are being constructed on the island of Liu-Kung. A Chinese regiment has been recruited and trained, to form with a British contingent the permanent garrison. In a zone beyond the limit of British jurisdiction Great Britain has the right to erect defensive works and acquire sites for water supply and communication.}

The Straits Settlements, comprising Singapore, Penang, and Malacca, form a Crown colony which was taken away from the control of the Indian Government in 1867. Sir F. A. Swettenham, Resident General for the Federated Malay States, is acting Governor. The island of Singapore has an area of 29 square miles; the island of Penang, 107 square miles; Province Wellesley, on the western side of the Malayan peninsula, 270 square miles; Malacca, on the western coast also, about 500 square miles; the Dingdings, 389 square miles. The population of Singapore in 1891 was 184,544; of Penang, 235,618; of Malacca, 512,542, comprising 5,290 European males and 1,299 females, 3,409 Eurasian males and 3,048 females, and 333,582 Asiatic males and 162,344 females.
The Asiatic population consisted of 213,073 Malays, 227,989 Chinese, and 53,921 natives of India. The number of Chinese immigrants in 1898 was 150,-
529; of Indian immigrants, 19,026, of whom 2,989 were indentured; returned to India, 11,500. The revenue of the colony in 1898 was $3,071,282; expenditure, $4,837,732. The amount of the revenue levied on either imports or exports, and the trade of Singapore is principally in transshipment of the products of the islands of the Indian Archipelago and those of the Malay peninsula and of goods destined for those places. The value of the imports in 1898 was $248,110,747, of which $39,304,164 came from Great Britain, $51,323,125 from Possessions, and $151,030,125 from other countries; value of exports, $212,308,029, of which $28,389,028 went to Great Britain, $33,580,296 to British possessions, and $150,342,705 to other countries. The principal exports are tin, sugar, pepper, nutmegs, mace, sago, tapioca, rice, buffalo hides, rattan, gutta-percha, rubber, gambier, guins, copra, dyer, and tobacco. Rice was imported of the value of $28,053,819; cotton cloth, $13,306,302; opium, $10,129,302; fish, $5,774,730; coal, $5,666,040; tobacco, $4,347,915; kerosene, $1,967,902. The value of tin exported was $32,296,134; spices, $12,555,422; guins, $12,808,503; sago and tapioca, $3,537,661; gambier, $5,347,282; copra, $4,910,205; rattan, $4,259,205; rubber, $2,690,377. The per ton value of tin imported in 1898 was 8,922, of 6,331,790 tons, exclusive of 15,509 native vessels, of 604,751 tons; the number of vessels cleared was 8,915, of 6,329,652 tons, exclusive of 15,601 native craft, of 616,357 tons. The post office received 3,238,110 letters, etc., in 1898 and dispatched 3,425,838. The standard of value is 4-41 gold dollars, and 1-6 British pounds sterling. The dollar and the British and Hong-Kong dollars are also legal tender. The export of tin from Perak amounted in 1898 to 19,703 tons; from Selangor, 16,301 tons; from Negri Sembilan, 2,435 tons. Mines are worked also in Pahang. The tin exported from the protected states in 1898 was valued at $46,139,390, and besides this coffee was exported for $330,232 and sugar for $1,283,165. The total value of exports reached $34,885,139, while the imports were valued at $33,765,073. With the growth of commerce the revenue keeps pace, amounting to $13,486,410 in 1899, compared with $9,364,467 in 1898 and $6,431,083 in 1896, the income from the customs and excise. The combined revenues of the 4 states amounted to $4,572,310. The increased value of exports is mainly attributable to the high price of tin, also the remarkable expansion of revenue, as the export duty is a progressive one, higher in proportion to value when the price of tin is higher. A regiment of native riflemen has been raised. The police force consists of 900 Malay Sikhs, and Pun- jabis. Lands have been sold to planters under an enactment of 1897, and the revenue obtained from this source was $730,013 in 1899. The Europeans have planted cocoanut palms and rubber as well as coffee, and are endeavoring to get laborers from India. Alluvial tin is obtained by hydraulic mining. In 1898, 1,724,929 tons of gold were mined. The Government offers a bounty of $5 a head. The Federated Malay States of Perak, Selangor, Negri Sembilan, and Pahang are under British protection. British Residents, assisted by a staff

of European officers, aid and direct the native authorities, the supreme legislative and executive functions being vested in each state in the State Council, composed of the superior British and native officials. The area of Perak is about 10,000 square miles, with 214,254 inhabitants; Selangor, 3,100 square miles, with 31,042 inhabitants; Negri Sembilan, comprising Sri Menanti, Johor, Jelebu, Rembau, and Tampin, 3,000 square miles, with 41,617 inhabitants; besides 23,002 in Sungei Ujong, which was placed under the same Resident in 1895; Pahang, 10,000 square miles, with 57,402 inhabitants. By a treaty concluded between Great Britain and the Sultan of Ranau, 1895, the states of Vemini, Menanti, and Johor, forming the Federation of Johore, was placed under the general administration of a Resident General, and the states agreed to furnish troops for the defense of the colony in the event of a war between Great Britain and any foreign power. The state of Johor, having an area of about 9,000 square miles and 200,000 population, placed its foreign relations in the hands of the British Gov- ernment in 1885. Coffee of the Liberian variety, pepper, sugar, rice, gambier, sago, and tapioca are produced in the native states and in British territory, and the states on the western coast of the peninsula furnish a great part of the world's supply of tin. The mines are owned and worked mostly by Chinese, and the duty on exports of tin to China is paid by the native owners, while the natives states. Gold is also obtained, and 22,100 ounces were exported from Pahang alone in 1898. The revenue of Perak in 1898 was $4,575,842, and expenditure $5,560,529; revenue of Selangor $3,852,439, and expenditure $4,470,845; revenue of Negri Sembilan $701,334, and expenditure $730,830; revenue of Pahang $224,556, and expenditure $372,719.

Mauritius, an island in the Indian Ocean east of Madagascar, was a French colony before the Napoleonic wars. The Governor, Sir Charles Bruce in 1900, is assisted by a Council of Government consisting of 27 members, of whom 10 are elected. Of the estimated population of 778,873 on Dec. 31, 1898, the general population numbered 117,650, including 3,389 Chinese. The creoles of French extraction are the original proprietors, and the bulk of the fixed population consists of African natives and mixed races. The Indian coolies and other laborers working under indentures on the coffee plantations in 1897 numbered 261,222. The population at the end of 1890 was 739,659, and of the total 261,739 were Indians, of whom 62,387 were immigrants and the rest were born in the island. The number of arrivals in 1897 was 426; of departures, 917. The prop- erty in St. Louis, the capital, which had 56,615 inhabitants, and the lands of the island are rap- idly passing into the possession of East Indians and Chinese. The revenue in 1898 was 7,620,326 rupees; expenditure, 8,131,470 rupees; debt, £1, 195,690. The merchandise imports in 1898 were valued at 24,006,970 rupees; exports, 27,537,030 rupees. The chief exports were raw sugar, 24, 727,690 rupees; rum, 85,360 rupees; vanilla, 140,- 100 rupees; aloes fiber, 40,130 rupees; coconut oil, 59,150 rupees. The trade is mainly with South Africa, Australia, and India. The number of ves- sels entered in 1898 was 302, of 327,246 tons; cleared, 293, of 328,298 tons. The length of rail- roads is 105 miles, and there are 135 miles of tele- graph and cable communication with Zanzibar. The postal revenue included a fund for sending 51,444 postal cards, 1,432,114 newspapers, and 9,246 parcels. The number of telegrams was 62,352. Dependencies of Mauritius are the Seychelles, containing a population of 16,440 and exporting cocoanut oil, soap, vanilla, tortoise shell, coffee.
and cacao; Rodrigues, with a population of 2,570; Cargados Islands, the Eagle and Cosmoledo groups, and the Chagos Islands, the largest of which is Diego Garcia, which exports 4,813 hectolitres of coconut oil. The sugar crop of Mauritius has been increased by the transfer of small holdings to the Indian population, and the yield of sugar has been improved by the use of modern machinery. The imposition of countervailing duties on bounty-fed sugar by the United States, India, and Canada has benefited the export trade, and this has reacted on the revenue, which exceeded 9,000,000 rupees in 1999, a part of the increase being due to higher taxation. The imports exceeded exports by 24,750,000 rupees. The plague was introduced from Madagascar early in 1899, and spread through the island in spite of vigorous measures of disinfection, the destruction of rats, and general sanitation.

The Cook Islands, in the Pacific, were formally annexed on Oct. 10, 1900. Among their population of 35,176, of which 16.219, or 46.4%, are Mangarevan, the volcanic soil is exceedingly fertile, producing coffee, cacao, cotton, coconuts, oranges, limes, and all tropical fruits with little cultivation. A British protectorate was declared in 1888, and since 1892 the New Zealand Government, to which they are now subordinated, has supported a Resident. This and a few small islands, of which Paratonga, Manguia, and Atiu are the chief ones, contain with the Hervey Islands 8,400 inhabitants on the space of 142 square miles. Pitcairn Island has 126 inhabitants. The Manukiki Islands, 12 square miles in extent, have a population of 1,000. The Tokelau Islands, with 7 square miles of area, contain 1,100 natives. The Phoenix Islands, 16 square miles in area, have 59. The Ellice Islands have 2,400 on an area of 14 square miles. The Gilbert Islands, on an area of 166 square miles, have a population of 35,200. The British part of the Solomon Islands, over which a protectorate was proclaimed in 1897, had an area of 8,357 square miles, inhabited by Choiseul and Isabel, with neighboring groups and islets, were transferred by Germany to Great Britain by the Sanoma agreement of 1899. They produce copra, tortoise shell, and ivory nuts, and coffee plantations have been started. The natives are often engaged for a term of years to work on other islands.

The Christmas Island has an area of 234 square miles, with 106 inhabitants, of whom 92 are Malay. Malden Island, with an area of 35 square miles, has 165. Jarvis Island, less than 2 square miles in extent, has 30. Panning Island, with an area of 15 square miles, has 150. Other coral or guano islands and groups annexed by Great Britain are the Santa Cruz and Daliva groups, Starbuck and Washington Islands, and the Percival group. The Phoenix Islands, Manie, Emeral Island, Campbell Island, Macraurie Island, and the Antipodes and Bounty Islands. Coconut trees are abundant on most of them. The High Commissioner for the Western Pacific, Sir G. T. M. O'Brien, has jurisdiction over all of them and over any others that are not under the dominion of a civilized power, for the purpose of adjudicating disputes between British subjects and of protecting the natives from being carried off by force to work on plantations or from other oppression. Tonga, which was declared neutral by the Berlin declaration of April 6, 1886, was relinquished to British control by the Anglo-Georgian Convention of 1899, which was subsequently accepted by the United States. The Tonga, Haapai, and Vavau groups, formerly known as the Friendly Islands, lying east of Fiji, form a native kingdom, whose sovereign is George II, born June 18, 1874. There is a Legislative Assembly, half of hereditary nobles, removable for cause, and half of elected representatives of the people. The area of the kingdom is 374 square miles; the population in 1893 was 17,500, including 250 foreigners, most of them British. The revenue, obtained mainly from customs duties, a poll tax, and leasing of land, is about $125,000 a year, the expenditure a little less. The imports in 1898 were valued at £35,176, exports at £29,404, of which £29,610 represent copra and £3,264 fruit. The tonnage entered in 1898 was 81,190, of which 74,388 tons were British, 5,177 tons Norwegian, 931 tons German, and 604 tons Danish. A British protectorate was proclaimed over Tonga on May 19, 1893. Sights for a coal station and a fortified harbor were selected at Vavau. The King would not agree to a protectorate except against foreign powers, and insisted that the sovereignty should be guaranteed to himself and his successors. Basil Thomson, who was sent out as British Commissioner to the Tonga Islands, could not get from the Tongans an assurance of British help in case of difficulty with foreign powers constituted a protectorate, and concluded a treaty by which the King agreed to make no treaties with other powers without the consent of the British Government, and to apply for British assistance only in any trouble. He was supported by the House of Lords in his action as a more complete form of protectorate. Jurisdiction over Europeans, however, was conceded to the British court of law, and the two naval harbors were granted. The Tongans have retained the ownership of the land, none of which is occupied by Europeans except under lease, and they are allowed to keep the lands of the headmen and the races of the Pacific who were taught civilized methods of government by the missionaries have succeeded in preserving.

Ascension is an island in the Atlantic used as a coaling and virtualing station for the British squadron on the west coast of Africa.

St. Helena, formerly important as a port of call on the Cape route, is a coaling station for naval vessels on the Cape and West African stations. The revenue in 1898 was £9,152; expenditure, £21,349.

Tristan da Cunha, a group of islands in the south Atlantic, is inhabited by the families of some wrecked seamen's wives from St. Helena. They numbered only 64 persons in 1897.

The Falkland Islands, east of the Straits of Magellan, have in proportion to their population a large trade in wool. They are a Crown colony, having a land surface of 6,500 square miles, with 2,630 inhabitants. The revenue in 1898 was £13,059; expenditure, £24,275. The imports were £282,987 in value, and £106,984. Of the total trade 94 per cent. is with Great Britain. There are 2,325,154 acres of pasturage, on which 732,010 sheep were kept in 1898, with 2,758 horses and 7,343 cattle. Live animals were exported to England in 1898, but the enterprise was abandoned or interrupted.

The Bermudas, 350 miles from Cape Hatteras, are a group of small islands having a total area of 20 square miles, one third of it under cultivation. The population was 10,219 in 1898, of whom 6,239 were whites. The number of marriages during the year was 143; of births, 113; of deaths, 378. The Governor in 1900 was Lieut.-Gen. G. H. Harley Barker. There is a Legislative Assembly of 26 members. The trade is with the United States and Canada, whence provisions and breadstuffs are brought to feed the people and whiter are shipped in winter and spring potatoes, onions,
and tomatoes. The bulbs and plants of the Easter lily are also an important article of export. The value of imports in 1898 was £113,903; exports, £351,274, the value of onions being £58,373, of potatoes £19,855, and of lily bulbs £13,452. The tonnage entered and cleared was 471,956, of which 409,751 tons were British. The shipping of the colony consisted of 2 steamers, of 65 tons, and 23 sailing vessels, of 5,460 tons. There are 36 miles of land telegraph, 15 miles of cable, and 700 miles of telephone wire. A cable connects Bermuda with Jamaica.

**British Guiana** is administered by a Governor, Sir Walter J. Sendall in 1895, consists of a Colony consisting of 7 official and 8 elected members. Taxes and expenditures are voted by the combined court, composed in addition to these of 6 financial members elected by the registered voters, who numbered 2,815 in 1890. The Roman Dutch law is in force in civil cases, while the criminal jurisprudence is based on that of England. Of 279,325 population enumerated in 1898 there were 99,615 of negro blood, 105,465 East Indians, most of them coolies, 3,714 Chinese, and 2,533 born in Europe. The number of births in 1898 was 8,500; of deaths, 9,706. The revenue for 1899 was £235,865; expenditure, £235,387. Of the revenue £204,366 came from customs, £25,548 from lottery, £5,430 from the monopoly of tobacco, and an equal amount from the royalty on gold. The public debt amounts to £975,791. The sugar estates, 74 in number, had an area in 1891 of 60,814 acres, on which 90,492 persons were living. Gold mining began in 1886, and in ten years £2,796,300 worth of gold was taken out. In 1897 the product was 15,279 ozs. The revenue from the sugar, rice, and cocoanuts from 1899 to 1899 was £112,464 ounces. Cloth, flour, rice, fertilizers, hardware, fish, machinery, and coal are the principal imports. The total value of imports in the year ending March 31, 1899, was £1,371,412; exports, £1,775,691. The export of sugar was £1,040,952; of molasses, £1,19,905; of rum, £144,712; of gold, £415,746. There are 40 miles of railroad. The tonnage entered and cleared in 1899 was 362,090. The shipping of the colony consisted of 15 steamers, of 1,171 tons, and 33 sailing vessels, of 1,082 tons. The telegraphs have a length of 550 miles; telephones, 671 miles.

**British Honduras** is a Crown colony south of Yucatan. The population is 34,747, as compiled in 1897, excluding 481 whites and 34,266 colored. The number of marriages in 1898 was 281; of births, 1,409; of deaths, 1,146. The Governor is Col. Sir David Wilson. The revenue for 1898 was £274,690; expenditure, £301,413. Customs and excise duties, license fees, the land tax, and sales and leases of Crown lands furnish the revenue, and British capital is employed in the local railroad and canal. The value of imports in 1898 was £1,245,910; exports, £1,282,503, consisting, besides mahogany and logwood, which have always been the staple products of the country, of bananas, plantains, and cococanuts shipped to New Orleans. Coffee, rubber, and sarsaparilla, the products of Yucatan, are also shipped from the port of Belize. There were 618 vessels, of 183,932 tons, entered and 609, of 153,532 tons, cleared during 1898. The shipping of the colony consisted of 225 sailing vessels, of 4,930 tons, and 7 steamers, of 1,992 tons. United States gold has been the legal standard currency since 1894.

**Preservation of Wild Animals in Africa.**—Resolutions were adopted at a meeting of 70 representatives of England, France, Germany, Italy, Portugal, and Spain, and of the King of the Belgians acting for the Independent State of the Congo, met in London, and on May 19, 1900, signed a convention for the protection of wild animals in Africa between 20° of north latitude and the Zambezi. It is not allowed to hunt or destroy vultures, owls, secretary birds, or rhinoceros birds, on account of their usefulness, or giraffes, gorillas, chimpanzees, mountain zebras, wild asses, white-tailed guans, elands, or the little Liberian hippopotamus, on account of their rarity, and the prohibitions imposed will be extended to useful or rare species threatened with extermination. The hunting or destruction is prohibited of young elephants, rhinoceroses, hippopotamuses, zebras, buffaloes, ibexes, chevrotains, and antelopes and gazelles of the genera Bubalis, Damoselus, Connochaetes, Cephalophus, Oreotragus, Oribia, Pseudoryx, and tragelaphus. The production of aardvark, Pelea, Eupyceros, Antidorcas, Gazella, Ammodoceras, Lithocranius, Dorcotretragus, Oryx, Addax, Hippotragus, Taurotragus, Strepsiceros, and Tragelaphus; also of females of any of these species when accompanied by their young or of any females that can be recognized as such. Of adult males of the same species only limited numbers may be killed, and the restriction is extended to various pigs, colobi and all the fur monkeys, aard varks, dagouns, manatees, small cats, servals, cheetahs, jackals, and wolves, small monkeys, ostriches, marabous, egrets, bustards, francolinus, guinea fowls and other game birds, and large tortoises. Harmful animals, of which it is desired to reduce the numbers, and which may be hunted, may be hunted, and measures will be applied to effect their reduction. In this category are lions, leopards, hyenas, the hunting dogs, otters, baboons and harmful monkeys, large birds of prey except vultures, secretary birds, and owls, crocodies, poisonous snakes, and pythons. Measures may be taken to protect the elk, the common wild boar, poisonous snakes, and pythons, to insure the protection of ostrich eggs, and to supverb sick cattle in order to prevent the transmission of contagious diseases to wild animals. Export duties will be imposed on skins of giraffes, antelopes, zebras, rhinoceroses, and hippopotamuses, and on rhinoceros and antelope horns and hippopotamus tusks. Seepenalities will be enforced against hunters of young elephants and all tusks weighing less than 10 kilogrammes will be confiscated. Reserves will be established, within which it shall be unlawful to hunt, capture, or kill any bird or wild animal except those specially exempted from protection; the reserves to be sufficiently large tracts of land including abundant food for the animals. The use of salt for preserving birds and wild animals and affording them the necessary quiet during the breeding season. Outside of the reserves close seasons will be established to facilitate the rearing of young, and only holders of licenses, revocable in case of breach of the provisions of the convention, will be permitted to hunt. The use of trained dogs and pitfalls will be restricted, and the use of dynamite or other explosives or of poison for the purpose of taking fish is forbidden. The contracting parties undertook to promulgate the provisions of the convention within a year, and to communicate within eighteen months information as to the areas established as reserves. The prohibitions and restrictions may be relaxed in order to permit the collection of specimens for museums or zoological gardens or for scientific purposes, and also where it is desirable for important administrative reasons or necessitated by temporary difficulties of administration. The domestication of zebras, antelopes, rocks, and ostriches is to be reconsidered, and the convention will remain in force fifteen years, and will continue in force from year to year thereafter, any of the signatory powers having the right to withdraw at the expiration of the period or in any subsequent year by giving twelve months' notice.
The Session of Parliament.—The seventh session of the fourteenth Parliament of the reign of Queen Victoria was opened on Jan. 30, 1900. This was a session of many debates, in which had not fallen short of the noblest traditions of British military history, also the patriotic eagerness and spontaneous loyalty with which British subjects everywhere had come forward to share in the common defense of imperial interests, and the brilliant courage and soldierlike qualities of the fighting men. The session had been opened by Sir Edward Grey, and after an address by Mr. Labouchere, had been taken up with the discussion of the war. The debate on the address turned mainly on the war. In the vote on Lord Edmond Fitzmaurice’s amendment condemning the ministry for incompetency in preparing for and in the conduct of the war the cleavage of the Opposition was revealed by the abstention of 30 Liberals and also of the Irish Nationalists, who would not vote for it because it did not go far enough. The amendment had the effect of uniting the ministerialists, who rejected it with the crushing majority of 213. Sir Henry Campbell-Bannerman and a divided house refused to go with it.

The question of the extension of the ballot to the colonies, and the question of the renewal of the Irish Land Bill were also matters of great importance. The extension of the ballot to the colonies was taken up by Sir Henry Fowler, Sir Edward Grey, and others ranging themselves more and more with Lord Rosebery on the popular imperialist side, while Mr. Morley and Mr. Labouchere remained steadfast in their opposition to the war and Sir William Harcourt took no part in the discussions until he came forward to criticise the supply and the war. The renewal of the Irish Land Bill was not so complete but that Mr. Healy came into frequent conflict with the majority of his party, in which Mr. Redmond was able to maintain only a slight degree of discipline. The basis of the re-union was the return of the Irish Nationalists to a policy of conciliation, and to a change of allies, from their British Liberal allies, who were already eager to renounce Irish home rule as a practical policy.

Lord Salisbury and Mr. Balfour, in apologizing for the mistakes and miscalculations of the war, denied that the Government could have known of the Boer preparations, and complained that the scantiness of the naval and coast defenses. For domestic reforms involving large expenditure the time was not propitious, and the proposals to be made would not be open to this objection. Amendments in the laws governing the limited liability companies and in those relating to agricultural tenancies were required. Measures were also proposed for amending the law of ecclesiastical assessments and in regard to education in Scotland and for the relief of tithe rent-payers in Ireland. Attention would be invited to proposals for better enabling local authorities to take possession of certain tracts of land and Wales; for controlling the contracts of money lenders; and for the amendment of the factor law, of the law of lunacy, and of the housing of the working classes act. A bill would be brought in framed with the object of lessening of accidents to railway servants in accordance with the recommendations of a commission appointed to inquire into the nature and causes of such accidents. Parliament would be asked to sanction a measure to prevent the injustice of the existing law which appeared to have the effect of disfranchising those serving in South Africa. The bills relating to limited liability companies and money lenders had been before Parliament before. The one had repeatedly passed through the House of Lords, and was now brought into practical shape by the labors and criticism of lawyers and men of business. The money-lenders bill was rejected in the form in which it was presented in 1899 because the House of Commons would not agree to the term ‘contracts except in cases of proved fraud. The bill for the relief of payers of tithe rent charge in Ireland was a measure long promised to Irish landlords. The measure in aid of secondary and technical education was the financial consequence of the act already passed on the subject. The other measures, none of which were contentions, would only be introduced if there was time to deal with them.

The debate on the address turned mainly on the war. In the vote on Lord Edmond Fitzmaurice’s amendment condemning the ministry for incompetency in preparing for and in the conduct of the war the cleavage of the Opposition was revealed by the abstention of 30 Liberals and also of the Irish Nationalists, who would not vote for it because it did not go far enough. The amendment had the effect of uniting the ministerialists, who rejected it with the crushing majority of 213. Sir Henry Campbell-Bannerman and a divided house refused to go with it.

The question of the extension of the ballot to the colonies, and the question of the renewal of the Irish Land Bill were also matters of great importance. The extension of the ballot to the colonies was taken up by Sir Henry Fowler, Sir Edward Grey, and others ranging themselves more and more with Lord Rosebery on the popular imperialist side, while Mr. Morley and Mr. Labouchere remained steadfast in their opposition to the war and Sir William Harcourt took no part in the discussions until he came forward to criticise the supply and the war. The renewal of the Irish Land Bill was not so complete but that Mr. Healy came into frequent conflict with the majority of his party, in which Mr. Redmond was able to maintain only a slight degree of discipline. The basis of the re-union was the return of the Irish Nationalists to a policy of conciliation, and to a change of allies, from their British Liberal allies, who were already eager to renounce Irish home rule as a practical policy.

Lord Salisbury and Mr. Balfour, in apologizing for the mistakes and miscalculations of the war, denied that the Government could have known of the Boer preparations, and complained that the scantiness of the naval and coast defenses. For domestic reforms involving large expenditure the time was not propitious, and the proposals to be made would not be open to this objection. Amendments in the laws governing the limited liability companies and in those relating to agricultural tenancies were required. Measures were also proposed for amending the law of ecclesiastical assessments and in regard to education in Scotland and for the relief of tithe rent-payers in Ireland. Attention would be invited to proposals for better enabling local authorities to take possession of certain tracts of land and Wales; for controlling the contracts of money lenders; and for the amendment of the factor law, of the law of lunacy, and of the housing of the working classes act. A bill would be brought in framed with the object of lessening of accidents to railway servants in accordance with the recommendations of a commission appointed to inquire into the nature and causes of such accidents. Parliament would be asked to sanction a measure to prevent the injustice of the existing law which appeared to have the effect of disfranchising those serving in South Africa. The bills relating to limited liability companies and money lenders had been before Parliament before. The one had repeatedly passed through the House of Lords, and was now brought into practical shape by the labors and criticism of lawyers and men of business. The money-lenders bill was rejected in the form in which it was presented in 1899 because the House of Commons would not agree to the term ‘contracts except in cases of proved fraud. The bill for the relief of payers of tithe rent charge in Ireland was a measure long promised to Irish landlords. The measure in aid of secondary and technical education was the financial consequence of the act already passed on the subject. The other measures, none of which were contentions, would only be introduced if there was time to deal with them.
the terms exacted for exemption were fixed at twenty-two and a half years' purchase when few landowners could obtain fifteen years' purchase for their lands. The bill regulated the tithe rent charge by the average reductions in rent. Payers of church tithes were placed on the same footing as the rest of the Irish intermediate education act and a Scotch ecclesiastical assessment act were passed. The secondary education bill was dropped. The act for the prevention of accidents to railway employees empowers the Board of Trade to make rules regulating lighting of stations during shunting after dark, brake vans and whip protectors on engines, safety of signals and of the lay of the land, for preventing accidents, and for removing the danger or risk of other operations of railway service, after first giving the company opportunity to act. The company may appeal to the Railway Commissioners to determine whether the rules materially interfere with trade or the necessary operation of the railroad. If the act is carried out this act will be to compel British railroad companies to use automatic coupling. An act relating to merchant shipping extends the liability of shipowners to loss or damage caused to property by improper navigation, although without their actual fault or privity, the liability being limited to £8 a ton. The housing of the working classes act provides for lodging houses for the working classes to establish them outside of their proper jurisdiction, lodging houses including separate houses or cottages, with gardens. If rural district councils fail to adopt the act when they ought to do so the county council may establish lodging houses in the negligent parish for lodgers. If any lodging houses may, with the consent of the county council, or in urban districts with that of the Local Government Board, be let on lease to persons who undertake to build and maintain lodging houses exclusively for occupation by the working classes. The agricultural holdings act adds to the list of improvements for which a tenant may claim compensation, though they may have been effected without the consent or the knowledge of the landlord. For the consumption of purchased feed by stock and for laying down temporary pasture he may demand compensation, and he can send in his claim up to the last day of his tenancy. If he has acquired fixtures or buildings they become réanimed to the tenant in the same extent as if he had put them up himself. The liability for breach of covenant is limited to the actual damage suffered, except in the case of penal covenants against breaking up permanent pasture, burning heaths, and felling trees. The landlord gains the right to enter a farm at any reasonable time for the purpose of ascertaining its condition, and both parties may refer to arbitration any dispute even if not covered by the act. The amount of compensation that can be claimed of a landlord for an improvement is such sum as fairly represents the value of the improvement to an incoming tenant, but nothing due to the imperfect qualities of the soil is to be considered as part of the improvement. In the case of buildings and various other improvements the consent of the landlord must be first obtained, in case of drainage notice must be given, but for consumption by stock of grain not produced on the holding, for the application of lime or commercial fertilizers or for draining, a notice is no longer needed. No notice or consent is required. This act applies to Scotch as well as to English holdings. The proposal to bring in the Irish doctrine of compensation for disturbance was rejected by 207 votes against 111.

A workmen's compensation act was passed which extends the benefit of the act of 1897 to workmen in agriculture, including horticulture, gardening, forestry, and the keeping of live stock. The original act was limited to railroad, factory, and other dangerous employments. The employer is liable in any company or undertaking, or to the dependents of a workman killed by accident arising out of and in the course of his employment, provided the accident is such as to disable the workman from earning full wages for at least two weeks and is not attributable to his own serious and wilful misconduct, but the company or undertaking must have paid the workman for his ordinary weekly wages and the compensation for death must not exceed £300. After the outbreak of trouble in China an act was passed prohibiting the exportation of arms, ammunition, military and naval stores, and any article capable of being converted into or made of military purposes, with the quantity of arms, to any country or place named in a royal proclamation whenever it may be deemed expedient for the prevention of their being used against British forces or their allies. On Aug. 7, the day after this act was passed, the exportation of arms and ammunition to China was prohibited by royal proclamation. The electoral disabilities of reservists who had been in service during the continuance of the war in South Africa. The Uganda Railroad bill provided for carrying on a work that has far exceeded already the original estimate.

Besides the Commonwealth of Australia act, Parliament has passed more than 60 other acts, half of them of little general interest or applying to Scotland and Ireland. The most important were the companies act, the agricultural holdings act, the workmen's compensation act, and the housing of the working classes act.

The companies act is the outcome of the report of a committee appointed by the Board of Trade in 1894. Hereafter no person can become a director or be named in a prospectus as a director of a company unless he has contracted to pay for the shares necessary for his qualification. No allotment of shares may be made and offered to the public for subscription unless the minimum amount specified in the prospectus of all the shares capable of being allotted is otherwise subscribed for or guaranteed. Any shareholder may claim their money and recover from the directors. Any brokerage, commissions, or discounts for subscribing or the procurement of subscriptions may be only of such amount or rate as is authorized in the articles of association and disclosed in the prospectus. Every prospectus or notice offering shares, debentures, or debenture stock for public subscription must be dated, signed by all the directors, and registered. No new company will be allowed to commence business or borrow money until a declaration has been filed that the minimum amount of cash subscriptions has been paid in and every director has paid his proportion of the capital. The amount is stated and an account given of shares allotted otherwise than for cash. The companies act of 1867 declared a prospectus fraudulent unless it stated every contract. The new act demands in a prospectus the memorandum of association, the qualification for directors, the minimum subscription requisite for forming the company, the amount of capital, preliminary expenses, and payments to promoters, the dates of and parties to every material contract, and full particulars of the interest of every director in the promotion of the company, with a statement of all sums paid in cash or shares by any person for his services or to qualify him as
a director. A waiver of rights secured by the act is void, but a director can not be held liable for a defective prospectus if he proves that he was not cognizant of the matters not disclosed. When a new company is started a meeting of the shareholders and a register must be opened and contracts of shares allotted, distinguishing those not allotted for cash, the names of shareholders, the particulars of contracts or modifications of contracts to be voted upon, and a statement of receipts and payments. All mortgages given by companies have to be recorded and a register must be published in the annual report, also the names and addresses of the directors, and at every annual meeting auditors must be appointed, otherwise on the application of a member. One object of the bill is to do away with the spurious qualifications of directors and the gift of paid-up shares. Not only must the minimum amount to be subscribed before allotment be stated in the prospectus, but 75 per cent. of the amount due on application must be paid up bona fide before business is begun.

An elementary education act was passed enabling poor law guardians to contribute to school funds so as to provide for the education of pauper children, in accordance with the Act for granting school fees, and changing the maximum age of compulsory attendance from thirteen to fourteen years. An amendment to the mining law prohibits the employment below ground of any boy under thirteen, instead of the former limit of twelve years.

The county auditors act is practically identical with the measure that failed to pass in the preceding session. Every person whose business is lending money or who advertises or holds himself out as carrying on that business is obliged to register himself as a professional money lender, and is liable to have his contracts judicially varied in the interest of a borrower where the borrower is sued for a loan and there is evidence which satisfies the court that the interest or the charge for expenses is excessive and that the transaction is harsh and unconscionable, or is otherwise such that a court of equity would give relief. The court may in such case reopen the transaction and relieve the borrower from the payment of any such excessive interest, and may order the money lender to repay such excess, may set aside or alter any security or agreement, and if the money lender has parted with the security may order him to indemnify the borrower, who on his side may also initiate proceedings to obtain judicial relief as if he had waited to be sued. The rights of a bona fide assignee or holder for value without notice are not to be affected, however. The money lender is required to register his name or his usual trade name, and the address or addresses where he carries on business. Any money lender fraudulently induc ing or attempting to induce a person to borrow is guilty of intimidation, and every person who sends circulars inviting an infant to borrow is presumed to know that the invitation was sent to an infant unless he proves that he had reasonable ground for believing the infant to be of age.

An act for the preservation of ancient monuments was authorized to be taken of all persons abiding in any house in Great Britain or in Ireland on the night of March 31, 1901, overseers of the poor and relieving officers to act as enumerators when required. The census papers are left at every house to be filled up with the name, sex, age, occupation, condition as to marriage, relation to head of the family, and birthplace of each individual, whether any such person is defective, the number of rooms occupied if less than five, and in Wales and Monmouthshire the language spoken. The burial acts were amended with the object of doing away with complications, unjust provisions, and causes of dispute. Consecration or partial consecration is now carried out by the Government through the Home Office, while undenominational chapels may be erected on unconsecrated burying grounds, and no fees may be exacted except for services rendered. An act was passed making it an offense wantonly to abuse, cause suffering to, infuriate, or terrify wild animals in captivity.

The Commonwealth of Australia act a royal proclamation was issued on Sept. 17 declaring the union of the Australian colonies under the constitution they had approved, with the compromise as to appeals to the Privy Council to which Mr. Chamberlain agreed (see AUSTRALASIA). A bill was passed admitting to a franchise in the United Kingdom, a class of three years’ standing and of good character, either on passing an examination or in certain cases without examination. Another bill empowers trustees to invest in colonial stocks. An eight-hour bill for miners was rejected by 109 votes against 175. The Scotch education bill, the lunacy bill, the factory acts amendment bill, and several minor measures were passed. An act for the suppression of the employment of persons under the age of fourteen, or over the age of thirteen, in the employment of persons over the age of fourteen, or over the age of thirteen, in the employment of children was passed. A sequel to Mr. Chamberlain’s veto of the Australian claim to have all appeals tried by the Supreme Court of the commonwealth was a measure for the appointment of four colonial judges to the Privy Council. The bill had been prepared by the last Colonial Secretary, and was only a temporary measure, to remain until Mr. Chamberlain’s pledge, and was not pressed. The ultimate intention is to merge the Judicial Committee of the Privy Council with the appellate jurisdiction of the House of Lords, and thus constitute a High Court of Appeals for the entire empire, in which colonial jurists will be amply represented. Sir Henry Wodehouse and Sir Henry Fowler appealed to the Government and to Parliament to vote a grant in aid to India for famine relief, but unsuccessfully, although Lord George Hamilton admitted that the extent and cost of the famine surpassed all estimates. An Irish proposition to establish a Roman Catholic university in Ireland was repelled by the Government on the plea that it could not be known what would be acceptable to the Roman hierarchy. The Irish landlords put forward a demand for compensation for injury caused by agrarian legislation, and obtained a majority in the upper house, but the ministry, which had just given them relief from the burden of most of their abhorred capitation duties, thought it a bad moment for their investigation was ordered into the hospital service in Africa in consequence of charges brought by Mr. Burdett-Coutts; also an investigation into the use of Belleville boilers in the navy and one into War Office contracts.

During the session the Duke of Norfolk resigned
as Postmaster-General in order to serve with the troops in South Africa. He was succeeded by Lord Lansdowne, Sir Edward Webster became Master of the Rolls, and was succeeded as Attorney-General by Sir Robert Finlay. Sir Edward Carson became Solicitor-General. Parliament was prorogued on Aug. 8. The lament over the inconclusive campaign in Africa was repeated in the speech from the throne, although there was still undue the heroism and high military qualities of the troops had succeeded in driving the invaders beyond the frontiers. The Orange Free State had been annexed by proclamation in the belief that the continued political independence of the two republics would be a constant danger to the peace of South Africa, and that it would be the first step toward the union of the South African states for which, while establishing from the outset good and just government for all, may be in time developed so as to secure equal rights and privileges in the South African dominions. The disturbances in China and Ashanti were mentioned, and the famine and plague still raging in India.

United Nations. Parliamentary elections were held in the week beginning Oct. 14. In the electoral campaign Sir Henry Campbell-Bannerman, the accepted leader of the Liberals, denounced the policy advocated by Sir Alfred Milner in South Africa of governing the Orange River and Transvaal colonies, as the Boer republics would regard their maintenance as a claim, and, if claimed, as Crown colonies. The Conservatives obtained 332 seats, the same number as in the last Parliament, and the Liberal Unionists increased theirs from 67 to 69, making 401 ministerialists, compared with 399 in the former Parliament, and 269 in the Opposition, compared with 271. Of the Liberals with imperious tendencies, however, while the number in the outgoing Parliament obtained 63, there were 81 in the new house, while the Radicals and Labor members fell off from 126 to 106, the Irish Nationalists retaining their 82 seats. The Cabinet was reconstituted on Nov. 12 as follows: Prime Minister, Lord Salisbury; Lord Chancellor, Lord Halsey; Lord President of the Council, Lord Randolph Churchill; Lord President of the Council, Lord George Hamilton; Lord Cross; Chancellor of the Exchequer, Sir Michael Hicks-Beach; Home Secretary, Mr. Ritchie; Foreign Secretary, Lord Lansdowne; Colonial Secretary, Mr. Chamberlain; Secretaty for War, W. St. John Brodrick, previously Parliamentary Secretary for Foreign Affairs; Secretary for the Colonies, Mr. George Fothergill; Secretary for Scotland, Lord Balfour of Burleigh; First Lord of the Admiralty as successor of Mr. Goschen, Lord Selbourne; First Lord of the Treasury, Mr. Balfour; Lord Lieutenant of Ireland, Lord Cadogan; Lord Chancellor of Ireland, Lord Ashbourne; President of the Board of Trade, Gerald Balfour, previously President of the Local Government Board; Walter Long, previously President of the Board of Agriculture; Secretary of Works and Public Buildings, Mr. Akers-Douglas; Chief Secretary for Ireland, George Wyndham, previously Parliamentary Secretary for War; Postmaster-General, Lord Londonderry; Vice President of the Council, Sir John Gorst; Attorney-General, Sir Robert Finlay; Solicitor-General, Sir Edward Carson.

Edward VII.—The Prince of Wales took the oath as King in St. James’s palace, Jan. 23, under the style chosen by his mother, and on the 24th was proclaimed throughout the kingdom as "Edward VII., Vice President of the Council, Sir John Kingdom of Great Britain and Ireland, Defender of the Faith, Emperor of India." Parliament was not dissolved on the decease of the sovereign, the law having been changed a few years before. The first proclamation of the King retained in office all persons in the employment of the Crown.

Albert Edward (now Edward VII.) was born Nov. 9, 1841. He was taught in his childhood by Lady Lyttleton, a sister of Mrs. Gladstone, and after he was six years old by the Rev. Henry Mil- dred Birch for four years, and then Frederick W. Gillies became his tutor. He legally attained the majority at the age of eighteen, and traveled through Continental Europe incognito as Baron Renfrew, with Mr. Tarver, who thenceforth directed his studies. He entered upon a course of study at Edinburgh so severe that the newspapers made complaint that the heir apparent was being overworked. Later study, joined freely in the sports and social life of the undergraduates, and at Trinity College, Cambridge, he led a life of ease and pleasure. In 1860 he visited Canada, accompanied by the Duke of Newcastle, in recognition of the services of the Canadian regiment in the Crimean War. Before returning to England he made a journey through the Lowlands as a candidate of the Conservatives. In 1875 he visited India. The expense of this official tour was an eventful one; crowds of Indians, nearing a lar- mor changed when its political effect in India was appreciated, and he was welcomed home with ceremonies eclipsing those of the thanksgiving over his recovery from typhoid fever four years before. He made himself very popular by presiding at public feasts and ceremonies, and by his kindness to wives of officers on each occasion. When he consented to officiate at a festival of the licensed victuallers in 1876, the temperance societies raised a protest; and Radicals complained constantly about the sums allowed him by Parliament and about his extravagance and readiness to make debts. They thought the debts ought to be paid by his mother, who was accused of extravagance. There was much said about the abstinence from the public duties of royalty made it necessary for the prince to take her place whenever law and etiquette would allow. In social life he surrounded himself with a jovial and pleasure-loving set, some of them such as his mother would scarcely admit to court. Following his father's example, he took a keen interest in the promoting exhibitions, notably the Colonial and Indian Exhibition of 1886. His first speech in the House of Lords was one in 1884 supporting a measure to secure the better housing of the poor, and the interest that he showed led to his being appointed a commissioner to study the question. The British Empire was his reason for the Prince of Wales was summoned as a witness in a divorce suit, and years later when through his testimony an officer was cashiered for cheating at cards. As a sportsman, however, a good shot, a daring fox hunter, an owner of race horses since 1877, who won the Derby with Persimmon in 1896 and with Diamond Jubilee in 1900, a yachtsman, commodore of the Royal Yacht Squadron since 1882, and winner of the Queen's cup with the cutter Britannia, and as a patron of the stage, the Prince of Wales pleased the great majority of the English people, and also by his popular tastes and democratic ways, such as riding in cabs and mingling with the people, but the prevalent interest that he took in agriculture, evinced in the development and management of his model estate at Sandringham, where he bred prize.
cattle, horses, and dogs, won the approval of the serious-minded, and still more the fidelity with which the prince discharged his dull and trying public duties, his interest in charities and benevolent institutions, and the abilities he had to go through the schedule of his public appearances and to carry on his extensive correspondence, his more sober and earnest life during the past ten years, and the lively interest that he took in the public affairs and international relations of England, coupled with a conscientious and studious avoidance of all interference, of even the slightest exertion of personal influence or betrayal of his private predilections or prejudices in political matters. He learned German as well as English while a boy, and to converse also in French, Italian, and Russian.

GREECE, a monarchy in southeastern Europe. The legislative authority is vested in a single chamber called the Boule, composed of 207 members elected for four years by universal adult male suffrage. The reigning King is George I, born Dec. 24, 1845, second son of King Christian of Denmark, elected King of the Hellenes on March 18, 1867, after the deposition of King Otho, with the assent of the protecting powers England, France, and Russia, under whose auspices the Hellenic kingdom was originally established in 1830 after the overthrow of Turkish rule. The heir apparent is Prince Konstantinos, Duke of Sparta, born Aug. 2, 1868. The Cabinet, formed on July 26, 1893, consisted of the following ministers: President of the Council and Minister of the Interior, M. Theotokis; Minister of Finance, M. Simopoulos; Minister of Foreign Affairs, M. Romanos; Minister of Worship and Instruction, M. Eutaxias; Minister of War, Col. Kounoundrous; Minister of Marine, Capt. Bourdouris; Minister of Justice, M. Kallergis.

Area and Population.—The area of the Hellenic kingdom is 25,014 square miles. The population in 1896 was 2,433,806, being 97.3 per square mile. Athens, the capital, had 111,486 inhabitants. There are about 100,000 Albanians in Greece who have preserved their distinct nationality, while in the Turkish Empire there are over 6,000,000 Mohammedans, who are a composite people, not a race, and their Greek strain is evident in a considerable part of the Mohammedan population in Asia Minor especially and on the islands.

Finances.—The revenue for 1899 was estimated at 107,085,658 drachma, of which direct taxes produced 29,077,580 drachma; duties and excises, 395,000 drachma; stamps and fees, 19,209,900 drachma; monopolies, 11,940,500 drachma; state property, 4,217,065 drachma; sales of state property, 832,400 drachma; deductions, etc., 3,534,560 drachma; various receipts, 7,468,258 drachma; international telegraphs, 472,000 drachma; lighthouses, 400,000 drachma; instruction, 42,000 drachma; police contributions of communes, 442,000 drachma; extraordinary receipts, 1,473,175 drachma. The expenditure was estimated at 103,418,273 drachma, of which the public debt consumed 29,014,577 drachma; allowances, 11,600,000 drachma; various revenue received, 12,000,000 drachma; pensions, 6,093,603 drachma; civil list, 1,325,000 drachma; the Chamber of Deputies, 919,220 drachma; the Ministry of Foreign Affairs, 2,193,373 drachma; the Ministry of Justice, 5,785,200 drachma; the Ministry of the Interior, 13,077,506 drachma; the Ministry of Worship, 5,431,680 drachma; the Ministry of War, 18,008,340 drachma; the Ministry of Marine, 7,608,739 drachma; the Ministry of Finance, 2,018,088 drachma; collection of taxes, 9,041,858 drachma; various expenditures, 2,606,630 drachma. For 1900 the revised estimate of revenue was 111,315,228 drachma, and of expenditure 110,240,731 drachma. For 1900 the estimate is 114,000,000 drachma of revenue and 111,000,000 drachma of expenditure.

The public debt, payable in gold, on Jan. 1, 1900, amounted to 669,617,000 drachma in gold, requiring an annual expenditure for interest and amortization of 14,657,355 drachma. There was, moreover, a principal of 173,740,790 drachma, requiring 5,083,500 drachma a year.

The International Committee of Control during the year ending Jan. 12, 1900, received 10,685,108 drachma in gold and 55,174,450 drachma in paper, and expended 9,981,103 drachma in gold and 50,212,600 drachma in paper.

The revenue appropriated for the service of the public debt yielded 3,535,755 drachma over the estimate, of which 60 per cent., after deducting 18 per cent. for the expense of control, was available, as also the profit on the rate of exchange, for the service of the debt, one half to increase the interest and one half to augment the amortization. The amount of this surplus was 1,712,675 drachma. The customs revenue in 1898 amounted to 13,144,200 drachma, petroleum revenue to 5,115,165 drachma. The administration of the monopolies is intrusted to a company. Snuggling of petroleum and salt and frauds in the collection of the tobacco, customs, and stamp duties deprive the commission of a part of the assigned revenues. The rates of interest paid in 1899 were 47 per cent. of the original interest on the monopoly loan and 40 per cent. of that of the funding loan and the other loans. Germany, Austria, France, Great Britain, Italy, and Russia, the mediating powers between Greece and Turkey, have representatives in the commission. Of the new loan of 30,000,000 drachma guaranteed by the French, 93,930,000 drachma were paid to Turkey as a war indemnity, 31,350,000 drachma were applied to paying off the floating gold debts, 2,440,000 drachma were used to settle other debts, 21,900,000 drachma were given to the Government to cover the deficit of 1897, and 29,000,000 drachma were available to meet the deficits of other years.

The Army and Navy.—Every Hellene is liable to serve in the army for two years from the age of twenty-one. Whoever is not drawn for active service is enrolled in the reserve and pays a tax. The army in 1898 numbered 1,880 officers and 23,433 noncommissioned officers and privates; total, 25,333 men, with 3,294 horses and 180 guns. The war strength is about 82,000 of all ranks.
The navy consists of 5 armor clads, 17 large torpedo boats, 1 torpedo ship, 2 corvettes, 2 unarmed cruisers, and 12 gunboats. The newest and best vessels are the Dodecanese, Messenian and Spetsai, and Psara, having a displacement of 4,885 tons, 11.8 inches of armor at the water line, and 3 10.6-inch and 4 5.9-inch Canet guns, 7 6-pounder quick firers, and 16 smaller guns.

**Navigation.**—The number of vessels entered at Greek ports during 1898 was 6,428, of 3,299,208 tons; cleared, 1,579, of 2,330,992 tons. The Greek vessels among the total numbered 2,933 entered, and 2,712 cleared. The merchant shipping of Greece on Jan. 1, 1898, consisted of 1,152 sailing vessels, of 238,196 tons, and 118 steamers, of 87,845 tons.

**Commerce and Production.** The most impressive fact of Greece is the dried currant, of which an average crop of 350,000,000 pounds is gathered. The production having outgrown the demand, a law was passed in 1895 and renewed every year since, by which 15 per cent. of the crop is retained by the Government and sold to distillers, the proceeds furnishing capital for an amount set aside for the benefit of currantsellers. The crop of 1898 was 160,000 tons, of which 24,000 tons were retained, leaving 136,000 tons, for which, though not equal to the world's requirements, the quantity exported having been 102,078 tons. In 1899 the crop was fair, but in 1900 disease caused a serious failure in Peloponnese, on the Ionian Islands, causing distress among the farmers, though not impairing the revenue because the price rose to double what it had been.

The land in Greece is cultivated by the owners. It is exceedingly fertile, producing wheat, barley, corn, and other grains, tobacco, olives, and fruits. Capital is scarce and agricultural methods are backward. The annual yield of cereals is over 20,000,000 bushels, of which 2,500,000 is barley. There are 2,625,400 acres of forest. The yield of olives in 1898 was 5,200 tons. In Messenia, the seaf of the silk culture, 150,000 kilogrammes of cocoons and 8,000 kilogrammes of silk were produced in 1897. There are 843 tons of powder and 112 tons of dynamite manufactured annually, and the annual output of soap falls short of 12 tons. Olives and wine are important products. There are about 100,000 horses, 360,000 cattle, and 2,900,000 sheep, the pastureage amounting to 5,000,000 acres. The mineral products in 1898 were 282,782 tons of manganese ore, 109,443 tons of hematite, 24,024 tons of zinc ore, 2,536 tons of dressed gneiss, 1,255 tons of dress lead and zinc blend, 2,500 tons of lead smokes, and 300,724 tons of low-grade lead ore, yielding 18,820 tons of pig lead with silver. The total value of special imports in 1898 was 152,083,634 drachmai in gold; domestic exports, 90,734,074 drachmai. The chief imports were cereals for 37,116,931 gold drachmai, tobacco for 12,922,853 and raw materials for 16,250,034 drachmai, fish and eatables for 6,849,034 drachmai, timber for 7,709,726 drachmai, live animals for 5,061,430 drachmai, chemicals for 5,358,500 drachmai, ores and metals for 6,327,004 drachmai, sugar for 3,629,171 drachmai, hides for 3,448,255 drachmai, and coffee for 2,756,547 drachmai. The export of curants was valued at 37,791,773 drachmai in gold; ores, 20,900,780 drachmai; wine, 4,530,809 drachmai; olive oil, 3,658,824 drachmai; figs, 2,616,600 drachmai; tobacco, 1,964-196 drachmai; gall nuts, 1,896,631 drachmai; silk and cocoons, 1,248,035 drachmai; brandy, 1,165,533 drachmai; sponges, 1,083,500 drachmai; gunpowder, 1,187,031 drachmai; emery, 536,227 drachmai. The quantity of tobacco cut in the Government factories in 1898 was 3,188,088 pounds, besides 126,396 pounds of tunbuki, and the duties collected were 6,573,022 drachmai. The values in gold drachmai of the special imports from and domestic imports to different countries in 1897 are given in the following table:

| Total              | 118,303,348 | 81,708,926 |

**Railroads, Posts, and Telegraphs.**—The railroads of Greece had a total length of 591 miles, and 300 miles were building, principally the extension of the railroad terminating at Athens to the Turkish port of Larissa, there connecting with the rail line running from the interior of Turkey through Servia, Bulgaria, and Turkey. The extension of the line from Piraeus to Larissa was as far as Demerli near the Thessalian frontier was in- trusted to a syndicate in March, 1900, the Government issuing a 4-per-cent. loan of 43,570,000 drachmai for the purpose and the company raising 10,716,000 of capital by guaranteeing a profit of 6 per cent. under international control.

The telegraph lines had a total length of 590 miles on Jan. 1, 1899, with 6,090 miles of wire. The number of internal telegrams in 1898 was 785,982; international, 97,039; official, 19,320. The receipts were 1,981,081 drachmai.

**Politics and Legislation.**—On Jan. 10, 1900, Col. Konoundouros resigned his portfolio as Minister of Commerce and Industry, as 834 factories are in a state of neglect and bankrupts and being prevented from carrying through the reorganization of the army. Col. Tsamasides was appointed to the post, which he had filled under Trikupis and Rallis. An army bill was passed in March which practically transfers the administration of the army from the Minister of War to the Czar of Russia and intrusts the reorganization of the army to foreign officers. Some of the junior officers of the infantry in the summer incurred punishment by making a demonstration against the exclusion of their arm from staff appointments.

**GUAM.**—The largest of the Ladrone or Marianne Islands, celebrated the United States by an act of Dec. 11, 1898, the other islands of the archipelago being subsequently transferred to Germany. Guam has an area of nearly 200 square miles and about 9,000 inhabitants, who are the descendants of immigrants from the Philippine Islands, the original population having died out. About two thirds of the people live in Agana, the chief town. Spanish and the native Chamorro are the languages of ordinary intercourse, but many of the inhabitants understand English. There are 18 schools, and 99 per cent. of the natives can read and write. The island is fertile and to a great extent covered with woods containing valuable timber. The first American Governor, Capt. Leary, who was residing in Samoa at the time when Guam was occupied by American troops
in July, 1898. He sold to collectors the first postage stamps that were printed in Washington for use by the United States, and loaned others, thus eking out the scanty revenue. He ordered the people of Agana who were living in irregular wedlock to have their unions legalized, and compelled them to conform their dress and customs to civilized usages. On Washington’s Birthday he issued a proclamation declaring that personal liberty was the inalienable right of all men, and that the mild form of slavery hitherto practiced on the islands was at an end wherever the United States had jurisdiction. A breakwater for the roadstead has been designed, and the fortification of the harbor of San Luis d’Apra is contemplated in order to fit it for a coal station on the route between Honolulu and Manila. A sufficient coal has already been accumulated, and transports bound for Manila are usually compelled to take in coal there.

GUATEMALA, a republic in Central America. The legislative power is vested in the National Assembly, a single chamber of 60 members, 1 to 20 members each for the four-yearly universal adult male suffrage, and in the Council of State, consisting of 13 members, part elected by the Assembly and part appointed by the President. The executive power is vested in the President, who is under the Constitution elected by the people for six years and can not be a candidate for the next succeeding term. Manuel Estrada Cabrera was the inalienable right by till men, and

Area and Population.—Guatemala has an estimated area of 63,400 square miles. The population in 1898 was 1,535,632. There is a small proportion of pure Spanish blood, but nearly all who are not are Indians and mestizos. Thus fiftith of the inhabitants are Indians. There are about 12,000 foreigners. Most of the foreigners and native whites live in Guatemala la Nueva, the capital, which has about 73,000 inhabitants.

Finances.—The revenue in 1897 was $12,479,741, and expenditure $21,433,194. In 1898 the revenue was $12,538,961, and expenditure $21,636,836. For 1899 the revenue was estimated at $9,815,000, of which $3,402,000 come from custom, $1,567,000 from taxation, and $3,546,000 from monopolies. The revenue was estimated at $13,708,781, of which $6,211,901 were assigned to the Department of Finance, $1,349,588 to the interior and justice, $1,566,997 to education, $2,554,792 to the War Department, and $1,755,272 to Public Instruction and works. The revenue is collected in currency. There is very little metallic money in the country, and the premium on silver coin rose in 1899 to 70 per cent., and on gold to 430 per cent. The foreign gold loan of 1895 amounted in 1899, with $29,656 arrears of interest, to $1,512,456. The silver debt, including outstanding ceedals, and other liabilities, amounted on Jan. 1, 1899, to $18,638,281 in silver, and gold debts separate from the loan of 1895 to $1,203,205 in gold. The banks by a decree issued on Oct. 29, 1898, were authorized to issue $6,000,000 in notes that are legal tender to the exclusion of former issues of notes and in preference to silver, even though debts are made payable in silver by the contract.

Commerce and Production.—The coffee crop in 1898 was 82,033 quintals. There is an export duty on coffee of 10 cents per quintal. The quantity of tobacco grown on 2,500 acres is 9,000 quintals a year; of sugar on 6,700 acres, 25,000 quintals. Bananas are cultivated for food and export, and corn is grown for the foreign market. The planting of rubber trees is encouraged by the Government, which in a decree issued on Jan. 14, 1899, offers a caballeria of the national land for every 20,000 plants grown, to be given when they are four years old. Cattle are pastured on the high table-land, about 500,000 head in 1895. The number of horses is estimated at 62,000; of mules, 42,000. The national lands, by the law of 1894, excepting on the seashore and the land frontiers, are open to settlers in lots of 15 caballerias or less at prices ranging from $250 to $500 per caballeria of 112 acres. Wild lands may be granted without price to immigrants or coloniztion companies of 15 municipalities or villages, or in consideration of road making or for school funds. Gold, silver, and salt are mined to a small extent, and lead, tin, and copper are found. The value of imports in 1898 was $4,500,835 in gold, equivalent to $13,207,656 in silver; exports, $15,377,460 in silver. The gold value of cotton imports was $388,068; of coffee, $261,838; preserved foods, $117,126; iron wares, $109,888; silk goods, $106,808; gold and silver coin, $439,704. The value in silver of the coffee exported was $14,069,509; bananas, $93,240; hides, $55,801. Of the imports, $1,549,146 came from the United States, $937,899 from Germany, $848,443 from Great Britain. The revenue from the coffee exported, 498,270 quintals went to Germany, 180,000 to Great Britain, and 126,473 to the United States. The number of vessels entered at Guatemalan ports in 1898 was 825, and 845 were cleared, nearly all United States vessels.

Railroads, Posts, and Telegraphs.—The railroad from Camperio to Retalhuleu, 32 miles, was completed. New lines between Port Barrios and Izapa and the capital have recently been undertaken, and the line from the port of Izapa has been completed, the Government paying a subsidy of £1,630 a mile. An American company had 130 miles of the other line (210 miles in total length) in operation in 1898, receiving, for not exceeding 10,000 a month.

The number of letters, cards, papers, parcels, etc., dispatched through the post office during 1898 was 2,769,543; received, 2,771,035. There are 3,126 miles of telegraphs. The number of messages sent during 1898 was 653,402.

HAWAII, a Territory of the United States, formerly an independent kingdom. Queen Liliuokalani, the last sovereign, having proclaimed alterations in the Constitution favorable to the native Kanaka population which threatened the ascendancy of the whites, was forced to abdicate by a revolution in which the United States naval forces intervened by a demonstration that was construed as menacing. Liliuokalani declared that she yielded to superior force, and afterward appealed to the President of the United States to restore her throne. The revolutionary party, most
of whose leaders were descendants of American missionaries, proclaimed in January, 1893, a provisional government to carry on affairs pending annexation to the United States. On July 4, 1894, a republic was constituted in which native Hawaiians and white residents who could read and write either Hawaiian or English had the right to vote indirectly for Senators and members of the House of Representatives. On Aug. 12, 1898, in accordance with a joint resolution of Congress, the Hawaiian Islands were formally annexed to the United States, an annexation treaty having, on June 16, 1897, been signed at Washington by envoys of the Hawaiian Republic and John Sherman, Secretary of State, in which it was stipulated that, until Congress should provide for the government of the islands, the civil, judicial, and military powers were to be vested in such persons and exercised in such manner as the President of the United States should direct, and the power was conferred on him to remove officers and fill vacancies by appointment, and all debts of the Hawaiian Government not to exceed $4,000,000. The existing Government of Hawaii was confirmed, and its members continued in office for such period as existing customs relations of Hawaii with the United States and other countries remain unchanged. Until otherwise determined by Congress the municipal laws of the republic were to continue in force as far as they are not inconsistent with the treaties or the Constitution of the United States, but all treaties of the Hawaiian Government with foreign powers were declared to be confirmed, and all descendants of the Hawaiian race, either on the paternal or maternal side, who were citizens of the Hawaiian Republic were declared citizens of the United States. There were 2,687 electors on the register in 1897. President Sanford B. Dole and all the administrative and judicial officers were continued in their functions. For military purposes the islands were attached to the department of the Philippine Islands. Cabinet appointments in the beginning of 1900 of the following members: Minister of Foreign Affairs and of Public Instruction, E. A. Mott-Smith; Minister of the Interior, J. A. King; Minister of Finance, S. M. Damon; Attorney-General, H. E. Cooper.

Area and Population.—The area and population of the different islands on Sept. 27, 1896, were as follows:

<table>

The total population was composed of 72,517 males and 26,563 females. There were 31,019 native Hawaiians, 8,485 Hawaiians of mixed blood, 24,407 Japanese, 21,616 Chinese, 15,191 Portuguese, 3,096 Americans, 2,250 English, 1,534 Germans, and 1,420 of various other nationalities. The religion of 26,363 was Roman Catholic; of 23,773 Protestant; of 4,886 Mormon; of 44,306 Buddhist, Confucian, Shinto, etc.; of 10,192 unknown. The immigration in 1894 was 8,114, and emigration 5,477; immigration in 1895 was 8,000, and emigration 4,636; immigration in 1896 was 13,984, and emigration 6,857; immigration in 1897 was 11,579, and emigration 6,504; immigration in 1898 was 17,229, and emigration 7,313. Most of the later immigrants are Japanese, brought under contract to labor. The total population was estimated in 1898 at 117,281. The native Hawaiians are rapidly declining in numbers, owing to excessive infant mortality. On June 1, 1900, the population of the islands was 154,001, showing an increase of 41.2 per cent. in four years. This increase was due to fertility, the number of births being far in excess of the number of deaths. The number of pure Hawaiians in 1853 was 71,019. The smallpox, measles, and other contagious diseases which formerly decimated them because they are peculiarly susceptible to infectious disorders are now held in check, and so is leprosy, to which a great many of them still succumb. The percentage of increase in the entire group was 71.1 per cent. in ten years. The population of Honolulu was 39,306, having nearly doubled in the decade and grown into a modern seaport with street cars, electric lighting, and good architecture from a native village of 3,000 souls since the coming of the missionaries in 1810. The capital of the nation was moved from Oahu to the island of Maui in 1879, when the revenue was $2,568,489 and expenditure $2,186,278. The chief items of revenue were $896,975 from customs, $811,818 from taxes, and $1,585,057 from internal revenue duties. The chief expenditures were $102,659 for the public debt, $229,115 for education, $54,534 for the army, $230,157 for public works, $1,647,966 for sanitation, and $241,931 for the Attorney-General's office. The debts on Jan. 1, 1899, amounted to $4,374,055, paying from 5 to 12 per cent. interest.

Commerce and Production.—Sugar is the principal product, and next in importance comes rice. Coffee has been planted extensively, and bananas are largely grown. Hides and skins and wool are exported in considerable quantities. The productivity of water power is exceedingly fertile. The growth of the sugar industry has been the chief factor in promoting the extraordinary increase in the population and wealth of the Hawaiian Islands, which are now the third largest producer of cane sugar in the world. Nearly all the money invested in Hawaiians has been out of sugar. The production of raw sugar in 1899 was 282,807 tons, having nearly doubled in five years. There were 51 plantations, employing about 40,500 laborers, of whom 30,000 were Japanese, 6,000 Chinese, 2,150
Portuguese, and the remainder of various nationalities. Scandinavians have been tried, also Poles and Austrians, and in 1900 Porto Ricans and American negroes were taken out.

The total value of imports increased from $5,730,000 in 1894 and $5,714,000 in 1895 to $7,165,000 in 1896, $8,385,000 in 1897, and $11,650,000 in 1898; that of exports of Hawaiian produce from $8,141,000 in 1894 and $8,358,000 in 1895 to $15,436,000 in 1896, $16,022,000 in 1897, and $17,346,000 in 1898. Foodstuffs for the population, as well as textiles and clothing, timber, machinery, and hardware, are imported. Cereals and provisions, cotton goods, and a majority of other goods are brought from the United States, which supplies 74.64 per cent. of the total imports, while 11.05 per cent. come from England. On many articles imported free from the United States 10 per cent. duty is paid if they come from other countries. Of the exports 99.44 per cent. go to the United States. The imports into the United States from Hawaii were valued at $17,187,380 in 1898 and $17,831,463 in 1899, the exports from the United States to Hawaii at $5,907,155 in 1898 and $9,305,470 in 1899. The total trade of the islands in 1899 showed an increase of 44 per cent. over that of the previous year. The proportion of the United States in the import trade was 78.8 per cent., that of the British Empire 11.25 per cent. There was a notable increase in the importation of machinery, fertilizers, building materials, clothing, and provisions. Sugar amounted to 97 per cent. of the total exports, all going to the United States. The export of rice has declined, owing to the increased domestic demand. Bee culture is growing into an important industry, especially in Oahu, and the export of honey to Australia and New Zealand has reached a considerable figure. The imports from the Hawaiian Islands into the United States in 1900 reached $20,707,903 and exports from the United States to the Hawaiian Islands $13,500,148.

Navigation.—The shipping belonging to Hawaii consisted in 1898 of 71 vessels, of 33,576 tons. Lines of steamers run between Honolulu and American, Australasian, Chinese, and Japanese ports.

Railroads, Posts, and Telegraphs.—On the islands of Oahu, Hawaii, and Maui are railroads having a total length of about 100 miles. The telegraphs in these three islands, with the cable connecting Oahu with Hawaii, have 250 miles of line. Honolulu already had a thorough telephone system before the fall of the monarchy. The number of letters and other mail matter handled by the post office in 1897 was 5,079,872. The postal savings bank in 1897 had $953,981 belonging to 10,620 depositors. Cables will soon connect all the islands.

Politics and Legislation.—The tariff and navigation laws of the United States have been extended to the Hawaiian archipelago. The time labor contracts by which laborers engaged to work on the sugar plantations could be restrained by the public force from leaving before the stipulated term of years expired have been abolished as repugnant to the United States Constitution. The trade between the United States and the Hawaiian Islands is now coastwise in character. No duty is paid on Hawaiian products brought into the United States or on American products brought into Hawaii. As Honolulu is no longer treated as a foreign port the merchants of San Francisco who conduct most of the business no longer report the quantity and value of the imports and exports.

The first election held in Hawaii since it became a Territorial part of the United States took place in November, 1900. A Delegate to Congress was chosen. There were three parties—Republicans, Democrats, and Independents, the last representing specially the native Hawaiians and the principle of home rule. Samuel Parker, of native descent, the chief cattle breeder of the islands, was the Republican candidate; Prince David Kamehameha, a nephew of ex-Queen Liliuokalani, was the candidate of the Democrats; and Robert W. Wilcox, who was a leader in the revolutionary uprising of the natives against the Americanizing Government in power in 1889, was the nominee of the Independents, whose object is to gain the rights of statehood for Hawaii. Mr. Wilcox was the successful candidate, and in the Legislature elected at the same time, comprising 15 Senators and 30 Representatives, the Independents obtained a majority of the seats.

HAYTI, a republic in the West Indies, occupying the western third of the island of Hayti. The legislative power is vested in the National Assembly, consisting of a Senate of 30 members, chosen for six years by the lower house from two lists, one submitted by the President and one by an
electoral college, and a House of Representatives, 95 in number, elected for three years by the votes of all adult male citizens who have regular means of livelihood. The President is elected for seven years by the people. Gen. Tiresias Augustin Sam was elected on April 1, 1896, to fill the unexpired term of President Hippolyte, ending in May, 1899. The Cabinet at the beginning of 1900 was composed as follows: Secretary of Foreign Affairs, Brutus San Victor; Secretary of Finance and Commerce, Herard Roy; Secretary of the Interior and Police, Tancrède Auguste; Secretary of Agriculture and Public Works, C. Leconte; Secretary of Justice and Worship, L. Canvin; Secretary of War, M. Guillaume; Secretary of Public Instruction, M. Chanzey.

Area and Population.—The area of the republic is estimated at 10,204 square miles. An ecclesiastical census taken in 1894 made the population 1,210,625. Nine tenths of the people are negroes and the rest of mixed blood. The state religion is the Roman Catholic, but all creeds are tolerated. The people speak the French language, corrupted in the country districts into a patois known as Creole French. Elementary education is free, and nearly $1,000,000 are spent to support 400 public schools and 5 lyceums; yet the mass of the people, especially in the country, lack the rudiments of education and are extremely ignorant and superstitious, relapsing at times into the savage rites of African witchcraft.

Finances.—Nearly the whole of the public revenue is derived from customs duties, levied in United States gold coin on exports and on imports in gourdes or national dollars, which are 15 per cent. below par of the American dollar. The export duties collected in 1897 amounted to $2,993,388 in gold, the import duties to $3,957,857 in currency; the export duties in 1898 to $3,212,239 in gold, the import duties to $2,649,574 in currency. For the year ending Sept. 30, 1899, the revenue was estimated at $5,626,260 in currency and $2,537,205 in gold; the expenditure at $5,693,068 in currency and $2,325,284 in gold.

The public debt on Dec. 31, 1898, consisted of 5 and 6 per cent. foreign gold loans amounting to $13,141,751, $4,407,055 of internal debt payable in gold and secured by the export duty on coffee, and $9,227,713 payable in currency. There were $3,749,000 of paper money and $3,500,000 of silver dollars having the same value as the French 5-franc piece in circulation in 1899, with $225,000 in copper. The amount of American gold in the country was about $1,200,000. A loan of $3,500,000 in United States gold was authorized in February, 1898, for the purpose of retiring the paper money. The money could not be borrowed, and subsequently a law was passed imposing a supplementary duty on imports, equal to 25 per cent. of the former duties, which was to be applied to the redemption of the paper currency until a loan could be raised.

The Army and Navy.—A Government guard of 650 men with 10 generals among its officers is kept to protect the President. An army of 6,898 men, mostly infantry, has been authorized since 1878. A fleet of small cruisers and gunboats has been acquired at different times.

Commerce and Production.—The staple product of Hayti is coffee, for which the country is admirably adapted. An export duty of $3.87 a hundredweight is imposed in extension of the industry, and much of the coffee is gathered from old, neglected plantations. Cacao has been planted in recent times. Cotton also is now-planted, and the export is becoming important. Tobacco cultivation has been undertaken by a company organized lately. The sugar cane is grown mainly for rum, which is distilled and consumed in the country. Copper, iron, and nickel exist, but there is no mining. The chief forest product is logwood. The export of coffee in the year ending Sept. 30, 1898, was 67,437,593 pounds; of logwood, 127,946 pounds; of logwood, 66,603,168 pounds. Minor exports are hides and skins, honey, and mahogany.

There were 196 vessels, of 268,196 tons, entered and cleared at Port-au-Prince in 1898; 192, of 285,577 tons, at Cape Haytien; 134, of 164,644 tons, at Les Cayes; and 177, of 426,352 tons, at Jautel.

HENDERSON, DAVID BREMNER, Speaker of the United States House of Representatives, was born in Old Deer, Aberdeenshire, Scotland, March 14, 1840. He is a son of Thomas and Barbara Henderson and a grandson of Walter Henderson on his father's side. He was taken to the United States by his parents, who settled on a farm in Winnebago County, Illinois, in 1846. In 1849 they removed to Fayette County, Iowa, where the son was educated, attending district schools and Upper Iowa University at Fayette. He enlisted in the National army, Sept. 15, 1861, and was mustered in as a private at Dubuque, Iowa, Jan. 3 as 1st lieutenant of Company C, Twelfth Iowa Infantry. He participated in the battles of Fort Henry, Donelson, Shiloh, and Corinth, was severely wounded at Fort Donelson, and lost a leg at Corinth, Oct. 4, 1862. He re-entered the army, June 10, 1864, as colonel of the Forty-sixth Iowa Infantry, and served until the close of the war. He was admitted to the bar at Dubuque in 1865, and was appointed collector of internal revenue at the close of the war, serving until June, 1869, when he resigned to become a member of the law firm of Shiras, Van Duze & Henderson. He was
Assistant United States District Attorney for the northern division of Iowa about two years, and resigned in 1871. In 1882 he was elected as a Republican to the Forty-eighth Congress, and in 1886 he was re-elected to the Forty-ninth, Fiftieth, Fifty-first, Fifty-second, Fifty-third, Fifty-fourth, Fifty-fifth, Fifty-sixth, and Fifty-seventh Congresses. He was elected Speaker of the House of Representatives, Dec. 4, 1899. Upper Iowa University has conferred upon him the honorary degree of LL. D.

HOLLAND. (See Netherlands.)

HONDURAS, a republic in Central America. The legislative power is vested in the Congress, a single chamber of 46 members, 1 to 10,000 of population, meeting biennially and elected for four years by universal male suffrage. The President of the republic is elected for four years by popular suffrage. Gen. Teodoro Moscoso was President in 1899 for the term ending in January, 1903, and Gen. José M. Reina was elected Vice-President. The following were members of the Council of Ministers in the beginning of 1900: Minister of Foreign Affairs, Dr. C. Bonilla; Minister of Public Works, F. Altenschul; Minister of Justice and Public Instruction, Dr. E. C. Wall; Finance, D. Fortin; Minister of War, Gen. M. Rosales.

Area and Population.—Honduras has an area estimated at 45,250 square miles, with a population of about 407,000, mostly of Indian descent. Education is gratuitous, secular, and compulsory, the government being from America. There are 23 superior schools with 1,588 pupils besides a university at Tegucigalpa, and 683 elementary schools with 23,767 pupils. The Government spends on the latter $13,390 a year.

Finances.—The bulk of the revenue is derived from duties on liquor and tobacco and from customs. The revenue for the year ending July 30, 1897, was $2,385,500, and expenditure $2,400,272. For 1898 the revenue amounted to $3,049,365, of which $1,263,654 came from internal revenue duties, $1,030,116 from customs, $192,149 from stamps, $21,462 from taxation, and $512,953 from various sources. For 1900 the revenue was estimated at $2,928,500 and expenditure at $2,940,272.

The Government of Honduras contracted between 1867 and 1870 foreign loans, on which interest ceased to be paid in 1872. On the first loan, which was £78,800 at 5 per cent., £100,470 interest was owing in the middle of 1898; on the second loan of 1897, which was £900,700 at 10 per cent., £2,541,800 of unpaid interest had accumulated; on the loan of 1899, which was £227,165,570 at 6 per cent., the arrears were £23,700,169; and on £2,424,500 borrowed at 10 per cent. in 1870 they were £5,830,500. The nominal principal amounted to £3,398,570; the defaulted interest reached £12,446,324 at the end of July, 1899.

There is an internal silver debt amounting in 1890 to £5,518,522.

Commerce and Production.—The chief crop grown for export is bananas, which are sent to New Orleans. Tobacco, sugar, coffee, and corn are cultivated, and to a less extent indigo, rice, and wheat. There are large herds of cattle in the interior. The mineral resources of the country are great, but undeveloped. Gold is washed from the river beds by the natives, and recently companies have been organized to conduct mining operations on a commercial scale. Silver, copper, lead, platinum, zinc, antimony, nickel, and iron ores are abundant. The scarcity of labor is the greatest obstacle to production. The people brand Panama hats and carry on a flourishing export trade in hats, the soil sufficiently to supply their necessities, but will not work steadily for hire. The value of the imports in 1898 was $1,106,441 in gold; exports, $1,235,952 in gold; the value of bananas being $435,000, cattle $117,000, coffee $80,000, cotton $72,000, and wool $44,000. Of the total imports the value of fruit and vegetables is the largest, at $92,000,000. Exports of cotton, gold, silver, gold dust, and other metals are $312,000 from Germany, and $103,914 from Great Britain; of the exports, $98,897 went to the United States, $21,470 to Germany, and $11,596 to Great Britain. Gold bars of the value of $287,937 were exported from Amatapla, and silver bars of the value of $967,273, silver coin to the amount of $55,932, and $29,150 worth of other metals.

Railroads, Posts, and Telegraphs.—The rail-road from Puerto Cortez to La Pimienta, 60 miles, will be carried through to the Pacific coast and a line built from Puerto Cortez to San Lorenzo.

The post office in 1899 received 304,039 and sent out 337,598 internal letters, etc., and in the former service received $5,950 and in the latter $20,548. There are 2,730 miles of telegraph line, the number of messages in 1898 was 458,593. There are telephones in the capital, Tegucigalpa, a town of about 14,000 inhabitants, and in some other places.

IDAHO, a Northwestern State, admitted to the Union July 3, 1890; area, 84,800 square miles; population in 1890, 84,385; in 1900, 161,772. Capital, Boise City.

Government.—The following were the State officers during the latter part of 1899: Governor, Frank Steunenberg; Lieutenant Governor, H. E. Johnson; Secretary of State, Mart Patrie; Auditor, Bartlett Sinclair; Treasurer, Lucius C. Rice; Attorney-General, S. H. Hays; Adjutant-General, J. N. Weaver; State Engineer, D. W. Ross; Superintendent of Schools, Permeal French; Mine Inspector, J. W. Treglown; State Penitentiary; Chief Justice of the Supreme Court, J. W. Huston; Associate Justices, J. N. Sullivan and Ralph P. Quarles; Clerk, Solomon Hasbrouck.

Population.—The population of the State in 1900, by counties, was as follows: Ada, 11,559; Bannock, 11,702; Bear Lake, 7,651; Bingham, 10,447; Blaine, 8,000; Boise, 14,174; Cañon, 7,487; Cassia, 3,951; Custer, 2,549; Elmore, 2,16; Fremont, 12,821; Idaho, 9,921; Kootenai, 10,216; Latah, 13,451; Lemhi, 3,446; Lincoln, 1,784; Nez Perces, 13,748; Oneida, 8,933; Owyhee, 3,804; Shoshone, 11,950; Washington, 6,882; total, 161,772.

Finances.—The State's bonded debt is $427,500. The floating debt is all provided for, and cash is being paid out warrants as the State's funds permit. The State now has $5,500 and is ready when needed to pay the bonded debt amount to $75,000. The bonds are to be paid as fast as the option of the State matures. The bonds run twenty years, with the option to pay at the end of ten years. The first bonds to which the State applied its option were the $11,000 wagon-road bonds of 1872, which were paid July 1, 1899. Commissioner of Immigration, Labor, and Statistics, in his latest report says: "The present is the first time in the history of the State that it has been on a cash basis. The tax levy for State purposes has been cut down from 80 cents on the $100 valuation to about 52 cents."

Valuation.—The total assessed valuation of the State, as equalized, is $47,545,905.82, an increase of $825,915.43 over 1890. The total acreage of
Idaho.

Patented lands in 1900 was 2,587,259, with a valuation, as equalized, of $12,683,359.55. The total valuation of county assessments, as equalized in 1900, is $38,444,937.49, exclusive of railroad, telegraph, and telephone assessments, which are, respectively, $8,931,115, $8,692,68, and $85,160.65, making a total of $47,415,903.82, against $46,719,000, as in 1899. The amount of State tax levied for 1900 was $243,000. The value of mines and mining improvements, as given by the assessors, amounts to $1,214,211.

Mineral Yield.—The State official reports of the output of precious metals in 1899, with comparisons from 1898, reaches the following showing: Gold, $2,688,102; Silver, $3,760,553; S. I., $46,719,000. Total, 1899, $4,239,060; 1898, $4,692,107. The output of lead, 1899, was valued at $3,760,553. The grand total for gold, silver, lead, and copper reached $11,163,728. That is, $2,427,350 less than the State's output for 1898, the decrease being due very largely to the fall in the market for silver. The output from the mines of the State is largely over Eastern lines. The fact that the Black Jack mine was closed down last year accounts for a large portion of the Owyhee decrease, and the labor troubles in Shoshone County are accountable for the falling off there. The value of the copper output for 1899 was $660,000.

The number of quartz mills in the State was 2,587.

Railroads.—The amount of railroad mileage is 1,291.82 miles, the three counties having the greatest mileage being Kootenai, 238.96 miles; Bannock, 124.53; and Lincoln, 116.75. In southeastern Idaho 51 miles of new railroad have been built, connecting the town of St. Anthony with the Short Line system at Idaho Falls. This road was constructed on the Short Line because of the rapid development of the rich agricultural region through which it passes.

Telegraphs and Telephones.—There are 1,200.77 miles of telegraph line in Idaho. The telephone wires reach 1,232 miles, with 985.50 of additional wires.

Live Stock.—From the reports of the county assessors it appears that the State contains 162 miles, 170,476 cattle, 25,497 hogs, 80,390 horses, and 1,247,693 sheep.

Irrigation.—The greatest irrigation enterprise in the Northwest has been launched in Idaho. Water is to be taken from Snake river to irrigate the lands on either side of the river in the vicinity of Shoshone Falls. The project is to reclaim the land under the Carey act and the State legislation supplementary thereto, and it has progressed so far that the segregation of the land has been made. Altogether, 248,000 acres of land have been withdrawn from entry to be reclaimed by the proposed canal system, and of this 200,000 are the high and fertile lands that can be recovered from the canals projected. The proposed canal on the north side of the river is to be 20 miles long and 25 feet wide on the bottom, and will carry 400 second feet. On that side the State has segregated 31,000 acres, and 2,000 acres of school land are also covered. On the south side the width will be 123 feet, and the hills and cover the entire Rock Creek section. It will be 90 feet wide on the bottom, and will carry a stream 9 feet deep, or 3,000 second feet. It will be 65 miles long, ending at Salmon river. On that side the State has filed on 217,000 acres of land. In addition, 19,000 acres of school land are covered. The cost of the $1,545,900 canals will be about $1,500,000.

The Prison.—The total expenditure for the State Penitentiary amounted to $39,181.90 for the fiscal year. From this amount $14,028.38 is deductible as not being chargeable to maintenance, leaving $25,701.42 as the net cost. The average daily number of prisoners was 150, the whole number of prison days served 54,854, making the average daily cost per capita 47.53 cents. On Nov. 30 there were in the prison 147 State prisoners and 9 United States prisoners; total, 156.

Insane.—The number of patients remaining at the Blackfoot Institution on Sept. 30 was as follows: Male, 118; female, 74. This represents about the average number of patients.

Labor Troubles.—The report of the congressional committee on Military Affairs, which conducted an investigation of the Cœur d'Alene labor troubles, was made public on June 3, having been approved by a majority vote of the committee, the minority favoring a substitute report. The majority report says:

"1. The Governor of Idaho, in his efforts to establish order and enforce the laws of the State, is to be commended for his courage and fearlessness in the face of danger, and the consequent disturbance of public business, and the reign of lawlessness are in a fair way to be adjusted. The citizens of Idaho are to be congratulated on the removal of a dangerous cancer that has long threatened the peace and order of the State. The better ideas that prevail as to the rights and duties of the citizen in relation to the police of the country and this improved condition of affairs are in a great measure due to the conduct of the Governor of that State.

"2. The conduct of the military from May 2 to the present, amid the disturbing elements of the Cœur d'Alenes, when fierce passions flamed unchecked, when no hand was raised to stay the progress of the insurrection, is an evidence of the fact that the mob has been supreme, is a matter of earnest congratulation to the country."

The report takes up in detail the various meetings of the miners' unions the day before and on the day the Bunker Hill mill was blown up with dynamite, the distribution of firearms and masks, and the march of 3,000 miners. This," it says, "was accomplished with military precision under direct command of leaders and without any delay, from which fact, and from the evidence adduced at the Corcoran trial, it is found that there existed in the mining district of the Cœur d'Alenes a widespread, deep-seated, and thoroughly organized conspiracy."

The report says the district had been in a state of insurrection since 1892, and the condition in 1899 culminated in the violent state of insurrection and riot. The Legislature could not have been convened to meet the emergency, and the committee holds that "under the circumstances the Governor was warranted in calling on the President for the relief of the people in the district." As to the President's course, the report says:

"It is conceded on all sides that the President of the United States was justified in sending troops to Shoshone County, Idaho, in response to the application of the Governor. The United States troops have now gone into garrison 8 miles from the scene of the troubles and they are retained at the request of the Governor, supported by a petition of 1,500 citizens.

"None of the charges pending against the United States army and its officers in Idaho, as set forth in the various paragraphs of the resolution, have been sustained by the testimony. The military officer in Shoshone County, Idaho, Major Merriam, was used strictly in aid of the civil authorities. The sheriff and many other county officials were in collision with the rioters, and therefore civil authority could not be enforced."
Some of the county officials were afterward duly removed from office by judicial process because of said collusion and malfeasance in office. The United States army and its officers acted strictly within their instructions and the law. President Madison, in his message to Congress, said: "The army and the military power of the government are a protection, and the military acted solely within the Constitution and did not encroach in the distinct sphere of the civil authorities."

Political.—The vote of the State at the election in November was as follows: For presidential electors—Democratic, 29,414; Republican, 27,188. For governor—Judge C. O. Northcott (Republican), 28,164; E. C. Steele (Republican), 26,501. For governor—Frank W. Hunt (Democrat), 28,628; D. W. Standord (Republican), 26,468. The remainder of the Democratic ticket was elected. The State officers to succeed in January, 1901, are: Governor, Frank W. Hunt; Lieutenant Governor, Aurelia Taylor; Secretary of State, C. J. Lawrence; Auditor, E. W. Jones; Treasurer, J. J. Plumer; Attorney-General, Frank Martin; Superintendent of Instruction, Permele French; Mine Inspector, M. H. Jacobs.

ILLINOIS, a Western State, admitted to the Union Dec. 3, 1818; area, 56,650 square miles. The 1890 population was 3,826,351; in 1880, 3,286,351; and in 1870, 3,077,871. The population of the State at the last census was 55,162 in 1820; 157,445 in 1830; 476,183 in 1840; 851,470 in 1850; 1,711,951 in 1860; 2,530,891 in 1870; 3,077,871 in 1880; 3,826,351 in 1890; and 4,821,550 in 1900. Capital, Springfield.

Government.—The following were the State officers during the year: Governor, John R. Tanner; Lieutenant Governor, William A. Northcutt; Secretary of State, James A. Rose; Auditor, James S. McCullough; Treasurer, Floyd K. Whittemore; Attorney-General, Edward C. Akin; Superintendent of Public Instruction, Alfred Baylis; Adjutant General, J. N. Reece; Superintendent of Insurance, James R. B. Van Cleve; Printer, Robert, John H. Barton; Chief Justice, James H. Illston; Associate Justices, Alfred L. Northcott, John Johnson, Ambrose B. Fisk, Board of Agriculture, W. H. Fulkerson; Board of Arbitration, H. R. Calef, D. J. Keefe, and W. S. Forman; President of Board of Health, C. B. Johnson; Justices of Supreme Court, C. C. Boggs, J. R. Phillips, J. W. Wilkin, J. N. Carter, A. M. Craig, and B. D. Magruder. The following are the officers of the United States, as of April 24, 1899: Food Commissioner, A. H. Jones; Game Commissioner, Henry W. Lovelady; Supervising Architect, R. Bruce Watson; Board of Inspectors of Commission Merchants, W. H. Whitchcomb, J. W. Stanton, A. M. Crawford, Joseph Newman, and A. M. Smith.

The Identification of Illinois in 1900, according to the bulletin of the Federal census, was 4,821,550, against 3,826,351 in 1890, an increase of 26 per cent. The population by counties was: Adams, 67,058; Alexander, 19,384; Bond, 10,078; Boone, 15,701; Brown, 11,557; Bureau, 41,112; Calhoun, 8,917; Carroll, 18,903; Cass, 17,222; Champaign, 47,625; Christian, 32,790; Coles, 24,083; Cook, 1,922,799; Crawford, 19,240; Cumberland, 16,124; DeKalb, 31,756; De Witt, 18,972; Douglas, 19,007; Dupage, 28,196; Edgar, 28,273; Effingham, 20,465; Fayette, 20,063; Ford, 18,339; Franklin, 19,675; Fulton, 46,201; Gallatin, 15,836; Greene, 18,720; Ionia, 28,196; Hamilton, 29,790; Hancock, 32,215; Hardin, 7,448; Hanover, 10,836; Illinois, 40,049; Iroquois, 38,014; Jackson, 33,871; Jasper, 20,160; Jefferson, 28,133; Jackson, 14,612; Jo Daviess, 21,533; Johnson, 15,667; Kane, 78,792; Kankakee, 37,134; Kendall, 11,467; Knox, 43,612; Lee, 34,504; LaSalle, 87,770; Lawrence, 16,523; Lee, 29,894; Livingston, 42,055; Logan, 28,680; McDonough, 28,412; McHenry, 29,759; McLean, 67,843; Macoupin, 44,003; Macon, 42,256; Madison, 64,694; Marion, 30,446; Marshall, 16,370; Mason, 17,491; Massac, 13,110; Menard, 14,336; Mercer, 20,945; Monroe, 13,847; Montgomery, 20,054; Morgan, 38,552; McLean; 35,859; Peoria, 21,129; Perry, 88,608; Perry, 10,830; Piatt, 17,706; Pike, 31,505; Pope, 13,855; Pulaski, 14,554; Putnam, 4,746; Randolph, 28,001; Richland, 16,391; Rock Island, 55,249; St. Clair, 86,685; Saline, 21,683; Sangamon, 71,903; Schuyler, 10,129; Scott, 10,453; Shelby, 32,126; Stark, 19,186; Stephenson, 34,053; Tazewell, 33,901; Union, 22,610; Vermilion, 63,653; Wabash, 12,583; Warren, 23,163; Washington, 19,526; Wayne, 27,626; White, 25,386; Whiteside, 34,710; Will, 74,764; Williamson, 27,796; Winnebago, 47,845; Woodford, 21,822.

Valuations.—The total assessment of the counties for 1900, as given by the Auditor, was $779,717,788; as assessed against property, $775,717,788; and as new, $1,787,917,875. The total of the assessment is accounted for by alleged evasions of property owners, a new law intended to secure accurate returns having proved ineffective. Detailed published statements from the reports of the State Board of Equalization, which adjourned on Dec. 3, show the following figures for 1900: Lands, $295,945,843; buildings, $904,691,170; personal property, $157,426,634; capital stock, $4,838,928,690; railroads, $77,928,418.

Banks.—In May the State Auditor had received statements of the condition of all the State banks. One hundred and fifty-seven showed total resources and liabilities of $207,576,108.25. This included the following: Resources—banks' funds and discounts, $119,171,187.20; United States bonds, including premiums, $861,853,34; other bonds and securities, $25,902,864; other real estate, $1,040,593.77; gold coin, $5,383,292.15; gold Treasury certificates, $7,403,123; silver coin, $307,700.83; silver Treasury certificates, $1,267,640; national bank currency, $4,115,925; legal tender and Treasury notes, $3,921,151; surplus capital stock, $18,432,000; surplus fund, $7,141,201.43.

In August the Auditor published the following figures in his report as to the condition of 139 State banks for the year ending June 30, 1900: Capital, July 1, 1899, $16,987,900; surplus, $8,929,558; undivided profits, $4,734,014; total investments consisting of loans and discounts, $146,098,082; total investments consisting of part of reserve due from banks, $37,690,589; gross earnings of the twelve months, $8,774,891; net earnings of the twelve months, $2,876,134. Of the 139 banks, 117 report dividends paid during the twelve months, amounting to $1,836,470. The percentage of dividend per capital and surplus, and undivided profits was 5.3, and the percentage dividend per capital was 9 per cent.

Agriculture.—In June the State Department of Agriculture issued a report, which included an interesting account of Illinois's agricultural fairs held in 1899. The totals represent results at 70 distinct fairs, holding, including the State fair. The total entries of cattle exhibited were 3,355; horses and equestrianism, 7,917; sheep, 2,533; hogs, 4,227; poultry, 11,869; farm products, 25,430; horticulture and floriculture, 7,880; fine arts, 8,399; textile fabrics, 20,477; dairy products, 7,457. The entries reached a total of 111,169. The percentage of premiums offered, including the State fair, and the amount actually paid was $168,617.38.

Arbitration.—In March the miners and operators of Illinois came to an agreement on the scale of wages to govern the mines of Illinois for the year beginning April 1, 1900. The advance of 9 cents for pick mining, as provided for in the
international agreement, was granted in every district except the thin veins of northern Illinois and the Fulton and Peoria County districts, the differential for machine mining to be 7 cents. This scale began April 1.

Early in November, 1899, there was a strike at the piano and organ factory of Story & Clark, in Chicago, and three days later all the other piano and organ factories in Chicago were closed by their proprietors. The number of employees thus thrown out of employment was about 3,500, whose aggregate earnings prior to the strike and lockout had averaged about $45,000 a week. The trouble had its origin with the action of the Piano and Organ Workers' Union in making a large number of demands to which the manufacturers refused to accede. On Nov. 21 the board received by mail from Charles Dold, business agent of the Piano and Organ Workers' Union, a case for arbitration, purporting to be signed by a majority of the employees of the several manufacturers. The board, after an unavail- ing effort to induce the manufacturers to join in the petition, proceeded to make an investigation. The points of difference set forth in the petition were: (1) a nine-hour work day; (2) restoration of former wages (wages paid up to 1892); (3) payment of wages in cash; (4) a weekly pay day; (5) regulation of the apprentice system; (6) abolition of the contract and subcontract system; (7) abolition of the piecework system; (8) all future differences to be settled by arbitration.

In the board's report the following recommendations were made: (1) That the strike at the factory of Story & Clark and the lockout at all other factories be declared off immediately; (2) that work be resumed at all factories at once; (3) that all the employees at work at the time of the strike and lockout be re-employed without discrimination; (4) that a day's work in all the factories in all departments shall consist of nine hours; (5) that in case of a difference involving a proposed increase in wages, each employer shall meet a committee of his employees and endeavor to settle such difference by mutual agreement.

The manufacturers expressed their willingness to resume operations upon the terms recommended. The employees, however, rejected the decision on the ground that it did not provide for the recognition of the union. The suspension of work was thereupon continued. Eventually the Federation of Labor instituted an inquiry, and agreed, in a letter to the union, upon the following terms of settlement: “Your union is hereby authorized to declare the strike off in Story & Clark's. The manufacturers will declare off the lockout. Nine hours to constitute a day's work in all the piano and organ factories in Chicago. The reinstatement of all the old employees without discrimination, the manufacturers being glad to meet their old employees in their respective shops, and wherever differences as to wages exist to take them up and adjust them, and upon the adjustment of the differences work to be resumed.”

The men still refused to go to work, standing out for the formal recognition of their union. Several weeks later, however, operations were resumed at all the factories on the basis recommended by the board and approved by the president and treasurer of the Federation of Labor.

Charities.—In the Illinois Institute for the Education of the Blind, at Jacksonville, the number of pupils approved and during the biennial period ending June 30, 1900, was 291. Of these, 19 were adult males admitted as apprentices in the shop department; 5 were adult females admitted to the manual training department. The remainder were in the school proper during a portion of each school day. Of the members of the school, 159 are males and 108 are females.

At the Illinois Soldiers’ and Sailors’ Home, Quincy, the average attendance for the two years ending June 30 was 1,532, and the average cost of maintenance was $103.76. The actual amount expended for the ordinary expenses of the home during the past two years is $318,177.57. During the same period there has been received or now due, from the General Government, $306,475.

The report of the Illinois Soldiers' Orphans' Home, Normal, shows as present, June 30, 1900, 186 males and 127 females. The ordinary expenses for the year ending June 30, 1899, were $57,452.02.

The Soldiers' Widows' Home of Illinois, Wilmington, on June 30, had 49 inmates, with 53 others approved and awaiting admission; in addition, 1,943 were awaiting admission.

The four State asylums or hospitals for the insane make the following reports: Eastern, Kane County, 1,933 males, 1,346 females (1900); Watertown, 328 males, 292 females (1900); Central, Jacksonville, 643 males, 622 females (1900); Northern, Elgin, 538 males, 564 females (1900).

Education.—The school statistics for the year ending June 30, as issued by the Superintendent of Public Instruction, include the following figures: Persons under 21 years of age, 1,130,254; females, 1,110,091; increase in two years, 21,029. Children enumerated between the ages of six and twenty-one—males, 804,857; females, 784,038; increase in two years, 31,255. Pupils enrolled in schools—males, 483,792; females, 475,119; increase in two years, 19,748. Average daily attendance, 237,576; increase in two years, 8,240. Average number of days public schools were kept, 160; increase in two years, 1,7 day. Buildings used for schoolhouses, 12,809; increase in two years, 69. Pupils enrolled in private and parochial schools, 142,496; decrease in two years, 799. Public school teachers employed—males, 6,950; females, 19,903; increase in two years, 1,046. Average weekly salary of teachers—males, $90.34; females, $52.45.

Balance on hand June 30, 1899 (district funds), $4,585,741.81. Receipts for the year ending June 30, 1900—for income of township fund (rent of school lands and interest on school notes), $900,183.34; from State appropriations, $1,000,000; from district taxes, $185,999.45; from sales of bonds, $550,761; from all other sources, $799,229.84; total receipts from all public money, excluding balance on hand, $19,169,619.59. Total expenditures, $18,327,121.12; cash on hand, June 30, 1900, $7,428,240.28.

Fisheries.—The fourth annual report of the Illinois Fishermen's Association was issued in
February. It includes the output from 22 places on Illinois river. This represents only a portion of the fish taken from that river and used commercially. The report includes only such fish as have been handled by members of the association.

The total mileage of elevated and interurban lines entered the close of the fiscal year, June 30, 1899, and transportation of 64,674,258.14. The total railway capital of the elevated and interurban lines for the year ending June 30, 1899, was $3,698,322,900, which is an increase of over that of 1898 of $319,315,144. The total mileage of elevated and interurban lines entered the close of the fiscal year, June 30, 1899, was $130,328,487, a slight increase in total mileage of $1,995,221,03, and an increase in total surplus of $10,347,360.23. The entire travel of the Illinois Central and the accident-assessment companies were authorized to transact business in Illinois. One company has since been organized in the State. The last report showed 82 fraternal societies in the State.

**Building and Loan Associations.**—Official reports show the total assets of 590 associations, in 1899, as $54,104,692.06. The operating expenses of the steam roads were $44,393,463 more than for 1898. The number of passengers carried by the roads reporting was 37,329,824, and the passenger earnings per mile were $1,963. The number of tons carried by the steam roads for all purposes was 323,575,55; freight earnings per mile of road, $5,012.

**Mining.**—The coal mining statistics for 1899, published in May, 1900, show that 36,091 men were employed, the tonnage product being 23,434,445, and the number of days of actual operation 205.7. The price paid per ton for mining was given as 1.76, and the average price of coal per ton at the mine, 91.86 cents.

**Military.**—The report of the Adjutant General, made public in January, says that the militia consists of 7 regiments of infantry, 1 battalion of colored infantry, 1 regiment of cavalry, 3 batteries of artillery, 1 engineer company, 1 signal corps, and 1 hospital corps.

**Political.**—The canvass of the vote at the election held on Nov. 6 shows McKinley's plurality over Bryan in the State to be 94,924, and his majority over all the candidates 61,073. Yates' plurality over Alschuler for Governor was 61,233, and his majority over all the gubernatorial candidates 33,370.

The total vote for electors, reckoned by the highest on each ticket, was: Herbert, Republican, 597,985; Schubert, Democrat, 503,061; Bannen, Prohibitionist, 17,626; Randolph, People's, 1,141; Louis, Socialist-Labor, 1,373; Wullner, Socialist-Democratic, 9,587; Struble, United Christian, 352; Dunn, Union Reform for Direct Legislation, 672. The total vote on Governor was: Yates, Republican, 550,199; Alschuler, Democrat, 518,906; Barnes, Prohibitionist, 15,043; Van Tine, People's, 1,106; Hoffman, Socialist-Labor, 1,319; Perry, Socialist-Democratic, 8,611; Cordinly, United Christian, 334; Spencer, Union Reform, 650; total, 1,128,288.

**INDIA.**

This is an empire in southern Asia, under the sovereignty of the King of Great Britain and Ireland, who bears the title of Emperor of India, on the basis of a personal union, and governed under general acts of the British Parliament by a Governor General in consultation with and under instructions from the Secretary of State for India, and a Governor of the respective provinces, popularly called the Viceroy, is advised by a Council of 5 ordinary members, besides the commander in chief of the forces, who are appointed for five years. The Legislative Council, composed of the members of the Governor General's Council and 16 additional members appointed by him on the recommendation of certain public bodies, has power to make laws subject to the approval of the Governor General and the Secretary of State, for all persons within British India, for all British subjects in the native states, and for native Indian subjects of the King in foreign countries. British India is divided for purposes of administration into the presidencies of Madras and Bombay, and the provinces of Bengal, the North-west Provinces and Oudh, the Punjab, and Burmah, and the chief commissions of Coorg, Assam, and the Central Provinces. Each governor and lieutenant governor has a legislative council. The nine provinces are subdivided into about 100 districts. More than 500 feudatory native states are subject to the control of the Governor General.

George Nathaniel Curzon, created Baron Curzon of Kedleston, succeeded the Earl of Elgin as Governor General in 1898. The members of the Council in the beginning of 1900 were Major-Gen Sir...
India.

E. H. H. Collen, Sir A. C. Trevor, C. M. Rivaz, Sir Edward Fitzgerald Law, and Thomas Raleigh. Gen. Sir W. S. A. Lockhart was commander in chief of the forces. The Governor-General of Bombay, Sir Henry Macdonnell, Governor of Madras, Sir A. E. Havelock; Lieutenant Governor of Bengal, Sir John Woodburn; Lieutenant Governor of the Northwest Provinces and Oudh, Sir A. P. Macdonnell; Lieutenant Governor of the Punjab, Sir W. M. Young; Lieutenant Governor of Burmah, Sir F. W. R. Fryer; Chief Commissioner of the Central Provinces, D. C. Isherwood; Chief Commissioner of Assam, H. J. S. Cotton; Chief Commissioner of Coorg and Resident of Mysore, Col. D. Robertson; Resident at Hyderabad, Sir T. J. C. Powland.

Area and Population.—The area of British India is 906,003 square miles, and the population in 1801 was 221,289,445, of whom 71,346,987 were in Bengal, 46,903,085 in the Northwest Provinces and Oudh, 20,966,847 in the Punjab, 5,476,833 in Assam, 542,356 in Ajmere and Merwara, 35,030,440 in Madras, including the Laccadive Islands, 18,857,044 in Bombay and Sind, 44,079 in Aden and Perú, 10,784,204 in the Central Provinces, 2,080,000 in the Oudh, 1,635,000 in Lower Burmah, 3,603,426 in Upper Burmah, 15,009 in the Andaman Islands, and 27,270 in the district of Quetta. The feudatory states had a total area of 992,000 square miles, with 69,236,000 inhabitants, making the total area of the Indian Empire 1,957,000 square miles and the total population of the British India 112,542,739 were males and 108,630,213 females; of the population of the native states, 34,184,557 were males and 31,865,922 females. Of the total male population of India, amounting to 146,700,000, the number reported as married was 62,100,000, widowed 6,400,000, unmarried 100,000, and the number not reported; of the female population, 140,500,000 in number, 62,400,000 were married, 22,700,000 widowed, 43,600,000 unmarried, and 11,800,000 not reported.

The birth rate in 1897 as near as the imperfect registration indicates was 36.94 per thousand and the death rate 32.94 in Bengal, the birth rate 31.10 and the death rate 24.80 in the North West Provinces and Oudh, the birth rate 42.00 and the death rate 31.05 in the Punjab, the birth rate 26.80 and the death rate 69.34 in the Central Provinces, the birth rate 31.82 and the death rate 26.26 in Lower Burmah, the birth rate 32.59 and the death rate 50.61 in Assam, the birth rate 28.70 and the death rate 25.40 in Madras, and the birth rate 30.46 and the death rate 30.34 in Bombay. The number of cokie emigrants from India was 17,185 in 1891, 13,751 in 1892, 12,636 in 1893, 17,932 in 1894, 13,103 in 1895, 12,148 in 1896, 10,712 in 1897, and 10,306 in 1898. The number of scholars receiving instruction in India in 1891 was 3,196,220, of whom 2,997,558 were males and 198,662 females. Under instruction were 14,000, of whom 3,500 were able to read and write, 1,000 that were able to read and write in English, 19,000 in Bengali, 35,000 in Sanskrit, 69,000 in Hindi, 29,000 in Marathi, 25,000 in Telegu, 6,000 in Punjabi, and 5,000 in Oriya. The expenditure on education in 1898 was Rs 3,554,026, having risen from Rs 67,100 in 1865. Of the amount expended in 1898 the sum of Rs 507,120 came from local rates, Rs 146,672 from municipalities, Rs 551,255 from subscriptions and endowments, Rs 1,058,214 from fees, and Rs 930,164 from provincial revenues. The Indian universities are examining bodies having supervision over numerous colleges. In all the provinces are training schools for teachers. The following numbers of students were matriculated in the universities in the years 1898: 1,359 in Bombay, 913 in Madras, 1,942 in Punjab, 1,982 in Allahabad, 637. There were 100 colleges with 19,192 male students and 4 with 118 female students, 4,883 secondary schools with 509,125 male scholars and 450 with 42,016 female scholars, 388 training and special schools with 21,604 male scholars and 70 with 2,408 female scholars, 94 primary public schools with 2,785,367 male scholars and 5,650 with 316,216 female scholars, and 41,083 private schools with 536,521 male scholars and 1,284 with 38,048 female scholars, making the total number of 148,829 schools, with 4,274,275 scholars, 3,574,809 males and 399,466 females. The number of vernacular newspapers in 1897 was 797,779, printed in Hindi, Bengali, Marathi, Telegu, Sanskrit, Tamil, Gujratiti, and twelve other languages.

Finances.—The revenue in 1898 was Rs 96,442,004 and the expenditure Rs 101,801,215, of which Rs 76,481,391 were expended in India and Rs 25,319,824 in England. The revenue of the Government of India was Rs 17,298,537, and the expenditure Rs 19,509,618. The expenditure of the Central Provinces was Rs 2,120,483, and expenditure Rs 2,923,350; the revenue of Burmah was Rs 6,365,294, and expenditure Rs 4,185,849; the revenue of Assam was Rs 1,341,107, and expenditure Rs 983,908; the revenue of Bengal was Rs 20,288,493, and expenditure Rs 10,924,105; the revenue of the Northwest Provinces and Oudh was Rs 11,183,480, and the expenditure Rs 6,702,003; the revenue of the Punjab was Rs 9,015,123, and expenditure Rs 5,069,422; the revenue of Madras was Rs 14,142,046, and expenditure Rs 10,209,315; the revenue of Bombay was Rs 14,430,724, and expenditure Rs 10,982,710. The revenue of the Northwest Provinces and Oudh was Rs 367,000, and expenditure in England Rs 16,198,263; the gain by exchange on receipts in England was Rs 109,053, and loss by exchange on remittances to England Rs 9,121,561. The land revenue in 1898 was Rs 25,683,642, not reckoning the addition charged on account of irrigation; opium revenue, Rs 5,179,772; revenue from salt, Rs 8,594,225. The land revenue in the Punjab has been fixed permanently a century ago, comprising most of Bengal, a quarter of the area of Madras, and certain districts in the Northwest Provinces, is about 20 per cent. of the renting value of the land, averaging two thirds of a rupee per acre. In the rest of India the assessment, readjusted at intervals of twelve to thirty years, averages 1.4 rupee per acre, amounting to half the rental.

The revised estimates for the year ending March 31, 1899, made the total revenue Rs 101,566,100 for that year, the land revenue yielding according to the estimate Rs 27,679,400, opium Rs 5,679,400, salt Rs 9,947,200, stamps Rs 4,839,000, excise Rs 7,167,000, and other instruments. The number of scholars who were able to read and write was 12,097,530, of whom 11,554,035 were males and 543,495 females; the number of those who were not able to read and write was returned as 245,546,176, of whom 118,819,408 were males and 127,276,768 were females, and 25,584,505, comprising 13,530,255 males and 12,054,250 females, were not reported. The expenditure on education in 1898 was Rs 3,554,026, having risen from Rs 67,100 in 1865. Of the amount expended in 1898 the sum of Rs 507,120 came from local rates, Rs 146,672 from municipalities, Rs 551,255 from subscriptions and endowments, Rs 1,058,214 from fees, and Rs 930,164 from provincial revenues. The Indian universi-
INDIA.

774,290, famine relief and insurance Rx 1,176,100, railroad construction charged against revenue Rx 4,200, railroad revenue account Rx 23,614,500, irrigation Rx 3,222,100, buildings and roads Rx 5,842,100, the army Rx 24,051,300, and defense works Rx 8,400. The budget estimate of revenue for the year ending March 31, 1900, was Rx 13,901,500, and expenditure Rx 98,925,900, which was reduced to Rx 98,029,909 by receipts from provincial balances amounting to Rx 924,700. The provinces in 1899 received grants amounting to Rx 1,129,300 in aid of their resources, which had been exhausted by special expenditures occasioned by famine and by the advanced deficiency. The expenditure to Rx 5,350,211 in 1898 is attributable to these causes and to the war on the northwest frontier. The cessation of the war and the good harvests of 1897 came as a great relief to Indian finance, warranting the expectation of a considerable surplus in 1898 and 1899. The surplus realized in 1898, estimated at Rx 24,900,000 was nearly $3,500,000 up to March 31, 1900, of which Rx 773,000 was available for direct famine relief and Rx 737,000 for re-imbursement of land revenues on account of the lateness and the intermission of the monsoon on the west coast. The Government had a balance of Rx 29,000,000 unencumbered of the land revenue in 1897 and decided to raise a new loan of Rx 3,000,000. A rupee loan of Rx 3,000,000 at 3½ per cent. was subscribed in Bombay at the rate of 94. The cost to the Government of the famine of 1900 up to July was Rx 20,199,000 for direct relief, Rx 3,400,000 for re-imbursement of land revenue, Rx 2,540,000 loaned to native and civil officers, and a considerable amount to individuals. The failure of the British public to respond to the Viceroy's appeal for contributions to supply seed and plow cattle and to succor the sick, orphaned, aged, and those who shrank from receiving the form of public relief offered drove the Government to include these objects in its scheme of relief. A motion made in the British House of Commons for a grant in aid of Rx 25,000,000 to the Indian Government in its emergency was rejected by the ministry and voted down by a vote of 112 to 65.

The debt of British India on March 31, 1898, amounted to Rx 242,289,003, of which Rx 111,993,634 was permanent debt in India, Rx 177,274,680 in India, and Rx 14,018,689 unfunded debt in India.

Defense.—The military forces in India in 1898 numbered 5,194 European and 3,200 native officers and 206,525 noncommissioned officers and privates; total of all ranks, 214,928. The British army in India had a strength of 3,616 officers and 70,672 men, 74,285 pensioners, and 17,311 men of the artillery. Of the officers on the staff, 9 cavalry and 52 infantry generals and 26 general officers unemployed, 14 invalid and veteran officers and men, 491 officers and 12,916 men of the Royal Artillery, 261 cavalry and 5,400 men, 347 officers and 158 men of the Royal Engineers, and 1,508 infantry officers and 52,180 men. The native army consisted of 1,578 European and 3,209 native officers and 133,853 noncommissioned officers and men, a total strength of 140,640, made up of 33 native and 54 European officers and 2,001 men in the artillery, 353 European and 619 native officers and 21,935 men in the cavalry, 65 European and 488 native officers and 3,142 men in the sappers and miners, and 1,122 European and 2,045 native officers and 105,755 men in the infantry. The estimates for 1900 provided for a total strength of 219,369 of all ranks, composed of 778 miscellaneous officers, 17,896 artillery, 28,975 cavalry, 4,402 engineers, and 167,248 infantry. The British army was increased by drafts of troops for service in South Africa and to replace garrisons that were sent to South Africa. In July the British Government ordered three new regiments of native infantry to be raised for the garrisoning of colonial stations like Mauritius and Singapore. A regiment of sepoys was sent to Mauritius to take the place of the Central African regiment that had come into conflict with the Indian inhabitants of that colony. Sepoys of the Bengal and Punjab commands were passed into the reserve in order to train new recruits.

The European and Eurasian volunteer bodies on hand for the year ending March 31, 1898, had 50,749 men enrolled, of whom 16,046 were enrolled for service in the Punjab, 12,230 in Bengal, 8,744 in Madras, and 5,570 in Bombay. The imperial service troops, consisting of picked corps from the armies of the feudatory princes, trained under the inspection of 18 British officers, numbered 17,987 men in 1898, consisting of 7,820 cavalry, 9,574 infantry, and 1,693 artillery. The territorial service, consisting of 3,168; of Patiala, 1,790; of Alwar, 1,572 of Gwalior, 1,462; of Jodhpur, 1,190; of Bharatpur, 1,085; of Jaipur, 796; of Hyderabad, 786; of Kapurthala, 739; of Nabha, 736; of Bahawalpur, 573; of Jind, 649; Indore, Mysores, Bhopal, Rampur, and the Kathiawar states held small bodies of cavalry, and Bikaner, Maler Kotla, Faridkot, and Sirmur a company or battalion of infantry at the call of the India Government.

The naval force maintained by the Indian Government consists merely of two monitors, of 3,340 and 2,900 tons, armed with 4 14-ton guns, a dispatch boat, 2 torpedo gunboats, 7 small torpedo boats, and 8 small patrol boats. The gunnery training school at Rangoon, Madras, and the Hugli are defended by forts. The guns are said to be obsolete or defective, and black powder only is provided. The field artillery used black powder till 1899, and many of the guns are old muzzle-loaders. The cavalry are still armed with the Martini carbine and the Lee-Metford rifles furnished to the infantry are not of the best type. The native troops have till now been armed with the old Martinis discarded by the British regiments. These are now being passed on to the local militia organized for the defense of the northwest passes as fast as the native regulars can be rearmed with Lee-Metfords.

Commerce and Production.—The survey department furnished returns in 1898 respecting 542,560,615 acres in British India out of 732,792,973 acres in British and native territory covered by the surveys. Of the area net for which returns were made 138,118,424 acres were not available for cultivation, 64,346,530 acres were covered with forests, 106,533,717 acres are capable of being utilized, 37,159,325 acres were cultivated lands left fallow, and 169,497,232 acres were under crops. Of the area cropped 70,781,408 acres were under rice, 19,946,164 acres under wheat, 92,017,559 acres under other food grains, 2,648,498 acres under sugar cane, 12,564,604 acres under oil seeds, 8,916-
229 acres under cotton, 1,360,513 acres under indigo, 465,593 acres under tea, 1,048,430 acres under tobacco, 2,158,908 acres under jute, 385,421 acres under coffee, 1,148,522 acres under flax, 1,290,116 acres under hemp, 975,980 acres under paper and paper manufactures, 5,750,980 acres under vegetables other than grain or pulse, and 151,092 acres under coffee. Counting double 27,245,474 acres on which double crops were raised, the total area cropped was 223,243,566 acres. The irrigated area was 18,610,253 acres, of which 10,245,732 acres were served by minor works, paying Rx 3,759,946 for the irrigation and Rx 1,570,018 for the minor works, paying Rx 2,072,880, making the gross revenue collected for irrigation Rx 5,872,826. The net profits from irrigation works for which capital accounts are kept were 74 per cent. The area cultivated, counting double for double crops, was 30,418,454 acres, and the value of the irrigated crops was estimated at Rx 17,883,957. The rice in the forests covered nearly 75,600 square miles, the area in the Central Provinces being 19,206, in Burmah 14,706, in Madras 13,775, in Bombay 13,281, in Bengal 5,880, in the North-West Provinces and Oudh 3,851, in Assam 3,300, in the Punjab 2,283, in Beur 4,175 square miles, besides which there are Government forests in Coorg, Ajmure, Baluchistan, and the Madras Presidency.

The value of the sea-borne commerce of India in the financial year 1898-'99 was Rx 89,907,141 for imports and Rx 120,211,145 for exports, a decrease of 4.45 per cent. in the imports and an increase of 14.73 per cent. in the exports compared with 1897-'98. Of the imports, Rx 72,101,928 consisted of mercantile and Rx 17,883,957 of treasure; of the imports, Rx 112,799,725 of merchandise and Rx 7,441,420 of treasure. Of the bullion and specie imported, Rx 8,840,054 represented gold and Rx 9,035,559 silver imports, while the exports of gold were Rx 2,336,646 and of silver Rx 5,074,774. The imports of merchandise, excluding Government stores, were Rx 17,883,957; of the imports of treasure not for the Government were Rx 17,883,957, making the total imports on private account Rx 86,264,298. Of the total exports of merchandise Rx 109,350,276 were products of the country and Rx 3,371,197 re-exports. Excluding Government stores and treasure, the imports and exports of the principal commercial divisions of India in the foreign commerce of 1898-'99 were as follow:

The imports of live animals in 1899 were valued at Rx 329,306, and exports at Rx 139,579; imports of articles of food and drink at Rx 1,919,556, and exports at Rx 576,728; imports of chemicals, drugs, and colors at Rx 2,013,412, and exports at Rx 11,333,926; imports of oils at Rx 3,552,005, and exports at Rx 800,887; imports of raw materials at Rx 2,971,876, and exports at Rx 39,143,998; imports of hardware and cutlery at Rx 1,430,125, and exports at Rx 15,739; imports of metals at Rx 5,179,246, and exports at Rx 110,896; imports of wood at Rx 5,053,951, and exports at Rx 882; imports of railroad material and rolling stock at Rx 2,824,815, and exports at Rx 8,832; imports of yarns and textile fabrics at Rx 30,325,547, and exports at Rx 13,945,656; imports of clothing at Rx 1,580,486, and exports at Rx 1,511,157; imports of all other articles at Rx 6,127,738, and exports at Rx 5,100,825. The value of cotton manufactures imported was Rx 27,220,729; metals, hardware, and cutlery, Rx 6,609,369; sugar, refined and raw, Rx 4,016,399; silk, raw and manufactured, Rx 2,139,450; liquors, Rx 1,140,312; jute manufactures, Rx 1,531,667; chemicals and drugs, Rx 1,236,305; spices, Rx 889,034; dyes and tans, Rx 777,107; salt, Rx 661,227; coal, Rx 696,379; glass, Rx 662,293; paper, Rx 382,657; umbrellas, Rx 243,438; grain and pulse, Rx 51,265. The exports of rice were valued at Rx 13,815,954; oil seeds and other seeds, Rx 897,491; raw cotton, Rx 384,199; jute manufactures, Rx 5,785,359; indigo, Rx 2,970,478; coffee, Rx 1,749,824; wool, Rx 1,253,483; timber, Rx 1,063,765; tea, Rx 517,394; oils, Rx 1,371,307; spices, Rx 6,627; jute other than indigo and tans, Rx 510,886; silk, raw, and cocoons, Rx 458,033; salt, Rx 340,344; woolen manufactures, Rx 229,285; sugar, Rx 198,437; silk manufactures, Rx 128,189. Of the rice exported the value of Rx 5,928,038 came from Burmah, Rx 4,698,430 from Bengal, Rx 612,941 from the Central Provinces, Madras, and Rx 787,016 from Burmah, and Rx 189,283 from Calcutta. The rice exported on private account was Rx 676,592 from Bengal, and Rx 143,480 from Burmah; of the seeds, Rx 5,864,668 from Burmah, Rx 4,114,756 from Bengal, Rx 1,455,431 from Sind, and Rx 409,028 from Madras. On rice is collected the only export duty, amounting in 1899 to Rx 1,006,653. Of the other imports and exports, Rx 63,445,443 to Rx 63,903,930, salt paid Rx 2,588,903. Of the total value of the imports of merchandise Rx 58,078,934, and of the exports Rx 68,011,394, passed through the Suez Canal. The export and import trade of the port of Calcutta was Rx 72,578,339; of Bombay, Rx 60,579,339; of Rangoon, Rx 14,044,212; of Karachi, Rx 12,306,658; of Madras, Rx 8,623,001; of Tuticorin, Rx 2,187,869.

The shares of the principal commercial countries in the foreign commerce of India in 1888-'99 are shown in the following table, giving the total imports and the exports of Indian produce:

The import and export trade over the land frontiers with Nepal, the Shan States, Kashmir, Kandahar, Cabul, Bajaur, western China, Zinnt, Turkestan, and Persia amounted to Rx 10,142,000 in 1899, the imports be-
The trade with Afghanistan has fallen away in consequence of the restrictions imposed by the Amir, who has forbidden the export of horses and the import of salt and created Government monopolies of several important articles.

The indigo plantations, the most important of which are in Behar, the densely populated province of India, are threatened with the competition of artificially produced indigo, which is now made in Germany more cheaply than the natural indigo can be grown. The use of cheap chemical substitutes and artificial indigo, is rapidly decreasing the export of indigo cultivation before German chemists invented the process of manufacturing synthetic indigo on a commercial basis. The planters still hope to be able to compete with the German product by increasing the yield and improving the methods of preparation. The planters have applied to the Government for pecuniary aid to the extent of 3,500,000 rupees, which was once carried on by Europeans before they turned to indigo, and which might once more become profitable with modern methods and machinery, at least as an auxiliary or alternative crop. The food crops of India, except in famine years, are superabundant for the meager requirements of the population, and consequently there is a large surplus for export. The variability of rainfall causes great fluctuations from year to year in the quantities of the different agricultural products that are exported. Wheat is grown in almost every province, yet the main production is in the northern half, while two thirds of the cotton crop is grown in the southern part of the country. The cotton plant also is cultivated everywhere. Rice is produced in Burmah, eastern Bengal, and Madras far in excess of the needs of those provinces. Maize is the staple food in many of the districts of central and southern India lately stricken with famine, and millet is the staff of life for a majority of the Indian population. The output of the flax crop is grown in the Northwest Provinces, the Central Provinces, and Bengal. In 1900 the failure of rain over a great part of India caused a great deficiency in staple export crops, such as wheat, cotton, and oil seeds, but stocks remained for export from the abundant harvest of 1899. The imports for the year ending March 31, 1900, the first since 1896, in which the indigo trade was flourishing, amounted to 7,072,000,000 rupees, an increase of 1,750,000,000 over the previous year, and the imports of the same class amounted to 3,293,000,000 of re-exports. The exports of 1890 were swollen by abnormal shipments of rice and wheat, whereas in 1900 large quantities of food grains were diverted to the famine-stricken provinces. No less than 40 per cent. of the total imports consisted of cotton manufactures, nearly all of which come from England. The cotton exports have increased in the last two years, owing to the adulteration of the Chinese drug and the increased purchasing power of the Chinese people, but it is probable that the downward tendency of opium exports is only temporarily suspended. The increased exports of raw hides and skins, of which the demand is increasing in India, and to the heavy mortality among cattle consequent upon famine. The exports of raw cotton to Europe were less than in previous years, while the Japanese requirements were larger. The area under cotton, jute, and oil seeds was smaller owing to the superior claims of food crops in consequence of the last famine, and short supplies entailed higher prices, which were further enhanced by the crop failures of 1899-1900. The sugar imports from Germany have been replaced by the produce of Mauritius, China, Java, and the United States. Settlements as the result of counterfeiting duties against bounty-fed sugar, and the imports from Austria, have declined. The imports of metals and metal manufactures declined, especially copper on account of its high price and machinery in consequence of the depression in the manufacturing industries of Bombay and Benares. The imports of flax, jute, and the like, declined, and India was compelled to begin to yield, increasing the annual production. The chief effect of the unparalleled drought of 1900 on the foreign commerce of the financial year 1900 was to stimulate exports and to a certain extent imports. In 1901 there will be little to export of the staple products. The crop of oil seeds, usually worth Rs. 35,000,000, of which cotton, is the cotton crop, of the average value of Rs. 15,000,000, amounted to not more than Rs. 7,500,000; the wheat crop, in normal years worth Rs. 36,000,000, was reduced to Rs. 15,000,000. The loss of nine tenths of the cattle entails diminished production for years to come.

Rural Navigation.—The number of vessels entered during 1898-99 at the ports of British India was 4,915, of 4,583,186 tons, of which 2,365, of 3,770,391 tons, were British; 775, of 105,641 tons, were British Indian; 1,181, of 66,905 tons, were native; and 5,945, of 637,849 tons, were foreign. The number cleared was 4,771, of 4,532,460 tons, of which 2,317, of 3,607,915 tons, were British; 756, of 50,665 tons, were British Indian; 1,121, of 66,728 tons, were native; and 1,170, of 650,755 tons, were foreign. Of the vessels entered 626, of 1,028,550 tons, were steamers that passed through the Suez Canal, and of those cleared 1,004, of 2,541,230 tons. The number of vessels entered with cargoes in the inter-port trade was 125,004, of 10,963,901 tons, and of these cleared, 91,861, of 11,210,614 tons. The number of vessels built in India during 1898-99 was 67, of 3,409 tons; the number first registered, 105, of 7,068 tons.
INDIA.

Rx 1,758,766 on foreign lines, Rx 486,651 on surveys, and Rx 294,900 on coal mines. The guaranteed companies had raised Rx 46,955,105 of capital and the companies leasing Government railroads Rx 29,401,022. The gross receipts of all the railways, exclusive of the State railways, were Rx 8,689,220 from passengers and Rx 17,885,888 from freight. The number of passengers carried was 152,584,321; tons of freight, 36,350,900. The operating expenses of all railways was Rx 13,064,355, being 47.57 per cent. of the gross earnings, and the net earnings were Rx 14,399,882, giving a return on the capital of 47 per cent.

The number of letters, postal cards, and money orders that passed through the British Indian post office in the year ending March 31, 1898, was 408,797,236; of newspapers, 31,891,484; of parcels, 2,965,990; of packets, 21,364,415.

The Telegraph system at the end of the fiscal year 1897-1898, was 49,246 miles of line, with 154,824 miles of wire. The number of private telegrams was 5,713,227 during the year. The receipts were Rx 1,309,330, and expenses Rx 1,051,494.

Currency.—By the act passed on Sept. 13, 1889, on the recommendation of a committee of British financiers appointed by the late Lord Carnarvon, the legal standard of value in British India is the gold sovereign. The British sovereign is legal tender, the mints have been declared open to the free coinage of gold, and measures are taken by the Government with a view of introducing a gold currency. Since Sept. 11, 1887, sovereigns have been received at the reserve treasuries at the exchange rate of 15 rupees for the sovereign, the rate at which by the act of June 26, 1893, closing the Indian mints to the unrestricted coinage of silver, gold coin of full weight and gold bullion were declared receivable at the two Government mints in Calcutta and Bombay in exchange for rupees and by the Government in payment of duties. It also惯 a exchange for currency notes issued in Calcutta and Bombay. The mints were closed to the free coinage of silver in accordance with the recommendations of a committee, of which the Lord Chancellor was chairman, in consequence of the fall of silver which brought the exchange value of the rupee below 1s. 4d., entailing a change so serious as to endanger the financial position of the Indian Government and render the estimates of expenditure extremely uncertain. Fluctuations continued after the closure of the mints, and the Government withheld remittances to arrest the fall of the market rate, until this gradually approached the ratio fixed by the Government of 1s. 4d. for the rupee and 15 rupees for the sovereign. From 1835 to 1893 the legal standard was the silver rupee, and before the ratio of 1s 6d to 1 between silver and gold began to vary in 1873 the exchange rate of the rupee remained steady at 2s. During the whole period the Indian mints coined Rx 373,774,632 of silver, all rupees excepting Rx 11,863,641 worth of British dollars intended for the exchange of的声音 so serious as to endanger the Government and render the estimates of expenditure extremely uncertain. Since the closing of the mints to free coinage the Government has coined rupees to the amount of Rx 94,595 in 1895, Rx 292,713 in 1896, Rx 573,353 in 1897, Rx 985,692 in 1898, and Rx 698,305 in 1899. The Bombay mint has also struck large quantities of silver coins in the silver paying colonies of the value of Rx 752,445 in 1896, Rx 1,392,230 in 1897, Rx 4,830,083 in 1898, and Rx 4,888,883 in 1899. The Government has issued a paper currency since 1861, the amount of notes in circulation in January, 1899, being Rx 28,203,275, of which Rx 15,670,000 were covered by coin, silver rupees mainly, gold to the extent of Rx 480,000, and the remainder was covered by Government securities. The metallic reserve changed from silver into gold after the proclamation of the gold standard, so that on May 1, 1900, it consisted of Rx 14,181,553, or 47.57 per cent. of the capital. The Government was obliged to buy silver with a part of the gold, sufficient to coin rupees to the amount of Rx 4,400,000, in order to have a sufficient silver reserve to meet the demands; and to supply a deficiency of silver coin in the country Rx 16,980,000 in rupees were added to the circulation before the end of the month.

Famine.—Agriculture is the chief occupation of the people of India, and it is carried on under conditions that render it peculiarly difficult and precarious. The soil is remarkably fertile in most of the agricultural districts, but the taxes imposed on the cultivator are more severe than in any European country and more rigorously collected than in any Oriental country. In the southwestern Punjab and in Sind a system of irrigation canals is maintained as essential to successful agriculture. In the Central Provinces and immediately north of them, wells, tanks, reservoirs, and canals have been made and kept up both at public expense and by the owners of the estates in the districts for the benefit of the whole community. In the most fertile lands near the sea, the cultivation of the land is often an occupation of a month's work; in the interior, of a year. The rice crop is grown during the hot summer season and the land is never dry during the crop. The crops depend on the rainfall of the summer, and where it is insufficient the crops are in danger. The crops are in danger of being deficient or unequally distributed in any year, and at periods which seem to recur every ten or twelve years may fail entirely over expanses of hundreds of thousands of square miles, and the failure may be repeated in the following year, or may extend over a period of three or four years with good years intervening. Such repeated and widespread droughts are the cause of Indian famines. Drought is never universal even in the endangered territory. A surplus of food products in some of the provinces is usually available for the partial but ready relief of the stricken area. The average annual rainfall in India is 41 inches. In 1896 there was a deficiency of 5 inches, and as a result more than 295,000 persons were thought to be in need of relief, and of 40,000-000 was affected with famine by May, 1897. Before the disastrous Orissa famine of 1869 India had enjoyed immunity from serious scarcity for many years. Since that year, from causes ascribed variously or collectively to the periodicity of sun spots, to increasing pressure of the population on the land, or to the demudation of forest areas, India has passed through a long series of lean years and a number of famines. Since 1880 14 scarcities have occurred, of which that of Ganjam in 1889 and that of Madras in 1902 were grave, down to the serious calamity of 1897. The famine code first promulgated in 1833 and the local codes promulgated at the British expense in the British-Indian provinces were revised in accordance with the recommendations of a commission appointed in 1898. The Government of India as early as 1874 acknowledged its responsibility for the saving of lives, and in the serious famine that began in that year spent Rx 17,553,000 to relieve distress, an expenditure which the Government of Bengal and the British Government, which taught the lesson that to borrow for direct famine relief was a disastrous financial expedient and that it was necessary to reserve in prosperous years a substantial surplus of income which should be devoted to reducing debt or preventing the increase of debt for productive public works, so that
when famine comes money can be borrowed to the extent of the amount by which debt has been reduced or prevented. Fresh taxes were imposed in 1878 to secure a surplus revenue, known as the famine insurance fund, to the amount of Rx 1,500,000 a year. In 1881 the plan was modified by applying half the annual fund to special works for protection against famine, such as irrigation canals and reservoirs and railroads for the conveyance of supplies in time of scarcity and for the development in normal years of the districts liable to famine. Between 1880 and 1898 the Government spent Rx 7,701,989 on direct famine relief, for which, when occasion demands, the insurance fund is always available; on protective irrigation works the total expenditure on irrigation and reservoirs, Rx 6,550,931; for guaranteed interest on the Midland Railroad bonds, Rx 4,438,507, a questionable application of the fund; for reduction or avoidance of debt, Rx 25,991,797. This makes a total of Rx 25,991,797 and an annual average of about Rx 1,530,000. Down to 1896 the average was Rx 5,607,000, which sum was roughly up to the normal figure by the expenditure on relief during the severe famine of 1897 and 1898. The Government diverted the fund, although a great part of it is raised by a supplementary tax on salt, to the great military defensive works carried out on the northwestern frontier as the result of the Afghan war. Moreover, when the great famine of 1898 came in 1898 the authorities fell into the belief that a crore and a half of rupees was too much to reserve every year for famine insurance.

In 1897 the rainfall was generally sufficient to produce fair crops, and in 1898 the rains were profuse and harvests of 1899 were consequently abundant. In 1890 the monsoon failed again, this time in the milder form in any previous recorded year. The deficiency was 11 inches, 27 per cent. of the average rainfall. The drought came earlier in the year than was ever before known. It fell upon provinces not yet fully recovered from the famine of 1896–97 and upon others where famine was till then unknown. It brought unprecedented suffering throughout all parts of the country, the northern, the central, and western India, impoverishing classes superior to those ordinarily coming to relief works, and rendering the task of recuperation much more arduous because years must elapse before the live stock can be renewed. The autumn and spring harvests both failed utterly. In February, 1900, there were 4,500,000 families in the famine districts, and the number relieved at that part of the season of 1897. The scale of wages at first adopted was soon reduced. The Government would promise only to stave off absolute starvation, not to prevent suffering. The affected areas had an extent of 417,000 square miles, nearly a quarter of the Indian empire, and the famine reached 54,000,000 in May, 1900. The number receiving Government relief in that month was 5,607,000, compared with 3,811,000 in the corresponding part of 1897. The southwest monsoon, which breaks in June on the Malabar coast and floods the central parts of India with 100 inches of rain in good years before the end of September, was dry in 1899 but in 1898, it was still hoped that the autumnal crops of southern India might be saved by a good northeast monsoon and in central and upper India by abundant winter rains. The northeast monsoons, however, which break on the eastern coast in November and December, failed to a great extent likewise. In February, 1899, cutting off the spring harvest in a vastly larger extent of country than that previously affected, and intensifying the distress there also. The autumn harvest was the worst for many years, and the spring harvest was little more than half a crop for India as a whole. Peasants sold their bullocks worth 60 rupees for a single rupee and great numbers died on their hands for want of fodder, so that it will take twenty years to re-stock the country with farm animals. In many places no drinking water could be had.

The benevolence of the public of Great Britain and India enabled the Relief Committee in 1897 to supplement the Government expenditure of Rx 7,272,123 by Rx 1,549,901 of private contributions. This charitable fund was spent: (1) in supplying clothing and blankets to the destitute, special food and medical comforts for the aged and infirm persons of the patients and children, and in adding to the Government dole in the case of respectable persons and secluded women who were driven to accept gratuitous relief; (2) in supporting orphans during and after the famine; (3) in selling grain at a cheap price to such as would not apply for relief and relieving respectable people, especially widows and women, who could not reasonably be termed as famine-stricken, and to a great extent the cases of destitute of institutions, such as hospitals, foundries, and orphanages which were generally at a standstill; (4) in helping the poor and reducing the mortality; (5) in giving work to the unemployed, and assisting the destitute; (6) in sending food, clothing, and blankets to the destitute and others in need, as the need occurred; (7) in providing money for the purchase of temporary and permanent reservoirs; (8) in helping to re-open education; (9) in providing work. The famine of 1897 was the worst in India since 1876. It was the greatest of all the famines between the years 1860 and 1900, and, according to the best guesses of the statisticians, the greatest since the Emperor Akbar's reign. In the official reports for those years, all the famines were ranked in order of size. In 1900, the great Indian famine was ranked among the ten worst calamities that have ever visited mankind.
of wheat is produced annually, was only 65 per cent. of what was harvested this year. In the Central Provinces, where 18,000,000 bushels of wheat are raised on the average, this and most other crops failed entirely, and in Bombay only a third of the average wheat crop of 19,000,000 bushels was obtained, and other crops failed by a like extent. In Berar the crops were almost a total failure. The relief was divided between Bombay, the Punjab, the Central Provinces, Berar, Ajmere, Rajputana, Central India, the Bombay native states, and Baroda, and later relief works were started in the Central Indian native states, the Northwest Provinces, and the IS. Punjab natives areas. These famine areas covered over 300,000 square miles, with a population of 40,000,000, while the area of scarcity and distress extended over 150,000 square miles more and affected 25,000,000 or 30,000,000 persons.

Although the provincial authorities had not yet readjusted their local systems in accordance with the suggestions of the commission appointed to digest the experiences of the famine of 1897, the methods of public relief were more promptly and efficaciously applied in 1900 because the machinery was already in working order and the officials were trained in the famine code. Mortality in many of the worst districts, as in the Central Provinces, had dropped down to rates only half as high as above the normal. In some isolated areas, however, where the distress was acute, where desti-
tute immigrants streamed across the boundary from native states, and where cholera and other diseases attacked the frames already emaciated by privation, the death rate was abnormally high, and the native system was apportioned to the worst.

The appearance of cholera in the famine camps caused a large proportion of the people on the relief works to flee. When the famine reached the acute stage in June, notwithstanding the flight of numbers to perish of hunger outside and the mortality in the camps from disease, the relief camps contained over 6,500,000 people. The total population affected grew to 95,000,000.

The Indian Government advanced to the native states Rs 503,800 to aid them in combating the famine, besides a loan of Rs. 1,000,000 to the state of Hyderabad, and granted Rx 1,228,800 to the provincial governments to loan out to cultivators or purchase provisions. The provings were also Rs 64,500 of charitable funds with which to buy seed and cattle to give to the poorest villagers and to provide for their needs until they could harvest a crop. The ravages of the cholera in Bom-
bad and Rajputana, added to the mortality from starvation, literally decimated the population in the thinly tracts, and among the Bhils, who were with difficulty induced to enter or to stay in the relief camps, 40 per cent. of the people are believed to have perished. Although the contributions from the British public were smaller than could have been expected, popular subscriptions from the United States and Germany and from China and the Straits Settlements came as unexpected windfalls to eke out the charitable funds.

When the summer rains came and the famine camps began to diminish it is estimated that 1,000,000 people had died of starvation or had been carried off by cholera, dysentery, the plague, and smallpox as a result of the famine and that 18,000,000 more emaciated that they would not have the strength to enter or to stay in the relief camps, 500,000 orphaned and homeless children, and 90 per cent. of the cattle had perished in the famine districts. The Government fixed the wages on the relief works at 1½ anna, equal to 3 cents, for nine hours of labor in breaking stone, building reser-
voirs, or making roads. Such a low rate made the Government money go further, and avoided all danger of pauperizing the people. The measures adopted for enabling the ryots to replant the ground when the rain came—in parts of western India the first rain in two years save one brief shower—were more complete than after any previous famine. The advances to working cultivators and to those who employ laborers were made without interest for a year, and the money will not be reaped at the end of this term if its recovery entails eviction or hardship. By the end of June the area of scarcity covered 417,000 square miles or 27 per cent. of India, of whom 10,000,000 were absolutely destitute, 7,000,000 of them in the famine camps and the rest too proud to accept relief or be dependent on pri-
civate charity. The famine death rate was 4,000 a day. The expenditure of the Government for relief amounted to Rs 28,800,000. Government relief was administered (1) by giving food in money or for work in the great relief camps; (2) by remitting the rent collected from cultivators under the land settlement; (3) by establishing poorhouses, hospitals, and kitchens for the sick and debilitated, delicate and nursing women, children, and aged people; and (4) by advancing money for the purchase of food by those of the cultivators who were gatherers in the middle of September. The number of persons on the famine works had then dwindled to a little over 1,000,000, but 2,500,000 were still receiving gratuitous relief.

The Plague.—The bubonic plague, endemic in parts of certain Himalayan valleys, and for the last thirty years in the moun-
tain villages of Yunnan, was carried in 1894 down the West river to Canton and Hong-Kong, and from the latter place by sea to Bombay. For five centuries no plague epidemic, except isolated out-
breaks, has extended east of Persia until this last one. The disease has now appeared at the accustomed season in Bombay and the other parts of western India where its first ravages were experienced for several successive years, and has come to be regarded by the medical and governmental authorities as endemic and not to be stamped out, but by sanitation and cleanliness to be kept under control. The pest had for many years gradually spread into the mountain regions of the north and to the eastward. Calcutta, being a great seaport, was liable to an outbreak at any time, more so than the ports of Asia, Africa, and Europe into which the disease has been introduced. The Government endeavored to guard against it by cleaning the slums, but at the approach of the wet season in 1899 the plague appeared. The preparations to hold it in check and to pre-
vent it from spreading into the country were as much completer than they were at Bombay as forethought and experience could dictate, and for a time they seemed to be effective. Before the winter ended the infection passed the barriers and invaded the other districts of Behar, while still confined to two wards in Calcutta, where the Government promptly disinfected every house that was attacked. In March the mortality rose in Bengal to nearly 5,000 a week, exceeding that of all the rest of India. Two fifths of the deaths were in Patna, less than a sixth in Calcutta. The epidemic was gradually tamed. The period of devastation passed under a government determined to listen to the people to tumult, the Government gave way to their wishes by intrusting the duty of detecting and reporting imported cases to their leading men, whose systematic concealment of such cases was responsible for the great mortality. A commission
appointed in November, 1898, to study the plague and modes of prevention or cure reported favorably on the system of preventive and curative inoculation developed by M. Haffkine.

Even the officers of the civil service have been fettered by a rule forbidding them to utter any criticisms upon the policy or conduct of their superiors. When the English colonies began to send contingents of volunteers to fight in South Africa some of the native princes offered their troops also, calling forth praises from the Indian and British governments. In August, 1900, Lord Curzon, the Viceroy, addressing the legislatures of the native chiefs to travel abroad without the permission, not only of the provincial authorities, but of the Government of India. This spoiled the effect of the previous eulogiums on their loyalty, although the reason was given that it agreed to the attractions of European life and pleasures had a tendency to make the forgetful and neglectful of the welfare of their people.

INDIANA, a Western State, admitted to the Union Dec. 11, 1816; area, 36,350 square miles. The population, according to each decennial census since admission, was 147,178 in 1820; 343,031 in 1830; 685,806 in 1840; 988,416 in 1850; 1,550,428 in 1860; 1,658,637 in 1870; 1,978,391 in 1880; 2,192,404 in 1890; and 2,516,462 in 1900. Capital, Indianapolis.

Government.—The following were the State officers in 1900: Governor, James A. Mount; Lieutenant Governor, W. S. Haggard; Secretary of State, Union B. Hunt; Treasurer, Leopold Levy; Auditor, William H. Hart; Attorney-General, William G. Luckey; Superintendent of Instruction, F. L. Jones; Adjutant General, J. K. Gore; Statistician, John B. Conner; Geologist, Willis S. Blatckley; Commissioner of Insurance, C. W. Neal; Commissioner of Public Lands, L. G. Rothschild; President State Board of Agriculture, Aaron Jones; Labor Commission, B. F. Schmide, L. McCormack; Superintendent of the State Board of Charities, Amos W. Butler; Fish and Game Commissioner, Z. T. McSweeney; Tax Commissioners, T. B. Buskirk, J. C. Wingate; Supervisor of Natural Gas, J. C. Lench; Mine Inspector, Robert Fisher; Chief Justice of the Supreme Court, John V. Hadley; Associate Justices, J. J. Osborne, J. N. Alexander, Bowing, Leonard, and Robert C. Brown.

The Governor’s term is four years, his election taking place in the year of the presidential election. Other State officers are held for two years, the elections in even-numbered years. The Legislature meets biennially, in January of odd-numbered years, and consists of 50 Senators and 100 Representatives.

Population.—The population of the State, by counties, according to the census of 1900, was as follows: Adams, 22,252; Allen, 77,270; Bartholome- wew, 24,384; Benton, 13,123; Blackford, 17,215; Boone, 26,521; Brown, 9,727; Carroll, 19,683; Cass, 34,541; Clark, 31,807; Clay, 34,258; Clinton, 28, 202; Crawford, 13,476; Daviess, 29,014; Dearborn, 22,194; Decatur, 19,518; DeKalb, 25,711; Delaware, 49,624; Dubois, 20,357; Elkhart, 45,032; Fayette, 13,495; Floyd, 30,118; Fountain, 21,446; Franklin, 16,388; Fulton, 17,433; Gibson, 30,099; Grant, 54, 658; Greene, 28,590; Hamilton, 29,914; Hancock, 19,700; Harrison, 21,072; Hendricks, 21,295; Henry, 25,088; Howard, 28,575; Huntington, 28, 901; Jackson, 26,633; Jasper, 14,292; Jay, 26,818; Jefferson, 22,913; Jennings, 15,757; Johnson, 20, 223; Knox, 32,746; Kosciusko, 29,109; Lagrange, 29,584; Lake, 36,992; Lawrence, 25,729; Madison, 70,470; Marion, 19,727; Marshall, 25,119; Martin, 14,711; Miami, 28,544; Mon- roe, 20,873; Montgomery, 29,388; Morgan, 20,457; Newton, 10,448; Noble, 23,533; Ohio, 4,724; Orange, 16,554; Owen, 15,149; Parke, 23,000; Perry, 18,778; Pike, 20,466; Porter, 19,175; Posey, 22, 232; Pulaski, 14,633; Putnam, 21,478; Randolph, 22,653; Ripley, 19,881; Rush, 20,148; St. Joseph, 58,881; Scott, 8,307; Shelby, 26,491; Spencer, 22, 407; Starke, 10,431; Steuben, 15,219; Sullivan, 26, 005; Switzerland, 11,840; Tippecanoe, 38,659; Tipton, 19,116; Union, 6,748; Vanderburg, 71,769; Vermilion, 12,252; Vigo, 22,635; Wabash, 28,253; Warren, 11,327; Warrick, 22,222; and in round numbers, 409; Wayne, 38,970; Wells, 23,449; White, 19,138; Whitley, 17,328; total, 2,516,462.

Finances.—The report of the Auditor for the year ending Oct. 31 gives the following information: "The public debt has been reduced during the fiscal year of 1899 $483,000, and for the two years preceding the Legislature passed the following amount of the State debt: Oct. 31, 1900, was $4,704,615.12. Of this amount a substantial payment can be made Jan. 1, 1901, from the December settlement with the counties on account of the State debt sinking fund tax. The State gave notice many times ago of its desire to pay the State debt. This certificate now amounts to $330,000 and since then interest has been stopped. The $330,000 due Purdue University is payable April 1, 1901, and can be paid at maturity. The 3-per-cent. refunders of 1889, now amounting to $3,130,000, are held mostly by savings banks, and the State can pay at its convenience. The State debt sinking fund of 3 cents on each hundred dollars levied for this purpose amounts to $3,000,000. Of this sum a surplus of $400,000 a year, and this, with the probable excess each year from the general fund, will practically pay off all the State debt that can be paid within the next four years. The tax duplicate of the State amounts to $1,353,740,998. The taxes from the duplicate amount to $2,639,293.81.

The general fund in the State for equipment of soldiers for the Spanish war $44,382,50.

The unusual specific appropriations of the Legislature of 1899, the largest in the history of the State, have been paid so far as due, and the entire amount will be readily met as it matures from the general fund. It is in round numbers $33,000 was applied from this fund in the payment of the State debt.

Education.—The school enumeration for 1900 was 756,004, of whom 15,076 were colored; the enrollment in 1899 was 556,651; the average daily attendance, 424,725. The value of school property was $22,244,000. Between the years 1890—1900 233 school buildings were erected, at a cost of $846,800. The number of institutions held was 6,892, and the amount paid teachers for attending institutes was $134,350.88. School trustees were paid for managing educational work, etc., $74,374.

It is reported that the State truant law which has been enforced the past year has brought 9,000 more children into the schools. The board has employed 106 officers.

The State Normal School, at Terre Haute, opened in September with an enrollment of 400. The summer term closed Aug. 9, 538 teachers being in attendance. In the year 1,405 teachers attended and 86 were graduated.

Rose Polytechnic Institute graduated 15 stu-
students at its sixteenth commencement in June, and 13 were graduated at the Veterinary College in April. At the Indianapolis College of Law 17 students were graduated this summer.

De Pauw University graduated 72 students at its sixty-first commencement, June 14.

The twenty-sixth commencement of Purdue University was celebrated, when 71 students received diplomas. In the winter the class in agriculture was the largest ever attending, the enrollment being 92, of whom 20 were women.

Wabash College celebrated the sixty-eighth anniversary of its founding, Nov. 21.

Charities and Corrections.—The statistics given in September are from the charitable and penal institutions of the State for the nine months ending July 31, 1900, show that $423,434.18 has been expended in maintaining the 4 insane hospitals. The Central Hospital, in Indianapolis, consumed about $200,000, while the others used about $70,000 each. About $215,000 was expended in addition for new building and repairs.

The Home for Soldiers, at Lafayette, expended $633,797.72 for its support; the Soldiers' and Sailors' Orphans' Home, at Knightstown, $71,569.11; Deaf Institute, at Indianapolis, $24,177.50; Feebleminded Institute, Fort Wayne, $86,810.20. New buildings and unusual repairs in these several institutions cost $20,885.63. The State Prison, at Michigan City, required $84,306.61 for its regular expenses during the nine months referred to; the Reformatory, at Jeffersonville, $101,601.22; Industrial School for Girls and Women's Prison, Indianapolis, $31,678.57; Reform School for Boys, Plainfield, $47,800.95. New buildings and extraordinary repairs consumed $105,753. Additional. The aggregate cost of maintaining the State's penal institutions for the nine months was $263,450.35.

The State treasury received from these institutions, in the way of earnings and receipts, $97,922.01, reducing the cost to $1,229,508.75.

The National Home for Disabled Volunteer Soldiers, at Plainfield, received $22,570.934.42. The call in May showed the total resources of the banks to have been $23,178,919.84. The individual deposits were less in July than they were in May, and it is shown that there has been an increase in the amount of United States bonds held.

Railroads.—In 1899 77 miles of road were built in the State, and in the first half of 1900 there were 59 miles. The board increased the list of railroads for taxation, making the total $154,473,491, an increase of $861,600. Other companies were rated as follows: Telephone, $3,420,150; telegraph, $2,610,742; express, $1,822,840; palace car, $432,598.

The State sued the Vandalia Railroad for more than $500,000, alleged to be due under the charter under which the Indianapolis and Terre Haute Railroad first operated. It provided that after the stockholders had been reimbursed for the full sum invested, with 10 per cent. per annum, all over a dividend of 15 per cent. per annum should be turned over to the State for the school fund. The company operated fourteen years under this charter, and then reorganized under the general railroad law, which did not contain the provisions of the charter. The Legislature of 1897, after twenty-five years of various attempts to include these provisions in a law passed the following year, that the Attorney-General immediately brought suit. In the Superior Court a decision was rendered in October in favor of the State for $745,154.65.

Products and Business.—The annual report of the State Geologist shows that while Indiana ranks thirty-fourth in area among the States, it is sixth in the production of each of the following, that is, in petroleum, second in natural gas, seventh in building stone, and sixth in value of clay products. The values of these resources are: Petroleum, $2,228,276; coal, $5,177,044; natural gas, $5,060,900; stone, $1,731,914; and clay, $2,311,512, making a total of $17,409,715. The production of petroleum for 1899 was 3,815,713 barrels, an increase over 1898 of 67,406 barrels. In 1899 there were 4,330 producing wells in the State, against 3,628 on the same date the previous year. The wells sunk number 6,978, so that the number of dry wells in the State is 2,642.

Natural gas occurs in an area approximating 2,800 square miles. The average pressure in 1899 was 221.2, which is 3.5 pounds per square inch, while the supply is shut off at 130 pounds the outlook is not bright.

In the past year 5,865,123 tons of coal were mined. It is estimated that the coal in the State will last three hundred years.

The output of stone was valued at $1,686,572.

Malaria has been reported in April but the wheat crop in much of the State was a disastrous failure, owing in part to weather conditions, but largely to the depredations of the Hessian fly.

Experiments appear to have shown that only the northern part of the State is adapted to the cultivation of sugar beets, and the officials at the experiment station have announced that no special attention will hereafter be given to the subject.

The Legislature passed a law for protecting Asiatic or Chinese pheasants, imposing a fine of $50 for killing one, and 52 pairs have recently been distributed through the State.

The business failures for the first six months of the year were reported as 57, against 155 in the corresponding quarter of 1899, a total of 1,000,000 being lost in 1898.

Reports of mortgages filed and those satisfied show that in the 92 counties, the total of those filed in 1899 was about $10,000,000 less than in 1898.

Labor.—About 8,500 coal miners of the State stopped work April 1 because the wage-scale came to an end with no agreement reached on the powder provision in the contract for the ensuing year, the operators wishing to bind the miners to buy powder from them at $1.75 a keg, while the miners wanted the privilege of buying in the open market. An agreement was reached April 13, the right to buy in the open market being secured. The wages are $1.25 per day, and operators were not to be held responsible for fluctuations in the price. In November more than 200 hoisting engineers and 7,000 miners went out on account of the refusal of operators to sign with the engineers for a higher scale of wages. There were strikes in the year of glass cutters and workmen of other trades, with the result of advanced wages in many instances. The annual report of the Labor Commissioner in September showed that there had been 28 strikes, of which 19 were successful. In 14 increased wages had been demanded and secured.

A decision was rendered in the Superior Court in May, upholding the constitutionality of the law requiring weekly payment of wages.
Historical.—A meeting was held at the Statehouse, July 4, in observance of the one hundredth anniversary of the establishment of Territorial government in Indiana. Gov. Mount presided, and papers were read by Abner Hanway, Ignatius Brown, and Calvin Fletcher. Other papers on the early history of the State, which for lack of time were not read, were prepared by D. M. Bradbury, T. A. Goodwin, C. T. Dalton, J. R. Wilson, W. H. Smith, Miss Lydin Blaich, W. N. Jackson, G. U. Bingham, W. W. Woollen, and S. N. Chambers. A commission has been formed to raise $25,000 for a monument to the memory of Gen. Henry W. Lawton, who was a citizen of the State.

Requisitions on the Governor.—In April the Governor issued a requisition for a prisoner in the Kentucky Penitentiary, which was honored by Gov. Taft; but the parts on national issues, and recognizing him as Governor, declined to obey the order, and the officer serving the requisition went to Gov. Beckham, who offered to honor the requisition if Gov. Mount would agree to honor any requisition from him. This the Governor declined to do, regarding Mr. Beckham as a contestant until the final decision of the courts, and, moreover, declaring that the contents of the State law were no question of Mr. Beckham’s title. Later, requisitions were made on Gov. Mount for the surrender of Charles Finley and ex-Gov. Taylor, accused of complicity in the murder of Senator Goebel, but they were refused on the ground that in the existing state of feeling in Kentucky a fair trial would be impossible.

Lawlessness.—A dispatch from Rockport, Dec. 16, says that two negroes who waylaid, brutally murdered, and robbed a white barber in the morning were lynched in the jail yard at night by a mob of 1,000 citizens. The next day a third negro implicated in the murder was taken from a cell at Bloomington and was hanged; and the body was ordered from Evansville by the Governor arrived at Booneville fifteen minutes after the hanging.

Auburn.—A special election was held in this place, March 26, to determine whether it should continue under town or city government. The result showed a majority of 150 for the change to city government.

Political.—State officers were elected Nov. 6. Seven tickets were in the field—Republican, Democratic, Prohibition, Populist, Social Democratic, Socialist-Labor, and Union Reform. The Populist convention was held at Indianapolis, Feb. 22. The resolutions reaffirmed the position of the party on national issues, and on State matters said: “Resolved, That we view with alarm the enormous increase in the assessed values of the property for the purpose of taxation and the increased rate of taxation in Indiana, and we demand more rigid economy in the management of State, county, and municipal affairs; that we favor a State law compelling the letting of all legal and lowest bids; that we favor the election of the county superintendents by the vote of the people; that we demand a stricter enforcement of the State factory and eight-hour laws; that the People’s party of Indiana, believing that no man can rightfully govern another without the consent of the governed, favors local self-government for the State.”

A. G. Burkhart was nominated for Governor, and Messrs. C. M. Walter, W. T. Carmichael, J. W. Wales, W. H. Kunse, G. F. Boyer, C. E. Hoffman, W. P. Beasley, A. L. D. Grindle, Silas M. Holcomb, and —— Bull were the candidates for the offices of Lieutenant Governor, Secretary, Auditor, Treasurer, Attorney-General, Reporter, and Supreme Court, Superintendent of Instruction, Chief of the Bureau of Statistics, and judges of the Supreme Court, respectively.

The Republican convention met at Indianapolis, April 25. The resolutions approved the policy of the national administration, commending the resolution favoring the Nicaragua Canal, just and liberal pensions, restricted immigration, and legal control of trusts. On State affairs, they approved the administration, especially commending the management of the finances in the reduction of the debt and the State levy law; the emancipation of the penal and benevolent institutions from partisan control; and the provision, through ample appropriation by the last Legislature, for new buildings and appropriate maintenance to accommodate the unfortunate wards of the State—many of whom have been compelled to be quartered in county almshouses; the establishment of a labor commission; and the passage of the mortgage exemption law; and “the fulfillment of the pledge of the Republican party for reform in county and township government, whereby in the first year of the operation of the reform laws over $1,000,000 will be saved to the taxpayers of the State.” The Governor’s treatment of unemployed miners was praised, the solution of the school question in a quasiprivate election law was promised. The ticket follows: For Governor, Winfield T. Durbin; Lieutenant Governor, Newton W. Gilbert; Secretary of State, Union B. Hunt; Auditor, William H. Hart; Treasurer, Leopold Levy; Attorney-General, William L. Taylor; Reporter of the Supreme Court, Charles F. Edmiston; Judge of the Supreme Court, Benjamin F. Johnson; Superintendent of Public Instruction, Frank L. Jones; Judge of the Supreme Court, First District, James H. Jordan; Judge of the Supreme Court, Fourth District, Leander J. Monks.

At Indianapolis, May 2, the Prohibitionists charged the Platform with “moral cowardice in refusing to exercise his authority as commander in chief of the army to abolish the sale of liquor in the army canteen, and to prohibit its importation into our newly acquired territory.” The following ticket was nominated: For Governor, Charles N. Eckhart; Lieutenant Governor, Rev. Robert H. Clark; Treasurer, Hamilton Thomas; Judge of the Supreme Court, Isaac S. Wade; State Statistician, Henry S. Bonsib; Superintendent of Public Instruction, B. W. Ayres; Judge of the Supreme Court, First District, C. B. Kessinger; Judge of the Supreme Court, Fourth District, James E. Graham.

The Democrats, in State convention at the capital, June 6, declared allegiance to the Chicago platform, instructed delegates for Mr. Bryan, ensured the administration policy in the new possessions, demanded repeal of the stamp tax, declared for the election of a United States Senator by direct vote of the people, opposed a large standing army, extended sympathy to the Boer republics, demanded the strict enforcement of the Monroe doctrine and the construction of the Nicaragua Canal, and denounced the Hay-Pauncefote treaty as an abject surrender to England; denounced the Dingell tariff law and declared opposition to the prospective tariff, saying trusts spring from the tariff, and declaring that the Republican administration has made no effort to abolish them.

On State matters the platform called attention “to the reform legislation which the Democratic party has given the people of this State, the school-law, the tax laws, the Australian ballot, the fee and salary reform, and the many statutes for the protection of labor,” and said further:
"The Republican party is now hypocritically claiming credit for the reduction in our State indebtedness which the Democratic party worked; law, the enactment of which it opposed. It has mutilated the Australian ballot and repealed the statute making the bribery of voters a penal offense."

The Democratic candidates were: For Governor, John W. Kern; Lieutenant Governor, John C. Lawler; Secretary of State, Adam Heimbach; Auditor, John W. Minor; Treasurer, Jerome Herff; Attorney-General, C. P. Drummond; Reporter of Supreme Court, H. G. Yergin; Superintendent of Public Instruction, Charles Greathouse; Chief of Bureau of Statistics, Edward Horrell; Judge of Supreme Court, First District, George L. Reinhardt; Judge of Supreme Court, Fourth District, J. H. Harrott.

The Social Democratic party nominated in July the following: For Governor, John W. Kelly; Lieutenant Governor, John A. Lloyd; Secretary of State, Edward H. Evinger; Auditor of State, William Croke; Treasurer of State, C. A. Hulsman; Attorney-General, C. A. Thornton; Reporter of Supreme Court, Mr. Statistian, William Ehrenhart; Superintendent of Public Instruction, M. A. Thorndyke.

The candidates of the Union Reform party were Messrs. Wilson, Perry, Wheeler, Withrow, Carter, and Coppock for the offices, respectively, of Governor, Lieutenant Governor, Secretary, Auditor, Superintendent of Instruction, and Chief of the Bureau of Statistics.

The official report of the vote for presidential electors stands: Republican, 336,003; Democratic, 309,384; Prohibitionist, 13,718; People's party, 1,438; Socialist-Labor, 633; Social Democratic, 2,734; Union Reform, 254.

The Republican State ticket received a majority, the vote on Governor standing: Durbin (Repub, Inspector, 306,272; Eckhart (Prohibitionist), 13,453; Burkhart (People's party), 1,540; Moore (Socialist-Labor), 644; Kelly (Social Democrat), 2,239; Wilson (Union Reform), 244.

The Republicans elected 19 of the 26 Senators chosen, and the Democrats 7. Of the 24 holding over, 14 are Republican. The House will have about 61 Republicans to 39 Democrats.

The two constitutional amendments voted upon received each a majority. They fix the number of justices of the Supreme Court at 5 to 11, instead of, as now, 3 to 5, and authorize the Legislature to prescribe qualifications for admission to the bar. The bill which the first amendment was designed to pass and the total vote against it was 178,960—a majority for the amendment of 135,750. The vote for the second amendment was 240,031, and the vote against it 144,072—a majority for the second amendment of 95,959.

IOWA, a Western State, admitted to the Union Dec. 28, 1846; area, 56,025 square miles. The population, according to each decennial census since admission, was 192,214 in 1850; 674,193 in 1860; 1,194,020 in 1870; 1,624,615 in 1880; 1,911,890 in 1890; 2,251,829 in 1900. This is an increase of 15.9 per cent. in the past ten years. Capt. Des Moines.

Government.—The following were the State officers during the year: Governor, Leslie M. Shaw; Lieutenant Governor, J. C. Milliman; Secretary of State, George L. Dobson; Treasurer, John Herriott; Auditor, Frank F. Merriam; Attorney-General, Milton Renley; Superintendent of Instruction, R. C. Barrett; Adjutant General, M. H. Byers; Railroad Commissioners, E. A. Dawson, Welcome Mowry, David J. Palmer; Labor Commissioner, W. E. O'Bleness; Librarian, Johnson Brigham; Board of Control for State Institutions, William Larrabee, L. G. Kinne, John Cowine; Secretary of State, George F. Delevan; Chief Justice of the Supreme Court, C. S. Robinson; Associate Justices, Scott M. Ladd, C. S. Granger, Josiah Given, C. M. Waterman, H. E. Deemer; Clerk, C. T. Jones—all Republicans. The incoming government is: Governor, Leslie M. Shaw; Lieutenant Governor, J. C. Milliman; Secretary of State, W. B. Martin; Treasurer, G. S. Gilbertson; Attorney-General, Frank F. Merriam; Auditor-General, C. W. Mullan; Judge of Supreme Court, Emlin Mcclain; Railroad Commissioner, D. J. Palmer—all Republicans.

Finances.—Iowa property has increased in value about $56,000,000. The growth is mainly in personal property and buildings. This increases the taxable value to $342,000,000. No new assessment of real estate has been made this year. Live stock increased in value from $43,000,000, at actual values.

The following is a statement of the estimated available revenue for the biennial fiscal period ending June 30, 1901, under existing statutes: Net treasury cash balance July 1, 1899, $414,284. Proceeds from the sale of the State bonds for $1,000,000 in 1899, $763,435; 2.5 mills 1900, $1,500,000; 2.5 mills first half of 1901, $750,000; interest on taxes, $820,000; total, $3,033,435. Special levies—charitable institutions, $770,500; United States aid to Soldiers' Home, $100,000; receipts from institutions under Board of Control, $84,000; collateral inheritance tax, $100,000; corporation taxes, $405,000; State officers, $223,500; miscellaneous receipts, $8,500. Grand total for biennial fiscal period, $5,139,220.

Banks.—The bank deposits have doubled since June, 1896, exclusive of the national banks, which are equally prosperous. The amount due depositors in 1900 was $801,147,035.88; the capital stock, $18,054,900. The liabilities, $1,433,924.

Railroads.—Iowa, according to the statistics of the Railway Age, compiled in November, 1900, is the fourth State in the Union in railway mileage. More than 3,500 miles are in operation, and 1,500 are in course of construction. The total railroad assessment is $45,085,119, an increase of 188 per cent. The railroad central office has also put in operation this year 13 miles of railroad.

Insurance.—Fees to the amount of $345,545.15 and taxes amounting to $1,191,069 have been collected since 1890. This includes all insurance concerns, Iowa people had $551,671,540 in insurance Jan. 1, 1900. On Jan. 1, 1900, there were in force in Iowa fire insurance policies amounting to $551,671,540, or equal to a larger sum than all the property of the State is assessed for.

The number of companies transacting other than life insurance business in Iowa are as follow: Fire insurance, 132; fidelity insurance, 9; marine insurance, liability insurance, 4; hail insurance, 4; steam boiler insurance, 1; accident insurance, 2; burglary insurance, 3.
The 132 fire insurance companies mentioned may be classified as follows: Iowa joint stock companies, 9; Iowa mutual companies, 8; non-Iowa joint stock companies, 81; non-Iowa mutual companies, 1; United States branches foreign companies, 33.

Education.—In his message to the Legislature in January, 1900, Gov. Shaw says: "A system which results in the graduation of 1,589 young ladies from the high schools of Iowa the current year, and only 954 young gentlemen, is weak at a vital point. Our girls should be educated, but that does not imply that our boys should not be; and a policy that retires the latter from school at an earlier period than years of age needs amendment. So long as a majority of the teachers in town and city schools are women and girls, so long will a majority of the graduates be of the same sex.

"In several counties of the State the experiment has been tried of maintaining a central township graded school, to and from which the pupils are conveyed in carriages, at public expense. Whenever this plan has been adopted the results have been most satisfactory. The enrollment has been thereby invariably increased, and the attendance has been more regular; better teachers have been employed, with correspondingly improved scholarship, and in addition the expenses have been very considerably reduced.

"Of normal schools," he says, "Iowa possesses one such institution under State control and management. This has facilities to reasonably accommodate 600 pupils. During the last year the attendance has averaged over 1,000."

The Legislature provided for one new normal college, and made the following appropriations: State Normal Salaries, $176,000; State Agricultural College, $167,000; State Normal School, $164,500; total, $411,500.

The Memorial Military College of the Sons of Veterans is to be built at Mason City, and $2,600,000 have been raised for it. Mason City gave a site and $100,000. It is to be a memorial to soldiers and sailors, and is to be supported by endowments.

Charities and Correction.—For the year ended July 1, 1900, the 14 institutions under the management of the State Board of Control cost the people of the State $1,146,733.41. Gov. Shaw, in his message to the Legislature, said: "The twenty-seventh General Assembly appropriated $1,050,000 to be used, chiefly for the support of State Institutions, and the Legislature has assented.

"The several institutions under the control of the board have in the aggregate 4,189 acres of land, valued at $500,849. The buildings thereon are valued at $7,482,735, and the personal property at $597,134.77, making a total of $8,380,718.77. There were being cared for at these institutions, June 30, 1899, 6,980 persons. There was expended during the period for the support of inmates, $2,114,619.75; for improvement to buildings and grounds, $425,653.80."

The Legislature made the following appropriations for State institutions: Cherokee, $360,000; Clarinda, $23,300; Mount Pleasant, $75,000; Independence, $10,300; Fort Madison, $14,400; Anna, $1,141; Eldora, $57,400; Mitchellville, $22,750; Vinton, $6,500; Council Bluffs, $6,000; Glenwood, $64,534; Davenport, $14,400; Marshalltown, $18,000; total, $764,175.

Products.—The fall report upon agriculture showed that the year had yielded the most valuable crop of staple cereals ever grown in the State. The corn estimate was 552,365,000 bushels, capable of giving $50 to every person in the State. The State Fair was the largest and most successful ever held. The State has $7,022 worth of Angora goats.

Six hundred farmers tried an experiment in co-operative farming at Rockwell. They say: "Our people were not students of co-operative philosophy. We have barred from all our proceedings as co-operatives religion, politics, and racial differences. As co-operatives we are only farmers assuming the part of business men, and we find that we can be as successful as business men as those who are called up in a year, and not if we were once opposed to the middleman is always an instrument of injustice for the buyer as well as the seller, and the main idea in their organization was to get rid of the middleman.

Legislative Session.—The Legislature convened on Jan. 8. The following are the more important of the 200 bills that were passed:

For assessment and taxation of telephone and telegraph companies, applying to these companies the system now in force for assessment and taxation of railroad property.

A special tax on one tenth of a mill, not exceeding $55,000 a year for five years, for the State University for building.

Levy of a tax of one tenth of a mill, not to exceed $55,000 a year for five years, for the State Agricultural College for building.

Exempting beet-sugar plants from taxation for ten years.

Requiring the Executive Council to fix a levy that will raise $1,400,000 next year and $1,500,000 for the next year.

Changing the use of blasphemous and obscene language from an indictable felony to a misdemeanor.

To prohibit gambling in cities.

Making train robbery or attempted train robbery punishable by life imprisonment or any term from ten years up.

Prohibiting the operation of plants that use gasoline for cleaning in tenements.

Prohibiting the soliciting of liquor orders by traveling salesmen.

Making it a misdemeanor to deface or deface the United States flag in any way, as by an advertisement.

Requiring the retention of 5 to 15 cents per pupil in township and rural school districts, to be expended in buying a library. This establishes the rural school library in Iowa.

Creating a library commission to promote the establishment and efficiency of free public libraries.

Authorizing the State library trustees to extend the traveling library department.

Authorizing all cities and towns to levy taxes for library purposes.

Establishing a reformatory for women at Anamosa. The bill appropriates $2,500.

Placing the county asylums and private asylums under the supervision of the State Board of Control.

Providing for compensation of members of the National Guard for drilling, fixing the pay at 10 cents an hour, not to exceed 20 cents a week.

Appropriating $50,000 for Iowa monuments at the battlefield of Shiloh.

Placing the county and private insane asylums of the State under the charge of the Board of Control.

Reorganizing the National Guard, placing it on
an army basis and footing so that in time of war it can be sent into the service without reorganization at that time.

Authorizing and directing the authorities of the State educational institutions to suspend students who frequent saloons.

Prohibiting the manufacture of pearl buttons and butter tubs in the State penitentiaries.

Creating a department of agriculture.

Requiring the State Board of Educational Examiners to examine all persons to whom State certificates and diplomas are issued. This law removes the complaint of discrimination in favor of the graduates of the State University and the State Normal School.

Empowering the State Board of Educational Examiners to issue certificates to teachers of special branches, as music, penmanship, etc., on the passing of a satisfactory examination.

Increasing the amount that may be paid in rural districts for transporting pupils to and from the public schools from $5 to $10 a pupil a year.

Providing for the experimental use of voting machines.

A proposition to amend the Constitution so as to provide for biennial instead of annual elections.

A proposition to amend the Constitution so as to establish woman suffrage was defeated in the House, March 8, by a vote of 54 to 44. It also failed to pass the Senate, where it received 24 votes.

Political.—The People's party held its State convention at Des Moines, April 24, to choose delegates to the national convention. Eugene V. Debs was the choice for presidential nominee.

The Weaver faction of the People's party met in convention at Des Moines, April 17, and the delegates were instructed to vote for the nomination of William J. Bryan. The resolutions condemned the war in the Philippines, favored an income tax, denounced the currency bill, favored initiative and referendum, expressed sympathy with the Boers of the Transvaal, and denounced trusts.

The United Christian party held a State convention on July 4, six members being present. A State organization, platform, accepted which declared that all temporal governments derive their just powers from God through Christ, and by the consent of the governed; denounced all war; demanded abolition of the liquor traffic, woman suffrage, election of President by direct popular vote, and Government ownership of public utilities. They approved the nomination of Charles M. Sheldon for President of the United States.

The Republican State Convention met in Des Moines, July 30. The following ticket was nominated:

Secretary of State, W. B. Martin; Auditor, Frederick F. Merriam; Treasurer, C. S. Gilbertson; Attorney-General, C. W. Mullan; Judge of Supreme Court, Emlen McClain; Railroad Commissioner, David J. Palmer.

The Democratic State Convention was held at Cedar Rapids, Aug. 15. The significant parts of the platform were these: As a phase of trust question, bearing disastrously on manufacturing interests in Iowa and other agricultural States, we point to the fact that the combination of the manufacturing trusts and the railway trust have resulted in closing many such factories. Many plants in Iowa now stand idle because they have either been driven out of business by unfair competition or have been absorbed by the trusts and closed down.

We demand that railway rates and taxation, as well as legislation affecting railways, shall be shaped and fixed for the benefit of the whole people, without improper interference from the special interests involved.

We condemn the subterfuge of the null and void pharmacy act by which the Republican party has returned the saloon to Iowa while still maintaining the farce of prohibition. The Democratic party believes in majority rule, it favors the honest and open policy of local control with stringent regulation.

The following ticket was nominated:

Secretary of State, S. B. Crane; Auditor, I. M. Gibson; Treasurer, H. L. Williams; Attorney-General, T. G. Harper; Judge of Supreme Court, J. W. Freeland; Railroad Commissioner, J. E. Anderson.

Two amendments to the Constitution were submitted to the people in November. The one providing for biennial elections was carried by a majority of 25,591. In connection with this amendment, arrangements were made for holding legislative sessions in the even years, so that there will not be another session until 1902.

The other amendment provided for a constitutional convention. This was defeated by a majority of 555.

ITALY. A kingdom in southern Europe. The throne is hereditary in the line of Savoy by male descent in the order of primogeniture. The reigning King in the beginning of 1900 was Umberto I, born March 14, 1844; died July 29, 1900. He was the eldest son of Vittorio Emanuele II of Sardinia, the first King of united Italy. His successor is Vittorio Emanuele, Prince of Naples, born Nov. 11, 1869. The legislative power is vested in a Parliament composed of a Senate containing at present 372 members nominated for life by reason of public services or eminence in science, literature, or the arts, or their pursuit tending to the benefit of the nation, and a Chamber of Deputies containing 508 members, 1 to 57,000 of population, elected under the law of 1895 by all adult male citizens who can read and write and who pay 20 lire of direct taxes or occupy a farm renting for 500 lire or a tenement or place of business of a certain minimum size. Schools for the instruction of the deaf and dumb, the blind, and the idiots are gratuitous. The law disqualifies the title of priest filling a clerical charge nor any salaried official except officers and others answerable to Parliament for the policy of the Government can be elected a Deputy.

In the Cabinet formed on May 14, 1899, and still in office in the beginning of 1900, the ministers responsible for the different departments were the following: President of the Council and Minister of the Interior, Gen. Luigi Pelloux; Minister of Foreign Affairs, Marchese Emil Visconti Venosta; Minister of the Treasury, Dr. Paolo Boselli; Minister of Finance, Pietro Carmin; Minister of Justice and of Ecclesiastical Affairs, Prof. Giovanni De Gennaro; Minister of Public Works, Pietro Lapacca; Minister of Public Instruction, Prof. Guido Baccioli; Minister of Public Works, Pietro Lapacca; Minister of Posts and Telegraphs, Marchese Antonino di San Giu,

Area and Population.—Italy has an area of 110,646 square miles. The population was estimated on Dec. 31, 1899, at 31,856,675, about 288 to the square mile. The emigration from Italy is greater than that from any other country. Besides the emigrants who intend to settle across the sea, and in applying for passports declare their
intention, great numbers leave Italy every year to work in other countries, mainly on railroads, embassies, and foreign consulates; 9,000 Italy professors and teachers; those who go to other parts of Europe for this purpose do not return, but sail for America from foreign ports. Many others return who have lived in America and saved a capital sufficient to establish themselves at home by acquiring a piece of land or discharging the mortgage on land already held. One of 283,752 emigrants in 1898, Piedmont contributed 21,743, of whom, however, 13,630 were temporary; Liguria 3,292, including 170 temporary; Lombardy 17,707, of whom 11,515 were temporary; Venetia 102,462, but 94,184 were temporary; Emilia 15,268, of whom 10,003 were temporary; Tuscany 14,293, the temporary ones numbering 12,972, and the permanent 2,321; Abruzzi and Molise 15,151, including 3,585 temporary; Campania 32,057, including 6,806 temporary; Apulia 3,387, including 1,546 temporary; Basilicata 8,032; Calabria 15,133, including 29 temporary; Calabria 15,133, including 29 temporary; Umbria 1,066, including 370 temporary; Lazio 2,491, including 189 temporary; Abruzzi and Molise 15,151, including 3,585 temporary; Genoa, with 64 professors and 1,256 students; Macerata, with 11 professors and 310 students; Messina, with 45 professors and 591 students; Modena, with 45 professors and 435 students; Naples, with 81 professors and 5,465 students; Padua, with 71 professors and 1,197 students; Palermo, with 305 professors and 1,292 students; Parma, with 42 professors and 550 students; Pavia, with 53 professors and 1,321 students; Pisa, with 56 professors and 1,087 students; Rome, with 75 professors and 2,300 students; Sassari, with 24 professors and 148 students; Sienna, with 31 professors and 231 students; and Turin, with 68 professors and 2,531 students. Besides these, there are the towns which have 18 professors and 234 students; Ferrara, with 22 professors and 77 students; Perugia, with 26 professors and 320 students; and Urbino, with 14 professors and 100 students, making the total number of 21 universities, with 962 professors and 22,446 students. Of the young men called up for military service in 1911, the proportion of university students was 37.38 per cent., showing that the law of compulsory education has not been well enforced. Formerly it was not applied in communes where the supply of teachers was less than 1 to 1,000 inhabitants. Among the persons married in 1897, the proportion of males who could not sign their names was 52.98 per cent., and of females 52.13 per cent.

Although the Italian Government is preeminetly secular and has curtailed the authority of the Church and antagonized the papacy, and although it has recognized the right of all creeds to freedom of worship, Roman Catholicism is still the religion of practically all Italians except the minority who reject religion altogether. There were at the last census about 22,000 belonging to the ancient Waldensian Church of Piedmont, 10,000 Evangelicals, and 30,000 who had been converted to Protestantism by foreign missionaries. The number of Jews was 38,000. The educational institutions controlled by the Government, which also supports the public schools or shares their cost with provinces and communes. The law demands that children be sent to school between the ages of six and nine. There were 50,526 primary schools in 1896, with 51,526 teachers and 2,373,549 students; with 9,565 teachers and 210,074 scholars; 4,687 evening schools, with 4,848 teachers and 151,369 scholars; 214 higher schools for girls, with 1,765 teachers and 7,319 scholars; 148 normal schools, with 1,622 teachers and 24,152 scholars; 332 lyceums, with 1,532 teachers and 17,689 scholars; 708 gymnasia, with 4,732 teachers and 59,578 scholars; 74 technical institutes, with 1,314 teachers and 10,274 scholars; 381 technical schools, with 2,574 teachers and 37,305 scholars; and 21 schools of navigation, with 183 teachers and 957 scholars.

The Army.—In the levy for 1897 the number of young men who reported for examination was 1,589,945, of whom only 1,548,945, 34, put back for a year, 85,256 were rejected as unfit for service, 104,829 were drawn for active service, 551 were assigned to the permanent army on leave, and 94,215 were enrolled in the territorial militia. Young men having a superior education are admitted as one-year volunteers on paying 2,000 lire per year if they are to serve in the cavalry or 1,500 lire in the other arms. Noncommissioned officers are enlisted for five years of service, and if they serve twelve years they are entitled to civil employment after retiring. The age at which recruits are taken into the permanent army is twenty-one years, and the term of active service is five years for carabiniers and for the other arms the four years. The 12 army corps have their headquarters at Turin, Messandria, Milan, Genoa, Verona, Bologna, Ancona, Florence, Rome, Naples, Bari, and Palermo. The Ninth Corps, at Rome, has 3 divisions, the others 2. There are 96 regiments of infantry of the line, 12 regiments of bersaglieri, 7 Alpine regiments, and three regiments of who are for the other arms. The 12 army corps have their headquarters at Turin, Messandria, Milan, Genoa, Verona, Bologna, Ancona, Florence, Rome, Naples, Bari, and Palermo. The Ninth Corps, at Rome, has 3 divisions, the others 2. There are 96 regiments of infantry of the line, 12 regiments of bersaglieri, 7 Alpine regiments, and three regiments of reservists. The carabiniers consist of 11 territorial legions, consisting of 1 regiment of mounted squadron; cavalry—10 regiments of lancers, 14 regiments of light horse, and 6 squadrons, with 4 depots for remounts; artillery—24 field artillery regiments, 1 regiment of heavy artillery, 3 mounted regiments, 1 brigade of train, 1 regiment of mountain artillery, 22 brigades of coast and fortress artillery, 21 batteries of coast artillery, 17 companies of heavy field artillery, 8 companies of field artillery, 11 companies of field artillery, and 6 companies of railroad engineers. The mobile militia consists of 51 infantry regiments, 20 battalions of bersaglieri, 38 companies of Alpine troops, 31 squadrons of cavalry, 63 field batteries, 78 companies of coast and fortress artillery, 21 companies of coastal artillery, and 11 companies of field artillery. The territorial militia consists of 324 battalions of infantry, 22 Alpine battalions, 100 companies of fortress artillery, 30 companies of engineers, and 4 companies of royal carabiniers. There are 3,384 officers in the permanent army, including 250 on half pay; 6,244 officers enlisted in the mobile militia, besides 1,048 auxiliary and retired officers, and 10,719 half-pay and reserve officers for the territorial militia. Of the mobile militia, 2,016 were under arms in 1899, and of the territorial militia, 5,394. The strength of the permanent army was 510,602 men with the colors and 303,887 on unlimited leave; of the mobile militia, 465,349; of the territorial militia, 1,941,918; total, including officers, 3,237,491. The African corps numbered 6,750 troops, of whom 5,465 were natives.

The Navy.—The five monster storm-clads of the Italian navy—the Duilio, Dandolo, Lauria, Andrea Doria, and Morosini—were built before 1900, and although they are not as large as the 11,138 tons, and their armor is 18 and 22 inches thick at the water line, and their heavy guns are of 17-inch bore, and their speed is from 15 to 17.
knots, they now rank as second-class ships. The later Ammiraglìo di Saint Bon and Emmaudele Filiberto, launched in 1897, displace 9,800 tons, have 10-inch armor, carry 4 10-inch, 8 6-inch quick-firing, and 8 4.7-inch quick-firing guns, and make 18 knots with 18,000 horse power. Three of the first class are being built—the Regina Margherita, Benedetto Brin, and Princepessa di Savoia. The latter is armed with 4 12-inch guns in revolving turrets, and 4 8.5-inch, 12 6-inch, and 8 3-inch quick fiers. Italy possesses powerful deck-protected cruisers, most of them having side armor of good thickness. The oldest and the largest are the Italia and Lepanto, launched in 1880 and 1883, displacing 15,654 and 15,000 tons, each of two 12-inch quick-firing guns, a 17-inch quick-firing, and 4 12-inch guns in revolving turrets, and 4 8.5-inch, 12 6-inch, and 8 3-inch quick fiers. The Carlo Alberto and Vettor Pisani, launched in 1892 and 1895, of 6,500 tons, carry 12 6-inch and 6 4.7 inch; the Marco Polo, launched in 1892, of 4,583 tons, 6 6-inch and 10 4.7-inch quick-firing guns. The Re Umberto, Sardegna, launched in 1888, 1890, and 1891, of 13,298 to 14,800 tons, capable of making from 18 to 20 knots, are armed with 4 13.5-inch guns, and 8 6-inch and 16 4.7-inch quick fiers, the 67-ton bow and stern chasers being mounted in pairs in inclined armoured barbettes. The new battle ships will have their 12-inch guns mounted on four fo'stays and the 6-inch and 4.7-inch quick fiers in 4 turrets amidships, and their 6-inch battery on the main deck, and their armor belt will extend the full length of the ship and protect the base of the turrets, being of 6-inch Terniti steel, impervious to shell. A new Garibaldi and Varesese have been launched to replace the cruisers sold to the Argentine Government, larger than they and better armed.

Commerce and Production.—Land is much subdivided in Italy. In Piedmont and Liguria peasant proprietors predominate, and in many other sections some of the cultivators own their farms. In Tuscany, the Marches, and Umbria the system of partnership prevails which was once in common, and is still practiced in different forms in other provinces also. The owner and the cultivator usually share the produce or profits equally, and frequently the same small farm is thus made to support two families. In Venetia and Lombardy the farmers commonly rent their lands. Large farms are found in some departments of Lombardey, Emilia, and Tuscany, especially in Romagna, Caserta, in Apulia, Basilicata, and Calabria, and in Girgenti and Trapani in Sicily. The yield of wheat in 1898 was 48,400,000, and in 1899 it was 45,600,000 hecctolitres; the yield of maize in 1898 was 26,850,000 hecctolitres; of rice, 6,180,000 hecctolitres; of wine, 31,500,000 hecctolitres; of oil, 2,300,000 hectolitres. The yield of citrus fruit, and marketed was 3,900,000,000. The total value of the special imports in 1898 was 1,413,339,346 lire, excluding gold coin and bullion, silver coin, and goods in transit; the value of the special exports was 1,205,500,504 lire. The imports of gold and of coined silver were 3,443,800 lire; exports, 19,012,600 lire. The chief imports of merchandise were wheat of the value of 201,994,050 lire; coal, 137,377,244 lire; cotton, 111,601,382 lire; raw and twisted silk, 61,996,500 lire; machinery, 37,343,770 lire; raw hides, 30,219,252 lire; timber, 35,201,932 lire; tea, 1,513,405 lire; fish, 30,429,100 lire; raw sugar, 19,966,744 lire; exports, 19,012,600 lire; hides, 3,443,800 lire; coffee, 14,062,035 lire; linen and hemp yarn, 11,163,285 lire; iron and steel bars, 10,079,900 lire; cheese, 3,160,350 lire; printed cottons, 1,692,122 lire; colored and dyed cottons, 1,400,770 lire; bleached cottons, 1,029,880 lire; unbleached cottons, 474,745 lire; refined sugar, 230,399 lire; horses, 21,173,600 lire; refined petroleum, 12,011,265 lire; olive oil, 15,431,895 lire; indigo, 4,768,500 lire; cotton yarn, 2,295,825 lire; railroad materials, 2,038,554 lire; silkworm eggs, 1,450,250 lire. The chief exports in 1898 were raw and thrown hemp, 6,170,450,000 lire; tobacco, 27,050,800 lire; eucalouns, 2,776,200 lire; wine in casks, 66,600,356 lire; sulphur, 41,799,810 lire; olive oil, 40,353,122 lire; eggs, 37,786,920 lire; raw hemp and flax, 33,516,754 lire; manufactured coal, 24,043,180 lire; raw hides and skins, 17,141,802 lire; marble, 16,134,109 lire; fresh and salted meat, 15,912,120 lire; rice, 13,298,891 lire; zinc, 3,906,400 lire; cattle, 12,505,490 lire; raw wool, 862,000 lire; hogs, 3,671,457 lire; cereals, 6,351,335 lire; dyers and tans, 9,200,786 lire; raw cotton, 1,869,516 lire; straw braid, 7,461,960 lire; lead ore, 786,100 lire. The value of foreign exports in 1898 was 23,433,000 lire; of the transit trade, 127,899,000 lire.

Railroads and Telegraphs.—Of a total length of 9,592 miles of railroad, 5,908 miles belong to the Government and 92 miles are partly owned by the Government; but the state lines in 1885 were leased to companies for sixty years, though the contracts may be terminated and the Government may resume possession at the end of the term. In February the Court of Cassation, by companies having a length of 3,892 miles. The telegraphs are owned and operated by the Government, except 2,017 miles of line, with 23,311 miles of wire, belonging to railroad companies. The Government lines have a length of 23,698 miles, with 76,310 miles of wire.

Ministry of War.—The Minister of War, Gen. Mirri, who took an active interest in bringing to the light the secrets of the Sicilian Mafia, was himself implicated by the revelations of the Notarbartolo trial in electoral irregularities, such as are indispensable in Sicilian politics. Partly on this account and partly because of differences of opinion between him and the Ministry of War, in September, according to war estimates, he resigned his portfolio on Jan. 4, 1900. On Jan. 7 the Premier, Gen. Pelloux, was appointed by the King to administer the War Office until a new minister could be selected. The question of providing funds for renewing the field artillery stood in the way of the acceptance of the office by any of the generals. In February the Court of Cassation, by company, quashing a sentence passed upon an anarchist under the provisions of the public safety bill promulgated by royal decree on June 22, 1899, precipitated the discussion of this bill, which the Chamber had decided to postpone, and thus brought on a political and ministerial crisis. The Chamber was then ready to pass a project of law when the Chamber reassembled after its temporary prorogation at the end of June, 1899; that when the session closed without its receiving parliamentary sanction it lapsed entirely; and that when it was introduced again at the beginning of the winter session it was a draft bill again, not binding upon magistrates until ratified by Parliament. Magistrates were accordingly instructed to suspend the application of its provisions, and debate on the bill was begun on Feb. 24. Its provisions empowered the Government to suppress public meetings, destroy sedition titles, dissolve subversive societies, punish the publication of tobacco, or its sale, or against writers, printers, or publishers of inflammatory articles. It was read twice in the Chamber in the spring session of 1899, but its final passage was blocked by Socialist and Radical ob-
striction. The ministers therefore prorogued the Chamber for a few days, and during the recess promulgated the bill by royal decree. This act was condemned, not by the Socialists and Republicans alone, the Revolutionary Left, but by the Constitutional Left, followers of Zanardelli and Giolitti, and by dissentient Conservatives of the Rudini faction, who maintained that the Italian Constitution as traditionally interpreted permits legislation by royal decree only in case of certain tariff modifications, and that it precludes the promulgation by the initiative of the Crown and without previous sanction of Parliament of any political measures. When the Chamber reassembled a week after the promulgation of the bill of public safety itself, the proposal to adopt the bill was prevented by the turbulent Opposition from adopting the bill of public safety itself, which went into force on July 22, 1899, after the violent demonstrations of the Radicals and Socialists had brought the session to an end. The Government refrained at first from applying the new law. In the spring of the following year, the Opposition was defeated in two parliamentary trials, and in the autumn the second section of the Roman Court of Cassation upheld the law on an appeal based on one of its articles. Assuming from this that the decree was provisionally valid, the Government showed no haste after the winter session opened to bring the bill forward for passage. In the meantime the Socialists and Radicals renewed their attacks upon the Government. Obstruction began when the discussion of the articles began after the ministry had secured a vote of confidence on March 2 of 222 to 189. A roll call was demanded on every motion, even on applications for leave of absence. Any 10 members can make such a motion, the roll call being not only to count the roll as a safeguard in case of important decisions, President Colombo refused to employ it to aid the obstructionists, who thereupon created such a tumult that the sitting was suspended. The clause for the regulation of public meetings came first, and when the closure was voted, shutting off all except those who had given notice of amendments, the Socialists prevented others from speaking by noise and uproar, then made interminable speeches themselves when the Marquis di Rudini offered a proposal to eliminate this clause, and afterward renewed their turmoil and insults when he withdrew the proposal. People, leading to disturbances and fights between citizens, especially students, who shouted, some for the Constituent Assembly, others for the King. Count Cambray-Digny moved a set of rules to prevent obstruction, and the Opposition hindered the Chamber from taking action upon them until the president stopped speakers who digressed from the subject of debate. When the ministers of the Revolutionary Left raised the cry for a Constituent Assembly their allies fell away from them. Their determination to discuss constitutional revision and the referendum in defiance of President Colombo's veto led him repeatedly to suspend the sittings. The ministers on March 30 determined, since they could not break the deadlock over the public safety bill, to withdraw it and proceed with urgent economical measures. The Extreme Left, bailed by President Colombo's rulings, tumultuously demanded his resignation. He had checked all discussion of the Government proposal amend- ing the electoral law on the ground that the house had adopted the anti-obstructionist rules by means of a technical violation of the existing rules. The violation was the act of the president of the Chamber, and therefore the Extreme Left, who had won a barren victory and held the field from which the enemy had retreated in good order by the withdrawal of the public safety bill, resolved to continue the campaign by assassinating President Colombo. When the house met on March 30 they shouted insults and ob- jurgations, stamped and slammed desk lids, raised such a din, created such a scandal, and affronted the president with such offensive epithets that he left the chair without opening the proceedings, whereupon the Extremists and their Moderate and Conservative allies marched out in triumph. The latter made it more difficult for the president to retain his office than the noisy Socialists by resigning their membership in the presidential bureau. To clear the situation President Colombo offered his resignation. In the direct ballot on April 2 he was re-elected by 365 votes to 158 over Signor Biancheri, many of the Rudini having voted with the Government. Before Count Cambray-Digny's amendments to the rules of procedure were put to the vote by summary procedure without discussion, on April 3, the Deputies of the Extreme Left and Right, after denouncing the regularity of the late proceedings, announced that they would never recognize the validity of the proposed rules and left the house in a body, shouting for a Constituent Assembly. The Chamber then adopted the amended procedure almost unanimously, and adjourned till May 15. When the Deputies repeated their objections, on that day, President Colombo proposed a committee to consider a compromise on the question of procedure. Signor Ferri, speaking for the Extreme Left, announced a determination not to permit any discussion under the amended rules, and to oppose their application by every legal means, even by violence, if necessary. When business was recessed, after the clericals began to sing in chorus, and drowned the president's voice by beating desks. On the following day the Chamber was dissolved by royal decree. Elections were held in the beginning of June, so that the new Chamber could be assembled to vote provisional supplies before June 30, the end of the financial year. The Clericals voted in greater numbers than in former elections, disregarding the papal interdiction in spite of the efforts of the clerical organizations to make them give up their ballot papers to be forwarded to the Vatican.

Serious riots occurred in Milan and other industrial centers, which were suppressed only by the firmness of the military authorities and the discipline and fidelity of the troops. The result of the elections was a victory for the Extreme Left, which increased its number of seats from 69 to 97. The ministerial party lost as many, while the Constitutional Opposition returned in about the same strength as before. The Socialists, who numbered 15 in the former house, doubled their representation. Although the ministry had still a majority of nearly 100, the outcome was a moral defeat so serious that after the Chamber met on June 16 and elected a presiding officer—who was not Signor Colombo, because he had lost his seat—and had granted provisional supplies, Gen. Pelloux offered the resignation of the Cabinet on June 18, and insisted on its acceptance. On June 20 King Umberto commissioned Signor Saracco, president of the Senate, an aged Liberal, to form a new ministry. He constructed one on the basis of the majority that had elected Signor Gallo president of the Chamber. The new ministry, which took office on June 24, was as follows: President of the Council and Minister of the Interior, Giuseppe Saracco; Minister of Foreign Affairs, Marchese Visconti Venosta; Minister of War, Gen. Conte Ponza di San Martino; Minister of Marine, Admiral Morin;
JAPAN.

Minister of Justice, Signor Guintoro; Minister of the Treasury, Signor Rubini; Minister of Finance, Signor Chimirri; Minister of Public Works, Signor Brande; Minister of Public Instruction, Signor Gallo; Minister of Agriculture, Signor Careano; Minister of Posts, Signor Palladino. The Moderate Liberal element predominated in the new Cabinet, which included three representatives of the Right and three from the Opposition, one a pronounced Zanardellian. When the Chamber met on June 27 the Premier read a conciliatory declaration of policy. Tommaso Villa, a member of the Liberal League, Protectionists, was named to succeed Signor Gallo as president of the Chamber, and when he took the chair he appointed a commission to draft new rules of procedure. The new Chamber would grant no more than a month’s supplies until it received an assurance that the Government would not plunge into Chinese adventures more deeply than was required to preserve Italy’s place in the concert of the powers. The new standing orders, dictated by the Opposition, permit the suspension for a week only of Deputies who create a disturbance. On July 10 the Chamber adjourned after voting provisional supply until the end of the year.

Assassination of King Umberto.—On July 29 the King was shot dead at three paces by an anarchist at Monza, where he had taken part in distributing prizes at an athletic competition. The murderer was a young silk weaver, who had resided in the United States since 1897. He left Paterson, N. J., for Italy in the preceding May, and stayed at the house of his brother near Prato, where he practised with the revolver to give him skill for the deed which up to the time of his conviction at Milan, on Aug. 29, and sentence to penal servitude for life (the extreme punishment permitted by the Italian code) he persisted in declaring was conceived and planned by himself alone. He avowed that he was impelled to kill the King by a desire to avenge the sins of the people; that he had formed the design after the state of siege was proclaimed in Milan and Sicily. Three shots were fired at King Umberto, who fell back in his carriage and died instantly from one that pierced his heart. In spite of the assassin’s denials, there was evidence of a plot and of the complicity and pecuniary aid of anarchists in America and probably in Italian cities and in Paris and London. The assassin was a skillful and industrious worker, who had borne a good reputation and had saved money. His demeanor during the trial was self-possessed and alert, and he answered all questions calmly, in well-chosen phrases, with an appearance of frankness.

Vittorio Emmanuele III marked his accession to the throne by a proclamation extolling the dead King’s career, his liberal ideals, his sacrifices and his faithful guardianship of the unity and independence of Italy, declaring his own determination to defend the monarchy and to preserve constitutional liberty as linked together and both indispensable for the supreme welfare of the nation, and asserting the retention of Rome as the surest index of the part played by the new King in Italian unity. The new King reorganized and reduced the royal household; he inspected public institutions; he visited the garrisons, where he enjoined upon military officers the duty of wearing their uniforms constantly, setting the example himself; he removed the barrier that has prevented frequent intercourse between the King and politicians by appointing an hour when those who wished could confer with him any day; and he participated actively in the deliberations of the ministry. Premier Saracco unfolded the programme of the Cabinet in a report to the King, published before the reopening of Parliament in December. All politicians desired to hold the key to the beginning of the new reign by a reduction of taxation if it could be secured without endangering the stability of the budget, and some suggested the shifting of a part of the burden that oppressed the poor upon the shoulders of the rich. Signor Chimirri had a plan for the diminution of some of the vexatious demands upon small taxpayers, including abolition of the tax on the lowest incomes. After disposing of the budget, the work proposed for Parliament to do was to consider an emigration bill that had long been before the Chamber, then to discuss bills for reform of local administrative bodies, for abolition of the enforced residence of dangerous characters, for repression of anarchistic crime, and for improving the position of school-teachers. Military estimates were to be maintained within the limits already reached, and provision would be made for renewing the artillery without extra expenditure. The naval estimates were increased by new credits for construction. Additional legislation was required for the protection of the labor of women and children. The Chamber would also have to decide upon the best conditions for the renewal of the commercial treaties with Austria and Germany, also the terms on which railroad conventions will be renewed.

JAPAN, an island empire in the Pacific Ocean, eastward from China, between the Russian and the American possessions, extending from north latitude 21° 48' near the Philippines to 50° 50' near the Kuriles, and from east longitude 150° 32' to 115° 48', the area being an area of more than 6 square miles, and about 500 are inhabited, though a majority of the people in the empire live on Hondo, the main island. The five larger islands are Hondo, Kiushiu, Shikoku, Hokkaido or Yezo, and Formosa. The coast line of the entire empire measures 18,542 miles. The total area of the empire is 182,000 square miles. The population, Dec. 31, 1898, was 46,540,754. The money standard is gold, 8 yen being worth 50 cents.

Over this constitutional empire the Emperor Mutsuhito not only reigns, but governs. He is the one hundred and twenty-second of the traditional line of Mikados, and was born Nov. 3, 1852, and ascended the throne Feb. 18, 1867. The heir apparent, Yoshihito, born Aug. 31, 1879, proclaimed heir Aug. 31, 1887, married, May 10, 1900, the Princess Sada, his cousin, the third daughter of Prince Kujo. Only male descendants—natural or adopted—of the direct line of the Mikados can succeed to the throne. The laws relating to marriages in the imperial family, promulgated in May, 1900, forbid marriage before the age of seventeen in the prince and of fifteen in the princess, and during any period of imperial mourning. The Emperor shares legislative power with the Imperial Diet, which consists of two houses—the upper house, having 316 peers and imperial nominees, and the lower house, 300 members, elected by male voters who, according to the new law of elections, pay direct national taxes to the amount of 10 yen ($5). By the new law of 1900, the House consists of 369 members, from 16 urban and 308 rural
districts. Since 1880 constitutional reform has been almost continuous, and has been effected without popular disturbance.

The fifteenth annual meeting of the Diet took place Dec. 22, 1900. The second Yamagata ministry, after twenty-two months of office, retired in September, 1898, to make the way for a new and a third ministries since 1868, and of the 7 constitutional cabinets since 1868, composed of the "elders," or statesmen, of the Restoration of 1868. Marquis Hirobumi Ito was called for the fifth time to form the new Cabinet, which begins its work Oct. 19, and consists, with the exception of himself, wholly of the "youths," or statesmen, of the Restoration of 1868. They are the United States and Europe, and under modern constitutional forms. In the months' session of "the spendthrift Parliament" of 1900, ending Feb. 24, 37 out of the 59 bills brought forward were debated, nearly every measure advocating expenditure from the treasury. Of those withdrawn, a great majority were schemes for fostering private enterprises.

The Emperor's Cabinet consists of the Minister-President of State and the 9 heads of departments. There is also a Privy Council of 20 veteran statesmen, who have great influence, especially in the formation of cabinets and the appointment of envoys and officers. There is also a Court of Accounts, which, besides being a financial department, is the administrative for each of the chambers of peers and of deputies. These all form the Central Government, in which are employed 49,208 salaried functionaries, whose salaries require 12,599,955 yen. Under imperial control are also the prefecture of the police of Tokio, the Department of Colonization, the Imperial Navy, the Army, and the three provinces, and the government of Formosa, in which 4 provincial governments are employed 19,668 salaried officers, who draw 5,987,755 yen from the treasury, making a total civil list of 58,876 persons, drawing 15,587,170 yen from the national treasury. Since the war with China, in 1895, the number of officials and the amount of salaries have increased more than 50 per cent.

Population.—For more than a hundred years, in the eighteenth and early in the nineteenth century, the population was stationary. Since 1870, when the first scientific census was made, showing that the empire contained 7,107,841 houses and 33,029,450 persons, the population has been increasing steadily, until at the close of 1898 the number was 46,540,754—the nobles numbering 3,845, gentry 1,660,301, the remainder being the common people, many of the gentry of former years having voluntarily dropped into the ranks of the commons. The average yearly increase for a decade has been nearly 500,000. The excess of births over deaths in 1898 was 531,891. The increase was 253,000,000, and the expenditures 250,000,000. The budget for 1899-1900 shows an ordinary revenue of 103,000,000 yen and an extraordinary revenue of 60,000,000 yen and an expenditure of 250,000,000 yen; that of 1901-02, ordinary revenue 201,000,000, extraordinary 52,000,000; and of expenditure of 252,000,000 yen. Japanese economists reckon that Japan's war fund, consisting of gold coin in London deposits in the Bank of Japan, 4-per-cent. bonds, capital fund for war ships, with reserves in connection with national calamities, education, and indemnity, amounts to nearly 150,000,000 yen. The public debt in 1890 was 418,363,389 yen. At the close of 1890 there were 2,052 banks in operation, with a capital of 88,409,000 yen.

The Army.—After the war with China (1894-95) the army was reorganized into 12 divisions (instead of 6), in addition to the Imperial Guard, with a total of 110 generals, 1,097 superior officers, 7,544 officers, 5,821 underofficers, 32,733 noncommissioned officers, and 265,754 soldiers, making a total of 132,733 soldiers. The total number of soldiers in the War Department. Of this total, 135,345 are in the active service, 115,666 in the reserve, and 74,797 in the territorial army. In the recruiting operations of 1897 477,355 males, conscripts and volunteers, came under inspection,
of whom 66,023 were above the conception age of twenty years. The artillery soldiers garrison the forts, and the 12 divisions are located in different sections of the empire, usually in large camps and barracks, where the drilling, training, and daily life of the soldiers take place with facility. In army education there has been in recent years vast improvement, since so large a percentage of the volunteers and conscripts are graduates of the middle and elementary schools. The number of illiterates is small—in 1897–98 only 11,790—while the graduates of the ordinary and the higher schools numbered 69,000, and of the middle schools or academies more than 500. For the campaign in China in the summer of 1900, the Hiroshima division, with some additions from two or three others, making a body of 20,000 men of all ranks and arms, was dispatched under command of Lieut.-Gen. Yama-

guchi, under Jiro, Tanaka, and in commission, Terauchi, and Oku. The men were armed for the most part with the new Arisaka rifle, which is very light and simple, carrying a magazine of five rounds. The definitive establishment of officers (on a peace footing) is 3 field marshals, 3 full generals, 21 lieutenant and 48 major generals, 96 captains, 114 lieutenant colonels, 441 majors, 1,302 lieutenants, and 1,302 second lieutenants.

The total membership of the Red Cross Society is 903,178, of whom 46,320 are life members, the annual contribution amounting to 1,904,365 yen. Two hospital ships, with names meaning Savior and Mercy, especially built and equipped for the service, with all modern appliances, were in constant use for natives and foreigners, during the Chinese campaign, in the expedition from Tientsin to Pekin, in which the Japanese casualties reached a total of 797.

The Navy.—Most of the new ships contracted for in Europe and the United States after the China-Japanese War are now on order. The resources and classification of the imperial navy of 70 ships and 66 torpedo boats, at the end of 1900, are 8 battle ships (first class, above 10,000 tons, 6; second class, below 10,000, 2); 20 cruisers (first class, above 7,000, 6; second class, above 3,500, 9; third class, below 3,500, 5). Ships for commerce and defense totaled the above, but while the first and second classes are wanting, there are 10 in the third class. Of 15 gunboats, there are 2 in the first class above 1,000 and 13 in the second class below 1,000 tons. There are 4 dispatch boats, 1 torpedo depot ship, 12 torpedo catchers. The 66 torpedo boats are rated in 4 classes. The battle ship Mikaze, 15,150 tons, launched in November, is the largest war ship afloat. The total number of sailors, marines, officers of line and staff, construction and administration, under the Navy Department is about 25,000 men.

Communications.—A railway system of 7,000 miles would not be sufficient for the needs of Japan. The first railway, between Tokio and Yokohama, was finished, despite antiforeign clamors, in 1872, and but few more railways were built until 1880. The length of railways now in the empire is 3,700 miles. The number of companies holding provisional charters in 1900 was 16. Of 68 applications for charter to build railways in 1901, 12 were rejected, and 56 granted. The aggregate capital of these companies is 80,940,000 yen, but the total mileage secured is 1,523, making a grand total for the empire when finished of 5,530 miles. In 1900 227 miles were opened for traffic, 102,115,942 passengers traveled (showing an increase of 3.1 per cent. over last year), paying for passage 28,417,576 yen, while 18,820,024 tons of freight were carried, on which 12,726,845 yen were paid, giving a balance of net profit on freight and passengers of 19,386,053 yen. The increase in freight traffic, and money paid for the same, was 26.6 and 30.1 per cent. respectively. Most of the roads were built to private capital, but the aggregate capital employed in railroads is about 300,000,000 yen. Besides those under Government ownership, there are more than 100 private railway companies. The length of the postal routes by land and sea is 100,000 miles. In 1898 157,514,540 letters, 329,933,829 postal cards and other pack-

ages were delivered, and the aggregate telegraph service 4,537 offices, 39,295 postal boxes and 38,000 employees. To foreign countries 2,922,663 pieces were sent, and from them 2,749,784 pieces received. Over 5,295 miles of telegraph route, having 29,501 miles of wire, 15,342,555 domestic messages were sent. By submarine cable, 1,000 foreign dispatches were transmitted. There are 640 miles of telephone routes and 13 stations, chiefly in the large cities. In 1898 10 street-car companies, with 420 cars and 1,620 horses, carried 36,872,845 passengers. In 1898 there were 1,130 steamers, of 477,430 tons, and 1,914 sailing ships, of 170,894 tons, and 19,997 junks, of 16,001,420 tons. In 1898 the number of post offices was 6,663. In 1899 18,785,986 persons were sent the mails, and 18,820,061 received them.

Religion and Education.—According to the Constitution of 1889, all religions are equal before the law. Article XXVIII declares that "Japanese subjects shall, within limits not prejudicial to peace and order and not antagonistic to their personal or religious belief," Legislation, despite the virulent opposition of the Buddhist hierarchy, steadily proceeds toward carrying out the constitutional provisions, especially in freeing impartially from taxation all ground and edifices for religious purposes. In Shinto, no longer a state religion, there are 12 sects, 104,723 priests and shrine keepers, and 1,872 pupils. In Buddhism there are 35 sects, 103,340 priests and preachers, with 10,983 pupils. Shinto temples number 1,962, and Buddhist temples (usually much larger than Shinto) 109,945.

In Tokio the Christians have 70 church edifices and 55 preaching places, with an enrollment of 11,500. There are 10 mission schools, with 2,251 Christian students, 9 theological schools, and 9 industrial, poor, and primary schools, having 5,423 pupils. They publish 10 periodicals. The value of mission property in Tokio, including the Christian Association building, is 1,200,000 yen. About 2,000,000 copies of the Bible, or portions of it, have been distributed by sale or gift. The Emperor accepted a copy in 1895. In all 944,000 Scripture portions have been circulated since 1890, in addition to those imported and sold to the trade. In the public schools, out of 7,125,966 children of school age 4,910,380 attend daily, the other 2,215,586 remaining at home, making in 1898 an attendance of 69 per cent. The Christian schools, despite the recently crippled by the interference of the educational authorities, there are 204, 68 of which are above the middle course, with 15,846 pupils, 9,394 being in the primary course. Mr. Naruse, a Christian educator, has obtained the gift of nearly five acres in Tokio and the sum of 130,000 yen for the establishment of a women's educational institution. In his own school, besides 90,000 native teachers, 270 foreigners are employed, the majority being American, English, and French. Students still go abroad to study, a large number preferring Germany, and there is a distinct trend toward the adoption of German ideas and culture, yet the
The vast majority of students and educated people use the English language, and the regulations of the Department of Education, published in 1900, have greatly extended the study of English in the schools. The agitation for the use of the Roman letter in writing Japanese has resulted in official sanction and regulation. The general discussion, on the lecture platform and in the periodical press, in favor of a higher public morality, not only personal but congeneric, was one of the features of the year.

In the history of Japanese morals, three eras are noted. Under feudalism, the basis of morals was “loyalty.” From 1868 until the Constitution of 1889, the basis was “patriotism.” Since then, the basis has been “reason.” Disease, an upsurge has extended from the courtier to the bureaucrat, and now to the people at large, and the cry for improvement of personal and commercial morality is the burden of the more respectable of the 800 journals published, with a circulation of 440,000,000. The Yoshivara, or literary quarter, is the place where a radical reform is in process of radical reform. In Tokio there were 458 houses in which were 6,835 women, most of whom, taken in childhood and trained up by their quasi owners, were not allowed ever to leave the Yoshivara inclosures except in case of death or illness of a near relative, nor allowed even to walk about in any of the streets. The women are generally made to feel the women better than slaves. Largely through the agitation of the Salvation Army agents new police regulations were issued in 1900, enabling every inmate to receive her freedom if she desires it. As a result, more than 500 women have left the quarters in Tokio, and more in other quarters.

Resources.—The year has been marked by the discovery of more oil fields on the western coast of Hondo, and of gold at Esashi in Yezo, the total product of gold being, for lack of official oversight in the hasty discovery, three times as great as the figures, which are for nine working months of the year. The Government reports show that 104,982 persons obtained 1,250 pounds of gold. In Hondo the two copper mines of Ashiwo and Besshi produce 1,300,000 pounds of copper annually, which is sold for 4,200,000 yen. In 1897 the production of iron from ore, compared with copper, was as 7 to 5, manganese as 4, coal as 5, sulphur as 3, and petroleum as 9. In general, the mining and refining industry is the mainstay of the economic development of the nation, and the enlargement of the iron and steel works is the first consideration. The development of the iron and steel works is in the hands of foreign interests. The foreign companies are working on the Yezo coast, which is the best source of iron ore in Japan, the ore of Japan being of inferior quality to the ore of foreign lands. The iron ore of Hondo is of inferior quality to that of Hondo, and the ore of Hondo is of inferior quality to that of foreign lands. The iron ore of Hondo is of inferior quality to that of foreign lands. The iron ore of Hondo is of inferior quality to that of foreign lands.

In 1900 283,460 tons of coal were exported, valued at 1,590,921 yen—the best record yet made in coal. Exports appraise for Japan a fifty-year supply only.

Agriculture has been noted for excellent crops, rice being the most valuable, reports from all the rice producing centers making it 22,000,000 bushels, or 14.3 per cent. above the average crop, which is 194,000,000 bushels. The barley crop has yielded 101,000,000 bushels, or 8.1 per cent. larger than the average. The tea exported in 1899 from Yoko-hana was 27,969,178 pounds. While the mulberry farms are increasing in area and output, those of the tea plant are diminishing, showing the increase of manufacturing interests. The value in 1899 from the export of silk was 62,027,721 yen, against 20,386,621 yen in 1891, while tea yielded 8,251,664 yen for the total crop of 158,282,214 pounds. Tobacco, considered the proudest crop, yielded 6,785,977 yen, in 1890. The season’s crop of silk cocoons is 13.1 per cent. increase over last year. The production of raw silk in 1890 was 2,529,816 pounds, and in 1899 5,257,773 pounds.

Fifteen million yen are invested in cotton spinning, there being, in 1900, 1,088,339 spindles; and the output being for the first half of 1900 154,000,000 pounds of yarn and cloth, of which 2,975,019 yen’s worth were exported, the latter low figure being on account of the stoppage of trade through war with China. In fisheries 3,005,429 people are employed, who take 36,476,820 yen’s worth. Tobacco is now a sort of Government monopoly, the crop being stored in 66 monopoly offices. The new developments of industry and trade include the formation of a tobacco trust, capitalized at 10,000,000 yen, and another of a cotton-yarn trust. The tobacco crop for 1900 is officially estimated at more than 6,500,000 pounds. In 1890-91, 4,064,000 acres of land was exported, but relatively the lacquer and the porcelain trade, both of them still existing as cottage industries, have fallen behind the textile industry, in which there are combination factories with capital. Foreign trade for the first half of 1900 reached a total of 238,190,061 yen, of which there were imports 148,150,000 yen, and exports 90,011,061 yen.

In 1899 the total trade of Japan with the British Empire exceeded 180,000,000 yen, of which 56,000,000 yen was with Great Britain, while the trade with the United States exceeded 104,000,000 yen. Compared with 1898, there is an increase in railway traffic of 4,000,000 to 11,000,000 passengers, in marine traffic from 200,000,000 to 700,000 tons; in the capital of commercial and industrial companies, from 230,000,000 to 900,000,000 yen; in clearing-house transactions, from 200,000,000 to 1,700,000 yen; of loans paid by the Bank of Japan, 50,000,000 to 150,000,000 yen; of foreign trade, 170,000,000 to 500,000,000 yen.

Politics and Government.—The bubonic plague invaded Osaka and Kobe, but was stamped out after several score of deaths. Rabies having been found to be subjects and vehicles of the disease, rewards were offered for their destruction. In Tokio 110,000 were killed and paid for. Dr. Kitasato discovered a serum believed to be efficacious in counteracting the virus of the pest. Under the new treaties abolishing the extraterritorial and consular courts, Miller, an American, was executed for murder under Japanese law, Jan. 15. Sir Ernest Satow exchanged places with Sir Claude McDonald, the one going to Peking and the other to Tokio. Russia has deprived Japanese subjects of the right to fish in the waters of Sakhalien, which are among the greatest fish-producing regions of all Japan, and all Japanese leave the island. Imperial sanction was given to the law providing that name seals are sufficient on documents where hitherto signatures have been necessary. Noticeable changes have been made in the Japanese diplomatic corps—Mr. Takahira, Vice-Minister of State for Foreign Affairs, succeeding Mr. Konishi; Baron Hayashi going from St. Petersburg to London, and Mr. Kato Takeaki from London into the Cabinet. The imperial wedding, bridal tour, and issue of memorial stamps took place in May, with many accessories approaching Western etiquette and customs. Snow fell on Mount Fuji Sept. 24, twelve days earlier, and on Mount Omitak twenty days earlier, than usual. Rear-Admiral Beardlee, in 1853 a lieutenant in Commodore Perry’s squadron, was received by the Emperor, and at a large garden party, with many relics of a half century ago, heard addresses from Japan’s eminent men recalling early days. A memorial monument to Commodore Perry is to be erected in Portland, before a lighthouse, surmounted with a bronze statue of the commodore. In November the training ship, Tsumishima Maru, with all her crew of 111 persons, was lost off Numadzu.

Formosa.—Despite petty insurrections of savages and bandits, the population—numbering, Dec. 31, 1898, 2,729,503, not including resident Japanese or the inaccessible red aborigines in the mountains—is being rapidly brought into order and prosperity. Hopeful experiments have been tried with Formosans in a military service. Government schools have been opened. In the six years of Japanese possession 140,000,000 yen of public money have been invested, which now yields a revenue of 16,250,000 yen. The estimate of expenditures for the next year is 22,000,000. The island, with its 140,000 miles of territory, derives its revenue from the opium, tobacco, and land tax, and the camphor monopoly. In 1898 the opium trade for the benefit of the Chinese and Formosans was placed in the hands of Japanese officers. The sales in 1899 amounted to 470,520 pounds, valued at 4,219,604 yen, on which the profit was 1,120,900 yen. In February, 1900, there were 140,130 opium smokers and 3,372 opium dealers, the known percentage of smokers showing increase of the habit. Of the world’s product of 8,000,000 pounds of camphor, Formosa supplies 6,600,000 pounds. At the present rate of consumption, Formosa has an ample supply for the next eighty years, and with judicious care the production may reach one hundred and forty-five years to reach maturity, the supply may be perennial. The revenues for the current year are 14,601,577 yen, and the budget for 1901 or the next year 16,298,509 yen, the camphor yielding 4,592,310 yen, opium 4,287,885 yen, and salt 723,708 yen. The expenditure on railways is to be 10,000,000 yen, and the land surveys from 600,000 to 700,000 yen. The railway from Tákao to Tainan, 40 miles, was finished in October, 1900.

The staples of export are sugar, camphor, and tea, and all values have an upward tendency. The enterprises of mining, forestry, and reclamation of land show steady improvement. The Bank of Formosa, now but a year old, has done an encouraging business. Its deposits amount to 40,000,000 yen. In 1898 there were cleared, from the 12 ports open to commerce, 14 steamers and 2,019 Japanese sailing vessels, with a total capacity of 76,000 tons, besides 151 foreign steamers and 706 foreign sailing vessels, with a tonnage of 70,000 tons. Of vessels entering, there were 17 Japanese steamers and 2,067 sailing ships, with a total of 68,000 tons, besides 169 foreign steamers and 1,887 sailing vessels, with a tonnage of 186,000. In 1898 3,850 emigrants, half of them women from old Japan, landed in Formosa, in which, with the Pescadores, 2,202 Japanese families, including 9,326 persons, are now permanently settled.

JEWS.

The blood accusation was revived both in Bohemia and in West Prussia, and riots against the Jews followed. There was a trial and an indictment, a quashing of the verdict and a retiral, and the incident is not yet closed. It has been magnified by certain elements among the Jews themselves and exasperated against the Jewish inhabitants. The courage of Prof. Masaryk, who is not an Israelite, in writing against the blood accusation, was a happy feature of the situation; and the Semitic section of the Congress of Orientalists at Rome passed unanimously a resolution to the same effect.

In Austria there has been no pandering in the anti-Semitic movement, which has been combined with clericalism. It has acquired a virulence, however, which can not endure if the better class of electors assert themselves.

In Roumania an emigration en masse began, owing to harsh anti-Jewish laws, but it was checked in time, to prevent the departure of more than a comparatively few thousands, most of whom came to the United States and were distributed to interior towns by the co-operation of Jewish societies.

The fourth International Congress of Zionists, held in London, shed no new light on the movement, but showed the continued enthusiasm of the adherents of the Jewish colonization of Palestine, which shows no signs of cooling. There has been no pandering to any practical result of the line of work. Anti-Jewish riots that broke out in Odessa (July 29) were promptly checked, and a large number of the rioters were arrested by the police and the troops.

In France, perhaps owing to the sense of solidarity strengthened by the Dreyfus trial, a new society was formed, L’Union Littéraire Israélite, to develop a love for Judaism, with special efforts to interest the young. In Paris, Sunday lectures on Judaism and its history were given for some months. The literary activity of the French Jews was attested not only by the continued success of the Revue of the Société des Études Juives, but by the preparation of a new French translation of the Old Testament, which is intended for the young, and by M. Schwab’s List of Articles relating to Jewish History and Literature which were published in Periodicals from 1783 to 1798.
